Background statement:

During the summer of 1987, Chancellor Reynolds requested Cal Poly (as well as other CSU schools) to consider how to expand student enrollment to meet the growing need for higher education in the state. The Chancellor asked for a report by April 1, 1988. President Baker sought the advice of the Academic Senate (through its Long-Range Planning Committee) and the Deans' Council regarding growth to the current Master Plan limit of 15,000 and possibly beyond in the future.

The Long-Range Planning Committee and Deans' Council held some joint meetings, shared information, and consulted individuals outside Cal Poly for their expertise (such as demographer Harold Hodgkinson). However, no time was available to collect new primary data nor to conduct special studies. The attached report summarizes the findings and recommendations of the Long-Range Planning Committee. In addition, a complete set of the background papers prepared by the committee is on file in the Academic Senate Office.

The following resolution is based on the premises that some growth in enrollment is appropriate to Cal Poly, but that program addition or expansion should be carefully planned so as to respond to external pressures, to take advantage of academic opportunities, and to assure that necessary instructional and non-instructional facilities and services are available to support the increase in numbers.

AS-279-88/LRPC

RESOLUTION ON
ENROLLMENT GROWTH TO 15,000 FTE AND BEYOND

WHEREAS

Cal Poly has been asked to consider when and how it might accommodate an increase in enrollment at two levels -- to 15,000 FTE and beyond 15,000 FTE;

THEREFORE, BE IT

RESOLVED:

That the Academic Senate of California Polytechnic State University adopt the attached report prepared by the Academic Senate Long-Range Planning Committee specifying criteria and conditions for educational equity, composition of the student body, and program addition and expansion; and be it further
RESOLVED: That Cal Poly enter a first phase of growth in enrollment toward 15,000 FTE no sooner than the 1991-1992 academic year to allow time for the completion of approved facilities and for the approval of funds to alleviate other shortages (in both instructional and non-instructional facilities and services), as specified in the attached report prepared by the Academic Senate Long-Range Planning Committee; and be it further

RESOLVED: That Cal Poly prepare a comprehensive plan, in consultation with the Academic Senate, covering demographic projections, composition of the student body, program addition and expansion, facility location and timing, and community impact to determine whether and how Cal Poly could accommodate an increase in enrollment to a range of 16,600 to 17,400 FTE over the next fifteen years, as specified in the attached report prepared by the Academic Senate Long-Range Planning Committee.

Proposed By: Academic Senate Long-Range Planning Committee February 16, 1988 Revised: February 23, 1988 Revised: March 8, 1988
The following report summarizes the information used, issues raised, and, in some instances, the reasoning followed during Long-Range Planning Committee deliberations about future enrollment growth. This report builds on AS-220-86/LRPC, passed two years ago, which also addressed enrollment issues. Key excerpts from that Senate Resolution are attached. More complete information is available in a set of working papers on file at the Academic Senate office and from the sources cited in the Reference list attached to this report.

The report and recommendations are based on the following premises:

1. Some growth in enrollment is appropriate to Cal Poly, but the numbers depend upon the nature of the growth that would occur. In other words, growth cannot be thought of as simply expanding what we currently have. Instead, the Committee sought to consider the conditions under which Cal Poly could grow.

2. Enrollment growth at Cal Poly should respond to external demographic changes and pressures that affect higher education, especially in California.

3. Enrollment growth at Cal Poly must also recognize state expectations regarding CSU schools, particularly with respect to the enrollment of transfer students and support for the Community College system.

4. Plans for enrollment growth at Cal Poly should acknowledge Cal Poly's special role as a polytechnic university and the adopted mission statement of the University.

5. The conditions necessary to accommodate programmatic growth to 15,000 FTE include the provision of non-instructional facilities and services as well as instructional facilities and staff. (This basically reinforces and further specifies AS-220-86/LRPC.)

6. Finally, the conditions necessary to consider any programmatic growth beyond 15,000 FTE involve a rate of growth which is sensitive to Cal Poly's impact on surrounding communities; a rate of growth that could be assessed in stages; and a total amount of growth that could be handled by the campus. The Committee was reluctant to indicate a maximum number for future enrollment, because it will take further study to determine how well the conditions for growth beyond 15,000 can be satisfied. To assure that the conditions which must be met in order to accommodate growth would not be overshadowed by the number itself, the Committee was willing to refer only to a range, with the understanding that it must be tied to a
plan that would show how the list of conditions in the recommendations which follow could be met.

