The Divisional Display Sweepstakes Award has been in the hands of the Graphic Communications Department since Poly Royal two years ago. The trophy goes to the best display and gossip has it that the printers wouldn't be adverse to keeping it for another year.

Do they rate? Check their exhibit out in the Graphic Arts Building.
EDITORIAL
Witness the awareness

As thousands of visitors traverse the campus today and Saturday, it would be worth their while to pause and reflect upon the accomplishments of this school in all areas.

Poly Royal is a combination of all the positive attributes of a year’s growth on this campus. More than just a brightly colored carnival, the annual open house gives the public a chance to see all of show off and flex new muscles of achievement.

The past year has signified change for Cal Poly. A new awareness pervades the campus, embracing not only ecology, civil rights and other popular fad issues, but also political, social and economic awareness of our environment.

Witness the establishment of Student Community Services, an organization to improve and coordinate relations between the city and the college, as proof that many students no longer consider themselves as transients where they live.

This is a growth among many—Ecology Action, Students Tenant Association, Faculty Evaluation Board—and students are working beyond what the classroom calls for.

An intellectual expansion is denoted by standing room only crowds to hear Dr. Norman Borlaug, Dr. Louis B. Leakey, Bobby Seale and Dr. David Brower, a few of the speakers on campus this year.

The trouble with Poly Royal has been its facade of a play period when everyone gets two days off. It is not.

Look past the gaily decorated booths, displays and creations. Look to the thought—the unified effort—behind them. And really see this campus.

Old time tally set for show

The first Laurel and Hardy movies with sound will be shown by the Speakeasy Club during Poly Royal.

The film will be shown in the College Theater at half-hour intervals throughout the two days.

A parent of a Poly Royal student, president of the club, will be present to answer questions and sell the program for ten cents. A display in the lobby of the theater will proclaim a coming attraction sponsored by the speech and drama department, the stage presentation of "You Can't Take It With You."
Photo contest on display

"Merry Elizabeth" a photograph by Ralph Oamarling was announced recently as the "Best of the Show" in the Poly Royal Photo Contest.

Best black and white print was "Hope" by Phil Valenzuela, a senior picture of a grandmother and granddaughter.

The contest was sponsored by Sigma Delta Chi, the journalism society. Judges included: John Healey, journalism department head; Larry Jamison, photo editor of the Telegram-Tribune; Dean Kingaard of the journalism department and Jeanne Twaita, author and photographer.

The photographs will be on display in the journalism department throughout Poly Royal, in QA 104.

Women's lib makes splash

You've come a long way baby! No, it's not another slim cigarette commercial. This familiar phrase is the theme for Poly Royal weekend's Women's Physical Education Swim Show to be held at the pool behind the Men's Gym.

Local swimmers will make their debut in performances at 3 p.m. on Friday, and 10 and 11:30 a.m. on Saturday. Since January, swimmers with beginning and advanced ability have practiced synchronized swimming to music.

Pulling their 'weights'

by BOB SCHNEIDER

A tractor pull is what you have when you hook two tractors together and see which can pull the other. Or so many people think.

But actually, according to James Bernmann, Agricultural Engineering instructor here, the tractor pull scheduled for Poly Royal this year has nothing to do with hooking two tractors in opposition to one another.

Bermann said the idea originated with the horse pull, where a horse was given a specific lead to pull down a track. In the same way a tractor is hooked to a sled to pull a load down a track about 300 feet long, he said.

Bermann said the sled itself weighs about 8000 pounds. As the tractor starts pulling the sled weight is added, in the form of people, until the tractor can't pull any further.

Bermann said one of the safety factors included will be a pace tractor moving just ahead of the pull tractor so that the speed will be kept to eight miles an hour. The slower pace means the sled moves at the same rate of speed as the cable cars in San Francisco and inures there is no danger for the people jumping onto the sled to add weight.

The tractors will be divided into three classes according to weight. While the contest will include stock tractors only, most tractor pulls include a class for modified tractors.

"With modified tractors it's like a drag race," he said. This makes them more dangerous, so, because of the safety factor, they will not be included.

According to Larry, Bechtold, chairman of the Tractor Pull Committee, the tractors will range in weight from 1,000 to 15,000 pounds. He said a tractor can enter any weight class above its own.

"We're hoping to get some entries from farmers and dealerships in Santa Maria and the Valley. We might use some of our own tractors from the shop here, but we're not sure about that yet," Bechtold said.

Some of the rules for entries are that they have rubber tires and a standard engine block. Bechtold said dual tractors will be excluded from this contest.

He said in the contest itself, tractor must start from a tight starting position, they cannot jerk the sled. Their front tires must also touch the ground every ten feet while pulling the sled.

The winner will be determined by considering the weight of the tractor in comparison to the weight it pulled and the distance it pulled the weight, according to Bechtold.

He said John R. Dunn of the Agricultural Engineering Department will be the judge for the event, and that his word is final on all decisions.

Bermann said the event is to be held Saturday April 29 in the field across the street from Yosemite Hall. He said there will be bleachers set up, and that the track will be roped off in order to keep it safe.

"Although this isn't a sanctioned event this year, we hope to have it sanctioned in the future. There is a national sanctioning body called the National Tractor Pull Association, Inc. and it's their rules we're using," said Bernmann.

Bechtold said, "The object is just to get out and have a lot of fun, and try to pull it off."

Rolling along

An activity of the women's physical education department the demonstration will feature approximately 30 girls displaying their skills in rhythmic gymnastics, tumbling, flex exercise and on apparatus.

Tropic plants, flower shows now on display

"My garden... affects me like sweet music... Among my flowers and trees, nature takes me into her own hands, and I breathe freely as the first man."

