Noon speakers hit poverty and oil pollution

Say ‘chicano’ not ‘mexican’

"Close your eyes—now picture in your mind an adult Mexican-American male, you will invariably get an image of a man in a field pickin’ a crop.

This is one of the things Ralph Alvarez, community education and activities coordinator for the Latin Mass School District, is trying to change. Alvarez gave his views in speech July 2 in the Architecture Patio.

He said rather than being called a Mexican-American, he would prefer being called a Chicano, because the word is from the Mexican language.

He spoke of the grape strikers in Delano. He cited this as not the first time Chicanos have gone on strike. In 1928 there was a strike that was ended with many of the strikers being sent back to Mexico. There was a bitter strike in the forties that was broken by the use of violence. He said the Delano strikers were striking for more than just higher wages. They are concerned with the entire way they are treated in the transient labor world, he explained.

In discussing the rising number of Chicano militants who have, according to Alvarez, learned lessons from the Blacks, he quoted from the epiphany of King Zoraunda in the same freedom fighter: "Rise you rebels, it is better to die on your feet than on your knees."

Ralph Alvarez: "The Chicanos have more living conditions and less educational opportunities than the Blacks in California. We outnumber the Blacks two to one so you can expect twice as much violence."

He also spoke of Los Angeles County. "L.A. County has a Chicano population second only to Mexico City and only 4% rest of its federal workers are Chicanos."

Alvarez summed up his talk with these words, "My purpose here today has not been to make you angry but aware, not fearful but prepared, not anti-Chicano but pro-equality. Mucha* Gracias."

Women to speak

Mrs. Gloria Smith of the campus Counseling Center Staff will be the Architecture Patio noon speaker on Tuesday, July 22. Her topic, "Education and the Minority," Dr. Margaret O. Nelson; Alexander State Hospital psychologist, will discuss "Personality Problems and the College Student" at noon on Wednesday, July 24.

Mrs. Alice Roberts won a 1969 Distinguished Teacher Award for her innovations in the Educational Department.

The Distinguished Teacher Awards for 1969 spotlighted the work of three campus faculty members. They are: Mrs. Robert M. Johnson, Mechanical Engineering Department; Dr. Horace Kennedy, head, Chemistry Department; and Mrs. Alice E. Roberts, Education Department and wife of Dr. Robert G. Roberts.

This annual award of the California State Colleges recognizes outstanding classroom teaching ability. The winners are nominated and chosen by their peers.

Oil intrusion "mindless"

by John Fife/Padelford

Robert Sollen—a reporter with the Santa Barbara News-Press—spoke to a small but attentive Architecture Patio audience earlier this month.

His message contrasted almost radically with the artsy, rosy patina he talked about the slimy oil that birds, fish, sand, rocks, and the allotment of houses and people have been washed with since Platform A blew out January 28 in Santa Barbara.

The last place in the world to drill for oil, he said, a Mexican-American hero would prefer living called a Chicano educational opportunity than Mexican language.

"Many Chicanos, he quoted from the Marks, he quoted the entire way they are treated with respect, he said. The Chicano* learned of Chicanos militanta who have, in the transient labor world, he added the Delano strikers were striking for more than just higher wages. They are concerned with the entire way they are treated in the transient labor world, he explained.

In discussing the rising number of Chicano militants who have, according to Alvarez, learned lessons from the Blacks, he quoted from the epiphany of King Zoraunda in the same freedom fighter: "Rise you rebels, it is better to die on your feet than on your knees."

Swing and connect

"Why do you run editorials about stuff that's not on campus?" she asked politely.

Well, let's see... summer's pretty slow here... there's no use stirring up a beautiful, peaceful campus; ah... there are issues students are... or should be... concerned with... and...

Here's another one that's not about stuff on campus. Here's an editorial about the misshapen nuclear situation that has kids scared and politicians in a left-right cloud of disquietude.

Because the trajectory of political rhetoric is currently toward the ABM system—a defensive weapon—people have perhaps forgotten the ominously offensive MIRV—a multiple, independently targeted reentry vehicle. MIRV is the missile bus that enables one missile to carry up to 14 hydrogen bombs all aimed at different targets—amounting to that many super-Nagasaki's in one ripping shot.

Russia, according to Pentagon spokesmen, has not yet built a MIRV system. We are building one now.

More than 40 U.S. Senators recently submitted a formal letter to the President asking him to hold back on MIRV. Mr. Nixon, in a June 10 news conference, hailed the Senators' request as "very constructive."

But on that same day a contract was handed to the General Electric Company for the development of 68 MIRV's. The initial tab was an estimated $88 million that is certain to mushroom.

