Five Poly coed finalists, selected from 61 contestants by the officers of the ROTC's Rainbow and Bandit, were voted for as candidates for the Fifth Annual Military Ball, to be held at the Officers' Club, San Luis Obispo, Feb. 19.

The candidates are Ann Boyer, Dorothy Fuller, Joyce jintlewie, Ruth, and Alice Stud. The competition for this year's winter of the contest will be one of the most keenly contested ever, according to Capt. Howard Gillis who will serve as chairman of the board of judges.

Three of the five finalists have "wavered voluntarily" to enter the competition. The other two have "been drafted" to fill the spots vacated by the "wavers." The five finalists won't decide the final outcome, according to Capt. Robert Farmer, Capt. Lt. Gene Peltier, and Capt. Lt. Tom Kennedy.

The candidates will be introduced by vote and select one of five pictures taken of them. Voting will be done at the ROTC administrative office. Prior to the dinner there will be a vote which will be held at the Tower Cafe for senior ratees and their dates.

Chalkboard Notices
Get Policy Review: Rules Now In Effect

Use of chalkboards by student organizations for notices is once more objected to. In a letter to the Mustang Flying Club, Everett M. Chandler, instructor in art, expressed his objection to the use of chalkboards by student organizations, as they are allowed to use chalkboards in class. He feels that use of policy and rules concerning the use of the chalkboard should be made public. He feels that chalkboards are being used for advertising purposes by student organizations, which is contrary to the use for which they were intended.

The rules state, "Chalkboards may be used for notices of policy and rules concerning the use of the boards, including the posting of notices, election of committees, the announcement of meetings of classes to post notices. As a consequence, student organizations are permitted to use the chalkboards to post notices for their own purposes without restriction."

This has turned out to be a violation of the original intention of the policy, he feels. "The college administration has found many instances of this rule being violated. The college administration, as a result, feels that the policy should be changed and that the students should be notified of the change."

The administration feels that the use of the chalkboards is contrary to the use for which they were intended.

OPTIMISM SEEN IN RVOT TESTS

Confusing criticism was raised Tuesday night during what appeared to be a meeting of interest to all those on RVOT—the proposed closed circuit student radio station. The "Radio Voice of Poly" spoke for the first time and placed itself more than an hour under the waiting eyes of students and faculty. Browning electronics, major heading the program which was to be held at the Manhattan University closed circuit station, KKPRT, was active in the testing.

RVOT was heard in several locations on campus. Browning said, however, because of interference circuits and loose lines, the listener was unable to make out all the information Browning told of possibilities in increasing the signal as much as five times by another station (one of the transmitters was being run at half power) and that testing was expected to show at least a very real possibility that RVOT can become successful but more tests and work are still needed before Browning said.

Queen Race Draws Three; Need More

At least three votes had stepped forward earlier this week to contest for queen of Poly Royal, April 26-27. At least for a posterior date according to a special reviewing committee, the Poly student body voted by election May 13, to select a queen for the Poly Royal gallon, and Poly Pals, in another special meeting, voted to select a queen for the Manhattan University closed circuit station. KKPRT, to active in the testing.

All Chillun' Can Get Rhythm

A new dance class, "Creative Rhythm," is now being offered for chil-
dren of family staff and students by the Physical Education Depart-
ment. Age limits are 8 to 10.

The first class will meet Saturday morning, Jan. 18, in the gym an-
naments, from 10 until 12 noon. Registered dress for children are pedal push-
ers or gym-type costumes. Ballet shoes may be used although bare feet
are preferred.

Behavioral are now underway and the program is scheduled for presentation in TCU, Feb. 29-Apr.

Costume is the only one required. Students will be grouped by adults from different school depart-
ments. Cast members include: Bob Brown, John Rose, Bertha Testa,

The class is taught by: A. C. Moore, Alvin Hunter, Patsy Blevins, and Patsy Pat-

Boxing Team Faces Chico "Wildcats" In Season Opener

By Jack Ractor

"I have learned better than to make predictions, however, I believe our boys have a good chance of beating the last year's champion Poly Bears.

The Cal Poly Bears will now enter their 1957 campaign against the Chico State in Chico where they opened their 1957 season against the Wildcats Saturday night.

Although the Wildcats have not been put through their paces fully this season, Coach Tom Les and his Mustangs boast four former Cal State in Chico where they opened their 1957 season against the Wildcats Saturday night.

This combination could give Poly one of the strongest boxing teams in the history.

The following is the 1957 boxing schedule. Poly's first home meet will be against L.A. State Feb. 7.

Chico State in Chico takes place Feb. 7.

Mr. P.H. Bradlow, Mr. Charles Hanks is issuing a call for golfers. Practice is being sponsored by the ski club. All ski enthusiasts are invited to enter in the first Poly Ski Team. It would be sponsored by the ski club. All ski enthusiasts are invited to enter in the fourth Wednesday of the month at 106 pounds.

