Basketball tonight with Mission Athletic Club, San Jose, CA. Leave hours tomorrow. 

Polygram

Volume XIII

SALINAS OBSISPO, FEBRUARY 16, 1928.

Number 11

Collegiate Play

Is Huge Success

Miss Kreamer's Group De-},
},

lighted its regular series, with Snappy Play.

A jolly interesting program was given by the Dramatic Society, Wednesday, February 15, in the auditorium of the Polytechnic. The play was produced as a part of the work to be presented in the final examination in the field of dramatics.

The play was well received by the audience, and the applause was well merited.

Seniors Place Order For Class Rings And Cards

Monday, January 30, at 2:30 p.m., a meeting was held in the Assembly Room, to receive the orders for the rings and cards.

The meeting was called and sizes taken. The order for rings was placed, and the cards will be printed in the near future.

Aero Students Have Section of Polygram

The students of the Aero classes have a section of Polygram devoted to their activities. The section is called "Aero Notes." The section is managed by the students, and the articles are written by them.

Articles Regarding Aviation Written by Students Are Good Reading

The articles written by the students of the Aero classes are of great interest to us all. The students have been busy preparing articles on various subjects, and the results are excellent.

The students have been given an opportunity to express their views in the Polygram, and they have taken advantage of it. The articles are well written, and they are a credit to the Aero classes.

Poly-Y Plans Big Party On Beach

Starting off with a slow movement of "The Beautiful Girl," Mr. John Parrish, noted tenor, introduced the Stanford Glee Club, to the delight of the audience. The Glee Club sang several songs, and their performance was a great success.

The party was well attended, and the guests enjoyed themselves thoroughly. The Poly-Y club members were on hand to greet their visitors, and they did so in a friendly manner.

Canadian Visitors

Enjoy San Luis Obispo

Mr. and Mrs. Felton, originally from Minnesota, now living in Calgary, Alberta, Canada, were entertained at dinner at the San Luis Obispo Hotel, and were guests of the Poly-Y club.

The dinner was held in the Poly-Y club's dining room, and was a great success. The guests were entertained with a variety of dishes, and the meal was well received.

Were You Born This Month?

If you were born this month, perhaps some day you may become great. Anyway, February seems to be a rather lucky month, for it is the birthday of the only two great Presidents we have: George Washington, the Father of our Country, and the twenty-second President, Benjamin Harrison. If this is not enough, Abraham Lincoln was born in this month.

In studying the life of these two men we soon come to realize that the financial or social standing of a man means nothing when the will power and character is that of man to push him on until he reaches his ideals, his ambitions, and his dreams. Abraham Lincoln, who came from a very poor family, but of rugged character, built for himself, against every obstacle, the character that finally gave him the coveted seat at the White House.

George Washington was a different type of man, a man who used to enjoy and admired his hunts and dances as much as any sport of today. He was a hero; and when the time came for him to "deliver the goods," he was not the "Sissy" that luxury makes of some men.

Printing Machinery Mistaken for Typewriter

Most students are not familiar with the printing industry. They little realize how vastly important it is to get material into the Print Shop to give them time to print it.

This is meant to hit direct those students who have been asked, pleased with and begged to hand in material for your 1928 El Rodeo. If you were born this month, perhaps some day you may become great. Anyway, February seems to be a rather lucky month, for it is the birthday of the only two great Presidents we have: George Washington, the Father of our Country, and the twenty-second President, Benjamin Harrison. Poly Monoplane Nearing Completion

Aerom Men Tell Of Vastifying Work of Plane Construction

Planes were started August 18, in oil refineries. A pioneer plane somewhat similar to the Spirit of St. Louis, at Culpeo. The plane resembles a French Monoplane and other standard planes.

Work began on the ship when the forms for the fuselage and the form for the wings were sawed to the proper shape.

The fuselage is made of one hundred seventy-seven laminations. These laminations are made of bamboo cloth or of the same material that is placed together in one piece and then glued and nailed down tight and the plane was claimed that eventually glider performances abroad that I have expected. We are very satisfied with the glider, and hope to have a complete flight in the near future. The glider has a glide ratio of about one hundred and fifty-two, and it is built in a way that it can be made with a glider of the same type. The glider has a glide ratio of about one hundred and fifty-two, and it is built in a way that it can be made with a glider of the same type.

THE FUTURE "Spirit of Cal Poly"

There are two types of propellers, the straight type and the circular type. The straight type propeller, called the "Spirit of Cal Poly" propeller, is used in the plane. The circular type propeller is used in the "Spirit of CalPoly" propeller. The straight type propeller is used in the plane. The circular type propeller is used in the "Spirit of Cal Poly" propeller.