This excerpt is from a poem by Alexander Smith that is printed in the front of the guide book to be handed out to Poly Royal students as part of the Ornamental Horticulture display program entitled "Impressions Under the Sun."

Headed by Dr. Howard C. Brown, the Ornamental Horticulture Department plans to have numerous displays designed and constructed by students of their department.

Some of these will be landscape displays, educational displays, flower show displays, and a tropical hut where all the different tropical plants that the department has will be on display.

The landscape displays will include fine products that students have made using just basic principles, such as balance, form, texture, and color, all of which they learned in class.

Integrating mere boards, rocks, and other construction materials, and plant materials they formed artistic impressions that are balanced and harmonious in color and texture.

In the educational display, visitors will have a chance to see exhibits showing how students learn the basic principles of landscape drafting and design that are used to form actual landscapes and how a terrarium can be constructed.

The horticulture flower show, begun in 1950 and sponsored by the Ornamental Horticulture Department will include public entries also. On display will be specimens of potted plants and cut flowers, which will be judged by the nationally recognized California State Polytechnic College Intercollegiate Flower Judging Team.

Other displays will include the glasshouses and the American Institute of Floral Designers (AIFD) displays. Glasshouses, including a mist house, mum house, carnation house, rust house, and potted plant house will be equipped with special fans, lights, sprinkling systems, conduction tubes, and heating systems for control.

In addition to the many displays, the Ornamental Horticulture Department will have on sale items such as container stock, bedding plants, possibly some tropical plants, and food and beverages.

Many people deserve acknowledgement for their participation in the planning and preparing of the exhibits, and each one to the display program, this includes Mother Nature.

Crafts store opening today

Students now have a place where they can turn their spare-time hobbies into profit. A new crafts store, located in the Crafts Center in the College Union, will celebrate its grand opening today and Saturday from noon until 7 p.m.

According to Leslie Griffin, the Craft Center director, the store is an outlet for students and staff members to sell their craft articles.

The store will accept articles such as leather work, ceramics, paintings, photography, clothing or any other kinds of crafts. All prospective sellers must bring their wares to the center and indicate the selling prices for each item.

A maximum of five items from each consigner may be displayed at any one time. All items will remain on sale for one month.

Die store will keep 20 percent of all income with the balance going to the consigner.

The grand opening ceremony will include crafts demonstrations. Music will be provided by "Coffee House."

Following Poly Royal, the hours for the crafts store will be from 4 p.m. to 8 p.m. Monday through Friday.

THIRTY DIFFERENT STORES TO SERVE YOUR NEEDS
Residents hassle ‘home, sweet home’

Dorm reform issue causes more and more problems along the way

by MALCOLM STONE

Dorm reform is an underlying issue that seems to lurk and simmer along with resolution continually around the bend.

Regardless of what the immediate issue are—24-hour visitation, quarterly contracts or a change of lifestyle—the long-term issues revolve around whether dorm residents have any rights and input in dorm operations.

Administrators are caught between the rock and the hard place. On one side is their responsibility to the state, and on the other their obligation to the students of the college community.

With those first—the established regulations or demands for the best possible living environment? Everett Chandler, dean of students, has been at this college for years. He said demands for dorm reform are nothing new, being criticized is nothing new to him either.

No easy way

"For 36 years I’ve played third base," he said. "There’s no easy way on a lot of things."

While dorm reform has a long history the current issues date back to last spring.

At that time the administration had a closed door policy. Whenever a member of the opposite sex was visiting a dorm resident the room door had to remain open. Discontent with the policy grew and resulted in 10 or 15 people marching in front of the administration building with placards.

Chandler said a group representing Inter-Hall Council, came to him about the controversy over the open door policy. A committee was formed consisting of faculty members and representatives from the administration and IHC.

"We met several times. Finally we said let’s survey,” Chandler said. "We also recognized at that time 40 percent of the contracts were signed by parents.”

Chandler was sharply criticized for not making the results of the parental survey readily available to dorm reformers. He said he was reluctant to do so on legal grounds.

Some of the parents specifically requested that their replies be kept confidential. Chandler has kept that confidentiality by releasing the results in a generalized manner.

No hang-up

Chandler maintains he does not have "any big hang-up" about giving out the results of the survey. He says part of the problem is "parents don’t respond the same way students do. Parents respond at least 150 different ways to four questions.”

The Student Tenants Association is the most strident group voice for dorm reform. STA was originally organized a Dorm Congress. The new group consisting of representatives from the dorms and members of IHC and STA drew up five proposals. It hopes the proposals will eventually become dorm policy.

The proposals call for 24-hour visitation to be instituted as soon as possible. IHC rules would be changed to improve its function. Quarterly contracts were requested for students staying only one or two quarters with higher fees than a student on a yearly contract.

Room checks were asked to be by appointment and sign-in, sign-out policy be dropped entirely. The establishment of coeducational living facilities were also proposed.

The resolutions were presented to Student Affairs Council and IHC for their approval.

The Dorm Congress also requested written statements from Pres. Robert E. Kennedy, Chandler, and Robert Boturom, director of housing, by May 10 on their positions.

“Al are we asking is that each dorm set up its own rules,” Abernathy said.

The Dorm Congress would like the administration to voluntarily ease dorm restrictions, but in the event it would not the group is prepared to take the matter to court, according to member Skip Kelley. Legal remedies were endorsed by all of the presidential candidates in the recent ASI elections.

Kids are the crux of queen's ambition

by NANCY WILKESON

Every year about two months before Poly Royal campus clubs nominate girls—who have completed 12 credit units and have a senior standing—to run for the Queen of Poly Royal. The student body then chooses the queen by voting.

