New system to help every student

A new system of early registration for freshmen and transfer students has also made it possible to help returning students register, according to Gerald Holley, registrar.

With the new system, freshmen and transfer students came in groups of 100 to register during the summer. On the day they were to register, the students took the college battery of tests at 8 a.m. At 1 p.m. they were instructed about registration and then met with department advisors.

When they were ready to register they did so. Each student was then sent to the Health Center for chest x-rays. If the student wished to, he could buy his books at the bookstore. If he did not, he was instructed on how to register them.

According to Holley, 3,000 students took part in the summer registration. That number is about three-fourths of the freshmen and transfer students expected on campus this quarter.

There were two primary purposes for the establishment of this system of registration, he said. It enabled each student to receive more personalized service in a less chaotic situation. It also gave the registrar's office and department heads three weeks to review and handle classes for returning students.

While in past years there were only a few hours overnight to analyze the information, the three weeks allows several decisions to be made. If too many classes of one type close out, it is now possible to add sections well in advance. Also, if it looks like some classes aren't going to be filled at all, those instructors can be used to teach classes which have been added, Holley said.

Holley pointed out that there will be approximately 10,000 students on campus this year and that the new system of registration should help make things go smoother for returning students.

Another new part of registration this quarter will be a Registration Clean-Up Session, according to Everett Chandler, dean of students. This session will be held Oct. 28 and 29 for students with severe schedule problems.

During registration a student who has been out sick for an extended period will be sent to a Control Desk. If the people screening each problem think that something can be done to solve it, the student will be helped.

A list of those students who have completed 461 senior project papers, and are entitled to register for credits or grades, will be posted outside the gym, Holley said.

"We think it's worth a try," Chandler said, but he emphasized that only students with severe problems will be helped.

"We think it's worth a try," Chandler said, but he emphasized that only students with severe problems will be helped.
Emphasis on education

Back in 1957 when the Russians beat us into the space with their Sputnik I everyone was saying our education system was falling.

Now the space laurels are on other helmets, those of our nation’s astronauts and the thousands of men and women who worked behind the scenes to help make our recent moonwalk a triumph. Does this mean then, that our educational system is now a success?

Not necessarily. For education like many another complex human activity cannot be explained in such simplistic terms: The Russians beat us so our schools are a failure. We let the Russians get ahead of us because of apathy.

Rather, our schools are both a success and a failure. Scientifically, technologically we are successful. We have also through our educational system achieved greater a susceptibility to change.

We must separate the good from the bad. We must emphasize the positive while doing something about correcting the negative.

In the recent words of Mrs. Margaret Lemmer, new president of the California Teachers Association, we must emphasize the positive aspects of this period while not whitewashing the need for improved schools if we are to meet tomorrow’s challenges of increased automation and social changes.

Mrs. Lemmer warned against overreaction when schools are made scapegoats for critics and activists from both extremes of the political spectrum, who generally rely on emotions rather than reason in championing their causes.

"To penalize the majority of hard-working students and teachers because of the violent activities of a few represents a dangerous, emotional approach to the problems and needs of education," she warned.

"For it will not help our children if, because of frustration over protests, the public, in pique, withdraws financial and other kinds of support from its public schools. Such emotional action makes the many pay for the sins of the few and damages the whole of society."

As we hail the all-time historical feat of Astronauts Armstrong, Aldrin and Collins during the months and years to come, we should be reminded that our dedication to education in this country and the moonwalk possible.

We should also be reminded that if we can walk on the moon because of our educational system, we can also walk in peace on earth. The moonwalk possible.

But we must, as Mrs. Lemmer said, emphasize the positive gains of education while not whitewashing the need for improved schools to meet those great challenges of the future in space and on earth.

President's welcome students

For all of our thousands of new students, and to those who are returning as "old" students a hearty welcome to Cal Poly for the 1960-61 "Year of Purpose." The friendly, helpful spirit that has long identified the Cal Poly campus will continue, I'm certain, because it is one of the college's traditions that humanities or any other faculty member's work, the opportunities can decrease—but we work positively to develop this important aspect of the learning experience.

This Fall quarter Cal Poly probably will have about 11,000 students, more than 3,000 of who will be attending this college this year as freshmen or transfers from junior colleges or other four-year colleges. Of the nearly 600 faculty members, more than 100 will be new this year. It is more important than ever that our "old" students and our "old" faculty members assume the role of "host" and take the first step in making sure that our "old" students and our "old" faculty members assume the role of "host" and take the first step in making sure that

Paul Kresge

Kresge urges participation

I am pleased to have this opportunity to welcome you to Cal Poly for the 1960-61 school year. I hope you will all have a most successful year.

The ASI officers face the coming year with a great deal of optimism and enthusiasm. We hope to get several new programs underway and improve on the old ones. There are many opportunities for involvement outside the classroom. Whether you join a club or an ASI committee, you should definitely make an effort to take part. The project program offers very rewarding experiences that enhance the value of college years. It is not possible to list these activities here. However, the following are available in the TCU: the ASI personnel and officers about your special interest. "The Furry," a weekly schedule of activities, is a valuable source of information. Above all, feel free to contact either ASI Vice President Dick Barrett or myself at any time you may need assistance or if you have ideas for new activities. We stand ready to assist you and are especially eager to make this a good year for everyone.

Welcome and best wishes!

