Miller blames autos for housing squeeze

Six contestants are vying for the title of "Ugly Man" in this year's Alpha Phi Omega sponsored Ugly Man On Campus Contest. In order to prepare the student body for the appearance of the "sick six" introductions are at hand.

Ecology Action is sponsoring Howard Carr who will make you a believer in cleaning up the earth, that is, if you can see him. He blends in nicely with the grass.

Lewis Haller of Tenaya Hall is also known as the "mystery man." When he sneaks up on you you'll really wonder where you are at.

S.A.M.'s one-eyed monster is Richard Lippi. Next time you see him try asking him if he ever shaves.

Rose Parade Float Committee is represented by a nice, quiet old man, Ken Ristow, but watch out for those walnuts.

Philip Wensholl of the Jewish Students Union is an ugly man who's not going half way. Peace, brother!

Muir Hall is represented by a smirky sort of ugliness, Jerry Westphaal. This back is worse than his bit.

The Ugly Man will be making surprise guest performances during Homecoming and will ride atop the Alpha Phi Omega float during the Saturday parade.

Proceeds from the Ugly Man on Campus Contest are used for the improvement and maintenance of Poly Grove, so get out there and support your man. Bring coins and vote ugly.

Lewis Haller, the sixth candidate for "Ugly Man" has not yet been photographed.

Ugly face, dress: ugly mess

The key to the problem of student housing, city councilman Donald Q. Miller thinks, is student acceptance of the fact that the automobile is outmoded. The problems of transportation and housing are intricately interrelated, the councilman explained, and one is the cause of the other.

Because of the reliance on the automobile for transportation, most housing is located near the campus. Since parking on campus is such a problem, students want to live within walking distance of the college. The parking problem continues because students either have to live close to campus or drive to school.

Miller feels that reliance on the automobile for transportation should be eliminated. Other means of transportation such as interconnecting trains or a fast rail system to link all parts of the community with the campus is the only solution.

"The school must come to a confrontation with the automobile," Miller said. An arbitrary ruling, such as no Freshman or Sophomore parking privileges, might have to be initiated.

Housing wouldn't present a very great problem, Miller feels, after a rail system has been developed. Housing along the railroad corridor would be advantageous for student use because fast trains could get them to campus within 15 minutes. Miller stated that he believed a $5 million expenditure would be advantageous to all concerned. The costs and the gains would be shared. Students that had train services available to them would be allowed to drive on campus. The $5 that is now being spent for a parking sticker could be applied to the cost of the trains and a student's work would be used as a subsidy.

Land costs along the railroad corridors would be comparatively less expensive than that of space adjacent to the campus, which might encourage building and possibly lower rents.

City buses could be used to aid in the transportation system. At the present city buses would be very slow because they can only move as fast as the flow of traffic. If the traffic problem was eased by the rail system then city buses would be efficient.

While attending a transportation hearing in San Francisco on Oct. 8, Miller learned that federal fund for transportation are available. The funds are distributed on a regional basis, he explained, and the city would have to form a transportation commission in order to procure the funds.

Greater student participation is needed to solve the housing and transportation problems, and the key lies with the acceptance of the idea by students that the automobile has limitations. Ultimately it is the student who will have to live with any system that is adopted, added Miller, and his acceptance of it will make it work.

The biggest tragedy, according to Najami, a student from Pakistan, is that many of the returning students did not know of the tuition increase before returning to campus for fall registration. It was reported in the October issue of Cal Poly Today that approximately 125 of some 100 continuing foreign students could not be located by special letters sent by the college to advise them of the new tuition costs.

Most everyone involved admits that the foreign students need help but whether A.S.I. funds should be used is another question.

A.S.I. President Paul Banke said that he felt personally that "it is not the function of A.S.I. to give scholarships and grants to individual students, whether they are foreign or American."

Martinez and his Foreign Students Tuition Committee will present their findings at the S.A.C. meeting tonight at 7 p.m. in Library 126. Any interested persons may attend the meeting.
Editor:
In regard to Dr. Fred Rizzo's comments about the petition to ask Hanoi for fair treatment for our soldiers:
I'm a simple person with a simple mind. I think like this: I do good to others because I like to, and maybe they will do good to me; if we all do good to others we'll all be better off. And I'm not too good at English where one reads between the lines. One has to be good to do that.
And I guess one has to be real, real good to read the entire Viet Nam War between the lines of the current petition.
But as for me, it may or may not say all that Dr. Rizzo says or means. All I know is that it does say be good to our soldiers, and if they're good to others then maybe...
Lawrence Siminski, I.T.