This year's queen is Karen Nystrom, the daughter of Mr. and Mrs. Gordon Nystrom of Santa Cruz. Miss Nystrom is a child development major and will graduate this June. She wants to teach elementary school after she receives her teaching credential next year.

A graduate of Soquel High School in Santa Cruz, Miss Nystrom was a cheer leader and was active in the American Field Service. She enjoys spending her spare time working with the children in the Pals organization, and she belongs to the Child Development Club as well as the Boots and Spurs Club.

The new queen was nominated by the Boots and Spurs club and ran for queen because she felt it would be a good experience. She feels that "the wonderfully unique thing about Poly Royal is that it happens because the students want it to happen."

The princesses are Sharon Craig, Georgia Lynn Pemberton, Camilla Gray, Sue Geer and Margie Kelly.

Miss Craig is a representative of Sigma Delta Chi, the national Journalism society. Her parents are Mr. and Mrs. E. J. Craig of Chowchilla. She is majoring in Journalism and plans to work in radio or television advertising.

The princess attended Chowchilla Union High School where she was vice president of her senior class and a member of the California Scholastic Federation. She attended Fresno State College for three years prior to her arrival here.

Miss Craig enjoys painting, dancing, reading and car and motorcycle racing.

Miss Pemberton is a business administration major and wants to work in the field of personnel when she graduates this June. She is the daughter of Mr. and Mrs. Frank Condello of Salinas. Before coming to this campus, Miss Pemberton attended Hartnell Junior College in Salinas and Humboldt State College. She likes music and Emergencies and is a member of Women's Glee and the Society for the Advancement of Management, the club she represented in running for queen.

Miss Gray is a home economics major who is representing the Dairy Club. Her parents are Mr. and Mrs. Frank Condello of Petaluma. She graduated from Rancho State High School in Petaluma where she was a cheer leader and a member of the 4H Club. She transferred here from Bakersfield College in her freshman year.

Miss Gray likes to snow ski and sew and is an active member of the Dairy Club and of Pals. After graduating in June, she wants to be a Consumer Consultant in the field of dairy.

The princess ran for queen because she felt it was a "good chance to represent Poly Royal."

According to Keith Little, Cal Poly Rose Parade Float Committee chairman, a display will be held in Computer Science room 201 from 11 a.m. to 5 p.m. today and from 8:30 p.m. to 5 p.m. on Saturday.

Included in the display will be two components from this year's award winning float and a demonstration showing what goes into building a float.

Winning float on display

The excitement and splendor of the Tournament of Roses Parade will be in evidence at Poly Royal, as the result of an exhibition and demonstration to be presented by the college Rose Parade Float Committee.

The princess ran for queen because she felt it was a "good chance to represent Poly Royal."

According to Keith Little, Cal Poly Rose Parade Float Committee chairman, a display will be held in Computer Science room 201 from 11 a.m. to 5 p.m. and 8:30 p.m. to 9 p.m. today and from 8 a.m. to 5 p.m. on Saturday.

Included in the display will be two components from this year's award winning float and a demonstration showing what goes into building a float.
I hoped you enjoyed the last TG you attended. It was probably your last. The phenomenon known as TGIF (Thank God It's Friday) is about to be dealt the death blow by the city of San Luis Obispo.

The problems that gave the Friday afternoon bash of a recent origin, but the TG is as old as San Luis Obispo's fraternity. The backyards of all those early frat houses were filled, on Friday's after class, with relieved students trying to drown the week's frustrations with paper cups of beer.

The bigger, as it was called then, was innocent enough when put on for the entertainment of the fraternity members and their guests, but the profit motive took the party out of the backyard and put it in the park where it could make more money.

Today the TG is likely to be a beer, a band, and a 1,000 students looking for a Friday night date. When this many people get together in one place, something has to give. The community blames the resultant drunken brawl on the fraternity who immediately point the finger at the jock who, when drunk they said, always started throwing punches. As damaging as all this is, it will have very little to do with the death of the beloved TG.

The epitaph reads that students defaced property, unruly carelessly, disturbed the peace and caused traffic accidents. The charges are as true which makes the defense of the TG weak, at best.

The city, until recently, took a position of benevolent blindness when it came to the TG. The age of innocence is now over for the TG functions.

A subcommittee of the San Luis Obispo City Council's Human Relations Committee (HRC) is trying to find a way to allow the events by setting up strict guidelines to rule TGs. The committee proposed that the beer parties be sanctioned by a TG governing committee which is establishing age and time limits which must be agreed to before and adhered to while the party is in progress.

The efforts of the HRC may be in vain as the city council is giving the evil eye to the TG. In a meeting held a few weeks ago, the council refused to endorse the HRC's proposal.

While the TG Committee is trying to okay the parties the San Luis Obispo Police Department is planning to say no. According to Ervin Rodgers, police chief, all

Couple enjoys local TG

Tri-Beta offers trip into dune

Discover what is in the center of a sand dune and see the Biology Department's display in Science North, room 106, 110, and 112 today or Saturday. The display is a joint effort between the Biology-Science department and Tri-Beta, the departmental club, according to Keith Pearson, student chairman of a sand and dune and the department and Tri-Beta, the Biology Department's display.

A three dimensional view of a sand dune will be one feature of the display. Visitors will feel as if they are walking through the center of the dune. Finding out what holds it together will also be shown, as well as the plant life.

A lake, typical of one found in the center of a dune will be presented in another display.

Van Morrison

The musical talent of Van Morrison will fill the Men's Gym Saturday night for the enjoyment of students and Poly Royal visitors.