Despite this arms-extension condition it would be unreasonable to think of Mr. Nixon as Hector gone mad with a hydrogen army.

Yet he is not a saint. He is a President (Bob Dylan writes "Even the President of the United States sometimes must have to stand naked. . .")—a man who doesn't possess mythical potions.

And he's a man who hears Ben Filberbrit's gruff "pure Nonsense" in the same room with Defense Secretary Laird's demure "First Strike."

But if Mr. Nixon—man and President that he is—fails to perform a simple arms control prelude and listens only to the "First Strike" anthem, it will be his First Strike-Out.

Connect with sanity, Mr. President, connect.

"I served on the school board for seven years and then in the early 1950's I began to double as a substitute teacher when members of the regular staff would be absent."

I enjoyed teaching again but felt I had forgotten much in my teaching in order to relearn the methods that had gone so long without use.

She then went into elementary school teaching and was soon putting her innovative teaching methods into practice. It was the innovative processes she found she liked best and was soon working herself into a position of teaching others how to teach better.

She earned her masters degree in 1962 and the following year joined the staff at Cal Poly.

"She recognizes the problem, gets to the heart of it and solves it before it gets out of hand," said Dr. Walter Schroeder, head of the Education Department.

In the Observer Teacher Assistant (O.T.A.) program that she started here, Mrs. Roberts exemplifies the tried and trusted "learn by doing" Poly motto. Students prepare a short lesson and then, through the cooperation of the local public school system, present this lesson to children of an age they will soon be teaching.

"Using fellow students to practice on did not present the real problems that would be met," Mrs. Roberts said.

In "team teaching" Mrs. Roberts combines her teaching procedures class with Malcolm Wilcox's reading specialization class to turn out what Dr. Schroeder calls "teachers second to none in this field."

"It is this high caliber of teacher, innovative, interested, concerned with relating today's needed skills to the students, that makes Cal Poly the important educational center that it is today," Schroeder said.

Page 2—Wednesday, July 14
S.B. writer talks oil

(continued from page 1)

Sullen said these were, for the most part, people who had "never dreamed" of protesting anything. There was a token attempt by the police to clear the way for the trucks, but it failed, and the people yelled "You shall not pass!" at the shovel drivers.

The trucks, as Sullen put it, "backed off!"

He said Santa Barbara is now so fed up with the oil people there could easily be violence and he expects "some kind of civil disobedience," but refused to speculate about what form it would take.

Despite the continuing flow of oil from Platform A, the companies spend thousands of dollars monthly attempting to keep the angry voices silent. But all these assurances, said Sullen, "fall on deaf ears. The people don't want the industry even if it were clean," his accent on the "were.

This is the sady phantom who continues to plague the animals, beaches and people of Santa Barbara.

"One-hundred thousand have signed petitions demanding that the oil industry pull out," he lectured, "and Washington has indicated no response at all."

Representatives from the city flew to Washington recently to plead for the removal of all oil platforms. "The Senators were unmoved by the plea," said the seasoned reporter. "There was no real empathy."

"If Santa Barbara can't protect itself from the rampant, mindless exploitation of its own environment, where is the next trench we retreat to?"

The title of his speech was "Santa Barbara Oil: Who needs it?" When Sullen finally got around to answering his own question, he didn't have to. "Nobody needs it," he snapped, "and here we sit, without a voice in the matter."

He concluded his noon address with thoughts about pollution in general, saying our environment "must be changed" if man is to survive as a civilized culture.

"We need to reduce the population rate," said the slight, articulate writer from Santa Barbara, "not increase oil production."

Santa Barbara's Miramar Hotel Beach received an ugly anniversary gift June 28, five months after the Platform A spillage began. —Santa Barbara News-Press photo.
Computer enters course

by Nancy Dupuis
Staff Writer

In the midst of small lights flashing and cards shuffling a tall, lanky Biology professor ponders over rows of paper as it slides out of the IBM No. 1066 computer in room 103, Mathematics and Home Economics building. This is where Dr. Richard A. Pimentel spends his July mornings.

Pimentel is spending his summer "debugging" a system of analyzing biological data. For Biology students his work means a new type of homework.

He is planning to incorporate his studies into his Quantitative Biology class in the fall Quarter. Pimentel explained that his students will be using the computer to study plants and animals through comparative analysis.

Presently Pimentel is learning the operation procedures of the computer so that comparative studies can be done. Each method of analysis is placed on cards, which are fed into the computer where a memory bank stores them for future reference. Then as problems work into the machine it uses the information necessary to compute the problem. Prior to the use of the computer comparative data on plants and animals could only be examined through hours of laborious calculating. With the computer, calculations are done in much shorter periods of time. More complex calculations can also be done.

