Kennedy defers frat decision

President Robert E. Kennedy, in a statement issued Monday, said that he had no intention of making any decision regarding the recognition of fraternities and sororities on campus until he had thoroughly investigated all of the facets of this particular problem. I am being subjected to considerable pressures for an immediate decision, but the pressure is coming from those who wish me to change the College's existing policy of non-recognition of social fraternities and sororities.

"For your information, I do not intend to take any action one way or the other. I'm ready to make a decision, but I have no intention of making any decision regarding the recognition of fraternities and sororities on campus until I have thoroughly investigated all of the facets of this particular problem. I am being subjected to considerable pressures for an immediate decision, but the pressure is coming from those who wish me to close the issue by refusing to recognize fraternities and sororities."

The Mustang Daily reported in its Friday, January 30, issue, that the Academic Senate on January 13 stated as follows:

"The Academic Senate on January 13, 1969, formally adopted a policy of non-recognition of social fraternities and sororities."

The fact that Mr. Loren Sutherland, the current President of the Intra-Fraternity Council, disagrees with this statement, does not negate the fact that it remains the official position of the Intra-Fraternity Council until I have received from the Intra-Fraternity Council an equally official notation that this policy has been changed through a decision reached by a majority of the Council.

"Because there is considerable merit to both sides of the issue of recognition versus non-recognition of social fraternities and sororities, I will continue to investigate the matter and will make no decision before at least 30 days."

Experimental aerospace class tendered in spring

Under the direction of Dr. Frank J. Hendel, associate professor of Aeronautical Engineering, an experimental course in space science has been formulated and approved for Spring Quarter 1970.

The new course, AERO 406X, is offered as a three-unit course for non-engineering majors. Students planning careers as teachers or in the fields of journalism, applied sciences, business administration, and technology should find the course of interest.

According to Dr. Hendel, "There is a vital upsurge in the field of space science and space science science has been formulated and approved for Spring Quarter 1970."

The new course is designed to provide students in the non-engineering areas with an understanding of space science. Included for study in the course will be the history of aviation, space flights, and rocketry. Investigations will be made into the areas of fundamentals of flight vehicles, propulsion, trajectories, orbital mechanics, aerodynamics, re-entry, pyrotechnics, nucleonics, electrical power sources, guidance systems, and telecommunications.

Prerequisites for the new course, to be taught by Dr. Hendel, are junior standing or the equivalent. The course may be applied as elective credit against the requirements of the M.A. in Education.
Poly Royal--a pseudo world

by SCOTT LEARNER

With the north of April rapidly approaching, the thoughts of many of us begin to turn to Poly Royal, and the festivities that accompany this holiday; parties, music, flashing lights and the veritable river of boor that flows through San Luis for these two days.

What do we say during Poly Royal? What things do we have to show for this concentration of some ten thousand people in the midst of the most productive years of their lives? Not much, not much at all.

Every year we have hundreds of displays, pavilions and exhibitions of just how good this world Is and say, why. I dream things that never were and say, why not.

Let us too say why not, and do something about it. Can we afford not to?

The late Robert F. Kennedy once said, "Some men see things as they are and say, why. I dream things that never were and say, why not."

We have a unique opportunity here in San Luis, where we can actually see the results of our labors.

Right here there is poverty, disease, hunger, racial inequality and pollution, all the things that are wrong with the whole world. Right here we have a place to begin.

The late Robert F. Kennedy once said, "Some men see things as they are and say, why. I dream things that never were and say, why not."

Let us too say why not, and do something about it. Can we afford not to?

SLO Likely place for Nixon's books

The San Luis Obispo Chamber of Commerce sent a resolution to Leonard K. Firestone last Friday. Firestone is the chairman of the commission to locate a library for President Richard M. Nixon's works. The committee is investigating possible sites for the library, which is to be built in California.

In the resolution, the chamber stated that the library would be well located to house the President's letters, papers and records. It will include records from Nixon's two terms as vice president and his years in office as president.