Robert E. Kennedy

ASI President

Senior project option offered to all majors

Looking for an option to your Senior Project? Any student in any major who wishes to devise his Senior Project may take Aero 461 and 462 if he has the approval of his department advisor. The project will deal with complex problems with an interdisciplinary approach. The nature of the problem will determine what particular majors can take the class. The first problem which will be run Winter and Spring Quarters this year is "The Application of Aircraft to Metropolitan Transportation," according to G.A. Andreadis of the Aeronautics Engineering Department.

A study similar to this was done at Stanford by professor Andredis said that the project will offer students a chance to compete with faculty thinking. In a similar situation last year, students from four majors designed a transportation system for this campus, he added.

Barbeque slated

A free barbeque will be held Sunday night at the First Baptist Church, 2973 Johnson Ave., at 5 p.m. The dinner will be open to all college students and will be the beginning of weekly meetings and evening fellowships.

Daily products contribute substantially to the gross national product of the U.S. accounting for over a third of all of the new orifices last year.
Reassignment of Col. Robert W. Green:

Col. Robert W. Green, head of the Reserve Officers Training Corps program of the College of Science Department for the past 14 months, has been reassigned to the College of Science Department at Ft. Holabird, Md., according to Dr. Clyde F. Traub, dean of the School of Applied Sciences.

Col. Green, who has been director of defense management and counterterrorism courses at the National War College in Washington, D.C., prior to joining the faculty of the National War College, he was stationed in Vietnam and fulfilled various assignments.

The senior project was dropped because it was "a glorified term paper or a thesis," explained Col. Green, head of the Military Science Department presently has a staff of 5 officers and 6 enlisted men, all on assignment from the Sixth U. S. Army Command with headquarters in Hawaii.

"Among the largest such volunteer units in the Western United States, this school's Military Science Department presently has a staff of 5 officers and 6 enlisted men, all on assignment from the Sixth U. S. Army Command with headquarters in Hawaii."

The 1968-69 academic year saw nearly 800 members of the college student body enrolled in various military science courses and activities. Participation in such programs is in addition to regular degree courses of the college and completion of a bachelor's degree curriculum is required before commissioning.

Dr. M. Eugene-Smith, who had been head of the Social Sciences Department for the past four years, was transferred to the History Department. He is also serving as acting head of the newly organized Social Sciences Department pending appointment of a permanent head that department that begin his duties in July.

Dean Fisher said the History Department began operation in mid-June after approval by President Dr. Robert K. Kennedy. "As I have often expressed, Dr. K. Treacy, Dr. Herman Voelt, Dr. W. E. Burris, Dr. Burton C. Olsen, Dr. Robert L. Butler, Ralph W. Dilts, and Dr. Michel N. Franck, were among the most memorable of his experiences in the Army, and he was stationed in Vietnam and fulfilled various assignments.

Dr. Philip F. Fisher, dean of the History Department, added that the department reached a high point in its history during the past year have seen about 75 students who have transferred their studies interest from social sciences to history. Dr. Fisher had been head of the Social Sciences Department for the past four years and was transferred to the History Department. He is also serving as acting head of the newly organized Social Sciences Department pending appointment of a permanent head that department to begin his duties in July.

The History Department will continue offering the Bachelor of Arts Degree in social sciences with curriculum concentrations in social services, government, and social sciences.

In addition to Dr. Smith, the history faculty includes Dr. Robert L. Burton, Ralph W. Dilts, James L. Friga, Donald M. Henesi, Dr. Scott J. Maughan, Edward L. Mayo, Peter H. Nolan, Dr. Barton C. Olson, Robert K. Tracey, Dr. Herman Voeltz, Jay C. von Werlhof, and William M. Wharton, Jr.

The reorganized Social Sciences Department will continue to offer the Bachelor of Science Degree in social sciences with curriculum concentrations in social services, government, and social sciences.

President Kennedy, among others, felt each student should have some kind of a closure experience, the lanky Pederson explained. Thus senior project will be reinstated—not as a senior project per se but as a closure experience, he stated.

Pederson stressed that the form will be changed completely. A committee has been formed to continue to set the standards and to decide the way the project will be administered. Pederson expressed concern "that students have a negative attitude about something I know will be exciting."

When babies are boiled, man might be toothless

by Jeff Randolph
Staff Writer

I dedicate this article to English majors, editors and "doozie-lovers." The following are actual quotes taken from American newspapers within the last three years.

"When the baby is done drinking, it should be uncrewed and laid in a cool place under a tap. If the baby does not thrive on fresh milk, it should be boiled." CORRECTION — Unfortunately, the illustrations of edible and poisonous types of mushrooms were reversed on page 14 of our Sunday edition.

The women on the local team were doing fine until the last half of the fifth when all the bags got loaded. Now we are abandoning our University freshmen test to use the College Broads altogether.

Served with a writ yesterday afternoon, B.O. Blake must produce children in court within 24 hours.

"Do you know what it is to sit down in the evening with a book in your hand, your faithful dog by your side, your good pipe at your feet?"

Twice during the day the President walked to the Executive offices at the western end of the White House, gone to look over his mail and again just before going to church.

"It won't be real New England clam chowder unless you put your heart into it."

The calls started at noon Saturday night.

Then the officers moved in. Murphy was wounded slightly in the hip. A stray bullet killed one bystander slightly.

"The father is a Moron. That's why they're moving to Utah."

"Abraham was born in a house which he helped his father to build."

"He remarked in all seriousness that it was hereditary in his family not to have any children."

"State highway patrons have now been instructed to aid in building a State; if you use orange juice, squeeze it from fresh lemons."