I. Demography and Educational Equity

A. Discussion and Findings

The committee examined data on nationwide trends in higher education, on high school graduation and matriculation by ethnic group, on demographic change in California, and on enrollment characteristics of Cal Poly. The committee also met with demographer Harold Hodgkinson to discuss some of the ramifications of change in California for Cal Poly. From this, several key factors emerge:

1. The absolute number of high school graduates is currently declining, but will turn around (in California in 1990);

2. College students are becoming older, on average, and less-likely to enroll full-time and/or complete a degree within 4-5 years. At Cal Poly this decrease in the average student load means that the total number of students enrolled is about 10 percent more than the FTE they generate (i.e., it takes about 15,620 students to generate 14,200 FTE);

3. The increasing non-white population in California is not being reflected to the same extent in college enrollments. (Asians participate at a higher rate; Blacks and Latinos at a lower rate than whites.) Cal Poly enrolls even fewer non-white students than most other CSU schools;

4. Ethnic groups vary significantly according to their choice of major or occupation and their college preferences;

5. Overall, the changing demography in California means that Cal Poly will not be able to continue to draw so many of its students from its traditional pool of predominantly white applicants;

6. The concept of educational equity requires that Cal Poly increase its proportion of under-represented students; yet attaining educational equity requires extraordinary efforts by colleges and universities and special attention to high school preparation and recruiting.

B. Recommendations

1. That any increase in enrollment at Cal Poly take account of the beneficial effects of diversity which might arise from the admission of CSU qualified under-represented students and be consistent with educational equity plans already approved by the schools and the University;

2. That Cal Poly support, expand or create the following kinds of programs (with
sufficient funding) to draw and retain more ethnic minority students: (1) To increase eligibility and recruitment through high school counseling, and "feeder" or "farm" programs at specified community colleges for certain majors to effectively guarantee transfer to Cal Poly as juniors; (2) To increase community support through residential choice on and off campus, and appropriate social opportunities; (3) To increase retention through faculty and staff models and mentors, academic advising and personal counseling, easing procedure for changing majors and providing students with financial aid;

3. That Cal Poly expand student support services, including record keeping, food service and book store supplies to accommodate the needs of students with different cultural backgrounds and of part-time students and others who do not progress at a "normal" rate or enroll continuously from quarter to quarter.

II. Composition of the Student Body

A. Discussion and Findings

The committee found a need for clarification of the current percentages of undergraduate transfers vs. first-time freshmen. While common knowledge holds that Cal Poly's enrollment represents the reverse of the CSU system in general, the committee found that this is only true of Fall Quarter (which ranges from 42 to 49 percent transfer students). Indeed, data for enrollment across the entire academic year revealed that the percentage of undergraduate transfers has ranged in recent years between 54 and 60 percent — not far off the state mandate of a minimum of 60 percent.

Further, the Master Plan Renewed calls for four-year institutions to "maintain lower-division enrollment systemwide at no more than 40 percent of total undergraduate enrollment" (p. 15). For Fall Quarter 1987 enrollment at Cal Poly consisted of 36.2 percent freshmen and sophomores and 63.8 percent upper division students. The only school which enrolled more than 40 percent in the lower division was Science and Math (at 46.7%).

Discussion of any need to increase the relative percentages of undergraduate transfer students vs. first-time freshmen reflects countervailing forces at Cal Poly.

On the one hand, the state legislature and Master Plan Renewed report insist that CSU schools enroll at least 60 percent upper division students. Reasons are partly financial -- it is significantly less costly for students to attend community colleges than CSU or UC schools. In addition, under-represented minority students are more likely to attend community colleges initially, so increasing the proportion of transfer students can also increase the prospects for achieving educational equity goals. Finally, fulfillment of General Education and Breadth requirements at the community colleges relieves CSU schools of much of this burden (both on facilities and faculty), allowing more attention to advanced study (upper division courses) in the CSU.

