Hey Smokey! Got a match??

by Claudia Galloway

"With a ranger's hat and shovel and a pair of dungarees, You will find him in the forest always sniffing at the breeze; People stop and pay attention when he tells them to beware, That's why they call him Smokey he's the fire-prevention bear."

"Smokey the Bear, Smokey the Bear..." Prowling and growling and sniffing the air, He can spot a fire before it starts to flare. That's why they call him Smokey, that's how he got his name.

So goes a song about Smokey Bear, whose familiar face greets motorists and campers in the National Forests throughout the country, reminding them to drown their matches, and help prevent forest fires.

For about 40 years the government has used the Smokey Bear image in an effort to prevent forest fires. Yet recent evidence seems to show that the program may be hurting the very population it was designed to protect.

"People don't realize that not all fires are bad," says Marvin Whals, a Natural Resources Management instructor. The Smokey Bear program has led the public to believe that forest fires are bad and must be prevented. "Actually, fire is a part of the natural cycle. Except for the problem with erosion and property damage to man, fires would be almost entirely advantageous," Whals continued. "What we have to worry about, though, is wildfire."

Wildfires are a different story. While fire as a management tool is being used with success more and more today, catastrophic wildfires, such as the one in California recently, burn indiscriminately and uncontrollably.

Conditions were conducive to major wildfires this fall. The abundance of new growth from the heavy rains two years ago coupled with the relatively dry winter of last year and caused a lot of dense, dry undergrowth in the forest. Drop a match, or let a spark fly, and you can have a wildfire.

By attempting to persuade people to be more careful of fires, the Smokey Bear program does help some; but the problem lies not so much in the actual starting of a fire as in the conditions which lead to an area being a fire hazard.

Control of the fires is the key. "More and more people are realizing the importance of using control burns-the difficulty is in getting the public to accept them," says Dr. R.J. Greffenius, also of Natural Resources Management.

John Delmonte and Frank Hamen, both students in Natural Resources Management pointed out that, like most things, control burns have their good and bad points. Control burning is helpful in that, by burning away the dense, dry underbrush, it reduces the risk of catastrophic wildfires.

Also, the fervor of a fire produces an increase in wildlife production. This may seem unbelievable since we are used to thinking of fire as ravaging the forests and leaving the animals homeless.

Actually, a fire helps the animals by providing more open spaces, which they prefer to have dry underbrush, and more fresh food.

By removing the larger trees, the fire provides space for the animals, more food, and a greater short-term water yield. In short, fire contributes greatly to the total ecology of the forest.

Of course, there are disadvantages of control burning. One is that after a fire-either a control burn or a wildfire-the land is left denuded and there is an increase in erosion and soil erosion. Naturally, replanting is done immediately after the fire, but the success of the replanting depends largely upon the weather.

Religion a "good trip"

by Art Tyree

You don't have to be a research physicist to comprehend the spiritual make-up of Jesus Christ.

This promises to be just one of the many points Lambert Dolphin will delve into when he speaks on campus today at 4 p.m. in Room 212 in the Science North building.

Dolphin, who will speak as the guest of a campus organization, took his "trip" with LSD as a supervised experiment for a research foundation studying the then newly-discovered psychedelic drug. He now serves as a research director working with such titles as "The Christian Looking Glass," and "Conquest of the Wilds." He now serves as a research director working with such titles as "The Christian Looking Glass," and "Conquest of the Wilds."

"I hoped that the all-day session would help me to know and understand myself more completely, to get to the root of deeper emotional problems, and at the same time to have an all-encompassing religious experience," he reports of the experience, noting, too, his curiosity as a scientist.

He got more than he anticipated from the drug. After the potion of LSD-25 combined with mescaline had done its pleasant hallucinatory work of expanding sound and sight experience, noting, too, his curiosity as a scientist.

He got more than he anticipated from the drug. After the potion of LSD-25 combined with mescaline had done its pleasant hallucinatory work of expanding sound and sight experience, noting, too, his curiosity as a scientist.