There were no inhabitants east of the Pueblo of Pecos until 1874. West of the Rio Grande there were even less.

A British scientist predicts that, in time to come, men will be born toothless.

Dr. George G. Clucas, an administrative staff member, is author of a new book on comparative city finance. The publication is designed to provide cities with a comparative basis for program analysis of their own municipal practices.

Dr. Clucas, who is director of research and development at the school, is a former senior budget analyst for the Office of the Legislative Analyst in Sacramento.

He more recently worked on budget planning and finance as a member of the central staff of the California State Colleges and was a member of the University of Southern California and California State College at Long Beach faculties.

A graduate of University of Michigan and USC, from which he received his doctor's degree, Dr. Clucas also teaches courses in public administration here.

The new publication is available in series form and in book form. The first five sections deal with property taxes; franchise, sale, and use taxes; licenses; permits; fines and penalties; use of money and property; federal state, and county grants, and current service changes and other revenue.

Library, health and community service charges and other revenues.

Dr. Clucas studied and consolidated data from 399 into 33 population groups for cities. Cities are placed in relationship to each other and urbanized areas are separated from cities in nonurbanized areas.

Band plans shows for home games

Blazing colors, dazzling precision and thrilling musical composition will be characteristic of this year's Mustang Marching Band, according to William V. Johnson, director of bands. The band will meet for the first time tonight at 7 p.m. in the band room, Music, Speech and Drama, 216. Tryouts will be tomorrow at 7:30 p.m., also in the band room. There are positions open in all instrument sections of the band, Johnson said.

Some of the halftime shows scheduled for this year are "Mustang Band Goes Western," "Mustie Makes Music," "Sounds of the Sixties" and "California Here I Come."

A great deal of preparation goes into each performance, the director said. Members must practice five hours a week. Drum major Larry Todd, eight band officers and the Rally Committee are responsible for the behind-the-scenes work.

The band's featured twirler, Susan Heflin, will be returning for her third year to perform intricate baton twirling routines while riding a unicycle.

The Marching Band rehearses on Monday nights from 7 p.m. to 9 p.m. and on Wednesday and Friday afternoons from 3:30 p.m. to 5:30 p.m. Each member receives two units of credit.
Social services, education provided by program

A research project designed to provide improved educational services through the development of subprofessional positions in the schools has been announced by the U.S. Office of Education. The project in Wayne County, Mich., is one of ten projects in the "new careers" research and development program of the Office of Education's Bureau of Research. The positions are designed to enable individuals to take advantage of current and anticipated employment opportunities in the expanding human and public service fields.

Researchers from the Wayne County Intermediate School District, which includes Detroit, will work with county school officials in seeking to:—Identify the possible subprofessional positions in schools by analyzing and regrouping tasks involved in the educational process. Such positions could include various levels of clerical and clerical and teaching tasks. (The Spanish verb "to be" interpreted as "to have." It is suited for determining what type of an individual is suited for on-the-job training opportunities for minority and low-income people. The concept of locating regular employment is aimed at improving the availability and quality of health, education, welfare and other related human and public services. This would be done by reducing shortages of professional manpower and providing useful jobs with career possibilities for large numbers of persons, including the disadvantaged, the undereducated and other unemployed and underemployed persons.

Besides education, other projects covered in the program are in the fields of social services; health; parole and probation; recreational services for the ill, disabled and aged; and municipal services.

Funds for the projects are being provided under a section of the Vocational Education Act of 1963 which authorizes research, training and experimental programs.

Coordinator named

Martinez heads Ethnic Studies

Richard Martinez, a native of Arizona, has been named Coordinator of Ethnic Studies and Director of Educational Opportunities, according to President Robert Kennedy.

As Director of the Educational Opportunities Program, Martinez will give financial aid, counseling and tutorial assistance to participating students of American Indian, Mexican and Black origin. This program, which aided 1,000 students last year, is set up to aid 7,000 this year.

Martinez will also be responsible for the administration and coordination of the interdisciplinary Ethnic Studies Program at the college. He will work directly with members of the college teaching and administrative faculty, students and representatives of the community. He will also head the Ethnic Studies and Ethnic Studies Advisory Committee.

Before taking his position at this college, Martinez served as field coordinator and supervisor of the entire state of Arizona for Service Employment Development (SER) and a federally funded program of on-the-job training opportunities for minority and low-income people. SER

Yearbook to take on new look this year

While writing the checks for registration, be sure to include one for the 1970 El Rodeo for $6.50. Sales will continue throughout the quarter at the TCU but no books will be sold after Winter Registration.

Seniors should make appointment for their senior pictures at Registration. The pictures will be taken November 10-13 by appointment only. Anyone expecting to graduate by December 1970 and interested in having a picture in the yearbook should sign up at the specified desk during registration.

This year’s book promises a new look in senior pictures and in other sections, according to Adrienne Donalson, editor.

Orange paper and four color process and duotone color photos will brighten the story of the 1969-70 academic year.

School of Architecture

The midnight oil burns

by Cheryl Slabey
Staff Writer

Every night 100 to 200 students
sit up burning the midnight oil
solving over drawings that may
or may not be good. As they work
at arranging schematic projects
of little boxes, styrofoam and
other materials, they are practice
ing this school's unique philo-

sophy of learn by doing.

The students are part of the
1280 member School of Architec-
ture on campus. The school is the
largest in the United States and
has risen to its present capacity
in the last five years.

The School of Architecture of-
fers a five year degree in archi-
tecture, a four year degree in
architectural engineering and a
four year degree in city planning.