On the other hand, Cal Poly's practice of requiring students to declare a major upon admission as freshmen means that most majors are designed for a four-five year sequence. Further, many of
the polytechnic majors require careful course sequencing to ensure that students have completed pre-requisites before entering advanced courses. Such sequencing has been difficult to coordinate with community colleges, especially in specialized fields where the community colleges cannot reasonably be expected to provide all of the necessary pre-requisites to allow students to transfer to Cal Poly as juniors.

A further complication at Cal Poly is that many students who may be considered upper division students based on accumulated quarter units have not completed their lower division General Education and Breadth courses either prior to entering Cal Poly nor during their first two years at Cal Poly (if they enter as first-time freshmen).

The role of graduate education has received less attention. While acceptable according to the Cal Poly mission, "to enrich . . . the undergraduate experience," graduate programs are small (currently constituting less than 10 percent of all Cal Poly students) and unevenly distributed in the University. (For example, they range from only 2.5 percent in liberal arts to near 19 percent in Professional Studies and Education.)

The mission statement does not address Cal Poly's relative responsibility to education in the state versus a more local population. Cal Poly occupies a unique position in the CSU system as a university with nationwide, even worldwide, recognition in some fields. Yet, there is a demand from students who graduate from high school and attend community colleges in the Central Coast region to attend Cal Poly.

B. Recommendations

1. That schools or programs which enroll less than 60 percent upper division students attempt to redesign their curricula (especially pre-requisites and sequencing of courses) to articulate with appropriate preparation at community colleges so as to facilitate the admission of more transfer students;

2. That graduate programs be allowed to expand and new graduate programs be added that fit the polytechnic character of Cal Poly and support existing undergraduate programs;

3. That Cal Poly provide support services appropriate to the educational, financial and social needs of graduate students to the extent that they differ from undergraduates;

4. That Cal Poly continue to give some admission priority to the student population from the Central Coast.

III. Program Characteristics

A. Discussion and Findings

The committee looked primarily to Cal Poly's mission statement to discuss what kinds of programs might be expanded or added in the future. Thus, the committee was concerned with maintaining, indeed capitalizing on, the special polytechnic character of Cal Poly.
In addition, future employment prospects for graduates are critical. However, projection of future demand for specific programs depends upon reliable economic forecasting, which was not available to the committee. (The committee plans to submit a supplementary forecasting report.) Further, individual members lacked sufficient expertise to assess the prospects for specific areas. The committee discussed a few possibilities for the future, such as biotechnology, but concluded that it would be more responsible to establish some criteria for evaluating future program proposals. Thus, proponents of a particular program could be asked to conduct a market analysis and provide the evidence of future demand for the field at the time that they submit a proposal. This approach provides flexibility for the University -- both to avoid remaining committed to programs which are currently popular but may decline in the future as well as to take advantage of new opportunities as they arise.

Key findings include the following:

1. Recent employment trends and projections for the future show that not all currently impacted programs will continue to be in high demand;

2. The Cal Poly mission statement emphasizes polytechnic education and the application of scientific knowledge to contemporary problems;

3. There are opportunities for an interdisciplinary approach to instruction between schools to take advantage of the polytechnic character of Cal Poly.

B. Recommendations

That enrollment increases in programs at Cal Poly be considered when there is a demonstrated demand for employment in that field continuing to and beyond the year 2000.

IV. Growth to 15,000 FTE

A. Discussion and Findings

Although Cal Poly has been budgeted at 14,200 FTE since 1977-78, enrollment has been projected to increase to 14,600 in 1990-91 and to 15,000 in 1991-92. The committee felt that this schedule should be delayed one year, to wait out the decline in high school graduates which reaches the bottom of the trough in 1990. With respect to programs, the increment from 14,200 to 14,600 has already been allocated to programs which have been approved but not yet implemented.

Facility planning has proceeded accordingly with recent approval by the CSU trustees of key instructional facilities. However, the committee found no assurance that non-instructional facilities and support services would keep pace with the instructional facilities. For example, both the Administration Building and University Union were built for fewer than the current number of students (13,000 and 12,000 respectively). Also, certain computing services and the library budget for periodicals and new acquisitions are insufficient to support current
enrollment. Further, outdoor recreation space is at a premium and students lack indoor space for studying and socializing. On the other hand, parking is more than sufficient -- complaints stem from inconvenience rather than lack of space.

