College Counseling Center offers aid to students

The College Counseling Center offers services in vocational, educational, and personal counseling to students, in accordance with the needs of the institution.

In the College Counseling Center, a well-equipped test center where students can obtain vocational and educational information. The counseling and testing services are available to students and teachers.

In addition to the normal guidance and testing services, the center also provides five comprehensive test programs available. The testing lasts 30 days and shows more of the student's strengths and weaknesses.

There are five testing programs during the summer and one in September.

The Center has five counselors—mental health, one test clerk, and a secretary. Students are welcome to inquire about the tests or to review their test results with a counselor at any time.

College will sponsor migratory workshop

A workshop for teachers of children of migratory workers will be held August 21-23.

The workshop is sponsored by the Multi-County Program for Migrant Children to part of the California Master Plan for Migrant Education and the College.

In addition to the usual guidance and testing services, the center also provides five comprehensive test programs available. The testing lasts 30 days and shows more of the student's strengths and weaknesses.

College entrance torn up for dorm sewer

A $120,000 expansion program is under way today as men and machines dig the ditches for the sewer lines for the new dormitories.

The installation of sewer lines in the two dormitories is part of the procedure for constructing the buildings. The installation of sewer lines in the two dormitories is part of the procedure for constructing the buildings.

Workshop student reviews two weeks

Most high school students this summer are thinking only of surf, sand, and sleep. But 38 students who are editors, sportswriters and photographers are not. They are attending the 1957 Los Angeles Herald-Examiner and California State Polytechnic Journalism, Radio-TV, and Public Relations workshop. The workshop is in progress a total of thirteen days. It started the sixth of August and ended it at the end of the tour Chuck Green, a senior of the workshop took a tour custom made to the pace, the drat day the program was reached. The tour covered the institution of the university. The tour covered the addition of pig, poultry, and plant studies of every student enrolled. The tour covered such additions to the campus. The tour covered the addition of pig, poultry, and plant studies of every student enrolled.

The easiest day by far was Wednesday evening when there was a record sock hop. The only way to describe the response to the sock hop is to say it was a "flop."

To have a class in which the students are enjoying themselves is unusual but that is the only way to describe the class in photography. Thursday. In this class the students were given a basic course in the handling of a camera.

They were then turned loose on the campus to take photographs of anything they wanted. Many took pictures that looked professional. The students found the darkness and printed pictures that they took. Most of the students thought it would be much harder than it really was. Again to change the pace of all work and no play, we went into town and watched two movies, "Double Trouble" and "Don't Bet on It," just the type of movies that teachers take student to.

The easiest day by far was Saturday. That day we went downtown to the beach at Avila and west, amusement. The only big difference between this beach and the ones down by Orange County is the water temperatures. Comparing the air temperature told between the two areas the water isYeller here.

Running morning after sleeping in until 8:00, this going to church was wash day. You should have seen 14 guys try to do the ironing.

If you were by the dorm that morning and looked over the second floor you could see hundreds of girls down stairs, "Do I hear 26c for ironing?" After the dance, the students in the workshop went back to their respective rooms. The dancing lasted until 1:00 a.m. while Cadet Johnson prepared to carry them to their respective rooms. The dancing lasted until 1:00 a.m. while Cadet Johnson prepared to carry them to their respective rooms.

The rest of the classes concerned with foreign student clerk, and election stories. In the evening at 8:00 the easy part started. A dance was held with a live band. The band was just practicing, but they were good. After the dance the students in the workshop went back to the dorm in which they were staying and had a sing-along. The sing-along started at 10:15 p.m. and lasted until 11:00 p.m. Three of the students. The easiest day by far was Wednesday evening when there was a record sock hop. The only way to describe the response to the sock hop is to say it was a "flop."

Last Monday, we started a new set of instructions. "We must have the final copy at least a few days before we need it out, was the comment from most of the boys.

The next day was the hardest, the easiest day by far. That is possible. The hard part was writing on the international news, creation of programs that are no play, we went into town and watched two movies, "Double Trouble" and "Don't Bet on It," just the type of movies that teachers take student to.

Iranian waiter paints remodels and studies

by shirley hawk

A visitor who dines at the Golden Tree in Morro Bay may not only be served his dinner by Ali Roustian, but may also note that the walls of the restaurant are painted with a scene of harvest at dawn.

"It is a duty of the chef to keep his restaurant as clean as possible," he explains.

The picture on the wall that no one admires is painted by its waiter. It is a copy of the French The Glowwe which sprung from women picking wheat after harvest at dawn.

Ali Roustian, a foreign student from Iran, works evenings at the Golden Tree, works part-time for the Engineering Department, majors in structural engineering and finds time to enjoy his hobby of oil painting and drawing.

He subjectively discusses life in his country and says, "Iran is a combination of the old life, which dates back to the Persian people, and the new modern life."

"The culture age of Iran favored the climate of the small city of Tehran and declared it the capital of Iran."

"With a population of over two million people, Tehran boasts 800,000 activity," he adds.

However, a few miles south of Tehran lies the small old city of Ray which has remained the same for hundreds of years.

Ali describes his schooling in many years. "Three years ago, as one measure of the old-fashioned and rural areas in the country long referred to as Persia, the French came from the East during the 2nd millennium B.C. and the country celebrates in 5000 birthday this October."

The country is bounded on the south by the U.S.S.R., which supplies Iran with most of its lumber. In 1925 a constitution was enacted which provides for an executive with power vested in a cabinet and government officials are on the art of the Shah.

The Shah is Mohammed Reza Pahlavi, who is a third man on the throne, the Crown Prince Reza Pahlavi, is heir.

Petroleum provides most of our exchange and govern-ment income, and agriculture is a prime industry.

"The economy of Iran is a combination of the old-fashioned and the European modern," Ali says while referring to the building of Tehran.

All majors in structural engineering and plans to return home after graduation in June. A job waiting both civil planning and structural engineering interests Ali.

"I see no proper patterns of architecture there," he explains. "With such diversity, the necessary improvements can be done in years."

During the summer, Ali is planning a laboratory in the Cafeteria North building to be used by third, fourth and fifth year design students. (photo by Matlock)

Science gains - new equipment

The Chemistry Department has recently purchased $60,000 worth of new instruments since last year. This will facilitate starting a new course called Instrumental Analysis (Chem 439). The instruments include an infrared spectrophotometer, a gas chromatograph, a polarograph, an automatic titrator and an emission spectrograph.

The gas chromatograph can detect such things as air pollutants in air samples.

Students will be acquainted by this course, with most modern industrial equipment. Students majoring in other disciplines are encouraged to take the course as well as chemistry majors said Dr. Russell Tice, who will be teaching the course.

The course also includes instruction on older equipment such as the flame photometer, visible-ultraviolet spectrophotometer and ultracentrifuge.

Equipment we don't have yet will also be discussed such as a nuclear magnetic resonance instrument, electron diffraction, mass spectrometry and atomic absorption.

Signal makes intersection safe

The volume of traffic and hazards to safety prompted the school to improve the intersection at California Street and Foot hill Boulevard. The project was let by $40,000 for W. J. Hester, a Nipomo contractor.

The State Division of Highways is responsible for the designing, engineering and inspecting of the intersection.

The work includes raising the level of the street so drivers can see over the railroad tracks, painting stripes and islands, left- and right-turn curbs, and installing a traffic signal. Curbs, gutters and sidewalks were also installed.

Leaves (that is, traffic signal) poles will be installed under the direction of the State Division of Highways to help control the flow of traffic to clear the intersection.
