Closing classes:  
"I'm sick of it!"

Tick, tick, tick...
Time: 3:18 p.m., Friday. "At this time everything has gone pretty well but from now until 4:30 classes will close at a much higher rate."

Dean of Admissions Jerald Hollay, college registrar, added that one of the main reasons that complicate matters is "that there are just 38 seats in a room, and all you can get is 38 students in each room." Hollay said the problem lies in the fact that there are only 103 lecture-type rooms on campus.

"By tonight we can expect around 11,800 students, compared to 11,380 for the 1969-70 term."

"Because of all the pressure there is in college, we are anxious to see how many actually do register. We had to turn down 5000 applicants for the fall quarter. We did accept 4300 new students, but expect only 3000 to actually enroll."

When asked of future registration plans, he expressed hope for a "survey project this fall for computer programming in the near future. It may be successful if we get valid information."

Holley said that Cal Poly has been using the same type of system of registering since he arrived nine years ago, and before that a system was used whereby the students went from building to building to register for each class. He added that he remembered seeing students sleeping in front of their classes in order to register first.

Nancy Green, a Junior majoring in home economics, hadn't yet registered at press time, and was to register with the last group of students. When asked what she thought of the system, she responded, "Don't ask me because I register last. I've registered last for the last three quarters and I'm getting sick of it!"

Tick, tick, tick...

by WOODY GOULART

College Pres. Robert E. Kennedy has expressed interest in an educational experiment which could involve conversion of the new-vacant President's Residence into a center for innovative instruction.

The first phase of the experiment in education might be an "Awareness Course" proposed by the Summer Quarter Industrial Engineering 433X class, whose goal is to apply systems engineering to today's problems.

Representatives of IE 433X, under the direction of Dr. Donald E. Morgan, presented the report for the proposed "Awareness Courses" to top campus administrators: Kennedy, Dr. Dale W. Andrews, Associate Dean Howard West, and Administrative Vice-President Harold O. Wilson on Sept. 10. Mrs. Joan Buckley and Kamal Gris, IE 400X students, having been introduced by the dean of engineering, Dr. Archie Rigdon, outlined the experimental class for the college administrators.

Buckley and Gris described the proposed class as being designed to "develop an awareness of social, economic, political, and environmental problems through interdisciplinary communication and interaction."

The class would be in the 400 series, they explained, being "available only to Juniors and Seniors, and would be titled, "Issue Awareness Special Problems for Advanced Undergraduates."

The "Polyhouse Center" is the result of Kennedy's plans for use of the residence. Polyhouse would serve as a facility for an information and reception center and be used for seminars, conferences, and even lunccheons and banquets. A part-time director of the Center and a secretary would be needed to insure the successful operation of the "awareness-oriented" educational project.

Kennedy noted that any "course taken at the Center will be offered in such a way that hundreds of students can be accommodated in a course that is of particular interest to them in individual or group investigation, research, studies or surveys of selected problems." Kennedy explained that Polyhouse would need to be funded by private donations to keep it separate from being a classroom facility under the state college system. He said potential donors are now being sought.

The college president suggested that the "Awareness Courses" course could be used in conjunction with the proposed Polyhouse Center.
System in change says new class

Concerned about today's public problems? Want to find some answers? IE 431X, Public Problem Project Systems Engineering, is a "systems" approach to the problems of today. The course will explore and explain the system project concept and the significance of multidisciplinary analysis of a problem.

IE 431X will be taught by Dr. Donald Morgan, of the Industrial Engineering Department, on Tuesday and Thursday, 1:30 to 3:00 and is offered only to non-engineers.

Offered for the first time last spring, IE 431X brought together 35 students from the departments of Agriculture, City and Regional Planning, Journalism, Social Science, Architecture, Mathematics and Computer Science, along with a group of consulting engineers.

Each week, two class meetings were devoted to group dynamics and problem solving and the third class meeting was devoted to lectures on no-mathematical studies of the systems approach and the study of the capabilities of available quantitative methods and their application to actual problems. Mid-point in the quarter, the entire group chose a problem to try and solve using all the methods they previously had been studying.