Key findings include the following:

1. A number of new programs which would generate additional FTE have been approved but not implemented;

2. The number of high school graduates in California is expected to reach a low point in 1990 and then begin to increase again;

3. Some facilities, such as the Recreation Center, Dairy Science Instruction Center, addition to Business Administration and Education, and new Faculty Office Building, designed to meet current deficits and/or to support enrollment growth to 15,000 have been approved by the Trustees, but remain subject to continued funding as part of a state-wide bond issue;

4. Other facilities, such as the University Union, Administration Building, Kennedy Library, outdoor recreation space, and student services (even after the new Student Services Building is completed) are inadequate to meet current enrollment levels and/or are inadequate to support an increase to 15,000 FTE, and no specific plans have been approved to expand them;

5. Academic Senate Resolution AS-220-86/LRPC (approved by the President, July 23, 1986) states that facility deficits must be met before any enrollment expansion be considered.

B. Recommendations

1. That the first phase of growth toward 15,000 FTE accommodate programs which have been approved but not yet implemented;

2. That Cal Poly enter the first phase of growth in enrollment toward 15,000 FTE no sooner than the 1991-1992 academic year to allow time for recruiting and counseling efforts to reach students who will be at the forefront of the new increase in high school graduates;

3. That Cal Poly consider entering a second phase of growth toward 15,000 after the approved facilities have been completed and funds have been approved to alleviate other shortages (including non-instructional facilities and services).

V. Extent and Phasing of Growth Beyond 15,000 FTE

Growth beyond 15,000 is complicated by many factors. A state-wide increase in high school graduates after 1990 creates a need for additional capacity in the CSU system. Indeed, some enrollment growth can be beneficial to individual schools. Increases in enrollment can bring
more resources to the University and permit program expansion or addition without jeopardizing existing programs. Further, departments which have been unable to hire any new faculty because of lack of turnover would benefit from an increase in enrollment that would generate new tenure-track positions.

However, because growth beyond 15,000 FTE goes beyond the existing Master Plan for Higher Education and would create a number of impacts, an Environmental Impact Report would have to be prepared. To do so, Cal Poly would need to address how rapidly it would grow, what facilities and other resources would be required, how students would be housed, and how traffic congestion would be handled. The rate and extent of growth would affect the image and character of Cal Poly, both visually and educationally. Basic infrastructure is apparently sufficient (water and sewer), but the campus has very limited space for new buildings within a ten-minute walking radius without giving up open space. Further, internal circulation (of cars, bicycles and pedestrians) becomes more difficult to manage as numbers increase. Just as importantly, unless Cal Poly provides more housing on campus, all new enrollment would lead to a greater demand for student (and faculty and staff) housing in San Luis Obispo and other nearby communities. Already, many of these face constraints on growth due to limits on water supply, sewage treatment and/or buildable land. More commuting would mean more cars, more traffic congestion and more need for parking. Thus, a careful plan to address these issues would be essential.

Key findings include the following:

1. The number of high school graduates in California is expected to increase steadily after 1990 (at about 3.7 percent per year);

2. Cal Poly's polytechnic emphasis is especially suited to prepare students for future jobs in the state;

3. Some growth in enrollment can create opportunities for educational diversity;

4. Some growth in enrollment can create opportunities for new faculty positions in departments which do not expect to experience any turnover;

5. Some growth in enrollment can bring new resources to the University;

6. The campus infrastructure (utility systems) have excess capacity (the most limiting of which are sewage transmission lines);

7. Cal Poly's campus has a limited amount of space remaining to construct buildings within a 10-minute walking radius;

8. New structures increase the density of development and supplant open space on the campus; whereas development in the surrounding area places prime agricultural land at risk;

9. Students rate the geographic setting and appearance of the campus second only to its academic reputation as reasons for selecting Cal Poly;
10. Vehicular ingress and egress from Cal Poly is already inadequate (especially in the event of any areawide emergency);

