State makes rules for campus dorms

by Randall Pry

In the State of California the worst or the best landlord a student could hope to deal with? Specifically, exactly what conditions must a student adhere to if he or she wishes to reside in one of the several on-campus residence halls?

In a recent meeting of the newly formed Tenants Union, the question arose as to just how favorable it is to rent living space from the State of California. Following up this question on campus housing led to some interesting facts on state-controlled campus housing.

The cost of living in a residence hall is about $83 per month, or $906 a year. Considering local inflationary rent prices, this is certainly reasonable, if not downright cheap. Living on-campus is certainly convenient, its proximity to the rest of the school puts it within walking distance, an asset when one looks at the parking situation at this school.

A linen service, access to cleaning appliances, washing machines and dryers, as well as the athletic and social programs available to the dorm resident all add up to a wholesome and pleasant place to live. In fact it's almost like home.

There is one rather distinctive difference. Instead of a mother telling a dorm resident to pick up his room, to make his bed..., and to keep things clean and dressed properly (all admirable endeavors) there is the State of California.

In the 1970-1971 version of the Campus Housing Manual, a complete system of social behavior has been created by which a student, while within the boundaries of the campus, is expected to honor. Some of the regulations deal with restrictions which apply to all students while on school property, such as the ban on alcoholic beverages. The majority of these rules are reasonable and justifiable, but the manual doesn't stop at the regulations pertaining to matters of the preservation of school property and administration. It also makes some moralistic judgments on student behavior. College regulations prohibit what is referred to in the Housing Manual as "lewd and obscene signs or pictures" in any of the residence halls. What does it not do is specify exactly what constitutes "lewd and obscene", or whether the distinction is left up to the student or the administration.

The implications are equally vague concerning the regulations restricting visitors of the opposite sex. The rules state that there are specific times for such visits, and that all liaison between members of the opposite sex be within the

Luckman speaks here on violence in schools

"We're living in an era of chaos and confusion. If the trend continues, all dwellers be a future for you or just a past for me?" These ominous words were spoken by Charles Luckman, chairman of the five largest firms in the world. Among the firms accomplishments was the designing of the master plan of Cape Kennedy and of the Houston Space Center.

Luckman spoke before an overflowing Little Theater audience yesterday on the topic of "Trustees View of Higher Education." He has been a member of the California Board of Trustees since it was first established, back in 1960.

"One man's conformity is another man's heresy," he stated. "For many years I have marched to a different drummer and I want to establish the premise that I care."

Addressing himself to violence, Luckman stated that none of it made any sense.

The bombing of the Bank of America is a terrifying example of uniformed ignorance," he said. "The tragedy is that radical bombers correlate badness with bigness.

"All who are part of higher education must be devoted to academic freedom. We who have responsibility cannot permit with- willful lawbreaking. We must teach respect for laws on our campuses. We cannot accept the principle that minority rights make right."

"Our system is founded on law and order. "Academic freedom means freedom from interference, not freedom to break laws. When the institutions rules are broken, the guilty must be penalized. When the civil laws are broken the guilty must be penalized."

"There can never be any virtue in violence. When liberty destroys order the hunger for order will destroy liberty."

The student violators should be subject to expulsion while teachers who attempt to disrupt the orderly process of a campus should have their tenure terminated.

Luckman ended with the sentiment that "Freedom is not for each but for all. Only we can preserve America. Freedom did not begin with us. Do not let it end with us."
President Robert E. Kennedy recently received the Outstanding Civilian Service Award from the United States Department of the Army.

Dr. Kennedy received the award from Maj. Gen. Richard W. Whitney, deputy commanding general, 6th U.S. Army, the Presidio, San Francisco.

The award cited Kennedy for his outstanding contributions to and support of the ROTC program from April, 1967, to September, 1969, as president of the ROTC program at the University of California, Berkeley.

"Dr. Kennedy has been a forceful and effective influence in maintaining the prestige enjoyed by the Military Science Department at that institution. He has publicly upheld and supported the ROTC program as a viable, proper, and essential activity of the college, emphasizing its importance in relation to the goals of national security and safety. The award was presented to Dr. Kennedy by his dedication to his profession and the college's tradition.