Last Spring, the problem chosen was campus unrest. The final report of the group after weeks of study suggested a new course to be offered here. A course designed to promote awareness through group and individual interaction.

IE 431X generated such enthusiasm that students on campus this summer continued with the promotion of the awareness course.

The anagram spells "action group." It's how Cal Poly Christian Fellowship president George Passage describes the basic format of his organization's operation.

Passage (rhymes withassage) anticipates that the campus organization will come on strong this quarter. Over 100 students participated in action groups last spring, and he expects to attract a larger number to the sessions this quarter.

What are action groups? Passage, hosting Cal Poly Christian Fellowship booth behind the gymnasium Friday during registration, described them as intensive, informative gatherings of students for fellowship, discussion, and Bible study. Groups range from two to twenty participants, with two to five preferred. They meet in widely scattered locations in student living quarters, on campus and off.

"The idea of these groups is to get close to people, discuss their problems, and through love and prayer to do something about them," he explained, adding, "The Bible tells us to bear one another's burdens, but how can we bear them if we don't even know what they are?"

Information about locations and meeting times of the CPCF action groups may be obtained at the weekly chapter meetings, according to Passage.

"These kids are real enthusiastic," he said of his organization's members, "They want to get going."

And so they will. Besides the burgeoning action groups, CPCF will sponsor a full roster of social events, recreational activities, and weekly chapter meetings. A folk rock concert by Sherman Andrus and the Brethren, a southern California group, will be held Friday night on the Little under CPCF sponsorship.

CPCF members began their schedule of events for the quarter with a skating party Saturday night in Morro Bay. "Skating parties are good ice-breakers," Passage commented.

Cal Poly Christian Fellowship is a quarter of Inter-Varsity Christian Fellowship, a nationwide organization headquartered in Chicago. The national CPCF establishes and assists groups of students for the purposes of helping them form a personal faith in Jesus Christ, and strengthening their spiritual life by study of the Bible, prayer, and fellowship. All of its activities are interdenominational.

Passage, in his second year at this campus, transferred from Chasta College in Redding, where he was first president of that school's Inter-Varsity Chapter. He served as vice-president in charge of action groups at CPCF before becoming the chapter president for the 1970-71 year.

Assisting him are Tom Barnhart, vice-president in charge of meetings, and Paul Toomey, vice-president in charge of action groups.

The first chapter meeting of the quarter will be Thursday, 7 p.m. in Science North, room 215. Goals for the year will be discussed, and officers will be introduced to new members, according to Passage.
Kennedy speech—local flavor

The importance of communication in college administration was stressed in a convocation speech delivered to 1700 faculty and staff members on campus by President Robert E. Kennedy.

Dr. Kennedy noted in his address, "The Importance of Community," that the college faculty is larger now than the entire student body when he joined Cal Poly 31 years ago.

His address dealt with the problem of maintaining two-way communication in an organization composed of 1700 individuals, including 916 faculty members. He noted that the Cal Poly community this fall will include some 13,200 students, and he pointed out that fewer than 100 of the nation's colleges and universities will have a larger enrollment than Cal Poly this fall.

Dr. Kennedy said that campus unrest is one of the foremost concerns of the nation today.

"It is easy to see now how failures of administrators and faculty on many campuses to listen and communicate with the first small groups of militantly agitated youth resulted in drawing into subsequent confrontation great numbers of students who originally had not bee politically motivated toward the use of demonstrations and violence."

"Today's youth wants to 'individualize' almost everything in society, the President said, but he added that meeting 'community' needs do not necessarily mean abrogating individual needs. "On campuses, the unrest may be not as much aimed at the slowness to change as the fact that youth, in many institutions, are denied a part in the decision-making process of those institutions. This they interpret as a method of postponing indefinitely the changes youth see as necessary."

Consultation and communication must be relied upon to keep a college free of disruption, Dr. Kennedy said. "I honestly believe that on this campus we have provided positive evidence to our students, as well as to others in and out of this academic community, that desirable changes can be brought about without undue tension, conflict, disruption, or violence. Changes have been brought about by cooperative action, the key to which is continuous communication and consultation by those who have the responsibility for administration with those who have the responsibility for every other aspect of the college."