Morrison was the lead singer for the rock group Them before he formed his own group. He has four musicians backing him up. Dan Fogelberg, who plays piano and acoustic guitar is the lead act. Fogelberg has been touring the country with Morrison's show.

Dave Taxis, program counsel, said a local act was added in the three hour package. The concert will start at 8 p.m. Tickets are $3 and $4 and can be purchased at the College Union Information desk.

### Carnival faces slower paces

The Rally Club is sponsoring the tenth annual turtle race from 6 to 11 p.m. Friday April 28 at the carnival.

The races will be run in heats with preliminaries, semi-finals, and finals. According to Chris Selby, chairman of the event, the list of heats will be posted Friday afternoon at their booth at the Yosemite Hall parking lot.

The grand prize will be a trophy with ribbons for the slowest pace of the tenth annual turtle race from 5 to 11 p.m. Friday April 28 at the Yosemite Hall parking lot.

Carnival faces...

### Social tea...

Continued from page 4 the laws governing public drunkenness and the selling of alcohol to minors will be enforced.

Rodgers said, first violators will be asked to shut down, and if they refuse they will be arrested. When asked what was wrong with them, Rodgers said, "They serve no constructive purpose and hopefully will die forever."

He may get his wish. A member of the HRC Ruth Wirshup said the TG is having problems because of community attitudes.

Mrs. Wirshup said that the city’s Recreation and Parks Department thinks the parties should be held in people's backyards and not in the parks because drunk people tend to ruin any good park facility. She said most of the city council members hope the problem will go the way of the Hula-Hooping.

The real problem with saving the TG then is trying to change attitudes and the city council seems to be resisting any change in that department.

Mrs. Wirshup didn’t say, but should have, that the students will play an important part in determining what will happen to Friday afternoon TGs. The participants — TG hosts and guests — in an event can make it or break it. As things stand now, all the kings horses and all the kings men...

### Coffee house, a place to do your own thing

The Coffee House, a gathering of individuals who do their own thing, have changed meeting times just for Poly Royal.

Other than the regular 7:30 p.m. to 10 p.m. Sunday night meetings in the CU 207, the Coffee House will be open on Friday and Saturday from noon until 7 p.m. The Coffee House will be located in the Crafts Center in the College Union.

Some people may ask what a coffee house is. On this campus, the Coffee House represents a time and place where students and teachers from various colleges may come to share their talents such as folk music, singing, and poetry recitation.

Leslie Griffin, former coordinator for the Coffee House, explained that this venture began in September, 1969, where it was first held in the staff dining center.

"However, because of lack of atmosphere there, the meeting place was changed to the cellar under the clock tower building, after only six months," she said, "The newest location in the College Union was decided upon when the building was still under construction.

The Coffee House offers entertainment, and refreshments including popcorn, cider, and different kinds of coffee to all for the fee of 25 cents.

Performers you must first audition before a panel. Auditions are every Thursday during College Hour in the College Union.

Miss Kelly that Poly Royal will reflect the feelings of students on campus as well as the community.

The queen and her court have been busily preparing for the annual event. They have made guest appearances at community clubs, have attended many luncheons and banquets, and have traveled to Santa Barbara, Santa Maria and Salinas to appear on local television stations.

The girls will be on hand during the weekend to present awards at the Live Stock Show and will attend the other activities scheduled for Poly Royal.

Welcome Poly Royal Visitors

From HURLEY'S PHARMACY in College Square

We know that you are often excited about a trip and sometimes you may forget an item of importance. HURLEY'S PHARMACY has been serving Cal Poly students for years and would like to serve you during your stay.

We have complete prescription, photo, cosmetics departments, as well as greeting cards and gifts. We also cash Cal Poly checks.

Come in and see us. We hope to make your stay an enjoyable one.

The slogan "We'll Catch the Sun and Never Let It Go" was developed with the idea that everyone could make their own interpretations, according to Randy Dettmer, the originator of the much talked about '92 Poly Royal poster.

Dettmer is an architecture major and a working member of the Poly Royal Board. Dettmer said the whole idea originated from a concept rejected by the board. The board had been trying to develop a poster which would grasp a kind of expanding idea, Dettmer said.

"The slogan presented to the board was too long and difficult to comprehend according to Information Officer Charles Mendenhall. During an architecture class of Dettmer's classmates mentioned a poem by Rod McKuen entitled 'I'll Catch the Sun.'

Thus, the poster was developed around an idea concentrating on education and a high educational goal.

McKuen's whole poem was not considered when the poster was in the planning stage. The first lines were the only basis for the slogan, said Dettmer. They read: 'I'll catch the sun and never give it back again.'

‘We’ll catch the sun—never let it go’ signifies goal worth grasping

The Industrial Engineering Dept. has planned a motivating display based on IE as the "Profession on the Move." According to James Golden, IE adviser for Poly Royal, displays of people in different areas of employment as IE graduates will support the theme.

Pictures, statements of the future of IE and its relevance to the scientific approach and the many diverse solutions to problems in IE will be viewed in the curriculum display. The lab will illustrate the latest production methods.

All this will be shown in Rm. 103 in the Graphic Arts Building during Poly Royal.

‘We’ll catch the sun—never let it go’ signifies goal worth grasping

The Industrial Engineering Dept. has planned a motivating display based on IE as the "Profession on the Move." According to James Golden, IE adviser for Poly Royal, displays of people in different areas of employment as IE graduates will support the theme.

Pictures, statements of the future of IE and its relevance to current positions by these graduates all will be on view to reflect the diversity of the major.