Who's who

Editor:
There seems to be no end to the putrid bull being put out by groups like the Black Students' Union. Now, in the October 16 issue of Mustang Daily, they tell us that Beethoven, Haydn, Hannibal and Imhotep were Black. Fortunately, there are ample contemporary portraits of Hannibal and Imhotep were that Beethoven, Haydn, and Haydn. They would do well to create one of their own instead of attempting to steal one ready-made from the Whites.
We doubt that his letter will be printed since so-called minority status has too often meant imputed intelligence and身材 in the majority. We suggest that the self-baiting Whites who pander to this attitude remember that they, too, belong to a minority — one that constitutes just one-quarter of the world's people.

Facts untrue

White in history with a wisp or curly hair was Black. It is little wonder that so many groups have been trying to tell us that history is irrelevant — they know that a little digging into it will expose them as liars.
If the B.S.U. really wants a culture, they would do well to create one of their own instead of attempting to steal one ready-made from the Whites.

Who's who?

To qualify for application you must be a senior, graduating in June, and have a GPA of at least 2.41. Submit a list of your activities with the application.

The directory's idea is to create a basis for national recognition without dues or initiation fees. Letters of recommendation for jobs are also part of the service to those who are accepted.

Approximately 325 colleges receive the publication and Cal Poly has been allotted 36 spaces in the book.

To qualify for application you must be a senior, graduating in June, and have a GPA of at least 2.41. Submit a list of your activities with the application.

The deadline is Tuesday, October 27 at 5 p.m. Applications are available in the TCU.

Simplifying in environmental ecology will be created in the next five years.

The study of Ecology and Environmental pollution a dying fad or is there a future in it for students who want to make a career out of it?
Dr. Carl Madsen, chief economist of the U.S. Chamber of Commerce, reports that the shortage of professionals in the environment-related fields won't appear likely to diminish. Laws regulating environmental quality, such as water and air pollution standards, are increasing and with them a need for personnel trained in environmental engineering and economics.

Large industrial companies like Standard Oil and PG and E are establishing ecology departments which need people with a broad training in the environmental field. Environmental control devices and equipment are making up a major growth industry that requires thousands of engineers and designers. The Labor Department reports that about 46,000 job openings for engineers specializing in environmental ecology will be created in the next five years.

The employment of environmental pollution includes control of air and water pollution, industrial hygiene, reduction of noise and vibration, air conditioning, heating, ventilation and refrigeration according to the college catalogs.

The environmental engineering department on this campus has a curricular concentration in Air Pollution Control which trains the graduate to enter a career in air quality management, industrial, public and private agencies concerned with solving problems of air pollution.

For students interested in environmental pollution and what they can do about it, the Environmental Engineering department may have some courses of interest in your fight for clean air. Env P 325 is a course on Air Pollution, its causes and effects on the individual and community, as well as its legal and public-relations aspects. The course is open to anyone with a genuine interest in the subject.

The course is open to anyone with a genuine interest in the subject. Experimental courses like EnvE 349X, also for juniors, deals with the study of the total environment and the application of engineering principles to control the natural resources that are so rapidly being destroyed by unconcerned human beings.

Regardless of your major, be it PE to Electronic Engineering, there is something of interest in the study of our environment. Courses taken in these areas often satisfy college general ED requirements so there is no reason not to take the class if you are interested in learning more about the world around you. The study of Ecology and Environmental pollution is definitely not a dying fad, and there is a future in it for anyone as a career or simply as a concerned citizen trying to help save the earth from extinction through pollution.

Unsuccessful self-love affair

by Paul Tokumaga

"If nobody else loves you... I'll love you!"

Lambert Dolphin, retired at age 70, bought a school at age seven. Became part of the Establishment. Quit the Establishment: drank his way through college—refusing even to find out what sex is in the locker room really was. Went out and established the research physicist-affair with myself for 30 years."