The School hopes to expand and
offer a degree in constructional
engineering.

All students start as architec-
ture design students and branch
out into a chosen field in their
third year of school.

What has caused the School of
Architecture to grow so fast?
Part of it is the practical train-
ing that a student receives. Many
students are assigned to work on
projects in the local communities
such as designing a plaza for
downtown San Luis Obispo, pro-
posing improvements for making
the north San Luis Obispo County
branch more attractive; enough to
attract tourists to keep coming back
and trying to make it more attrac-
tive.

Here are and design classes of-
fer a student a chance to design
and build schematic models of a
living area, a city or a mobile
complex. The materials a student
works with are those that he will
use once he finishes school.

An overseas program is offered
by the School to give students a
chance to see what other coun-
tries are doing in the field of
architecture. It helps to broaden
the student's outlook and helps
them to better understand the
problems faced in world construc-
tion. This fall three students are
studyng in Japan, two in Sweden
and two in Florence, Italy.

The School keeps in close con-
tact with the junior colleges
throughout the state so that,
junior college students can transfer
their architectural programs with
credit on the campus. This aids the
students who enter the college
for their third year because they
won't be behind in starting their
first year sequential courses.

New department to benefit entire campus

This campus now has a Computer Science and Statistics Department headed by Dr. Charles F. Gerald, according to Clyde P. Fishier, dean of applied sciences.

Among functions of the new department will be administration of the new computer science program, which the college announced last fall. The Computer Science and Statistics Department will also offer courses in statistics, philosophy and computer science to meet other degree and general education requirements for the entire student body.

A degree program in statistics is being planned to begin in 1972. Courses in philosophy and computer science have been offered for the past several years by the college's Mathematical Sciences Department headed by Dr. Milo E. Whiston. Initiation of the new department will result in change of the math unit's name to Mathematics Department, Dr. Fishier said.

Dr. Gerald will be joined by several other members of the Mathematical Sciences Department teaching staff on the new department's faculty.

They are Dr. Robert A. Bentley, A.C.W. Babel, Dr. William O. Bagchman, Thomas V. Cahill, Dr. J.T. Culbertson, Mrs. Joyce R. Curry, Robert R. Driscoll, Dr. Kenneth Puller, John E. Groves, Reino Hannula, William C. Hogan, Y. Leon Maksouian, Joseph B. Stefanac and Daniel F. Stubbs.

Prior to assuming his duties here, Dr. Gerald worked in various teaching and research capacities with MIT, University of Cincinnati, University Oil Products Company, University of Washington and El Paso Natural Gas Product Company.

Objective of the computer science degree program is to prepare men and women for work with computers in business and industry and for graduate study in the subject.

Students enrolling in the major will share the soon-to-be-completed $1.6 million Computer Science Building with students studying mathematics and architecture.

Dean Fishier said the new degree, which is among the first of such programs to be offered in the 19-campus California State Colleges system, is being provided by the college in response to an extreme shortage of persons trained in computer science in various levels of government, as well as in business, industry and research.

He looks on the program as an extension of the college's basic and unique purpose of providing occupationally centered higher education.

"This program will be a direct implementation of that program," Dr. Fisher said. "Not only will graduates obtain practical knowledge of computer programming, they will also attain the perspective and knowledge for assuming management-level responsibility."

"To this end, course work in programming, mathematics, physics, accounting and engineering are all being included in requirements for completion of the computer science degree."

Objective of the Department of Applied Sciences, headed by Dr. J.T. Culbertson, Mrs. Joyce R. Curry, Robert R. Driscoll, Dr. Kenneth Puller, John E. Groves, Reino Hannula, William C. Hogan, Y. Leon Maksouian, Joseph B. Stefanac and Daniel F. Stubbs.

Among functions of the new department will be administration of the new computer science program, which the college announced last fall. The Computer Science and Statistics Department will also offer courses in statistics, philosophy and computer science to meet other degree and general education requirements for the entire student body.

Poly Phase book exchange

Books sold on commission basis

by Eugene Matsumura

Whether it be an old textbook or just an overnight novel, it can be found at the "Book Exchange," sponsored by Poly Phase, the Electrical Engineering student club.

Roger Greenwood explained the condition of exchanging a book. "Any book, novel or encyclopedia may be brought to the "book exchange" as a means to us. The phases are open to the public for books they wish to exchange or buy at the price specified by the original owner. If the book is sold, the public pays us, and in turn, we pay the owner the specified price less eight per cent commission. If the book is not sold, we give the book back at no cost to the owner. When and if a case of an out of edition book is questioned, we will refund its price."

The "book exchange" benefits everyone—assets the owner by selling his books at the price he wishes; the buyer benefits by being able to purchase his books at a more reasonable price; and the club also benefits by gaining financial assistance and a chance to function as a business in the college's "learn-by-doing" earning while learning philosophy.

Russell Korsmeyer, advisor to the club, had this to say: "Found ed in 1928, the Poly Phase Club is today the biggest-little club on campus. The innovated spirit of the club has brought to the campus the popular carnival dance and the 'book exchange' service. Community service projects include lighting and sound for the Junior Matrons Fashion Show. For the future, the Poly Phase Club is planning expansion of the 'book exchange' into new quarters in the College Union Building."

Poly Phase began its function in the interest of all electrical engineers. The Electrical Engineering club aims toward the interplay of the student within the realm of society after graduation by hosting many speakers from the industry.