The scientific approach and the many diverse solutions to problems in IE will be viewed in the curriculum display. The lab will illustrate the latest production methods.

All this will be shown in Rm. 103 in the Graphic Arts Building during Poly Royal.

The slogan "We’ll Catch the Sun and Never Let It Go" was developed with the idea that everyone could make their own interpretations, according to Randy Dettmer, the originator of the much talked about '92 Poly Royal poster.

Dettmer is an architecture major and a working member of the Poly Royal Board. Dettmer said the whole idea originated from a concept rejected by the board. The board had been trying to develop a poster which would grasp a kind of expanding idea, Dettmer said.

"The slogan presented to the board was too long and difficult to comprehend according to Information Officer Charles Mendenhall. During an architecture class of Dettmer's classmates mentioned a poem by Rod McKuen entitled 'I'll Catch the Sun.'

Thus, the poster was developed around an idea concentrating on education and a high educational goal.

McKuen's whole poem was not considered when the poster was in the planning stage. The first lines were the only basis for the slogan, said Dettmer. They read: 'I'll catch the sun and never give it back again.'
Cowboys ride, logs roll

by ROBIN BAKER

Cowboys and clowns, tractor versus tractor, and the creation of a redwood log are some featured activities for School of Agriculture and Natural Resources during Poly Royal.

The cowboys and clowns can be seen in one of the three rodeos sponsored by the animal science department. An all-day horsemanship and animal showmanship event will also be sponsored by the department.

Deane milking cows, artificial insemination, and open houses at the creamery and at the dairy will be presented by the dairy science department.

Eggs, chicks, and chickens will be exhibited by the poultry industry department. Their emphasis is on health; the nutritional value of the industry's products.

From living to mechanization, the agriculture engineering department's display will show the relationship between agricultural engineering and the agriculture community.

Tractor plays will be sponsored by the agriculture engineering society.

"Impressions under the sun" will be on display by the ornamental horticulture department as students work with new ideas in landscaping and floral design.

The natural resources department will build a redwood log. The major emphasis is on controlled burning of redwoods.

Fertility will be in the soil sciences department's bag as they demonstrate a working soil testing laboratory. Information on crop responses to fertilizers and soil fertility will be available.

"Things from the soil" is the crops science department's creation as they make a salad of vegetables.

Food industries department's features will include meat values concerning can analysis, selling their own processed jam, and an automatic apple peeler and corer.

Charlie Brown takes care of the Agricultural Management Department when he hits the three beans of education in their display.

For the fun of a country fair on campus, everyone is invited to visit the displays and activities featured by the School of Agriculture and Natural Resources.

Although plans for several new phases of construction will be put into effect during the upcoming school year, the construction of a new library for this campus is not included in those plans.

According to Library director, L. Harry Breaux, the plans have been scrapped at least for another year. Architectural drawings for the new facility have been completed for several years.

Buildings that the master plan and budget will allow for include the conversion of a part of the present science building into a chemistry facility. \$711,000 has been allocated for this project.

A new entrance road is next on the construction agenda. An approximately \$804,000 designated for the widening and construction of the present "back" entrance to Cal Poly.

Crowded conditions at the California Blvd. entrance require the work which will be between Highway 1 and the Southern Pacific railroad overpass.

A new architecture classroom building on the site of the old wooden building near the clocktower is also planned, but may not get under way until late in the 1973-74 school year because the drawings have yet to be completed.

Further in the future are plans for a new engineering building at the location of the old power plant near Chadwell Gym. A \$7 million dollar addition to the health center financed by \$7 million dollars will be required to attain the goal of adequate facilities to handle this many students.

A master plan was one of the earliest requirements of the trustees who took over the college system in 1961.
by PAT ROGERS

The new hard plastic ABS identification card with the student's picture on it has all systems go after almost a full year of operation.

Although opponents of the card said it would further de-personalize higher education, the ID card has served its purpose by increasing efficiency where it is being used.

Three organizations on campus are using the cards the most: the Health Center, the Marksmen and the Dsembler Library.

Dr. Billy Mounts, director of health services, said the ID card is working well at the Health Center. He said it has helped cut down on the number of people who use the Health Center but are not students at this college.

Mrs. Colleen Miller, a Health Center clerk, said the card is used in much the same manner as a gasoline credit card. The student fills out a small information sheet, and his card is used to print his name and social security number on it.

The Marksmen host rifle shoot

The Marksmanship Training Unit is planning a rifle shoot to take place both days of Poly Royal, at the rifle range next to the Aero Hanger.

W a y n e S n o j i n a g a , Marksmanship Training Unit, and the rifle shoot is for the public to enjoy and the admission will be 26 cents.

Guns to be used are .22 caliber Winchester Competition Match rifles with open sights. The individual with the highest score out of 11 persons will receive a certificate of excellence.

Range instructors will be on hand for these wishing assistance.

The Foundation and the Dexter Library.

The Marksmanship Training Unit is planning a rifle shoot to take place both days of Poly Royal, at the rifle range next to the Aero Hanger.

The Foundation uses the card mainly for check cashing purposes, according to Bill Amaral, Foundation Executive Director.

All students must present their ID cards before cashing a check, he said.

The most extensive use of the new ID card will be in the library according to Harry Storace, director of the college library.

New machines will go into operation this summer which will simplify checking our books. The system will be almost totally computerized.

Opposition to the card came from some members of the Student Affairs Council (SAC) when the ID card system was first presented to them last fall said Everett Chandler, dean of students.

Chandler said some people were afraid the picture on the ID card was an invasion of privacy. One even thought, he said, that copies of the pictures were to be sent to the Federal Bureau of Investigation (FBI).
Do student governments have the right to control campus newspaper funds?