Editor:

Please allow me a few lines to make favorable comment about a most active, productive, and refreshing campus group. The Fine Arts Committee is one of the few recognizable outlets of ASI funds that I consider as a supplement to the education I am here for. Their provocative and mind-expanding programs are a welcome diversion for my friends and myself. We thoroughly enjoyed our evening with Baba Ram Das. An insight turn-on, a perceptual windshield wiper, a cognitive

Mustang
Free U, house of encounter offers kids experience

by TIM LONG
Raff Writer

"The Free U is... well it's a cler­ning house," volunteered a ser­ted hair girl, who was leaning against the wall and gesturing with her cigarette, "for people who want to experience education in a free environment, who want to experience themselves, and their environment."

The Free University is a loosely organized group which came into existence last January to supplement the traditional system of education in San Luis Obispo. It followed the many other groups, formed all around the country, that are trying to fill in the gaps that schools tend to gloss over or ignore.

A meeting at the Methodist church was called on Friday night to decide what directions the Free U should take. It was the first general meeting since November and the first since the original organizers had left the area.

Dave Freeman, speaker for the Free U, called the meeting and briefly explained its purpose. "We called this meeting to decide where the Free U is going," Freeman said, and of course set up some new classes and choose a new coordinator.

The meeting then became the common property of the 30 or more people who sat in chairs, on the floor and on top of tables in a loose semicircle. The time lag between the end of Freeman's brief address and the first reaction was short.

"I don't think that we should let the Free U become a highly structured organization," the voice came from the back of the room after all, didn't this get started because we were seeking to escape a rigid and arbitrary educational system?"

Other voices joined in. It was clear those in attendance wanted Free U to retain the fluid quality that allows it to move in many directions at once. There was a genuine reluctance to discuss organizational details and predictably—the subject of appointing a coordinator never entered the discussion.

"Part of the Free U is getting involved," said a young man sitting cross legged on a table, "getting involved in the community, in politics, in people."

Sitting up front, Freeman joined in, "I feel that we are in the Free U to move out of the intellectual and into activism. We must begin in the intellectual realm, in research," Freeman continued, and move into activism, using the facts to educate people in what's happening around them."

As the discussion evolved, the group approved a bipartisan activist, such as the Free U sponsoring nonpartisan activity. The Free U was not started as a political organization, Freeman said, "in the Free U I don't think that it should get involved in politics. I don't think that it would alienate the community."

"We stayed out of politics in the community last year," one member said, "because we figured that it would alienate the community."

The people that make up the Free U think of it belonging to the community as a whole, not restricted to any particular segment or interest group.

Projects such as creek cleanups, which proceed official city projects, have been sponsored by the Free U. Members on their own are often involved in activist politics, but prefer to let the organization remain nonpartisan.

Freedom to learn is the goal of the Free U. Classes are started by those in attendance who want to share their knowledge with others and by groups who want to learn and grow together. Unlike state educational systems, classes are not oriented toward any goal except that of obtaining new thoughts and ideas.

Informal atmosphere and a common interest in learning make the classes conducive to communication. Because it is not burdened with a grading system, the class can concentrate on learning rather than memorization.

An hour after the meeting had broken up, Max Rafferty was on television. He said, "There is not only something lacking in the school system but there is something lacking in society and that's why the younger generation is searching for a new answer."

Then again this is an election year.

Humanistic viewpoint of Vietnam war presented through College Hour film

"The Survivors," a movie showing the problem of war victims in Vietnam, will be shown twice tomorrow. The first showing will be during College Hour in the Engineering Auditorium, and the second will be at 8 p.m. in Room B-7, Science building.

The movie was produced by the Committee of Responsibility, which is an international group of physicians and other concerned people.

According to Mieba Najmi, president of People to People, the club sponsoring presentation of the film, the committee gives medical care to Vietnam war victims—especially children. "If the victims can't be treated properly there, the committee works to bring them to the U.S. or somewhere where they can be properly cared for."