Greenwood closed by stating: "With the 100 per cent cooperation from El Corral Bookstore, we feel even more confident of our success."

---

Kaydettes seek members for this year's drill team

The women's drill team, Kaydettes, is seeking members for the 1969-70 year. Any and all girls are encouraged to join this unit which also serves as an auxiliary to the ROTC. Interested girls can obtain additional information at the Military Science office in Lib. 114. Recruitment for this year's team will begin this month.

"A training school will be held during the first weeks before a drill down selection of the marching team," according to Alan Lewis, president-commander for the coming year.

"I think a lot of people are going to be surprised the next time they see us march. We're completely changing the drill team image," she stated.

Male advisor to the Kaydettes is Doug Hileb, a junior social science major and former member of the ROTC Men's Drill Team.
Foreign student mail held in International Lounge

Because of the difficulties which foreign students have in maintaining a suitable address for receipt of mail from home, individual boxes have been placed in the International Lounge in the old Post Office Building to provide mail delivery service for foreign students, according to Everett Chandler, head of students.
The Foreign Students Office, under the direction of Glenn Rich, will be in charge of operating the mail delivery service. In order to provide the necessary help for operating this delivery service, foreign students will be charged 50 cents per student per quarter, which is identical to the charge in the past for the general post office service provided all students, he said.

This service is being provided because foreign students have a far greater problem than native students in the handling of their mail. Most native students have a home address or have friends immediately available to them to take care of their mail. Foreign students do not have such help available and they do not even have the local Post Office because all of the post office boxes which ordinarily might be used are not available because of limited facilities in the downtown Post Office.

A new musical group specializing in the performance of madrigals and modern works has been formed on campus.
The College Chamber Singers, directed by Mr. John Russell, is an ensemble of twenty men and women planning several concerts this year.

One unit credit (Music 230-04, Voice) will be offered.

Plans for the Chamber Singers include a performance of Schubert's Mass in G Major with the Chamber Orchestra and the presentation of a College Hour Concert next May.

Students desiring further information should contact Mr. Russell in MSN 122 or phone 546-2556.
Bakers produce cakes and cookies for students, staff and faculty

by Ron Busard
Managing Editor

Let’s see, donuts on the breakfast menu. Set the alarm for 3 a.m. and there should be plenty of time to get everything ready.

While this might sound like the thoughts of someone planning a rare, early breakfast, it’s really just standard procedure for the bakers in the campus dining hall.

Getting to work by 3:30 a.m. leaves just enough time to make fresh donuts and breakfast rolls for the 1,860 students who start eating at 8 a.m.

The bakers make everything but the sandwich bread for the student and faculty dining halls.

The average day, which is worked in shifts, may go something like this: The early crew in around 9 a.m. and makes deserts (pies, cakes, turnovers and sweet rolls). The second crew will come in around 1 p.m. and finish off the day by making bread and rolls. Everything is made in quantities of 1,000.

Also the bakers are often asked to make fancy rolls, cakes or cookies for takeout orders.

Although the bakery is not unique, it is one of the last (because the school is in a rural area) to be able to make everything cheaper than buying it from an outside source.

John Lee, the assistant director of the dining hall, says, “Good bakers are hard to find, we’re real fortunate to have a full staff of qualified bakers and be able to supply the students with a complete line of fresh baked goods.”

DOUGH IS PREPARED... divided and weighed each day for use in the student dining hall. (above) Pies and sweet rolls are prepared daily for use in the snack bar and faculty dining hall. (below) —Photos by Ron Busard

Blue Key starts year with 32 active members

Blue Key, the largest honorary scholarship fraternity in the United States, recognizes men of excellence and achievement both in academic and co-curricular activities. Officers for this school year are: Mike Phillips, president; Tim Laballe, vice-president; Paul Banke, vice-president for public relations; Las Childs, secretary; Steve Cole, treasurer; and Steve Cox, alumni secretary.

Blue Key will begin this year with nine new members, bringing the total membership to 32. The new members are: Paul Banke, Las Childs, Steve Cox, Bill Lincoln, Mike Phillips, Bill Senter, Dick Sims, Gerard Smith and Stan Uchiyama.

THOUGHT FOR THE DAY:

Even if you're on the right track, you'll get run over if you just sit there!

The tree that became a branch

Once upon a time Marvin Hamilton was willed a hollow tree in an enchanted forest by an uncle who hated him. Marvin wasn't too thrilled with his legacy of leaves and bark, but he made the best of it. Actually he made a bank of it. Business was slow, and Marvin decided that the tree needed an image, a name people would trust.

"My tree needs an image, a name people will trust," said Marvin to his mother one day.

"Why not name it after me?" Marvin.

"It's the least you could do. After all I am your mother. If you only knew how hard I had to work in order to get the leaves and bark," said Mrs. Hamilton.

So he named the tree Security Pacific Bank.

Business boomed. All the forest elves and dwarves came in after every rain to deposit their crooks of gold. Marvin's bank grew and grew, until today Security Pacific Bank is one of the largest full-service banking systems in the nation, even though the first branch was only a tree.

Now the Bank is generally found in large concrete buildings, but the elves and dwarves still have accounts there. It's not surprising Security Pacific Bank always welcomes even small depositors.

SECURITY PACIFIC BANK
Local history unfolds

California's history is unfolding more of its mysteries near the small coastal town of Shell Beach.

A year ago the San Luis Obispo County Archeological Society, an organization unknown to most county residents, began looking for a site that would be representative of the early life on the central coast.