In common with magician Andre Kole, who appeared here three weeks ago, Dolphin observes the recurrence of the word 'sorcery' in Bible predictions as referring to drug users. "In early 1970, Weatherman faction changed strategy after many years in underground commando units to wage guerrilla warfare against the U.S. government with sabotage, bombings, assassinations and kidnappings. William C. Sullivan, top assistant to FBI director J. Edgar Hoover, said that the Weatherman, splinter faction of Students for a Democratic Society (SDS), and other 'archarchist groups' plan to use this terrorist strategy to demoralize American society. Their goal, he said, is overthrow of the government."

A high FBI official said today young radicals have formed underground commando units to wage guerrilla warfare against the U.S. government. They planned a small, tough paramilitary organization designed to carry out urban guerrilla warfare which would bring about a revolution against the government. Sullivan said, "In early 1970, Weatherman leaders called for their members to go underground and form 'commando' units. White Weatherman members were to engage in strategic sabotage directed against military and police installations using bombs, assassinations and some direct confrontations with police."

Sullivan said black extremists also have "accelerated their terrorist tactics" in recent months, and local police have borne the brunt of their attacks.

FBI tells of radicals' plan

by Claudia Galloway

- Williamburg, Va. (UPI) - A high FBI official said today young radicals have formed underground commando units to wage guerrilla warfare against the U.S. government. They planned a small, tough paramilitary organization designed to carry out urban guerrilla warfare which would bring about a revolution against the government. Sullivan said, "In early 1970, Weatherman leaders called for their members to go underground and form 'commando' units. White Weatherman members were to engage in strategic sabotage directed against military and police installations using bombs, assassinations and some direct confrontations with police."

Sullivan said black extremists also have "accelerated their terrorist tactics" in recent months, and local police have borne the brunt of their attacks.
A talk on Pot

"Marijuana: Should it be Legalized?" will be the topic of a lecture to be given by attorney Harry Woolpert at a meeting of Tri Beta, the biological science club, Tuesday evening.

The lecture is the third in a series on drug abuse. Future speakers will include Hon. Fred Schenk of Morro Bay Justice Court, Peter Osteyee of the San Luis Obispo County Sheriff's Department, and Dr. Billy Mounts of the College Health Center.

The Tri Beta program will be held in Science B-4 at 7 p.m.

Fire ruins craft

NOVATO (UPI) - A fire of undetermined origin burned Sen. George Murphy's campaign plane beyond repair early today at the Novato Airport.

Novato Fire Captain Walter Nolan said the fire started in either the office or small restaurant in a building at the airport, destroying both.

The plane landed at the airport shortly after midnight and was left near the restaurant. Nolan said the pilot told him he had left Murphy, the Republican incumbent in the race for the U.S. Senate, in Sacramento.

Botulism kills!

Since harvest time in California is also the peak period for home canning, special precautions should be taken against botulism, according to State Public Health Director Louis F. Saylor.

Home-canned vegetables, meats and other products with little or no acidity must be properly processed to eliminate the possibility of Clostridium botulinum, a poison-producing organism which can cause paralysis and death, Dr. Saylor said. A Stockton man died from botulism and his sister became ill in June after eating improperly home-canned olives, he continued.

Commercially canned foods are safe. Low acid foods canned in California are inspected in the canneries by the department to insure that they have been adequately processed.

Vitamin E can stop smog ills

RICHLAND, Wash. (UPI) — A research firm here has made a discovery that may lead to increasing the life expectancy of smog-sensitive dwellers. Early results from experiments being conducted at Battelle-Northwest indicate that vitamin E may prevent, or at least delay, respiratory diseases caused by air pollution.

"Laboratory tests on rats show that those fortified with vitamin E live as long as the unfortified rats in an atmosphere which stimulates smog concentrations like those found over Los Angeles or Tokyo on a bad day," Dr. D. B. Menzel, nutrition and food technology manager, reported. "These rats which had not received vitamin E died within an average of eight days of continuous exposure to an atmosphere containing one part per million of ozone."

"Los Angeles has recorded up to 3 parts per million of ozone on a bad day," Menzel said.