The award presented to Dr. Kennedy consists of a framed certificate and a medal. It is the second highest civilian service award presented by the department of the Army.

Participating in the presentation were Col. William Haste, head of the campus Military Science Department; Lt. Col. George L. Silva, military science instructor; and Capt. Bob Briner, aide to General Whitney, Representing the School of Science and Mathematics, which includes the Department of Military Science, was Dean Clyde P. Flaster.

Open feed

A home cooked meal for all comers will be available at the Annual Feed held by the Student Architect Wine Club Nov. 18, according to club member Marianne McCurdy.

The feed will be held at the New I, 911 One Street. A happy hour, beginning at 5 p.m., will precede the dinner, which will be served from 6 to 8 p.m. Sunday, Nov. 18.

Tickets will be sold at the door for $2.50 per person. The public is invited, according to Mrs. McCurdy.

In order to secure your future, make inspections for maintenance, safety, sanitation, and probable cause. Whether or not there is an enunciation of the rights of privacy of the individual, such a condition would certainly not be imposed upon a student renting from a private landlord.

The State of California may be a rotten landlord, or the best friend a student ever had. Arguments are available which favor both, and charging the regulations would be difficult; successful only if the students get together and work for it. Perhaps through an organization such as the Tenants Union.

Showing some initiative or an organized level would be an effective way to show responsibility in determining where and how students live. Student apathy was probably a factor in the establishment of the housing rules, and surely helped institutionalize the whole system.

Even if the conditions which must be adhered to are favorable to most students who must live with them, it still is interesting to note the extent that the Campus Housing Manual goes to in order to set up a complete system of practical and moral guidelines for the student who spends most of his time on-campus.

Attorney says rules may violate privacy rights

(Continued from page 1)

"confines of a student room shall take place only with the door wide open. They do not state, however, what or why anything would happen if a male and a female should find themselves together behind closed doors. The train of logic behind these regulations seem to imply that if a student isn't allowed to look at dirty pictures, or he shouldn't be given the opportunity to get themselves in a position dealing with the same situation, in the flash as in speech.

Harry Woolpert, a local attorney and former Poly instructor, who has spoken at several of the Tenants Union meetings, brought out another ramifications of the regulations imposed by the administration on it's residence hall population. It was the legality of a rule that may violate the privacy rights of a student living on-campus.

In calling the Campus Housing Manual, it is stated that the college preserves the rights of the property by authorized personnel to

Cuesta College measure passed by a 3-1 vote

County Measure A, the $60 million bond measure for construction of a permanent campus for Cuesta College, was approved in a 3,145 yes to 7,606 no vote by San Luis Obispo County residents. This is a 74.5 percent margin, with a 68 percent, 23 vote necessary for approval.

Dr. Merlin Elsenblisel, president-superintendent of Cuesta College, issued the following statement in response to the 3-1 vote:

“Enough has been said to indicate the need for and the worth of a permanent campus for the benefit of the students of the county and the future of our region. We have worked hard the past two years to bring about a building package which would be acceptable to our voting citizens. Now that it has passed, the administration and board of trustees will do everything possible to bring about a good, substantial, reasonably priced campus of which residents can be proud.”

“We do thank the voting public for their support and assure you that our continuing support.”

“We also want to express our appreciation for the excellent cooperation of newspapers, radio, television, and the individuals who brought the information concerning the bonds to the voting public.”

Why isn’t a big company like General Electric doing more to clean up the environment?

How much can one company do to clean up the environment? Until the problems of pollution are under control—until its effects are reversed—no company can ever be doing “enough.”

What follows is a listing of things General Electric is doing to ease environmental problems. Some are new. Some are as old as twenty-five years. Should we be doing more?

Yes, of course. Every company should. These are only a few of the more important ones. But every day sees us take more steps in many more directions.

► General Electric is working today to develop a vaccine that will use bacteria to convert garbage into a high-protein food for cattle. One possible answer to the mounting garbage problem.