This question has come up at several California state colleges and still remains unanswered. Recently, a newspaper versus government conflict has occurred at Sacramento State, Los Angeles State, San Jose State and San Fernando Valley State College.

The Mustang Daily receives a loan of around $4,000 from A.S. at the beginning of each year, which is paid back with advertising revenue.

Local conflicts over allocations from the A.S. have been avoided, but what would happen if the student body president could cut off newspaper funds?

It happened at Sacramento State College in March. According to Tom Kanawyer, business manager for The Hornet, the student body president had no authority to control the newspaper.

Previously, at Los Angeles State Associated Students Press, Fernando Valley State Colleges, and San Jose State, the student government officials decided to charge rental fees amounting to $100 a month for the paper, Sundial's, use of printing equipment owned by the A.S. President, according to co-editor Cary Haskin, "We wish to be independent of A.S. money control. We'll buy our own equipment if we have to." Budget hassles in the past have resulted in frozen funds and accusations of ballot stuffing.

The Sundial was allocated an equipment fund of $4,500 which the editors wished to carry over to next year's budget. After the incident was reported in an editorial, the fund freeze was confessed what had occurred.

"It was the result of a long-standing feud," said Managing Editor Larry Hawthorne, "Edwards and Ivan Cutler (editor) never got along." College Times

Hawthorne said a member of the College Times staff was approached by Edwards, who tried to persuade him to privately report to the president of newspaper operations and to look for something the Times might possibly be censored for.

"They intrigued for about three months or so before the reporter confessed what had occurred. The president was censured by the student senate and withdrew his demands that the paper conform to his standards.

Finally, The Student Judiciary will pay for one full-time typist. For the 1972-73 budget, this will amount to $27,000. The

agreement stipulates that present personnel will be retained.

Expenditures

Presently, total annual expenditures for the Sundial amount to $75,000. Sundial collects $40,000 in advertising revenue a year. To cover the difference, the editors have agreed to rent the A.S. equipment and receive additional allocations from the A.S. government.

The conflict to have extended the longest began a few months ago at San Jose State where the A.S. Press, Mike Buck expressed the desire to cut the funding of instructionally related programs.

According to Tom Kanawyer, "It was the result of a long-standing feud," said Managing Editor Larry Hawthorne, "Edwards and Ivan Cutler (editor) never got along." College Times

Was the initiative "just one piece of legislation. It is only binding until another law is passed that supercedes or voids it."

Finally, the Student Judiciary was asked to interpret the initiative. Their final decision was that the initiative was indeed binding and that A.S. funding of the instructionally related programs would continue until alternative funding can be found.

Events galore

Poly Royal activities appeal to all ages. A galaxy of special events ranges from turtle races to rodeos. A children's glue-in and a tractor pulling contest will be new facets of the 40th annual.
History: first fair on tight budget

The year was 1932. The event was a small-scale livestock show in San Francisco, and the people there were primarily agricultural students.

The significance? A tiny seed was unwittingly planted that would take root and grow into what has now become the dominant trademark of this college.

In 1933 the seedling was called "Poly Royal" and 300 interested spectators gathered to witness the poultry, horticulture and livestock judging, and to share in the festivities including an afternoon barbecue, band concert, baseball game and an evening dance.

Radio publicity and a queen chosen from a local high school drew a larger crowd the following year...large enough to extend the event to a two-day affair in 1933. Two years later, the engineering department entered the picture with the Poly Royal theme of "Follow Poly's Progress!". In 1940 the campus was made into a degree-granting, four-year institution, stimulating the publication of special editions of the campus paper, of which over 6000 copies were distributed throughout California. Poly Royal publicity hit the big time in 1947 when the Mutual Broadcasting Company presented a half-hour show ("Bops of Guts") direct from the campus.

What had begun as a tiny seed, was rapidly approaching maturity. By the time 1947 rolled around, the spirit of Poly Royal had grown to such a phenomenal degree, that officials, guests, and spectators waited patiently for the arrival of a Pony Express rider from Sacramento carrying an official proclamation from the governor to set the 40th Poly Royal into motion.

This year, the 40th annual Poly Royal features many of the traditional events as well as some new ones. Exhibits and shows from all the departments have profited from the past and have grown to satisfy a greater variety of interests.

"The mighty milkers will be out in force this weekend, as the dairy club, Los Lecheros, presents every aspect of the dairy industry.

Early risers can see the milking operations in process from 3:30 to 5 a.m. For those of a later inclination, Poly Royal, the cows will be milked again from 1:30 to 3 p.m.

For the youngsters, baby calves will be led toward the end of each milking.

At 8 a.m. on Saturday students from Dairy Husbandry 131 will compete in a cow milking contest.

The competing deans will be J. Corderon Gibson, of the School of Agriculture and Natural Resources; George J. Minnis, of the School of Architecture and Environmental Design; and Edward H. Barker, of the School of Business and Social Sciences.

Deans Jon Ericson, of the School of Communicative Arts and Humanities; Archie Higdon, of the School of Engineering and Mathematics will also be competing.

...milking time on the farm

Artificial insemination will be demonstrated at 11 a.m. Saturday. First semen will be collected, then a cow will be artificially inseminated with frozen semen that has been stored for several months.

The Dairy open house is planned for both days. The creamery, dairy plant and dairy unit will be open to everyone.

Processes of making various dairy products will be demonstrated at the creamery.

Ice cream, made by club members, will be on sale both days. As always, the stock will be a "Udder Disaster." In addition to receiving a ribbon.

The trophy was donated by dairymen in California in honor of the Californian dairymen.