11. Cal Poly has a significant impact on overall population growth, housing and traffic congestion in the surrounding community, at the same time as it contributes to the area's economy;

12. The growth of the City of San Luis Obispo and surrounding communities is constrained by limitations on water supply, sewage treatment capacity, and buildable land;

13. Population in San Luis Obispo County is expected to grow at about 2.3 percent per year through the year 2000;

14. The communities in San Luis Obispo County which have the greatest capacities for growth are in the southern and northern parts of the County, farthest removed from Cal Poly and least well-served by public transportation;

15. Academic Senate Resolution AS-220-86/LRPC (Approved by the President, July 23, 1986) states that "expansion should only occur after a detailed expansion plan is developed."

B. Recommendations

1. That Cal Poly consider a modest expansion in enrollment beyond the 15,000 FTE in the current Master Plan for Higher Education;

2. That such growth must fit within the parameters of community growth policies and constraints;

3. That the first phase of growth beyond 15,000 FTE be considered no sooner than two to three years after enrollment reaches 15,000 FTE;

4. That such growth occur in increments, whereby two to three years of growth (of 400 FTE per year) are followed by two to three years of stabilization to permit time for catching up and for assessment of the impacts of growth before considering a new phase;

5. That Cal Poly consider each new phase of growth after facilities have been completed and funds have been approved to alleviate any shortages in instructional space, non-instructional space, and supporting services;

6. That Cal Poly maintain its visual image of smallness and rural setting, by limiting the size (height and bulk) of new structures, by sensitive placement and landscaping of new buildings, by preserving open space within the campus, and by maintaining open land around the campus;
7. That any growth which required the conversion of University agriculture land from its present use be done so after consultation and adherence to University land use policy recommendations;

8. That Cal Poly maintain its ambience of smallness and intimacy by retaining small class sizes, early affiliation of students with a specific program or department, participation in student activities and access to student services;

9. That Cal Poly consider reducing its impact on community housing and traffic congestion by adding an attractive variety of residential facilities on campus (including necessary infrastructure and supporting services);

10. That Cal Poly consider limiting vehicular access to the campus; create more incentives to encourage commuting by means other than the automobile; and provide more facilities for non-auto-users;

11. That Cal Poly assign a full-time professional staff position to campus planning to work with the Academic Senate Long-Range Planning Committee and coordinate a comprehensive plan, covering demographic projections, composition of the student body, program addition and expansion, facility location and timing, and community impact to determine whether and how Cal Poly could accommodate an increase in enrollment to a range of 16,600 to 17,400 over the next fifteen years.

Selected excerpts from AS-220-86/LRPC, "Revised Enrollment Recommendations"

List of Long-Range Planning Committee Working Papers on Enrollment Growth

References
"There is strong consensus . . . to hold the size of Cal Poly at 14,200 FTE until such time as the current shortages of facilities (e.g., classrooms, laboratories, faculty offices) are corrected." Data for 1985-1986 showed that Cal Poly only had sufficient facilities to support an enrollment of 11,900 FTE (or a facility deficit of 2300 FTE). "This would suggest that any increase in enrollment beyond our authorized 14,200 should only occur when currently planned physical plant expansion projects are completed in 1990-91 . . . ."

The Senate approved the Long-Range Planning Committee recommendation that the following issues must be addressed before an increase of 800 FTE could be supported: "(1) How will these additional 800 students be distributed among new and existing programs: (2) How and when will the whole range of additional staff and facilities be added to handle these new students? . . . Any such expansion should only occur after a detailed expansion plan is developed. Such a plan would address the number and timing of new students, their level (freshman, transfer, or graduate) and their school or area. It would also address the timing and location of facilities to serve these students. Such facilities would include not only classrooms and laboratories, but also faculty offices (at least 50 at present student-teacher ratio on campus), parking, recreation (land and facilities), housing and support staff. . . . Such facilities should be in place before students."

Subject: RESOLUTION ON ENROLLMENT GROWTH TO 15,000 FTE AND BEYOND (AS-279-88/LRPC)

I would like to commend the Academic Senate and particularly the members of the Long Range Planning Committee for the excellent work on the issues related to enrollment growth at Cal Poly.