Najmi also noted that for the some 30,000 amputees in Vietnam, there is only one company producing artificial limbs in Vietnam. "And they only make 500 a year," he said.

Four American doctors who are members of the committee produced the film to show the humanistic point of view of the war," Najmi said.
Lonborg trains with Garrido's bandits

When a major league pitcher starts working out with a college baseball team you can be sure that team has a good program. The Mustang baseball program is good and Jim Longborg the 1967 Cy Young award winner of the Boston Red Sox is the major league pitcher working out with them. Longborg, who grew up in San Luis Obispo, explained his presence on the practice field. "I've been in Puerto Rico for the last three months playing winter league baseball and I'm on my way to Phoenix for spring training. But I stopped here to visit my parents. Asked how the Mustang's head coach Augie Garrido's practices measured up to the pro he stated, "Augie's got a great little camp here. He's got everybody doing something all the time and that's great. He runs your butt off. These kids here run as much as they do in the pro." Garrido's practices can be fun.

Some office jobs are more interesting than others.

In the old days if a man wanted to be an executive and crave adventure too, he could skipper a clipper ship. Today...the clippers are gone. Swashbuckling executives still get their chance, worth of plane and when you fly it the responsibility's all yours.

If you'd like to mull over every time you bank or roll at 1,400 + mph, try for Officer Train School after you graduate from college. Also, member the nice idea of yourself, an Air Force pilot, captain of all you command, gaiting to visit foreign ports like the clipper captain of yore. An Air Force officer's life is a great life!

Why just be skipper of a desk?

Send a LoveBundle for Valentine's Week.

Why squeeze a lot of Love into just one day?

Order a LoveBundle to arrive early.

It's a unique arrangement designed to stretch Valentine's Day into a week. Because the flowers will last.

A special Valentine. Only at FTD florists. At a special price.

Hairstylist idea

Face your future with a haircut

by DALE KERN
half section

How far will you go to be stylish? Would you consider shaving your head? How about shaving your eyebrows? These questions are directed at both sexes.

In an age when long hair is the thing, once again designers flip-out into their own obivious orbit and predict that, in the '70s, women will be hairless from the neck up and bear the neck to the waist.

An explanation for this itch case of mind and skull may be the new "Hairclothes" that is sweeping the country. People are getting dollars from the verge of a grow-it-today and wear-it-again tomorrow era.

Hair is being used to make ties, vests, purses skirts and other furry articles of clothing. Even Beatles John Lennon has taken to the new fashion trend and now sports a coat made of human hair.

Imagine the cost of a full length mink coat of good quality would cost approximately $6000. Imagine the cost of a full length human hair coat made up of such distinguished locks as those of the Beatles or the Rolling Stones. Kind of hard to imagine, isn't it? Even harder to imagine is how the Beatles and the Stones would look without any hair? It might be a little frightening. As strange as people might look without hair there might be one redeeming factor. The redeemer would be the money. College students might use the sale of their hair as another means of financing their education or extra-curricular activities. What with tuition close on the students' heels, an extra shot of coins couldn't do any harm.

It might be a boom to the coeds on campus if they were without hair. At least for the girls with the frizzies or the dire straight. Guys would be forced to take a girl for a little more than face (or in this case head) value. This, too, would apply to the female appraisal of the males.

At the present time it may seem highly unlikely that this idea of hairlessness will ever go over, especially considering the current boom in the world of wigs. Or is this boom an indication of things to come?

If the hairless idea does go, the barber college will be one college which will see its heyday. Barber and haircut will once again appear in the dictionary, and people will want and rave over the cost of a shave and a haircut.

Schools combine to plan new conservation course

A new concentration in Conservation Education for the Master of Arts Degree in Education is being proposed by faculty members from several departments on campus. As part of the concentration students would take courses in conservation, natural resources management, physical education, social science and environmental engineering.