Pointing to pressures for a change, Dr. Kennedy gave environmental pollution as an example urging the audience to eliminate pollution on campus to establish a model which could be emulated elsewhere.

He urged efforts to solve relationship problems in such smaller "communities" as among relatives, friends, acquaintances, neighbors, students in a department, in a college, people in a school district, city, county, state, and nation.

The convocation address marked the college's annual faculty-staff conference which this year has the theme, "Our Community."

Appointments told

Appointment of one new department head and three new acting department heads at this college was announced last week as members of the college faculty and student body began returning to campus for the Fall Quarter.

Named by Pres. Robert E. Kennedy were Dr. Gloria R. Jameeson, Dr. L. Robert Sorenson, and Mary Lou White. Sorenson was selected to head the college's Psychology Department and Dr. Jameeson, Teller, and Miss White, to serve as acting heads, respectively, of the Foreign Language and Linguistics, Economics, and Women's Physical Education Departments.

Kennedy said all four appointments were effective last week.

Three of the four departments involved in the new appointments—the Economics, Women's Physical Education, and Foreign Language and Linguistics Departments—are all newly established as part of the college-wide reorganization announced last spring by Kennedy.

Courses leading to the bachelor's and master's degrees in physical education, as well as general education courses, will be offered by the Women's Physical Education Department in cooperation with the Men's Physical Education Department. The Foreign Languages and Linguistics, Economics, and Psychology Departments will all provide general education courses for the entire student body.

Pollution: not even for birds

Pollution of our environment has become a national issue, but many of us wonder what we, as individuals, can do about it. A recent issue of Mademoiselle published an article which listed 40 ways the individual can help depollute the countryside. So, take a few minutes to read this article, and find out what you can do to stop the pollution plague.

The world may be a better place for it.

Don't use colored facial tissues, paper towels, or toilet paper. The paper dissolves properly in water, but the dye lingers on— and kills fish.

If you accumulate cost hangers, don't junk them; return them to the cleaner. Boycott a cleaner who won't accept them.

Use containers that disintegrate readily. Glass bottles don't decompose. Bottles made of polyvinyl chloride (PVC) give off lethal hydrochloric acid when incinerated. (That's the soft plastic many liquid household cleaners, shampoos, and mouthwashes come in. Don't confuse it with stiffer polystyrene plastic, used mainly for powders.) The Food and Drug Administration has now approved PVC for food packaging, too. Don't buy it.

Don't buy unretryable containers. Hold aluminum-can plastic many liquid household cleaners, shampoos, and mouthwashes come In. Don't buy it. Use decomposable— "biodegradable"—pasteboard, cardboard, or paper containers instead. If you can't, at least re-employ nondecomposable bottles; don't junk them after one use.

Don't buy unreturnable containers. Hold aluminum-can containers that disinfect readily. For an additional charge to your cleaning bill, you can find cons of fire (and, unfortunately, unburnt plastics.)

Don't buy or use DDT even if you can find it and (and, unfortunately, you still can). If you must spray, use the right insecticide. (If at all possible, use botanicals—natural poisons extracted from plants—like nicotine sulfate, rotenone, pyrethrum.)

(Continued on page 9)
Chemist is new fellow

A veteran member of the college faculty has been elected a fellow of the American Institute of Chemists.

Selection of Dr. Harold J. Watson as a fellow was announced in New York last month by Emerson Venable, president of the society which has more than 7,400 members and 28 chapters throughout the United States.

Watson, a research chemist for Dan River Mills and Texaco, Inc. prior to assuming his teaching duties here in 1964, is a graduate of University of Illinois, which awarded him three earned degrees, including the doctorate.

The American Institute of Chemists is the only chemically-oriented American organization whose principal purpose is to develop the professional and economic status of chemists and chemical engineers.

Membership in the institute is limited to persons whose principal education is in those fields.

Outta world program set

Seances your bag? How about clairvoyance, magic, ESP? The famed Andre Kole will be presenting a controversial program dealing with the fantasy and the reality of the supernatural world this Thursday, Sept. 24 at 8 p.m. in the Little Theater.

The program will include a variety of psychic phenomena including a visible demonstration of the Fourth Dimension, and one of the most spine-tingling spirit seances ever staged.