"I had an unsuccessful love affair with myself for 30 years."

Dolphin spoke of the confused state of Western civilization. "Western man is hung up on outer space, while the Eastern man is on an inward trip. Last year alone we spent 20 billion dollars on our outer space program." He characterized the movement as being "upward, outward and inward."

"Our society has upward mobility. We are committed to the Western God" which he classified as Protestant ethic. "Most people's impression of God is impersonal and remote and way out there. They look at God as someone being hard to get to know, like a father... This is a distortion of Biblical teaching."

"Christianity is not a white picket fence, a picture of Jesus, a Bible on the coffee table and no dust on the floor, this is simply good morals."
LETTER

Sex is not offensive

Editor: Yesterday a letter appeared in the Mustang Daily submitted by Sue Dredick. To my astonishment, Sue stated that she was disgusted with the obscene and lewd picture of two women in an advertisement, namely the "Swinger" advertisement. Sue went on to say that women have been slaves for ages on end and are tired of being harassed everywhere by males who are "obsessed by sex".

I think that an answer from someone with an opposing view, such as myself, is in order at this point.

Firstly, the women which appeared in the "Swinger" ad were not nude but were wearing very fashionable bikinis that you can see in living color anytime at the beach. And as for the old line of "poor mistreated women of the world unite" I am thoroughly nauseated. There are a few things that men can do that women can't do (or should I say shouldn't do) but if women would like to participate in these things, more power to them. I feel that equal privileges should be accompanied by equal responsibility. Therefore if women would like equality (if they don't have it now) they should feel willing to submit their names to the local draft board and serve their military obligations as men do, thereby attaining equal responsibility, making their place for the same privileges as men have only reasonable. How about it guys? Letting some of the gals chase the V.C. in Nam for a while. Maybe Sue did have a point when she said that the pictures were a little oppressive and degrading. The novels of each woman was clearly defined in the picture which was disgusting enough in black and white instead of color. This is clearly an atrocity of the press.

To top it all off, Sue asks "why not have some male nudes?" Maybe Sue was mad because the Swinger ads had women in them instead of men.

As a final note, I would like to commend the guys and gals who work so hard to compose this newspaper for the sole enjoyment of the students. Good job staff, keep up the excellent work. I have found that the Mustang Daily is one of the most decent papers I've read. It's too bad that some people are offended by the fact that there is such a thing as sex.

Sincerely,
Ray Righetti

Fellowship by fireside

by Art Tyree

Do active, well-liked, professionally-minded collegians need a serious faith in God? For the members of Alpha Omega Fellowship, a steadily-growing campus organization, the answer is "yes." A few cases will illustrate.

Rachelle Hogue, a junior Home Economics major, went to an Alpha Omega fireside meeting as a guest of a friend a year ago. Seeing "something different" in the lives of the collegians there, she heard that what she saw was due to their faith in Christ. She became one of the faithful.

Ray Morawaki, former student of the Bible studies on campus, fireside meetings, and special events round out the program. Alpha Omega takes its name from the Greek letters which in the Bible are a title of Christ referring to his eternal power. The campus group reflects the approach of its sponsoring church, Calvary Baptist, which members describe as "independent and fundamental."

Fellowship members attended a retreat last weekend at Camp Cachuma in Santa Barbara. Alpha Omega's plans include a swim party at Hawaiian Hot Springs near Avila Beach next weekend and participation in a special series of meetings featuring evangelist Phil Schuler.

To such person-to-person contact is attributed the fellowship's growth from three members in 1968 to the present 30, according to campus pastor advisor Eldon Martens. Weekly Bible studies on campus, fireside meetings, and special events round out the program.

Don’t let the landowners sucker you

by Bill Gurzi

In yesterday’s issue of Mustang Daily, a front page article on the impending Edmondson vs. King trial raises discrimination suit should represent to the students and townspeople of San Luis Obispo the beginning of a “fight fire with fire” attitude by the students of this college against the local landowners.

James Edmondson, Jr., and his wife are seeking restitution from the Harold King’s for alleged racial discrimination in property leasing. The Edmondsons are Black.

San Luis Obispo and its surrounding communities, rental rates have rocketed to inflationary highs paralleling the post-World War II housing situation throughout the country.