They found that the State Division of Highways had uncovered a site ten years ago when they were grading the hills to build a part of Highway 101. Armed with permission from the Division of Highways, volunteers from the society began excavating on the hilltop.

Jay von Werlhof, the head of the archeological "dig" and a history instructor on campus, said that the society is excavating an early Chumash village.

The village has been deserted since sometime before 1874 when Paul Schmacher, California's first archeologist, first saw the site.

According to von Werlhof, the knoll they are presently excavating will probably reveal an entire Chumash living complex.

From the discoveries they've made so far, it seems that the Chumash people ate mostly fish and birds. Almost half of the items they've sorted are shells, he said.

They have been finding burned bones, fish vertebrae, house foundations, undisturbed ash pits, and red and yellow shells that the men and women used for make-up.

Most of the materials they've found to this point are broken. But beyond the first level (25 centimeters) the material will be undisturbed, von Werlhof added.

Four generations ago someone took a Pendleton® shirt back to school. Since then, it's been the only way to go. But there have been some changes – today's man takes an entire wardrobe of Pendleton's, like sweaters, jackets, and slacks. In colors like brown, blue, green or gold. In plaid, checks and solids to coordinate within a color-group or outside it. One thing remains unchanged – Pendleton majors in quality. And pure virgin wool still rates the Dean's List. Naturally.

Local dunes great for rising sport

by Jane Ure
Staff Writer

Hot white sand, blazing in the
noonday sun, blinds the eye.
Silence prevails—not a bird sings,
not a breeze blows.

A low rumble is heard off to
the right. A tiny red flag atop
a slender stalk is seen rapidly
rising over the top of a distant
sand dune. Suddenly a buggy ap­
pars at the crest of the dune,
then it roars down the sandy face
and disappears from view.

Wherever there are sand dunes
— on beaches or in what were
once considered desert "waste­
lands" — dune buggies are found
to abound. This sport, which has
taken California by storm, is as
exhilarating and exciting as surf­
ing or skiing.

Each dune buggy enthusiast is
a mechanic of sorts, or shortly
becomes one after becoming in­
terested in this rapidly growing
sport.

These people become adept at
repairing and rebuilding powerful
engines so that their buggies may
travel over the sand with ease
and so that they may travel up,
down and around dune and hill
faces that are all but perpendicular.

Dune buggies can be found in
all shapes, sizes, and colors, but
they are alike in that they are
equipped with large tires (which
provide for better traction in the
sand) and a roll bar.

With a roll bar enclosing the
buggy and with the driver’s seat
belt-fastened, the dune buggy can
roll over and over without sub­
jecting the driver to serious in­
jury. With these safety features,
the exciting sport of dune bug­
ying provides a safe form of
recreation for all ages and can
be enjoyed throughout the year.

PREPARING TO DESCEND...

A dune is one of the many
thrills of riding in a dune
buggy (left). However, the
descent itself is the actual
climax of the experience.
— Photo by Jane Ure
Accreditation given

The engineering curricula of five departments of the School of Engineering have been accredited by the Engineers' Council for Professional Development. President Ernest Weber, president of the ECPR, announced that all five engineering curricula presented for accreditation during the past year have met the requirements for accreditation by the national organization.

Receiving accreditation are academic programs leading to Bachelor of Science degrees in aeronautical, electrical, electronic, industrial and mechanical engineering.

President Robert E. Kennedy, who received word of the accreditation while on vacation, said: "Congratulations to you and to the entire faculty of the School of Engineering for achieving ECPD accreditation in all five of the departments which submitted applications and were inspected by the review team. Achievement of ECPD accreditation was long overdue for Cal Poly; today's achievement is recognition of our past success and an even brighter forecast for the future. Over the years our Engineering faculty dedicated themselves to doing an outstanding job even without the recognition of accreditation by the Engineers' Council for Professional Development. This nation recognizes the worthiness of our program should make us strive even more to maintain the distinctive nature and personality of our engineering and technical programs.

Dean Archie Higdon commented, "The good news of this accreditation comes as a fine climax of two years of intensive work on the part of the faculty and administration of the College who had been working toward this goal. The College has moved forward to the next stage of recognition while on vacation, said: "Congratulations to you and to the entire faculty of the School of Engineering for achieving ECPD accreditation in all five of the departments which submitted applications and were inspected by the review team. Achievement of ECPD accreditation was long overdue for Cal Poly; today's achievement is recognition of our past success and an even brighter forecast for the future. Over the years our Engineering faculty dedicated themselves to doing an outstanding job even without the recognition of accreditation by the Engineers' Council for Professional Development. This nation recognizes the worthiness of our program should make us strive even more to maintain the distinctive nature and personality of our engineering and technical programs."

Cattle is California's number one agricultural commodity in dollar value, with dairy products being second.

California dairy cattle eat approximately $250 million worth of feed annually.

Production of butter in 24 major producing counties of the world during 1948 was up 2% over 1947 figures.

Title 5 information

Those students who desire specific information about Title 5 and provisions for suspending students can find copies of Title 5 in the Dean of Students' Office, Administration 309 or in the Security Office.

Twenty years ago about 6 quarts of milk could be obtained for an hour's wages; in 1948 earnings of an hour bought more than 11 quarts of milk.

How To Study is the name of the means:

"Effective Study Techniques" is the name of the course.

The Education Department is offering this 2-unit course designed to acquaint students with basic aims and objectives of going to college, and to provide adequate instruction and practices in specific study skills.