The resolution and accompanying report will provide excellent guidelines for enrollment planning and I intend to adopt the general framework for planning proposed in the report.

The availability of resources to accommodate growth is an important consideration in the development of specific plans. Clearly, we have well defined State standards for instructional resources such as faculty positions, classroom and laboratory space, faculty offices, operating expenses and instructional equipment. Standards for non-instructional services and facilities are not so well defined and although we may establish needs in these areas, we should not expect to receive state support that is beyond what the practice is or will be in the CSU at the time we propose an expansion of enrollment.

Certainly there are many benefits to the timetable and growth rates proposed in the report and I intend to try to implement the recommendations related to pace of growth. At the same time, we will have to consider that the needs of the State, the expansion rates of the system, and the local constraints, could influence the timetables.

I am forwarding a copy of the recommendation on enrollment growth from the Academic Deans' Council for your information. In essence, I find that these recommendations are consistent with the Academic Senate's Resolution and report. In addition, I have asked Vice President Wilson to develop in consultation with you a process to bring together academic planning and enrollment planning.

California Polytechnic State University
San Luis Obispo

ACADEMIC DEANS' COUNCIL

RECOMMENDATIONS ON ENROLLMENT GROWTH

Background:

The 1962 Master Plan for the Physical Development of the California State Polytechnic College, San Luis Obispo campus, contains a reference to a decision to master plan the non-metropolitan State Colleges at 12,000 F.T.E.. The 1968 Master Plan for Campus Physical Development, California State Polytechnic College, San Luis Obispo, also references the 12,000 F.T.E. figure which the campus anticipated reaching in 1974. However, in 1969 Assembly Concurrent Resolution 151 (ACR 151) was passed. ACR 151 altered the time of day portion of the then current space utilization standards with the effect that Cal Poly's master planned capacity "automatically" went from 12,000 F.T.E. to 15,000 F.T.E.. This "automatic" change was first officially recognized when the 1975 campus Master Plan for Physical Development was approved.

In 1977, the State experienced a shortage of funds, oversubscription at some campuses, and excess capacity elsewhere in the System. Considerable interest was generated in the concept of "redirection". This interest was translated into supplementary budget language which had the effect of freezing Cal Poly's enrollment at its then current level of 14,200 F.T.E.. In 1987, the campus was granted an additional 100 "non-capacity" F.T.E. to provide funding for its Cooperative Education Program. This action had the effect of raising current F.T.E. to 14,300 and the campus Master Plan ceiling to 15,100 since the additional 100 F.T.E. were non-capacity.

Physical facilities currently under construction and/or scheduled for completion of construction by 1990-91 would bring the instructional physical facility capacity of the campus to the 15,000 F.T.E. level reflected in the current Master Plan for the Physical Development of the Campus (funding for some projects is dependent on the passage of the Higher Education General Obligation Bonds during the election in November 1988). The academic deans recognize that these capital outlay projects were constructed based on projections of F.T.E. and that completion of the projects could be considered a tacit agreement to grow to the 15,000 (15,100) ceiling.

An assessment of Cal Poly's mission was undertaken by the Academic Planning Committee in 1982 and after consultation with the Academic Senate, a new Mission Statement was approved and promulgated on September 12, 1983. That Mission Statement is incorporated in the Campus Administrative Manual as Administrative Bulletin 85-3 dated November 20, 1985. The academic deans affirm the fundamental objectives of the Mission Statement and the role of that document in planning future growth for the campus.
General Comment:

The Academic Deans' Council commends the Academic Senate Long Range Planning Committee for its thorough and thoughtful analysis of the question of future growth for Cal Poly. The Council also endorses in general the content of Academic Senate Resolution AS-279-88/LRPC. The Deans' Council felt that less specificity than was contained in some of the Senate recommendations was desirable in order to maintain flexibility for dealing with a future which is difficult to predict with precision.

Enrollment Growth to 15,100 FTE

Recommendations

A. Educational Equity

Any enrollment growth scenario for the campus should be viewed as an opportunity to identify, encourage, and support the enrollment and academic success of students from currently underrepresented segments of California society.