Why, then, with the present scarcity of housing, must landlords fear housing integration? Suddenly, the excuses of a decade ago that renting to “Negroes” frightened away other tenants will not hold water today.

Whether the Kings refused the Edmondsons on grounds of personal prejudice, fear of neighbors’ recrimination or otherwise, their semi-blatant denial of the personal right of the Edmondson family should entitle the latter to the more than $1000 in compensatory and punitive damages asked.

Although San Luis Obispo is relatively untouched by the above-changing mores on integration and racial intermarriage, its citizenry must realize that segregation in housing has been codified by educational status, is a dangerous folly which precipitates, when the “climate” is right, onslaughts of violence and street-walking terror.

In this county, the climate of public opinion screams from the pressures of overpopulation. Add to this fervor the pains of racial prejudice, and the housing “bomb” becomes near-atomic.

James Edmondson, in challenging the Kings to a showdown duel over fair housing, symbolizes the running of the era of student apathy and the birth of a singular but exemplary spirit of courage for the rest of the student body to follow. If (and hopefully when) his rights as a man, a father, and a student member of this localized society are upheld by law, a new and perhaps an unrecognized realization of renters’ rights will menace the autocratic union of large-scale property controllers in this community.

\[ \text{Campus Interviews} \]

Now’s the time to sign up at your placement office for an interview with the Bethlehem Steel Loop Course recruiter. This could be the start of something big!

Where would YOU fit into the Loop Course? Check your degree or the one most similar to it:

MECHANICAL ENGINEERING—Engineering, or mechanical maintenance departments of steel plants, fabricating works, mining operations, and shipyards. Fuel and combustion departments. Supervision of production operations. Marine engineering assignments in Shipbuilding Department. Also: Sales or Research.

METALLURGICAL ENGINEERING—Metallurgical departments of steel plants and manufacturing operations. Engineering and service divisions. Technical and supervisory positions in steelmaking departments and rolling mills. Also: Research or Sales.

CHEMICAL ENGINEERS—Technical and supervisory positions in coke works, including production of by-product chemicals. Fuel and combustion departments, including responsibility for coordination and maintenance of air and water pollution control equipment. Engineering and metallurgical departments. Steelmaking operations. Also: Research or Sales.

INDUSTRIAL ENGINEERING—Positions in steel plants, fabricating works, shipyards, and mines. Engineering and maintenance departments. Supervision of steelmaking, rolling, manufacturing, and fabricating operations. Also: Sales.

CIVIL ENGINEERING—Fabricated Steel Construction assignments in engineering, field erection, or works management. Steel plant, mine, or shipyard assignments in engineering, construction, and maintenance. Supervision of production operations. Sales Department assignments as line salesman or sales engineer. (Technical service to architects and engineers)

ELECTRICAL ENGINEERING—Steel plant, fabricating works, mining operations, and shipyard electrical engineering, construction, and maintenance departments. Technical and supervisory positions in large production operations involving sophisticated electrical and electronic equipment. Also: Research or Sales.

MINING ENGINEERING—Our Mining Department operates coal and iron ore mining operations and limestone quarries, many of which are among the most modern and efficient in the industry. This 10,000-man activity offers unlimited opportunities to mining engineers. Also: Research.

NAVAL ARCHITECTS AND MARINE ENGINEERS—Graduates are urged to inquire about opportunities in our Shipbuilding Department, including the Central Technical Division, our design and engineering organization. Also: Traffic.

OTHER TECHNICAL DEGREES—Every year we recruit loopers with technical degrees other than those listed above. Students enrolled in such curricula are encouraged to sign up for an interview. Also: Research.

ACCOUNTANTS—Graduates in accounting or business administration (24 hours of accounting are required) are recruited for training for supervisory assignments in our 3,000-man Accounting Department.

OTHER NON-TECHNICAL DEGREES—Graduates with degrees in liberal arts, business, and the humanities are invited to discuss opportunities in the Sales Department. Some non-technical graduates may be chosen to fill openings in steel plant operations and other departments.

Bethlehem loopers spend four weeks at our home offices in Bethlehem, Pa. Then they report to the appropriate plants or departments for their first assignments. From there, anything is possible.