Although an individual can compare one characteristic of a few animals without mechanical aid, with the computer several animals can be taken into account along with several characteristics. What an individual could calculate in 200 to 300 hours can be done by the computer in minutes.

The possibility of error in human calculation is much greater than in a computer program that has been debugged and known to work. Pimentel explains.

The first problems Pimentel plans to give his Quantitative Biology students will be relatively simple since they will learn the operation of the computer. Then they will attempt more difficult calculations on the computer, perhaps comparing several types of animals.

Pimentel is not all computers. Have you ever attended one of his Saturday morning Nature walks, he takes his classes out?

Dr. Richard Pimentel "debugs" IBM No. 1066 in preparation for his fall Quantitative Biology class.

Floral design featured here

One-hundred and fifty floral designers will be on campus for a Floral Design Symposium Tuesday, July 20, through Thursday, July 22.

The workshop on floral design will be held throughout the three days in the Music, Speech, and Drama Building, Room 218.

The fragrant, colorful event is co-sponsored by the Ornamental Horticulture Department and American Institute of Floral Designers. Admission is by registration.

Smog in state

Walter H. Buchanan announced on June 28 that he intends to run for the office of Governor of California.

The announcement came at a meeting of Democrats of America, incorporated held at the Ambassador Hotel in Los Angeles.

Buchanan's platform: "elimination of wasteful spending... tax reform... elimination of crime... more industry... increasing job opportunities... civil rights... absolute elimination of smog in the air as well as in the state government."

Lost mittens

Dear Editor:
I parked my dark grey sports car in the new parking lot across from food processing at 8 a.m. Thursday (July 3) and covered it. When I returned at noon the cover was gone. It was quite a windy day, and it probably blew off. The cover is light green canvas with the words "MG MIT- TEN" stenciled on it. It was tailored for my wife's car and is of little use to anyone else. And because of the expense it is impossible for us to replace. If anyone saw it or knows where it is, please contact me (525-1271) or turn it in to Lost and Found.

Hopetfully, Jim Hall

Constructively speaking

Lawmakers react to rebels

by Vernon Trenckke
Column Writer

Unrest on campus usually quick and peaceful time. The students here seem to be a little more academically aware of the necessity to seriously apply themselves to getting an education rather than giving up their usual time off.

The students here seem to be a little more academically aware of the necessity to seriously apply themselves to getting an education for, in effect they are giving up their usual time off to do it.

That "late hour" has arrived. The students are giving up their usual time off to the task of "getting an education" for, in effect they are giving up their usual time off to do it.

Utah's Senator Wallace F. Bennett says: "The American Republic has always been slow to revert to a threat, domestic or foreign. Perhaps that is a virtue of representative government, because in the process, irresponsible dissent and abuse of constitutional freedoms are tolerated and suffered by the general public until a very late hour." That "late hour" has arrived. That small, well-trained minority, financed, according to the latest FBI report, by a New York based-financial foundation, a New England beteaux and a rich industrialist, has wreaked insult and, incursion to student and faculty alike in an attempt to bring down the very institutions themselves.

This and the other Marxist oriented red necks are being met with a rising and solidifying wall of resistance. One bill proposed in Congress would allow serious students to bring action against demonstrators in the form of a $1,000 fine and or one year in prison; or, if the demonstrator is armed, 10 years in prison. Eighteen states have passed new legislation that will take effect this fall. Most of these bills received overwhelming majority support.

Robert Bette of the Copley News Service says that one bill in California "would permit a state college president faced with a threatening situation to declare a state of emergency and bar peaceful, trouble makers from campus. There are also provisions under consideration for expelling students, firing professors and other state college employees who interpret laws of different colleges to the students. He also spoke of the availability of student records. He felt they shouldn't be given to anyone unless the student requests it. This includes police and other officials.

Education if viable, is going to involve unrest. Unrest is one of the primary ingredients of education."

This was one of the remarks made by Dr. Walter Johnson, professor of education at Michigan State University when he spoke to a noon-hour audience on "Change in the Legal Factors in Relation to Student Unrest."

His talk was concerned mostly with the legal end of unrest. He outlined many of the changing statutes regarding the power a college has over its students. He said a student doesn't give up his legal rights when he enrolls in a college.

One of his primary concerns was that students should be involved in the making of the laws for a college. He spoke of the forming of campus organizations, composed mostly of law students, to interpret laws of different colleges to the students.

Dr. Johnson is on this campus for the summer teaching two graduate courses in education. His lectures were sponsored by the Summer Activities Council and held in the Architecture Patio.