The college’s recognised success in the broad field of conservation and education makes it an excellent institution to engage in the elementary and secondary schools.

The proposed program is being developed to meet the need for teachers to be prepared in conservation as a problem arising from air pollution, soil misuse, environmental desecration, and wildlife mismanagement. The need has been established by the California legislature in the passage of two laws, Senate Bill 1 and Senate Bill 206, which set up the basis for the programs in conservation and outdoor education to be developed in the elementary and secondary schools.

The program, if approved, will be included in the 1971-72 curriculum.

Outdated swine unit will move

The new swine unit will open sometime during the first two weeks in March, according to Russell Anderson, head of swine production.

The old swine unit was built about 1937 and has since become outdated. Anderson said the new swine unit will be modern and up to date.

The main reason for moving the unit, was that a new road into campus from Highway 1 would have cut right through the barn to the underpass. The road, still to be built, will serve as another main entrance to the campus.

Field D-10, which is beyond the airstrip, will be the site of the new swine unit. Since the new unit will not be as large as the old one, they will have to cut down on the number of animals already present.

According to Anderson, the swine herd will consist of 60 to 80 sows and 8 boars. Most of the facilities will be made of concrete and steel, with some pasture for the breeding sows. The student living facility and judging barn will be combined in one building.

There will also be a farrowing barn (nursery) and a fattening or finishing barn. The unit will retain its own sanitation system.
Library costs from thievery

It cost the college library over $3,000 last year just to replace lost, stolen or dilapidated periodicals. According to Evelyn L. Wood, periodicals librarian, the cost becomes greater every year. "Every year we get a few additional magazines added to the library and every year more need replacing."

One reason the library is forced to replace certain magazines is that some are just plain worn out. Many magazines are used so extensively that they are dog-eared and too dilapidated to be bound effectively. Some magazines, such as Life, Readers Digest and Time, end up that way even when two or three copies of each issue are on the shelves.

But the most common reason why certain magazines must be replaced is that many are stolen or mutilated. The entire magazine is hard to steal because of the central check point. "But pages are very often ripped out," said Mrs. Wood. "If a magazine is mutilated that way, we are forced to send to the publisher and get an extra copy," she said.

For replacement the library must buy just one issue a few months after it is out of print. But just one missing issue will many times cost a lot of money. Several publishers do not reprint just one issue. The library is then forced to replace an entire volume or have a partially complete volume bound for use.

Some state colleges have recently claimed that annual book binding cost could be reduced 30 to 40 per cent if the binding were done locally. But this is not the case here, according to Harry Strauss, head librarian.

But it is reported that many libraries in metropolitan areas complain that they could reduce cost and time the books are away from a library by not sending them to the state bindery in Sacramento. These libraries are mostly in the southern California metropolitan area.

"But we have no problems like that," Strauss said, "we might be able to effect some savings, but there is no inconvenience to speak of concerning time the books are away from the library." The library ships books, pamphlets, serials and periodicals to Sacramento six times a year. The material is usually out of circulation only about a month at a time. Also the closest local bindery is in Fresno, according to Strauss.

Pollution can be beaten turn waste into profit

American ingenuity, combined with increased technology, could turn the problem of pollution into "commercial profit" according to Architecture instructor Dr. Geoffrey Stanford.

Stanford recently gave an address to students that dealt with "Environics and Urban Planning." Ecological damage, he said, "is a not a local problem, nor limited to California. It is of consequence to the entire United States."

Pollution has not developed a history all its own. In the beginning solid waste piled up all over the land. Then, with increased technology, man was able to pollute his waters. Now he has reached a logical end, the air around him is fouled.

"The problem of pollution should be treated as a whole," Dr. Stanford said, "if put under a central authority, pollution can be a commercial profit instead of a tax." English-born Stanford was amazed at how American contractors can erect cities. If he had the privilege of visiting Pueblo and was told that the flat snow-covered ground it stood on would soon be inhabited by thousands of people, he would feel the American ability to build cities "buttoned," Stanford said that we could "centralise industry and waste products instead of having them at areas places "stinking away," turn could be treated all at once is recycled for use."