Bethlehem Steel is an Equal Opportunity Employer
Endurance test for The City

UPI-The San Francisco Warriors will have their early-season endurance tested this week with three games in three nights in three separate cities.

San Francisco hits the road for a National Basketball Association contest Tuesday night against the Baltimore Bullets, followed by games on Wednesday and Thursday nights against the Atlanta Hawks and the New York Knicks.

**Dominion 500 won by Petty**

Richard Petty led for all but 18 of the 500 laps Sunday and coasted to victory in the Old Dominion 500 stock car race. Victory was worth $8,775 to Petty, who moved into first place in the Nascar money-winning derby. Meanwhile leader leader Pete Hamilton, Petty's Plymouth partner, did not race.

Petty won with a track record average of 72.235 miles an hour and chalked up his 17th Nascar victory of the year, good for 100 points and fourth place in the Grand National point standings. Leader Bobby Isaac finished fourth and picked up 94 points.

Petty took the lead from pole-sitter Bobby Allison on the 18th lap and yielded it only once to Isaac on the 63rd lap after Richard Brooks had crashed into the wall.

The Pandleman, N.C., ace lapped the field of the 215th lap in his Blue Plymouth and finished far ahead of Willisom, Gale Yarbrough and Isaac. Only 10 of the 31 starters finished.

It was the ninth time Petty has won this race, a record and his fifth consecutive Old Dominion conquest. The race this year was postponed from Sept. 27 because of rain.

Tibbetts sets record

Harriers notch Reedley first

Co-captain Greg Tibbetts found easy going and powered the Mustang cross country team to a team championship at Reedley this past weekend.

Tibbetts, a senior, toured the 4.1 mile course in 20:35,8 establishing a course record for second, third, and fourth.

The Mustangs totaled 18 points.

Freshman Bryan MacPherson placed second at 20:32, two seconds above the previous record, with Dale Horton, a sophomore, one second behind.

Rounding out the first four, co-captain Wally McConnell turned in a 20:30 time, and Rich Walline was eighth at 21:17.

Distance coach Larry Bridges said he was encouraged by the individual effort of Walline, a freshman. He said rich and his brother, Russ, who placed 11th, are working hard to provide the Mustangs with a much-needed fifth man.

The team faces Cal Poly Pomona and Westmont in their first home meet of the year Saturday. The meet will start at 11 a.m. at the old track.

Mustang riders win first rodeo

by Barnie Guesenze

Sports Writer

The Mustang Rodeo Team continued its winning ways last weekend turning back 14 schools to win the first National Intercollegiate Rodeo Association rodeo of the year.

Larry Ferguson led the Mustangs to victory, capturing the All-Round Championship taking first in ribbon roping and bull doggin’ and a second in calf roping.

In the bareback bronc riding, Melvin Dick showed everyone why he is a National Champion in that event. Danny O’Haco from Mesa Community College was second and Jeff Hay landed the third spot for the locals.

Competing unattached, Ed Kutz rode off with the top spot in the saddle bronc riding. Melvin Dick took second place, while Dick Gibford and Steve Calvin split third and fourth.

Guy Barth from Hartnell J.C. won the bull riding followed by Leland Decker, Fresno State; Gary Baumer, Modesto J.C.; and George Brown.

Backing up Ferguson in the ribbon roping were Phil Bidegain of the University of Arizona and local roper Jerry Kole.

Tailing Ferguson in the bull doggin’ were Jim Reddy, Hartnell J.C; Gary Baumer, Modesto J.C. and Mustang Bob Harvey.

In the calf roping, veteran roper Jerry Kole took the top honors, followed by a three way split for second, third, and fourth.

Tom Ferguson, Phil Bidegain, and Larry Ferguson were the lucky ropers tied up for the second spot.

In the girls competition, Yavapai College captured the top spot led by its only team member Dixie Richards. Miss Richards took home the All-Round Championship; she won the breakaway roping followed by Linda Goodman, the U of A; Shirley Anderson, unattached; and Colleen Semas, Mustang team member.

In the goat tying Miss Richards grabbed first place followed by Mardi Juhl, individual, Kay Eicks, Central Arizona College; and Linda Stockdale, of the Mustangs.