Psychology 104 is a guide to methods of studying in direct accordance with the class textbook How To Study, written by Clifford T. Morgan and James Deane. The course outline includes:

"Effective Studying" the art of studying; motivation for college work;

"Test Work Done" value of a schedule, how to use your time;

"The Strategy of Study" (ESPR) survey, question, read, recite, review;

"Reading Faster and Faster" reading with a purpose, using your eyes, reading improvement, vocabulary development;

"Taking Notes" underlining and outlining textbooks, writing summaries, using note cards;

"Taking Examinations" how to review, taking objective and essay examinations;

"Writing: Thèmes and Reports" choosing the subject, gathering the material, making an outline, writing the paper;

"Studying Foreign Languages" the general approach, techniques in language study;

"Mathematical Problems" basic skills, doing problems, using graphs and tables;

"Getting Help and Being Helpful" beyond the textbook help from workbooks, outlines, outside readings, films, fraternity files, and getting help from other students, instructors, faculty advisors, special courses.

Students learn to study effectively in psychology class

51% of the U.S. milk supply in 1948 was used in manufactured dairy products, such as butter, cheese, etc.
End of an era
Memories linger as old campus Post Office closes
by Berni Wright
Monday Editor

Mrs. Margaret Hoyt, campus postmistress, has moved to the book store. She took her stamps and scales, markers and meters, papers and postage. She can't take the mailboxes—row upon row of antique wood and brass containers — for they are part of the campus Post Office; and the campus Post Office will no longer exist, although the building still stands. The funds for a new Post Office are insufficient, and the old one was too small, so Mrs. Hoyt moved. Through a window in the El Corral Bookstore she will dispense the stamps and services until the bookstore moves to the new College Union Building.

The Archies want the old Post Office for labs. With so many students in the School of Architecture, present labs — A through P, Q and Z — are overcrowded. The Archies want to fix it up but it won't be the same. The campus Post Office serves a social as well as a physical need. It's a meeting place for students, a quiet corner for conversation, a source of information about houses and cars and other people.

Mrs. Hoyt will miss the Post Office — the myriad boxes and high cellings and bulletin boards and counters which characterize the campus Post Office. A window in a row of windows in a bookstore won't seem the same. No pipes brushing the glass ancient frame, windows. No pines brushing the glass in ancient frame windows. No ready shade on hot fall and spring days. No expanses of paper notes advertising the human condition. No iron grills and brass knobs and galvanized steel mesh.

"It isn't the same," says Mrs. Hoyt.

Trackmen earn All-American awards

With the announcement of 11 All-American honors after sweeping Mustang track team, a prosperous 1969 season came to a climatic close for the NCAA small college champions.

Thirteen Mustangs received All-American honors after sweeping the national championships last June in Ashland, Ohio.

Outstanding freshman, triple jumper, Mohinder Singh, did not compete in the meet due to injury.

Marty Growdon placed fourth in the 440-yard relay and took third in the winning 440-yard relay team. It was DeWinter’s final year with the Mustangs. Singh had already received four All-American honors before, two for the 440-yard relay, and one for both the 100 and 220-yard dashes.

Jim Edmondaon placed second in the 440-yard dash and also took part in the two-mile relay.

Two top hurdlers, James Lowe and Kenne Holmes, placed third and fifth respectively, to earn All-American awards in the 120-yard high hurdles.

On the field the Mustangs took three more All-American honors with Mike Boone placing fourth in the High Jump, Junior Olsen placing third in the shot put and Jeff Bunker placing fourth also in the shot put event.

The Mustangs took the national championships with 70 points, NCAA title for Coach Purcell Occidental followed with 43 and his Mustangs.

Offensive backs hold key to Poly success

With college football celebrating its 100th year, local sports enthusiasts are celebrating the return of head coach Joe Harper as the head mentor of Cal Poly's 1968 football club. Last year Harper and his team set the mark in route to boasting this school's best team since 1968.

Harper is optimistic about the upcoming season and his team's chances of faring well in a number of rugged contests with tough opponents. Highly rated Boise boasts more pro football prospects than any other college in Western Washington State, who presently are celebrating its centennial year, winning its local school's best team since 1968.

Head football coach Joe Harper and his team's chances of faring well in a number of rugged contests with tough opponents. Highly rated Boise boasts more pro football prospects than any other college in Western Washington State, who presently are celebrating its centennial year, winning its local school's best team since 1968.

However, will initiate the local school's best team since 1968. The Mustangs do lack the big, tough fullback that the Gold Gators of San Francisco, whose team is slated to battle the Mustangs Saturday night on the Golden Gator gridiron, has over the past few seasons.

Cal State Long Beach will bring their versatile running and passing game to central California. Their offensive line is one of the best in the nation. Their defensive line will be a problem for Poly, which has been struggling with its rushing defense.

The offense is the key to the game, and this year's Poly team has the potential to unlock the offensive unit. This Saturday the Mustangs put everything on the line as they face the Golden Gators of San Francisco.

**Mustangs view tough opponents**

Offense is the key to the game, and this year's Poly team has the potential to unlock the offensive unit. This Saturday the Mustangs put everything on the line as they face the Golden Gators of San Francisco.

**Offensive line**

The offensive line is a strength for the Mustangs. They have a lot of depth and experience up front. The tackle battle is going to be key, but must battle with the Golden Gators, who have a lot of size and speed.