"This research suggests a definite protective effect of fat antioxidants, such as vitamin E, against biological damage by photochemical air pollutants such as ozone and nitrogen dioxide," Menzel explained.

Although he warned, "before anyone leaps out and buys vitamin E, he should consult his physician," Menzel said there are no known hazards to taking vitamin E, in whatever doses. He advised that at present the vitamin, which is found in most fresh vegetables and wheat germ, is not considered an essential nutrient for man. He stressed that the substances would not cure "respiratory cripples," but that they could prevent diseases such as emphysema and edema, which research has shown can be caused in animals by air pollutants.

He said the fowl air causes an "oxidative breakdown" of the lung which he compared to butter becoming rancid. "Just as when a bubblegum balloon has a weak point it will rupture at that point, so will the tiny air sacs in the lung," said Menzel.

Menzel said that if man was only worried about respiratory diseases he would eat lots of saturated fats. "But since a large quantity of saturated fats leads to cardiovascular diseases," he said, the researchers were forced to look for a better answer.

Fat antioxidants act nearly the same way "preservative material does in today's foods" by preventing jumps from becoming "rancid," Menzel said. He also said the more unsaturated fats consumed by a person the higher his requirement for vitamin E will be.

Although Menzel said the ultimate solution must be to rid the environment of pollution, the discovery "may ameliorate what is one of the most rapidly rising disease syndromes in the world's urban areas."

Sherman Andrus has: (a) talent, (b) youthful vitality, (c) a glorious voice, (d) spiritual fervor, (e) all of the above. Sherman Andrus is not a multiple choice problem but perhaps the turning point in finding the answers to your problems.

Andrus, according to a recent profile, "really works!" In the language of the professional musician, that means he "really gives it...he communicates...he moves people with his singing."

Sherman Andrus will be appearing here Thursday evening with his group, the "Brethren." The price is $1.

According to a recent edition of the Hollywood Free Paper, "Swinging gospel rock seldom fails to leave an impression with listeners, and a new release from Impact Records presents Sherman Andrus in a winning selection of current and original tunes which bubble over with natural feeling."

According to an admirer, "The combination of the rich, low tones of Nat King Cole with the satin-smooth lyric qualities of Johnny Mathis. Sherman Andrus is an experience to hear."

Born in Mermentou, Louisiana, Andrus studied voice at Southern University, and for the past few years has been the featured soloist with "Andre Crouch and the Disciples," singing all over the world.

In Tokyo an elderly Japanese couple sat with tears rolling down their faces as Sherman sang the songs he knows and feels best. In Viet Nam and Army officer stated that the concert was the best entertainment he had heard in more than two years there, and in Edinburgh, Scotland, before the last note of Sherman's first solo had ended, the audience was on their feet applauding.

His record jacket of his latest album "I've Got Confidence," reads, "Sherman's very special voice, his ability to musically express great excitement and deep emotion combine with his deep spiritual humility and a driving, urgent sense of ministry to produce a man with a musical message that crosses all barriers...his message is for the young and the old."

Tickets are available at the Temporary College Union as well as at the door.

Concert planned

HARTFORD, Conn. (UPI) — President Nixon today announced a reduction by Christmas of 40,000 men in the U.S. troop ceiling in South Vietnam.

Nixon said in a statement that by Dec. 31 the over-all American troop level would be 344,000.

He emphasized the speedup of the troop pullout is part of the 150,000-man goal by next May which he announced last April 20.

Nixon's announcement came a day after Secretary of Defense Melvin R. Laird said on national television the first goal of withdrawing 50,000 U.S. servicemen by Oct. 15 had been completed ahead of schedule. He said actually 32,000 had been withdrawn.

White House Press Secretary Ronald L. Ziegler said the original withdrawal plan called for only another 10,000 men to be withdrawn by Christmas. That schedule had never been previously announced.

"The continued progress of the Vietnamization program has made possible an acceleration in the rate of withdrawal within the over-all schedule announced previously," Nixon said.