Book prices

Ouch! Those high prices on books really hurt. Haven't all of us said that again and again every quarter?

But, take heart Fresh, we have some enlightening news. The net revenues developed by the operation of El Quant College Store have been reserved over a period of thirty years and placed in fund to be used to build the College Union.

It is that large building at the top of the campus near the Administration Building. That is well on the way to completion. So you will be among the first to enjoy the results of those high priced books.

Dr. Walter Johnson, professor of education at Michigan State University, spoke to a noon-hour audience on "Change in the Legal Factors in Relation to Student Unrest."
Kresge laying groundwork for experimental college

By Cheryl Slabey, Staff Writer

In slow thoughtful tones, Paul Kresge, student body president, outlined his proposed plans for the next school year. Among these plans is an information center, experimental college, better college-community relations, a more relaxed atmosphere with Mustang Daily, and increased support for ASSIST.

High on priority on his list of programs is the ASSIST program (faculty evaluations). Last year the program evaluated only a minor portion of the faculty and published 25% of its findings. Next year, Kresge hopes to evaluate all the faculty and publish all of the findings.

Kresge feels that the ASSIST program is important to the students on campus.

In his second year on campus Kresge hopes to establish an information center during college hours composed of a member of the ASI president or vice president, preferably, and at least one member from the faculty and administration. The center would answer students with problems who are afraid to ask questions, and serve as a change device to guide students through bureaucr act red tape.

In response to a question regarding Mustang Daily, Kresge half laughed, "I'd like to publish a Mustang Daily that's valuable to the student body as a whole." Last spring was possibly a sharp clash between Kresge and the campus paper. "It was an ASI subsidy.

Kresge pointed out that pro-

Kresge is now laying the groundwork for an experimental college on campus. An experimental college is a learning experience outside of the regular curriculum set up by the state. The course are less structured, more seminars, Kresge explained.

Kresge feels that the need for this type of seminar is apparent even though college credit may or may not be given for the course. He says students need to have the most up-to-date material, curricula take too long to change, and the budget the state signed for education is tight.

If the 9th term president will be fared next year with bringing the college and community together on a better working relationship. He mentions this is strictly a publicity job and that he will devote time to keeping the student leaders in the eyes of the downtown merchants.

"The merchants should be impressed with the buying power of the students," Kresge said, "and they, the merchants should be made aware of the student hostilities that exist."

Vice-Chancellor retiring to business and sports

Dr. Raymond A. Rydell retired last month from his position as Executive Vice Chancellor of California State College Board of Trustees.

At a special luncheon held June 21, the Trustees awarded Rydell with a special plaque which noted that he has been "an author, a researcher, a professor, a dean, a vice chancellor, and a wise chancellor," while "maintaining the human touch that made him so well liked, do so in a way which pleased all those with whom he worked."

Rydell, after serving the State College system for 25 years, will establish permanent residence on Catalina Island.

The vice-chancellor plans to participate in civic activities on the island, pursue several business interests, follow up on a number of educational projects, and enjoy the sports of swimming and fishing.

In a tribute to Rydell, Chancellor of the 10-campus system, Dr. Charles Damsie said, "He has played a most significant role in the development of the California State Colleges as one of the greats in the systems of higher education in the world. . . . His outstanding work will influence thousands of California's young people in the years to come."

Dr. Raymond Rydell

Dr. Charles Damsie

Welcome!

If you wonder what all the excitement is about, here's the answer: The faces are those of incoming freshmen. About 1,000 new faces are registering each day.
Traveling through the dark

Traveling through the dark I found a deer dead on the edge of the Wilson River road. It is usually best to roll them into the canyon: that road is narrow; to swerve might make more dead.

By glow of the tail-light I stumbled back of the car and stood by the heap, a doe, a recent killing: she had stiffened already, almost cold. I dragged her off; she was large in the belly.

My fingers touching her side brought me the reason—her side was warm; her fawn lay there waiting, alive still, never to be born.

The car aimed ahead its lowered parking lights; under the hood purred the steady engine. I stood in the glare of the warm exhaust turning red; and stood by the heap, a doe, a recent killing.

I dragged her off; she was large in the belly, around our group I could hear the wilderness listen. My fingers touching her side brought me the reason—her side was warm; her fawn lay there waiting, alive still, never to be born.

I thought hard for us all—my only swerving—, then pushed her over the edge into the river.

—I Williarn Stafford

New dining facilities planned

What was just a rumor a year ago is a reality today. The proposed dining facility and a half ago is a reality today. The proposed dining facility and a half a year ago is a reality today. The proposed dining facility and a half a year ago is a reality today.