Andre Kole, billed as America’s leading illusionist, presents an unusual program of entertainment dealing with the mysteries of clairvoyance, legerdemain, magic, prophecy, extra-sensory perception, and kindred psychic phenomena.

The Campus Crusade for Christ is presenting the program, and admission has been set at $1 a person. Tickets may be bought in advance at the TCU, or at the door.

Prof writes handbook

Dr. Frank J. Hendel of this college is one of 33 contributors to the newly-published “Handbook of Tables For Applied Engineering Science.”

Produced by the Chemical Rubber Company of Cleveland, Ohio, the 903-page volume was released for distribution this summer after more than three years of preparation under the guidance of two editors: Dr. Ray E. Bolz, dean of engineering at Case Western Reserve University in Cleveland, and Dr. George L. Tuve, coordinating editor for the publishing firm.

Hendel, who provided special material for the propulsion and explosives chapter of the new book’s “Energy Engineering and Transport” section, is a member of the Aeronautical Engineering Department faculty here.

Vets in fall offensive

There is a campus club just for veterans and reservists. Chi Gamma Iota is a club designed for the ex-serviceman or woman. You have already served your initiation in boot camp and your pledge period was your tour of duty. You have already qualified. There is no BS given out. There are no obligations to attend meetings or activities. You devote only what time you choose and can afford.

Between six and eight units are considered three-quarter time for veterans at this college. The change is part of a bill that boosted GI education benefits by 20 percent in March. The bill, signed by Pres. Richard Nixon on March 26, increases monthly payments to single veterans from $130 to $175 if they are attending school full time.

Chi Gamma Iota has planned several Fall Quarter activities. They include barbecues (the first is scheduled for Sunday, Sept. 27), beach parties, and water skiing parties at Lopez Lake. Chi Gamma Iota offers special benefits for disabled veterans. These benefits include special parking permits when necessary.

All veterans and reservists are invited to attend the first club meeting. It will be held in Science E-48 Thursday at 11 a.m.

If additional information is needed the following club officers can be contacted: Pres. Bruce Weiland, Vice Pres. Dennis LeDuc (773-1707), Sec. Mike Jones, Treas. Dave Wegner (773-2787), Membership Chairman Bill Corner (923-9291), and Publicity Chairman Gary Kenyon (543-9001).

Placement computer job

This college is one of 17 colleges and universities across the nation chosen to test a new, computerized aid to seniors and graduate students in their choice of employment interviews.

Known as GRAD II, the pilot program is being conducted by the College Placement Council (CPC), the non-profit organization best known for its "College Placement Annual," the initial test of GRAD II was conducted successfully at Purdue University last year. The original GRAD program, limited to college and university alumni, has been in operation for several years.

According to Eugene A. Ritenhouse, director of placement

Hayakawa predicts peace at S.F. State

U.P./San Francisco State College President S. I. Hayakawa said today he had "very good reason for optimism that the school would have peaceful year.

"The past is past, the current year is about 700, a little better than average. In the year ahead we are going to need ingenuity, judgement and wisdom to cope with the problems caused by the serious shortage of resources and the increased demand for our services," he said.

Hayakawa said the failure to get faculty raises "means that the public is pretty well fed up" with what has been going on on college campuses.

and financial aid at the college, the experimental program will offer students here an opportunity to see the full range of opportunities offered by employers participating in GRAD II. Student participation is free and entirely voluntary.

The placement officer explained that the process has already begun with the input of employer job descriptions. Immediately ahead is collection of information from students here and from other test campuses.

Special forms are available at the placement office. Using this form, which takes only a few minutes to complete, the student can indicate the factors which are important in his or her job search. Factors include field of interest, degree level, discipline, job function, type of employer, and geographical preference.

Subsequently a personal report of the matching between em­ployer offerings and student qualifications will be distributed by the placement office to each student who has signed up for the program. The report will provide the student with names of participating employers, sending interviewers to the campus and the dates of their scheduled inv­erviews.

Officials of the College Placement Council emphasize that the GRAD II program does not confer special privileges upon participating students where their sign-up for interviews is concerned.