► Modern, pollution-free mass transit from General Electric is carrying more and more commuters into cities without their cars.

► GE pioneered the development of nuclear power plants. A nuclear plant makes electricity without making smoke. While there is still the problem of thermal effects, it’s being tackled on a site-by-site basis and can be solved. But for now, increasing demands for power can be met without an increasing output of air pollution.

► GE has developed a waste-treatment unit to significantly reduce the water pollution from ships and boats.

► We have been chosen by the federal government to solve the problem of jet-engine noise for the aviation industry. Our present jet is already quieter than those on the passenger planes of the Sixties, and yet it’s nearly three times as powerful.

► GE designed and built an undersea habitat called “Teekile.” Several teams of scientists have lived in the habitat while studying coral-reef ecology and ocean pollution.

► We’re designing an earth-resources satellite which will be used for a worldwide survey of the oceans. A first step toward the ultimate control of water pollution.

► Our newest jet airplane engine, for the DC-10, is designed to be smoke-free. Of course, there’s more to jet exhaust than just smoke. Our goal is to one day make them run totally clean.

► General Electric makes high-temperature vortex incinerators for the complete combustion of many types of solid waste. Complete combustion drastically reduces the amount of leftover ash, as well as virtually eliminating air pollutants.

The problems of the environment are many. And some of the solutions will be difficult and costly. But, as you can see, we’re working on them.

Why are we running this ad? We’re running this ad, and others like it, to tell you the things General Electric is doing about the problems of man and his environment today.

The problems concern us because they concern you. We’re a business and you are potential customers and employees.

But there’s another, more important reason. These problems will affect the future of this country, and this planet. We have a stake in that future. As businessmen. And, simply, as people.

Please write to General Electric, 570 Lexington Ave., N. Y. 10022.
Frosh take on Cal Bear-Cubs

Having slipped the Stanford frosh around last week before losing a 50-17 heartbreaker, the adventurous freshman football team of Coach John Crivello takes off for Berkeley this Friday to clash with the California frosh. The opening kick will sail downfield at 1:00 PM in Cal's Memorial Stadium.

“Our guys gained alot of confidence against Stanford. Now they know they can go out and play a Pacific 8 team on equal terms,” Crivello commented. “This will help our preparations for Cal this week.

“All our kids gave us 100 percent efforts last week. It’s hard to single out players without film to study but I can say this,” Crivello continued, “our players played without the services of their leading ground gainer, tailback Rick Gliniac. Gliniac missed last week’s game because of the stretched ligaments but may be ready for action this weekend. Mike Foley took over Gliniac’s duties, rushing for 96 yards on 22 carries, against Stanford. Foley is a very capable ball handler. The Cal frosh are winless in two starts having lost last to UCLA frosh, 30-23, and the USC frosh, 43-31. Both contests could have ended either way, so its really hard to determine Berkeley’s capabilities.

“I'm thinking give us a little buildup to this one,” Crivello concluded. “I'm thinking there is still something left in the tank here. Against Stanford we were the aggressor on the football field. Our kids have the guts, spirit, and ability,” Crivello, the former San Jose State split receiver added.

The Cal Cubs. Prior to their 20-17 loss to Stanford, a team rated as one of the best on the West Coast, the Colts defeated Cuesta College 14-0, stopped Santa Clara’s frosh 35-28, and the USC frosh, 42-13, and clobbered the Cal Lutheran J.V. 19-8.

This years frosh team is undoubtedly one of the best fields at this college. “Against Stanford we were the aggressor on the football field. Our kids have the guts, spirit, and ability,” Crivello, the former San Jose State split receiver added. “Although leading through much of the Stanford game, the Colts played without the services of their leading ground gainer, tailback Rick Gliniac. Gliniac missed last week’s game because of the stretched ligaments but may be ready for action this weekend. Mike Foley took over Gliniac’s duties, rushing for 96 yards on 22 carries, against Stanford. Foley is a very capable ball handler. The Cal frosh are winless in two starts having lost last to UCLA frosh, 30-23, and the USC frosh, 43-31. Both contests could have ended either way, so its really hard to determine Berkeley’s capabilities.