The Rifle and Pistol Club is offering free marksmanship instruction to anyone who is interested. Weapons and ammunition will be furnished free.

The Rifle and Pistol Team fielded by the club was rapturous in the nation, but was disbanded after the rifle range was condemned. The range has since been reconditioned, and the club is now rebuilding its membership.

Anyone interested is invited to attend the meetings of the club, Wednesdays at 7:00 p.m. in the ROTC Rifle Range, next to the Armed Ranger.

The usual time for gaining a master's degree in education is one year, but since the Interns are in effect, going to school only half the time they need two years to complete the requirements.

The program, unique in California, has the obvious purpose of giving practical work experience to students hopeful of a career in collegiate student affairs. This field includes such areas as counseling, placement, housing, financing, admissions and college union management.

Cal Poly offers an ideal learning situation for this type of program, according to Dr. Lawson, because of the school's ambitions: an on-campus living program (2,400 students living on campus—more than any other state-supported college), its top-rated placement office and its comprehensive student activity program.

Requirements for the program are rather stiff compared to other departments. Besides graduate status, applicants must take a battery of psychological and personality tests and present an autobiography. They are further screened through personal interviews by a four-man board composed of two people from the Education Department and two from the Placement Office. The interview determines the applicant's qualifications for acceptability.

More information regarding the internship program can be obtained from the coordinator of the program, Dr. Harry Scales, who heads the program, or the residence program toward a master's degree in education and at the same time devote twenty hours a week of actual labor to student personnel and student activities.

Their tasks include organizing student-sponsored events and advising the various campus clubs. For this work they are financed through the state budget and under their official titles: Student Affairs Trainees.

The usual time for gaining a master's degree in education is one year, but since the Interns are in effect, going to school only half the time they need two years to complete the requirements.

Kline wins NCAA scholarship

Wrestler awarded $1,000 for post-graduate study

by Dennis Atkins
Sports Editor

Tom Kline, Mustang three-time All-American Wrestler, was honored recently when he was named as one of 22 recipients of a $1,000 postgraduate scholarship awarded yearly by the National Collegiate Athletic Association. The announcement of Kline's selection was made by the NCAA office in Kansas City and in Monterey by John R. Jones, the faculty athletic representative.

Each year the NCAA awards scholarships to students across the nation who achieve both athletic and academic success. To be eligible for the award the athlete must first be recommended by his coach, then must receive favorable recommendation from the athletic director, head of the P.E. department, or University Department Head, and then the Faculty representative. The final choice is left up to the eight-member NCAA scholarship committee.

The 5'11, 191 pound Kline recorded a phenomenal record during his four years of wrestling for the Mustangs. In 1964-65 season, the Tri-Cities in the rookie year, he placed second in the position of the Mustangs, was picked for the third place selection.

Rick Pence, a local San Luis Obispo product who still has two years of eligibility left for the Mustangs, was picked as the second baseman. Bob Phillips, a slick fielder who played during 1963-64 seasons, is the third base selection.

The out-fielders on his all-time team are John Givens, Beth Williams, and Mike Maranto. Williams, who played four seasons for the Mustangs, signed a professional contract after graduation, but only played one year. Pence, who finished his career at Poly this past season, is now playing for Los Angeles Col. during 1963-64 seasons.

Hicks' over-all record of 1,913 wins and 208 losses indicates that he has confronted with numerous problems during his twelve years affiliation with the Mustangs. The major obstacle that kept him from being a winning percentage was lack of financial support.

The Athletic Department at this college has always devoted the majority of its funds to other sports, primarily football. Obviously, the athletic department and the students want a four-year college to be competitive with other colleges in the league. It must offer some form of financial incentive to potential players.

Linda McArthur

Linda McArthur, an athlete of considerable talent, has wanted for some time to attend Tufts University for the 11th International Games for the Deaf in Belgrade, Yugoslavia next month.

It has been, for her, a dream which seemed so far out of reach.

"She needed at least $1,800 to make the trip, "Said a fund drive.

And now she can stop dreaming. An anonymous donation has placed a check for $2,500 in her hand, putting the total at $3,300.

Miss Evalyn Pettitson-Limbo, a Poly physical education major—coordinated the drive and Linda to the games. Miss Pettitson-Limbo said the monies is a gift of $1,800, will be used to help other items make the pretty competition and competition as reasonable as possible.

Besides the generous gift of $2,500, help came from the Women's Club of Del "Miss McChapin's bouquet, in San Luis Obispo, Monterey Bay Tennis Wav Club, and the Ojai Optimist Club, as well as private individuals.