The only advantage to "matched" candidates is that the interviewers will be aware of their identity and may be expected to question them more concerning their qualifications. Unmatched candidates, as well as those who do not use GRAD II, will still be able to sign up for interviews of their choice.

The Placement Office will be advised of the various matches and in addition will be provided results of the weighting system which indicates the degree of match, enabling the placement officer to do a more realistic and meaningful counseling job with individual students, according Ritenhouse.

The placement officer said more than 100 major employers are participating in the GRAD II pilot study on the 17 campuses chosen by the College Placement Council to represent a broad cross-section higher education in terms of type, size, and geographical location.

From fairies to guppies...

by DICK WEST

Eyes firmly fixed on the bylaws, hand steady on the gavel and wallet awash with membership cards, the organization man in America has arrived at his finest hour.

A new edition of the Encyclopedia of Associations, just published by Gale Research Co. of Detroit, shows there are no 15,000 national organizations in this country, give or take the American Guppy Association.

This means that 1,100 new groups have been formed since the last edition was published two years ago. Which clearly ranks as a quantum jump in the number of organizations.

American Guppy Association. In this country, give or take the San Joaquin and Salinas Valleys, are arranged through the California Farm Bureau Federation with the help of Douglas Pierce, director of international education; Michael Worth, co-ordinator for on-campus Agency for International Development training programs; and Joseph M. Earley, assistant co-ordinator.

French pupils eye us

Thirty-seven French agricultural students who have just completed an agricultural experience program, coordinated in part by this college visited the campus last Thursday.

The group, all seniors from the Ecole Superieure d’Agriculture de Purpin in France, spent six weeks on California farms and in fruit packing sheds to gain a better understanding of our farming techniques.

Their work experiences in the San Joaquin and Salinas Valleys were arranged through the California Farm Bureau Federation with the help of Douglas Pierce, director of international education; Michael Worth, co-ordinator for on-campus Agency for International Development training programs; and Joseph M. Earley, assistant co-ordinator.

This college has 45 students from foreign lands lands in agricultural instructional programs under the AID program.

Live below your means.

If you’d like to get around the high cost of living, we have a suggestion: Cut down on the high cost of getting around.

And buy a Volkswagen. It costs less than the average amount paid for a new car today. And that’s only the beginning.

A VW saves you hundreds of dollars on upkeep over the years.

And it gets about 26 miles to the gallon. The average car (thirsty devil that it is) gets 14.

So the more you drive, the more you save.

And chances are you’ll drive it for years and years (since we never change the style, a VW never goes out of style). Of course, a VW’s not much to look at. So a lot of people buy a big flashy car just to save face.

Try putting that in the bank.

UC increases announced

UPI—The University of California expects a 4.5 per cent increase in the number of students in 1971-72 and should spend $375.2 million, an increase of $38 million over the present budget.

"Among the requirements for additional faculty at the growing campuses in 1971-72 is a need to hold or reduce class sizes to levels that are manageable in terms of good teaching," Hitch declared.

In a report to regents, the president predicted there would be 106,503 students on the university's nine campuses in the coming year, 72,752 of them undergraduates and, 33,751 graduate students.

Hitch's proposed budget calls for spending $375.2 million, an increase of $38 million over the present budget. His proposed budget increases spending $375.2 million, an increase of $38 million over the present budget.

Implementation of a systemwide Common Admissions Program for the 1971-72 academic year was announced recently by Chancellor Glenn S. Dumke.

Under the new program, which will govern admissions beginning with the Fall 1971 term, all applicants to State Colleges will file single application between Nov. 3-30, 1970, and will indicate as many as four choices of State Colleges in order of preference.

"The Common Admissions Program is a significant improvement over previous years," Chancellor Dumke said. "We will be operating as a system with all the benefits of uniformity, such as similar practices, procedures and dates."

Previously, State Colleges had closed admissions when enrollment quotas were filled, causing closing dates to vary as much as six months. Now all State Colleges will be open for at least the same minimum period.

All applications received during the November period will receive equitable consideration within established categories and quotas, regardless of the time and date received, Chancellor Dumke pointed out. The single admissions application will be available Oct. 16.