Coach Charles Hawks is issuing a call for golfers. Practice is under his direction and he has plans for numerous trips into the Yosemite-Badger Pass area this year. Anyone who is interested in skiing is asked to attend the meetings of the ski club and arrangements can be made for them to go skiing. Meetings are held every second and fourth Wednesday of the month at 106 pounds.

What a MATHEMATICIAN can do at IBM

First of all, what's it all about? What does an IBM mathematician do all day? In his own words, "I keep on learning. I learn something different every day. I learn from my colleagues, from different clients—advising them on the use of their IBM electronic data processing computers; I also consult with these customers and analyze their scientific and technical problems for solutions by IBM. Occasionally, I'm asked to write papers, and give talks and demonstrations on electronic computing. All in all, it's pretty fascinating, something new pops up every other day. In other words, John is a full-dledged computing expert, a mathematician, an important and very important person in this coming age of automation through electronics.

Since the IBM laboratories are always devoting newer and faster ways to solve the problems of science, government, and industry, an Applied Science Representative has before him a varied and interesting task. He may be asked to consult with a government agency on the use of their data processing center for solving problems of national importance. He may be asked to consult with a manufacturing company on possible new products and improvements.

Many of these representatives are mathematicians. In one sense they are mathematicians. They are involved in research, development, manufacturing, etc. They may be consultants to a company, or work for IBM directly, or both.

The aircraft people decided that they couldn't afford to wait long to get their hands on the best available equipment. The first model IBM computer program that saved the organization over 100 days of operation is running smoothly.

Another service that John performs is the constant re-arrangement of each customer's IBM operation. Occasionally, a customer may purchase a machine to suit a particular need. Periodically, in fact, John brings IBM customers together—just to talk over what's happening in each other's business—how everybody else handles that old bugbear in any industry... details.

New field for Mathematicians

Mathematics is an ancient and ever-advancing science that contains many forms. It shouldn't surprise you then that it took some time before John J. delivered the one breed of mathematicians that seemed custom-tailored to his ability and temperament. John is an Applied Science Representative, working out of the IBM office at 123 43rd Street, N. Y. C.

Promotionwise, John has come a long way since that time. He's now an Applied Science Representative in the one business, most responsible office in the IBM organization—mid-town Manhattan.

With his wife, Katherine, and daughter, Lisa, 80 months, and John.
Indian Electronics Major Like Education Methods

by Ben Adams

Were you a student in India, you would need to fail only one of the three-hour exams given on all subjects in the three-year course in order to flunk out of the entire course! So say A. B. Chhitra and Singh Pritpal Hans of Punjab, India, who have entered Cal Poly this quarter to study electrical engineering. The two men, who are cousins, each held a diploma in the field from an English University in Punjab.

"Having gone as far as we could go in electrical engineering in India, we were up to the United States," stated Hans.

Hans and Chhitra are noticeable on campus for the turbans which they wear. They explain that they are wearing turbans because of the Sikh religion, which prohibits cutting their hair, shaving, or being seen in public without their turbans. If they violated these taboos, they said, they would be ostracized not only from their religion but from their homes as well.

India Goes Modern

Education in India presents other difficulties for its students, the two relate. For instance, each student must go to the district of the neighboring states, the English language, and the language of the religion in order to study three subjects. The students also study the history of each nation very thoroughly.

"India is becoming more modern every year," Hans continued. "We are making great steps in the establishment of more schools and modern homes in India. Education there has improved much after those of the United States," said Hans, who lives in Model Town, Ludhiana, Punjab. "The homes there have been constructed in the pattern and design of American living."

Marriage Customs

Not since 1040 has a member of the Sikh religion been allowed to have more than one wife, the men said. There are some love marriages allowed now, but the old custom of the parents arranging the marriage may not work, but must attend to their homes and families. Sikhism is a non-god and child care are taken for the husband, but as in other homes all over the world, most of the domestic duties of the household are the wife's.

Hans and Chhitra arrived in the United States by way of San Fran-

Trouble From Violators

Parking around the post offices continues to be a service problem, which should be brought to the student's attention, state security chief, Robert Krug. The violations Krug pointed out are all violations of the State Traffic Code, namely; parking on the wrong side of the street, and over time parking.

In other parts of the campus, over time parking remains as the major student violation.

Have a REAL CIGARETTE...have a Camel

"The most important thing to me is a cigarette of any kind. Camelts always taste good and rich, never thin or flat. They're my smoke."

Margaret Blyenga

FOREIGN CORRESPONDENT AND POLITZER PRIZE WINNER

Discover the difference between "just smoking"...and Camelts!

Taste the difference! No fade, frill, or fancy stuff simply the finest taste in smoking. Camelts are rich, full-flavored, and deeply satisfying.

Feel the difference! The smooth Camel blend of quality tobaccos is unequalled for smooth smoking. Camelts never let you down.

Enjoy the difference! More people smoke Camelts year after year, than any other cigarette of any kind. Try Camelts—they're really good!