At 10:30 a.m. Saturday in an "udder disaster," school deans will compete in a cow milking contest.

The competing deans will be J. Corderon Gibson, of the School of Agriculture and Natural Resources; George J. Minnis, of the School of Architecture and Environmental Design; and Edward H. Barker, of the School of Business and Social Sciences.

CU VARIETY

'Try it...you'll like it'

by BONNIE ETCHISON

What can one say about the four-million-dollar college union building on this campus? Among other things, "Try it...you'll like it!"

Activities offered in the CU are bowling, pool, ping pong, football, and games like chess and checkers. A small fee is charged for classes like photography, pottery, macrame, silk screen, batik, tie-dye, jewelry, and lapidary. And, no CU would be complete without a wall-length bulletin board covered with notices for rides wanted, roommates needed, or things for sale.

One room in the CU is presently being rented as an ice cream parlor by a food service concession. Stereo Watts will also rent a room as an extension of their downtown business.

The concrete-grey structure which took approximately two years and ten months to build, was begun in May '68 and finished in March '71.

Architect Joseph Esherick of San Francisco was appointed by the trustees to design the building for the college. Esherick drew up plans for the college union but wasn't satisfied with them until his 37th design.

Since the CU was to be primarily for students, it needed to be rugged so that people would not have to worry about scratching the walls or floors. It also needed to be comfortable so that people would relax and so that the cost of maintenance would be low. Concrete fit the need, and it was about the same cost as other material to build the union.

Obstacles in finishing the CU caused a six month delay. Things like plumbers and operating engineers going on strike for about six weeks. Unusually heavy rainfall resulted in the delayed completion of the building.

The building itself covers 106,000 square feet, or about two-and-a-half acres under roof. The site was chosen as a center of campus activities. The dining hall, the large gymnasium, and the college theater are within a very short distance.

The cost of maintaining the CU is in excess of $850,000 per year. Operating expenses come from part of the student registration fees, about $86 each quarter to be exact. Next year the price may be up to $89, which is the maximum the college can charge.

Next year will be a financially tight year, for the college must draw upon the money it makes this year. The House of Studies Development leased the college three million dollars at three percent interest with a 40 year term. This interest is low compared to that of the open market, but more stringent controls are employed because it is the public's money.

Participation is object

by KENNEY BARNARD

It has long been the objective of faculty to take time out each year, dress up the campus, and get the public to a weekend of enlightenment as to what the youth of this college, are about.

Traditionally, this has been accomplished by offering projects, displays and demonstrations produced by the students through knowledge acquired from their curriculum. Unfortunately, the trend in some areas has been a reliance upon the commercial counterparts of various industry-oriented departments. Rather than student designing displays there has been a great deal of commercial display commercializing which has allowed schools to skate through Poly Royal with admirable presentations but which have amounted to little more than free commercial messages for companies within an industry.

One such department, formerly scoring under this rubric, was Food Industries. However, they have seen the error of their ways and plan to change. According to Jim Patton, Food Industries Poly Royal committee chairman, "This year we want to avoid the high level usage of commercial displays. We are encouraging individual projects as an effort to induce greater student involvement in the Poly Royal activities. We want to get more students participating rather than just a few putting on the whole show."

"Stimulate public"

Patton went on to say, "We will, however, utilize commercial materials and products to the extent of comparing products now being produced by the industry with those we produce here on campus. In this way we hope to show the public the depth of professionalism we strive toward. We are hopeful that this method of display will further stimulate public as well as student interest."

The Home Economics department is also instigating changes, hoping to develop more public interest.

The dream of a 36-man house

by BENET BERARD

After twenty years of hard work, Delta Sigma Phi finally has a new home. The brothers of DSP moved into their recently completed 36-man house last Easter weekend.

The house itself was supposed to be completed by the beginning of fall quarter. However, with the start of classes in September, the building had yet to be started. Taking the delay in stride, these resourceful fraternity men made the best of the situation and moved into Mustang Village.

They stayed until last Easter when their house was finished.

The house consists of a central living area and six separate living units. This main living area is the center of activity of the fraternity. It is made up of a large living room, television room, dining room and kitchen. The separate living units contain two bedrooms, a living room, bath and a separate study area. Thirty-one of Delta Sigma Phi's present membership of 70 are living in the new house this quarter.

"We began thinking about a new complex as soon as we moved into our old house on Palm Street in 1967," Bob Pessinger, president of Sigma Delta Phi explained.

The property, which is located next to the Cal Park apartments on California Blvd., was purchased by the fraternity in 1961 through a loan from a local bank.

John Kerr, chapter supervisor, and other alumni were the principle backers of the loan necessary for the construction of the new house. Kerr, house project coordinator, was said to have been invaluable in his help to the fraternity, and especially in acquiring this loan.

Jack Westerman, a local contractor built the $95,000 two-story structure. The members of DSP are presently landscaping the property.

Delta Sigma Phi has a long and proud history. From the time of its founding in December of 1940 to the present, DSP has grown to become the largest social fraternity in San Luis Obispo.

Their first house was located at 878 Monterey. This structure was destroyed by fire on September 30, 1968 and the Brothers were forced to live under the grandstand in Mustang Stadium and in the homes of some of the alums of San Luis Obispo.

In December of that same year DSP moved to 1136 Palm Street, which was to be their home for almost 19 years. Then in the spring of last year the decision was made to go ahead and build a new house at 344 California Blvd.

All that time everyone connected with Delta Sigma Phi put forth their best effort to get the new house built. Complications arose, and the Brothers were without a house for two quarters. Construction finally started during Christmas vacation, and the new house was ready for occupancy on April 1. The job of moving in began.