He also said the more unsaturated fats consumed by a person the higher his requirement for vitamin E will be.

Although Menzel said the ultimate solution must be to rid the environment of pollution, the discovery "may ameliorate what is one of the most rapidly rising disease syndromes in the world's urban areas."
After Earth, nothing

In his speech to a capacity crowd in the Cal Poly Theatre last Friday night, astronaut Walter Cunningham compared the Apollo spaceship to "Spaceship Earth" and voiced his opinion that the technology being developed at NASA could have practical applications in solving some Earthbound problems existing today.

Cunningham's speech was co-sponsored by the College Convocation Committee and the student chapter of the American Institute of Aeronautics and Astronautics. Congressman Burt L. Talcott was instrumental in securing the astronaut for the evening.

The same problems exist for people on Earth as for the astronauts in space, Cunningham said. There is a limited amount of air, water, electricity and food. One main difference he noted was that a spaceship could return to resupply, but on "Spaceship Earth," this is all we have. We have no place to go, so we've got to do something.

"We have got to accept the

NEW YORK (UPI)—When an 18-year-old boy with acne turned out to be a super male, there was much scientific excitement and before his medical workup was completed, four scientists were involved.

What excited them was the chance of connecting supermaleness with unusually facial eruptions, which older generations called pimples, not uncommon among male adolescents.

The existence of supermaleness was first discovered and what it conferred upon the male who has, if it confers anything special, is a matter of much mystery and therefore much scientific curiosity.

The Y chromosome is the chromosome of maleness. One is quite capable of establishing indubitable masculinity and most males have only one. But the super male has two.

Super males were first identified in maximum security prisons. They were overly aggressive, of much more than average height, and had low I.Q.'s. But this promising start proved to be fickle friends.

The papers endorsed Rafferty in the June primary, changed their minds and called in Fickle friends.

Fickle friends

SAN JOSE (UPI)—The San Jose Mercury and News, sister newspapers which endorsed Max Rafferty as state superintendent of public instruction at the June primary, changed their minds and called in today's edition for the election of Wilson Riles. The papers endorsed Rafferty for office in 1960 and again at last June's primary in which Riles forced him into a November runoff for the nonpartisan post.

In an editorial, the Mercury said it found it "impossible any longer to support Max Rafferty."

WASHINGTON (UPI)—The Senate gave congressional approval today to President Nixon's crime bill aimed at halting the spread of organized crime, accepting by voice vote House provisions to crack down on terrorist bombings.

The Senate's acceptance of the House changes eliminated the need for a House-Senate conference committee to reconcile their different bills and meant the President could sign the crime bill before the Nov. 3 elections.

The Senate had approved the organized crime bill Jan. 33 on a 73-1 vote and at the urging of Sen. John McClellan, D-Ark., went along with provisions the House added when it passed the bill 431 to 26 last week.

These changes include the death penalty for those convicted of fatal bombings and authorization for FBI agents to investigate campus bombings and arson, even if local and school officials object.

Chairman of the permanent investigations subcommittees, Tea tonight

The Student Wives Club will hold a Newcomer's Tea this evening at 7:30 in the home of Linda Minton, 1812 Lima Drive, San Luis Obispo.

The club is sponsoring the social to provide student wives at the college an opportunity to acquaint themselves with members of the organization. There is no attendance charge and all student wives are encouraged to attend.

Crime is under fire

McClellan, said the differences in the bill did not "justify the certain delay—and the possibility of disagreement—that a conference might entail."

"This law is needed," McClellan said. "Every day that its final enactment is delayed will lend further convenience, comfort, and protection, if not immunity, to many organized crime offenders."

"The nation needed this legislation six months ago," McClellan added. "It needs it now."

The bill would permit judges to impose additional sentences of up to 25 years on certain "dangerous adult special offenders" convicted of crimes which carry lesser penalties; allow special grand juries to indict or issue report on noncriminal misconduct by appointed government officials.