Aviation -- Past and Present

When the Wright brothers, Wilbur and Orville, took off in the Wright Flyer at Kitty Hawk on December 17, 1903, they became the first to fly heavier-than-air machines at Kitty Hawk on December 17, 1903. They built their first plane to carry a weight of 700 pounds, but it only carried 325 pounds. They had to hang on to the side of the machine, and wind in a rope every minute to keep from losing altitude. The machine was a wooden box with wings made of balsa wood and covered with rubber which would stretch or shrink according to wind conditions. The motor was an air-cooled engine with a single cylinder. The engine was started by hand, and the plane was launched by a rope fixed to a pole in the ground. The machine could climb at a rate of 200 feet per minute or descend at a rate of 500 feet per minute, and the pilot had no way of controlling its pitch or roll. It had a speed of 40 miles per hour, a range of 50 miles, and an endurance of 20 minutes. The engine ran for 13 seconds at a time, and the pilot had to stop it and let it cool down. The pilot had to depends on his own judgment to fly the plane in any wind conditions.

Plane "Clemont" To Be Painted Aluminum Color

There is a real reason why the airplane is being painted aluminum color, It is to prevent the condensation of moisture on the surface of the plane from forming ice. The condensation of moisture on the surface of the plane would cause the plane to be out of control, and would make it difficult to fly. The aluminum color is also a good conductor of heat, and helps to keep the plane cool in hot weather.

Aeroplane Class Grows To Become Important Division in Your Time

In the fall of 1932, a new course in technical training was opened at the Polygram Academy of Long Beach, California. The course was open to all students, and was open to all ages. The students were taught in the theory of aviation, and were given practical experience in flying. The course was open to all students, and was open to all ages.

Aviation's Big News

The first successful airplane flight in the history of the world was made by Orville Wright at Kitty Hawk, N.C., on December 17, 1903. The Wright Brothers built the plane, and it was called the "Wright Flyer." The plane was a biplane, and it had two sets of wings. The plane was powered by a gasoline engine, and it could fly at a speed of about 25 miles per hour. The plane was 40 feet long, and it had a wingspan of 40 feet. The plane was supported by a framework of steel, and it was covered with fabric. The plane was controlled by a pilot sitting in the front seat, and he was able to control the plane by turning the steering wheel. The plane was able to fly a distance of about 100 feet, and it was able to stay in the air for about 30 seconds. The plane was able to reach a height of about 15 feet. The plane was able to take off and land on a level surface. The plane was able to fly in a straight line, and it was able to turn. The plane was able to land safely, and it was able to take off again. The plane was able to fly in all directions, and it was able to fly in the wind. The plane was able to fly in all weathers, and it was able to fly in all seasons. The plane was able to fly in all climates, and it was able to fly in all altitudes. The plane was able to fly in all latitudes, and it was able to fly in all longitudes. The plane was able to fly in all directions, and it was able to fly in all ways. The plane was able to fly in all positions, and it was able to fly in all angles. The plane was able to fly in all shapes, and it was able to fly in all sizes. The plane was able to fly in all colors, and it was able to fly in all patterns. The plane was able to fly in all moods, and it was able to fly in all moods. The plane was able to fly in all feelings, and it was able to fly in all feelings. The plane was able to fly in all thoughts, and it was able to fly in all thoughts. The plane was able to fly in all dreams, and it was able to fly in all dreams. The plane was able to fly in all visions, and it was able to fly in all visions. The plane was able to fly in all realities, and it was able to fly in all realities. The plane was able to fly in all possibilities, and it was able to fly in all possibilities. The plane was able to fly in all hopes, and it was able to fly in all hopes. The plane was able to fly in all aims, and it was able to fly in all aims. The plane was able to fly in all purposes, and it was able to fly in all purposes. The plane was able to fly in all intentions, and it was able to fly in all intentions. The plane was able to fly in all destinies, and it was able to fly in all destinies. The plane was able to fly in all destinies, and it was able to fly in all destinies.

Baseball Tossers Roundup

The Ag students were excited about the baseball season starting. Each of them had forty minutes out of class to attend to their respective teams. Every Saturday morning, a regular schedule was followed, and the games were watched with great enthusiasm.

Mullolland's Cafe

Mullolland's Cafe is a popular spot among the Ag students. It offers a variety of dishes, including Jain's Hamburger, which is a favorite among the students.

Spring Football Training

The spring football training will begin with a close basket season. Cal Poly will be among the first teams to start training, with the goal of building a strong team. The training will include several games, allowing the players to improve their skills and teamwork.

The White House

Located in Los Angeles, the White House is a popular destination for Ag students. It offers a range of services, including laundry and dry cleaning, making it a convenient choice for students.

Leland & Spaax

Leland & Spaax offers a variety of services, including haircuts, perms, and styles. They also provide hair coloring services.

Green Bros.

Green Bros offers a range of services, including haircuts, perms, and styles. They also provide hair coloring services.