A late filing period is scheduled to begin Dec. 1, for those colleges not filling enrollment categories during the November filing period; applications will be accepted during the late period until quotas are filled.

The Common Admissions Program consists of a systemwide application for admission period, a uniform application form, common policies and procedures, and a centralized data system—which will be monitored by the Chancellor's Office.

"We have coordinated our program with the University of California to minimize confusion and make possible common data gathering periods," Dr. David Kagan, State Colleges Coordinator of Admission Services, said.

Admissions categories will be established by each college according to criteria set by the Board of Trustees and the Chancellor. In March the Board adopted a series of resolutions giving high priority for admission to recently discharged California veterans and transfers from California Community Colleges who have completed lower division work. At the same time the Board gave the Chancellor authority to establish enrollment quotas for the system and the individual colleges.

A prospective student files only one application within the State College system. Filing more than one, according to Dr. Kagan, will delay processing his application.

The application is filed with the student's college for first choice. Application which cannot be accommodated at the college of first choice will automatically be forwarded to the second choice, and, if it cannot be accommodated there, to the third choice, etc.

Chancellor Dumke said, "We will be operating as a system with all the benefits of uniformity, such as similar practices, procedures and dates."

Trash: It's your thing

(Continued from page 4)

To reduce noise, buy a heavy-duty plastic garbage can instead of a metal one. Or sturdy plastic bags to carry off the car. They're odorproof, malleable, lighter.

When you see a junked car, report it to your local Sanitation Department. If they don't care, scream till someone does.

If you don't really need a car, don't buy one. Car owners contribute a good half of this country's air pollution. Better, walk or bicycle. Better for you, too.

If you have to car commute, don't chug exhaust into the air just for yourself. Form a car pool.

Better yet, take a bus to work. Or a train. Per passenger mile, they pollute air much less than cars. Support mass transit.

If you still think you need a car of your own, make sure it burns fuel efficiently (i.e., rates high in mpg). Get a low horsepower minivan for the city, a monster only for lots of freeway driving.

Bug gasoline manufacturers to get the lead out. Tetraethyl lead additives are put in gas to hype an engine's performance; they can build up in your body to a lethal dose. (lead, by the way, chew up metal— including new antipollution catalytic mufflers.) If bagged garbage overflows your trash can, shake it out of bags directly into the can; and tramp it down to compact it.

If you have a fireplace...abstain. As much as possible. If you must send up smoke, burn wood, not murky coal.

Burning leaves or garbage is already illegal in many towns. Don't do it.

If you see any oily sulfurous black smoke coming out of chimneys, report it the Sanitation Dept. or Air Pollution Board. There's only so much water. Don't leave it running. If it has to be recycled too fast, treatment plants can't purify it properly.

Measure detergents properly. If you follow manufacturer's instructions, you'll cut out a third of all detergent water pollution.

Since the prime liability in detergent pollution is not acids but phosphates (which encourage algal growth), demand to know how much phosphate is in the detergent you're buying. Write the manufacturer, newspapers, Congressmen, the EPA. Until they let you know, use an unphosphated—non-detergent—soap. (Bubble baths do not cause detergent pollution.)

Never flush away what you can put in the garbage. Especially, unphosphated organic cleaners (like dawn, windex, etc.); coffee grounds and leaves (gardening waste); leaves (garberia from clippings); raw milk from pastured cows or moose into a container and dispose of it; don't hose it into the sewer system.

Avoid disposable diapers if possible. They clog plumbing and septic tanks.

Last, and most important— vitally important— if you want more than two children, adopt them. You know all the horror stories. They are true. Nightmarishly true. And that goes for the whole American economy: unless we stop fanatically reproducing and consuming more than we need, we won't have a world to stand on. CARE. Who will, if we don't?

Prof honors for eight

Eight former members of the faculty who retired earlier this year were designated professors emeritus during a brief ceremony held on the campus in San Luis Obispo this week.

With their former teaching areas listed, those honored during a convocation of members of this college faculty and staff held Monday (Sept. 14) morning in Mustang Stadium were:

Dr. John K. Allen, veterinary science; John H. Applegarth, biological sciences; Dr. Arthur G. Butzbach, education; C. Harold Gregory, printing engineering and management; Lewis E. Hammitt, physics; Raymond H. Lomberg, crops science; Elna L. Marston, English; and Francis F. Whiting, engineering technology.