**Quarterback**

The quarterback battle is going to be intense. There are three candidates vying for the starting slot. G. Abate, a 6-1, 185-pound veteran junior is extremely quick, accurate passer, a good scrambler and a fine team leader. Abate is being challenged by Don Miller, a 6-1 and 185-pound junior who shares the signal calling duties last fall. Miller has a strong arm and is a strong runner.

The third candidate is sophomore Steve Kromberg, a 5-9 and 180-pounder. He has great potential and could be a solid starter.

**Wide receivers**

The wide receiver battle is going to be fierce. There are a trio of candidates vying for the position. One of the standout candidates is Scott Abate, who has been a pleasant surprise to the Mustang coaching staff. He is an excellent competitor and a good left-handed passer.

**Running backs**

The running back battle is going to be key. There are a number of candidates for the starting slot. One of the standout candidates is sophomore Don Taylor, who made his presence felt during spring drill. He has a strong arm and is a strong runner.

**Defensive line**

The defensive line is a strength for the Mustangs. They have a lot of depth and experience up front. The tackle battle is going to be key, but must battle with the Golden Gators, who have a lot of size and speed.

**Linebackers**

The linebacker battle is going to be intense. There are a number of candidates for the starting slot. One of the standout candidates is sophomore Steve Kromberg, who has great potential and could be a solid starter.

**Secondary**

The secondary battle is going to be key. There are a number of candidates for the starting slot. One of the standout candidates is sophomore Scott Abate, who has been a pleasant surprise to the Mustang coaching staff. He is an excellent competitor and a good left-handed passer.

**Special teams**

The special teams battle is going to be intense. There are a number of candidates for the starting slot. One of the standout candidates is sophomore Steve Kromberg, who has great potential and could be a solid starter.
Injuries slight, spirit high
Mustangs ready for opener

Agility, speed and dedication are a few of the characteristics describing this year’s offensive ball club.

The Mustangs have the makings for a better offensive front than they fielded in 1968. However, a rash of minor injuries to key players resulted in concern. If all shake off the injuries, there should be depth in this department. A year’s experience for senior veterans and the addition of some new talent leads to optimism.

Jan Jurec, 6’ 2’ and 210-pound center, is the leading candidate for starting tight end post. Jurec, who was a regular defensive end in ’68, was successfully switched to offense during spring drills. He is a capable blocker and a fine receiver. Rick Roche, a 6’ 0’ and 180-pound senior from Rancho Marcos High School in Santa Barbara will back up Jurec. Roche was shifted to the end position from slot back.

A junior college transfer and a 1967 letterman are top contender for the tight tackle assignment. Vic Peracca, a 6’ 2’ and 205-pound junior from Golden West College in Huntington Beach, is a strong blocker, but is a strong blocker.

Rugged defense sparked by vets

Last season head coach Joe Harper introduced his brand of football. Defense was a key to the Mustang success. Crisp, hard-hitting tackling and tenacious pursuit are trademarks of the Harper defense. This same style also describes this year’s defensive unit.

The defensive line has a solid foundation of experienced veterans from last year complemented by some top-flight newcomers. Heading the line are Dennis Petrakek and Lee Treadwell. Petrakek earned All-California Collegiate Athletes Association (CCAA) honors as a defensive tackle while Treadwell was an all-league selection at linebacker.

Petrakek and Treadwell, both rugged seniors will play important roles again this fall.

Vic Keklund, a 6’2 and 210-pound Junior from Golden West College, is a tackle. He will also handle punt-duties. Both players earned All-Conference recognition and have a lot of potential.

With the return of Jurlc, 6’ 2’ and 200-pound senior, from left end. Petracek, who missed all of spring drills to have corrective neck surgery, is in the best condition of his career. He has been clocked at 4.8 in the 40-yard dash.

Rice, a rugged competitor, was a reserve right defensive end last fall. Last fall the Mustangs topped the talented ‘68 club. This defensive secondary was one of the bright spots during 1968 spring drills. It should also be a strong point this fall.

Cross-country up against NCAA's best

This will be the season of the giants for the Mustang cross-country team as they compete against four of the top teams in the nation. On top of the list of competitors is Cal Poly Pomona. Last year, the Broncos won the NCAA conference but are the heavy favorites to finish second in the nation in the college division and ahead of the nation's top two teams in the University division.

This will be the season of the giants for the Mustang cross-country team as they compete against four of the top teams in the nation. On top of the list of competitors is Cal Poly Pomona. Last year, the Broncos won the NCAA conference but are the heavy favorites to finish second in the nation in the college division and ahead of the nation's top two teams in the University division.

Among this year's non-league giants will be Westmont College. Last year, the Mustangs were the NCAA champions. Westmont has been led by nationally known Dennis Savace. The last year smashed the Mustang six-mile course record. With Long Beach State's returning power and San Jose State's returning power, both teams should offer more than a challenge.

Coach Tom Lea reported that "any freshman football players who have a good high school background and experience and are interested in playing for the Colts this year, should report to room 307 in the Man's Gym." Nine varsity players will compete for first string positions, said Coach Lea. As a good indication that a good freshman player has an excellent chance of making varsity the following year.

1969 Freshman Football Schedule

Open a Tenplan checking account at Bank of America and save.

Start the academic year off with a gesture of financial independence. Visit your local branch of Bank of America. Get acquainted with our student checking account because it's designed for student customers who usually write less than 10 checks per month. With it you obtain personalized checks and there's no minimum balance required. Just one charge of 15¢ for each check you write. (And now, Bank of America's new scenic checks are available, at a moderate additional cost.) So check with us — and save.