The measure also would make it a crime to use money from organized crime to acquire or establish a legitimate business in interstate commerce; make it a federal crime to participate in a conspiracy to obstruct the enforcement of state or local gambling laws; establish federal control over interstate and foreign commerce in explosives; and, establish a national commission to determine if the measure or any current laws infringe on individual rights.

Health plan

Dr. Louis F. Saylor, state public health director today asked Californians to "Turn-on to health," and to support local public health programs.

Writing in California’s health, a state periodical, Dr. Saylor said:

“We feel it is time people ‘turn-on’ to something constructive—like good health—rather than to panaceas, whether physical, psychological or social.”

“And it’s time, too,” he continued, “that local health departments received credit for their efforts to make California a safe and pleasant place to live.”

He said this task was not easy in a state with 20 million people and a "myriad of man-made and natural health hazards.”

Centennial year “Turn-on to health” buttons have been distributed in 43 counties with full-time health departments and in 13 counties which contract with the state for health services. The health theme also will be carried in public service announcements for television and radio.

Dr. Saylor said, and in a centennial issue of the department’s magazine.

If you don’t start using ZIP CODE, we’re all in deep trouble!

Don’t Use Frayed Electric Cords!
...or the next home that burns may be your own!

9 out of 10 home fires are preventable! So...
Don’t give fires a place to start!

Mail moves the country—ZIP CODE moves the mail!

Ringo records

Former Beatles Ringo Starr has become a country-and-western music singer. The famous drummer of the world's once most popular rock group has just completed an album of country-and-western hits recorded in the country music capital, Nashville, Tennessee.

Ringo has learned to play the guitar, and accompanies himself on the new album.

His first attempt at solo vocals, and album called, "Sentimental Journey," was not too well received in the music industry.

Yarbrough wins National 500

UPI-Mercury driver Lee Roy Yarbrough still thinks the NASCAR carburetor plate rule gives Chrysler products an unfair advantage in Grand National stock car racing.

But the veteran stock car ace from Columbia, S.C., won the National 500 race and $33,708 at the Charlotte Motor Speedway Sunday despite a lot of Plymouth and Dodge competition.

Hard driving and good luck was the payoff, and Yarbrough put It to the Charlotte Motor Speedway National BOO race and 123.70% at the Charlotte Motor Speedway.

Yarbrough finished under a caution flag, running ahead of the field of 17 cars which held up for the 500-mile event. Forty cars started the race. Dodge drivers Bobby Allison of Huey town, Ala., and Fred Lorenzen of Elmhurst, Ill., finished second and third, respectively.

A dogfight between Yarbrough, Allison and Bobby Isaac developed after the 22nd lap when Richard Petty hit the wall coming out of the fourth turn and took his blue Plymouth Superbird out of contention. Stabistale Pete Hamilton the circuit's leading money winner, knocked his Superbird out of the race in a similar accident after leading for a total of 106 laps.

Witches real?

It is a little known fact that there are several thousand confessed witches and warlocks living in this country today. Some of these unique personages live in the major cities of the United States, but most of them prefer to live in countryside areas.

Even though goatee Alan Anderson played some fine games in the net for the Mustang water polo team, he was not enough to stop three southern powers last weekend. The Mustangs fell to defeat at the hands of Fullerton Junior College 11-3, Cal State Fullerton 18-1, and Cal Poly Pomona 14-6.

The Fullerton and Pomona contests were the first league encounters for the Mustangs and, according to Coach Dick Anderson, "It's too bad we couldn't have played those games later in the season; I think we would have done a lot better."

Through a strange quirk in the scheduling, the Mustangs had to open their season with Fullerton and Pomona which just happen to be considered the class of the California Collegiate Athletic Association.

"Alan Anderson," according to Coach Anderson, "has really been playing well. Against Fullerton he blocked three penalty shots, which is exceptional for any goalie. He also has blocked at least one penalty shot in each game we have played. It wasn't for the way he played we probably would have lost by a bigger score."

Anderson went on, "The kids are really beginning to play better. Against Pomona we really started to look like a team in spots. I think now, we are pointing towards the league tournament at the end of the year, where all the teams in the CCAA will participate."