Dr. Allen, who joined the faculty in 1965, had been a member of the teaching staff and head of the Veterinary Science Department for 18 years before his retirement in June.

Applegarth is a graduate of San Jose State College and Stanford University, where he completed his master's degree studies.

Dr. Butzbach, who spent 39
Drugs claim Hendrix

LONDON UPI Jimi Hendrix, the flamboyant guitarist many critics and millions of fans considered the world's finest, died Friday in a London hospital, Hospital officials said. He was 24.

Police sources said Hendrix died of an apparent overdose of drugs. They said an overdose of unspecified drugs was the apparent cause of death, but that a coroner would issue the final ruling.

A hospital spokesman said first Hendrix was dead on arrival, but doctors who examined him later said he lived for about one hour after admission.

Hendrix, absent from music since the breakup of his group "The Experience" some time ago, rejoined the rock music circuit at the beginning of the year with a new band, "The Band of Gypsys."

Hendrix, one of the pop music world's biggest money-makers, was a native of Seattle, Wash.
Jordanian war spreads

by United Press International

The United States dispatched a helicopter carrier last Friday with 1,500 Marines to join 4,000 American and Jordanian armored troops in Jordan's civil war spread through six cities and Palestine as Jordanian proclaims a "liberated area" by the guerrilla commander in chief, ordered a brief-lived cease-fire in Amman to permit guerrillas who so desired to desert to the north of the city.

The situation in northern Jordan—proclaimed a "liberated area" by the guerrillas—worsened steadily, and fighting was reported on the cease-fire line with Israel. Tel Aviv reports said the sound of battle could be heard in Galilee.

The State Department said Thursday U.S. Army intervention in Jordan to save the lives of 360 Americans and 54 hijack hostages could not be ruled out.

The State Department said Thursday U.S. Army intervention in Jordan to save the lives of 360 Americans and 54 hijack hostages could not be ruled out.

Cairo newspapers said the death toll could soar as high as 30,000 to 30,000 with Army tanks and artillery shelling guerrilla headquarters and refugee camps and possibly some camps where hijack hostages were believed held.

An Arab correspondent who got a message out of Amman said "losses of lives are increasing with astonishing speed and the figure of wounded among civilians is reaching the tens of hundreds."

The International Red Cross sent in emergency, medical supplies with doctors and nurses to treat the unattended wounded.

Kaboom! Cal Lu shot down 40-7

The game started at 7:30 p.m. and by 7:36 the Mustangs had their first penalty of the season. It was an old familiar ring.

The fans also noticed that the stonewall defense was back again, as they kept the Kingsmen from gaining any appreciable yardage, and then, like a kick in the pants, ran them into the end zone for a two point safety. Add the Green Machine rolled on to victory.

Perhaps the victory was not as neat as they hoped for, because of the interceptions and penalties, but it was a solid 40-7 win over the Cal Lutheran Kingsmen nevertheless.

The statistics even say the Mustangs won. There were 17 first downs, to the Kingsmen 7. In yardage, the Mustangs had 297 yards rushing and passing yardage totaling 411. While the Cal Lutheran team accumulated 113 yards rushing and 90 yards passing.

Pat Young did some interesting kicking during the game, and with only four punts averaged 40.8 yards per punt. Punting for the Kingsmen wasn't so bright, as they averaged 23.9 yards in nine punts.

Another good performance was put in by tailback Joe Nigos. During the game Nigos bagged two first downs and recovered a fumble. Nigos is another letterman back to play a new season.

The passing was not as impressive as it could have been, although quarterback Don Milan completed five passes for 92 yards gained in 14 carries scoring on one of those for the Mustang men. This is a first season with the Mustangs. He transferred from another college and decided to sit out a year in accordance with CCAA league rules. Darryl is just possibly the fastest player the team will see. He runs a 9.2 100 yard dash, and was on the track team last year.

The passing was not as impressive as it could have been, although quarterback Don Milan completed five passes for 92 yards, and lead the game with a total yards gained.