Contractors who build "...with their own money and not on credit, capable of able to set up their own regulations, waste disposal systems, and limit the waste industry." He dismissed the American fear of centralisation of authority "...as a bogey rather than a fact."

Veterans clubs meeting place for ex-servicemen

(Editors note: This is the first of a two-part series on the military veteran and Chi Gamma Iota, the campus veterans club.)

There has been a 94 per cent increase in enrollment on this campus since the school year 1966-67. This is not total enrollment. It is enrollment of veterans continuing or beginning their education after completion of military service. Who are these 747 veterans? Are their aims and ambitions much different from other students? Why are their percentage increases year much higher than the student body in general? Just how different are they socially and academically?

According to Dave Doll, Chi Gamma Iota president, the club officially exists for the betterment of ex-servicemen at- tending the college, and for the betterment of the student body as a whole.

Purpose listed by other college veterans clubs and endorsed by Chi Gamma Iota include the following:

- "To provide for (Ventura College Veterans) an organization dedicated primarily to the advancement of academic achievement;" "to further good relations between the university and Chico State College;" "to promote the American way of life, encourage sound leadership and promote good fellowship among the veterans of Palomar College."

According to Dave Doll, Chi Gamma Iota president, the club achieves its goal of bettering the ex-serviceman each time it meets. Members get people with similar backgrounds and experiences together to help each other.

There's an absence of bickering and behind-the-back dealings because we've all been through the same. This is an all Ari card holder.

The club officially exists for the betterment of ex-servicemen attending the college and the student body in general.

Watch the clowns

So you say the rodeo is for the birds. So it's not really true. If you have seen a rodeo you know that they are exciting and many times humorous. If you haven't seen a rodeo, you came to the school with a nationally rated rodeo team. Last Saturday I attended the rodeo held in the campus arena. That was my first rodeo in a long time. I enjoyed every minute of the events held. The men's events were: bronc riding, bareback riding, bull riding, ribbon roping, calf roping and tying, and team roping. The ladies events were breakaway roping, goat tying, and barrel racing. If you are unfamiliar with rodeoing I'll explain a few things. Bareback riding, bull riding, and calf roping and tying are self explanatory. Ribbon roping is just calf roping and instead of tying you grab the ribbon which is on the calf's hind end and run to the judge's stand with it. Bronc riding is a horse with a saddle that doesn't like it or the rider. Team roping is just calf roping for time.

For the girls, goat tying is explanatory. Barrel racing is an event with three barrels which you must go around. It is somewhat of a slalom course. The breakaway roping is calf roping. One bronc rider, had a harder time getting on the pick-up horse and off the bronc than he did while riding the bronc. The clowns are very interesting to watch. When the bull riding starts the clowns put their lives on the dirt. With a nationally rated rodeo team you shouldn't sit in your room wondering what to do on a Saturday afternoon. The rodeo team is good. They could end up world champions and you still might not even know about it.

Hitchcock places 2nd in 'Coach of the Year'

Mustang wrestling coach Vaughn Hitchcock finished second in balloting for 1970 College Wrestling Coach of the Year. He was conducted by the men's committee of the National Wrestling Coaches Association. The vote took place during that group's mid-winter meeting in Washington D.C.

The top coaching honors went to Dave McCaskey, head coach at the University of Iowa. He had last year finished second in the Ten and seventh in the last Collegiate Athletic Association championships. It was the second straight year that Hitchcock has been close in the voting for the top honor. In 1969 he finished third in the balloting which was won by Ed Perry, wrestling coach of the UI Academy.

Hitchcock coached his team to the 1970 NCAA college wrestling championships. It was the second straight year that Hitchcock had been close to the top honor. In 1969 he finished seventh in the balloting which was won by Ed Perry, wrestling coach of the UI Academy.