B. Ratio of Lower-division to Upper-division Enrollment

_A Master Plan for Higher Education in California 1960-1975_ (p. 59) contained a recommendation that "the percentage of undergraduates in the lower division of both the state colleges and the University be gradually decreased ten percentage points below that existing in 1960 (estimated to be 51 per cent in both segments) by 1975."

_The Master Plan Renewed: Unity, Equity, Quality, and Efficiency in California Postsecondary Education_ the report of the Commission for the Review of the Master Plan for Higher Education (July 1987) contains the following language under Recommendation 3., page 15: "Both four-year segments shall maintain lower-division enrollment systemwide at no more than 40 percent of total undergraduate enrollment..." (It should be noted that this recommendation, like the report itself, has not as yet resulted in legislative implementation.)

Enrollment planning at Cal Poly should incorporate the goal for the campus of 60 percent upper-division and 40 percent lower-division. The statewide mission of Cal Poly, its curricular structure, and its location should be taken into consideration in reaching this goal.

C. Graduate Enrollments

Cal Poly has chosen to place its emphasis on undergraduate education and should continue to do so. However, within this context, as the importance of advanced study at the master's level in areas consistent with the mission of the campus becomes established, the campus should respond in a positive fashion.
D. Program Priorities

The first phase of growth toward 15,100 F.T.E. should accommodate programs which have been approved by the campus and the Chancellor’s Office but which are not yet implemented.

Cal Poly should make its first incremental move toward 15,100 F.T.E. at that time when instructional facilities and other resources, including availability of qualified faculty, are adequate to accommodate the enrollment growth, and assuming that there still exists a strong applicant pool.

Cal Poly should make subsequent incremental moves toward 15,100 F.T.E. when, in addition to sufficient faculty and adequate instructional facilities, provision has been made to address other shortages such as non-instructional facilities and services (i.e. library holdings, computing capability, student housing, etc.)

E. Environmental Factors

Considerations of growth in the University should occur in concert with the surrounding environment and especially with regard to the influence on the community of San Luis Obispo.

Care should also be given to maintaining the positive image of Cal Poly as a place which is concerned with the individual and which is characterized by opportunities for students to build close relationships with faculty, opportunities to participate in student activities, and access to appropriate student services.

**Growth Beyond 15,100 F.T.E.**

Recommendations

A. Cal Poly should consider a modest expansion in enrollment beyond the 15,100 F.T.E. which is in the current campus Master Plan for Physical Development.

B. Additional growth should be consistent with the mission and educational equity goal of the campus and should occur in small increments whereby growth periods are followed by a period of stabilization and assessment of the impacts of growth before considering a new phase.

C. Planning for any growth beyond 15,100 should include special consideration of the effect of such growth on the ambiance of the campus and the community.

D. Planning for growth beyond 15,100 F.T.E. should take into account the impact on both the instructional program and student life programs.

April 1, 1988
Memorandum

To: Charles Andrews, Chair
Academic Senate

From: Warren J. Baker
President

Subject: ACADEMIC SENATE RESOLUTION ON
ENROLLMENT GROWTH AND LONG-RANGE PLANNING

This is a follow-up to our discussion this morning at which time you asked for a report of what uses had been made of the Academic Senate report and resolution on long-range planning and enrollment growth. As I noted in my response to Academic Senate Chair A. Charles Crabb on May 2, "I intend to adopt the general framework for planning proposed in the report." I also noted that the report adopted by the Academic Senate contained a number of important issues which needed to be addressed in the planning process.

It was originally intended that we would be meeting with the Chancellor and the Chancellor's staff late in the Spring for a follow-up discussion on the results of the campus' review of the enrollment growth issue during the year. That meeting was originally scheduled for June 10 and in preparation for that meeting a number of documents were being put together as background material which we intended to share with the Chancellor and the Chancellor's staff in advance of the meeting. One of those documents to be included was the Academic Senate resolution and report.

However, before the materials were completed, the meeting with the Chancellor was postponed and has yet to be rescheduled. In addition, there is an overall review within the CSU system of enrollment for the future which is just now getting underway. This review, in concert with the studies being conducted by CPEC at the direction of the Legislature, will provide additional information and guidance for our own planning.