...finally comes true

A great deal of work has been done in order to get the house ready for dedication on Saturday of Poly Royal. The brothers are expecting many of their over 800 alumni to return for its dedication which will begin at 2 o'clock. Guests will include college Pres. Robert Kennedy and the national president of the fraternity. It is expected that there will be about 100 alumni in attendance.

DSP moved to 1117 Palm Street, next to the Cal Park apartments, in December of 1961.

A number of well-known alumni have leading roles in the programs which will begin at two o'clock. Guests will include college Pres. Robert Kennedy and the national president of the fraternity.

And although DSP is a "dry house" (no alcohol on the property) they do have many social functions away from the house.

They presently have a pledge class of 13 and are planning to expand their membership in the future. Anyone wanting to learn more about fraternity life is welcome to stop by and talk to any of its members.

Cuesta comedy opens

The maddest and gayest of William Shakespeare's comedies, "The Twelfth Night," will be presented Saturday at 8 p.m. in the Cuesta College Auditorium by Cuesta College Community Services, according to Pres. Martin E. Eisenbise.

A number of well-known television and motion picture personalities, including Marvin Miller and Richard Hake will have leading roles in the production.

Red tape cut by system

by SANDY WHITCOMB

A student majoring in city planning has come up with a systems analysis aspiring he claims will cut out the headaches of student government.

Skip Kelley, the originator of the plan, said "systematic will enable students to find out what is possible in student government at this school.

"A person who wants to get a controversial speaker on campus, for example, has no idea of the significance of the problems involved until he is in the middle of them."

He said that other students have creative ideas for the college but they get so tangled in red tape that they give up.

Kelley said his system study analysis would dissipate the confusion about the rules governing school policies. He said he has compiled all of the significant state laws pertaining to this college system, all of the laws and regulations authorized by the Trustees, Chancellor, and the college administration as well as the local ASI codes and bylaws.

Kelley has indexed each law under every conceivable subject relevant to it. A simplified chart will refer the student to a number which represents the specific subject he is interested in.

The student then looks up the number on matrix to find out what other groups cover that area. The researcher then reviews the groups, each with its own number, down to those which pertain to his specific question.

The law, section number, and paragraph number is listed in this index and a tab number is given which refers the student to the volume and location of the relevant law.

Although it may sound complicated, Kelley said that it is simple to use and can answer any college policy question within five minutes.

"Also," he said, "the answer will be only as comprehensive as the people need them to be." "Volume one is the index," Kelley said. "Volume two lists the constraints and possibilities on the state level, volume three lists those on the college administration level, and volume four lists those given in our own ASI codes and bylaws. It is a summary of all constraints and makes it possible for the student to know exactly what they can and cannot legally do."

"...They could tell us anything they wanted about the law."

According to Kelley, the administration has cited rules and decisions based on committee recommendations as reason for restricting student action.

"Before this system study analysis," said Kelley, "they could tell us anything they wanted to about the law because we didn't know what they were. We had to take them at their word. They usually only told us the parts of the laws which defended their side."

"The students should be able to have reference to the complete laws and to use them to their own advantage," said Kelley.

He said his goal is to "create an honest model of the existing student government system and to make it available to everyone, not just those who happen to agree with me on any particular issue."

The analysis will also show who the executive heads of the administrative committees are so students can apply pressure to the proper people.

"For example, advisory committees to the president of the college serve real purposes. The president must base his decisions on the committee findings. He can not decide on an issue until he has at least heard a recommendation from the committee," said Kelley. "But the president is the one who schedules the issues discussed and he can delay the recommendations for as long as he wants to." In this way, Kelley said, the issue can be put off until the end of the school year.

By the time each year's new officers become familiar with the government system and bring up the same topic, it is late in the year and the issue is indefinitely delayed again.

The study enables new officers to understand what is going on in a couple of months and usually six months to gain enough experience and exposure to do a good job.

With the systems study, said Kelley, the student can find out the volume and location of the relevant law.

"The administration, for example, said the ASI couldn't have an attorney," he said. "Because of the lack of information about the law, we are plagued with inertia."

Kelley said that a knowledge of rights gives confidence and a stronger determination to tackle problems and work out creative ideas.

Kelley gives ASI organizational a chance to carry through their ideas without violating the laws. It also informs students of their personal rights and tells them which agency has jurisdiction over their problems.

"Because the student representatives have the facts about the plausibility of an idea, a discussion can take place which is based on the real laws," said Kelley. "It can be a more rational discussion which gets to the issues."

"I have found 58 major conflicts within the bylaws."

Another major contribution of the analysis, according to Kelley, is clarifying the ASI codes and bylaws.

"I have found about 58 major conflicts within the bylaws," he said. "Over the years people who changed the laws didn't look like the whole picture. Now one group can defend his point with an ASI bylaw and another group can defend the opposite side with other bylaws."

He said the system will be comprehensive enough to prevent more of these problems.

He said copies of the system analysis will go to SAC, the student judiciary, ASI officers, the administration, the ASI attorney, the business manager and the ASI office where they can be checked out for individual student use.

Kelley is working on a feedback system in which those who use the systems study can report any problem they have with it. He said that he constantly can improve the study to increase its efficiency.

Kelley is limiting the number of volumes produced so they can be kept up to date. The analysis will be revised later in the spring when Kelley will add more information to it.

After that, revision will be part of the curriculum of the student government class offered here.

The class members will make sure that all new changes in legislation and the resulting changes in the articles and titles are recorded.

President's House symbolizes hospitality

by JONNIE T. FUEGTO

...if this college had to be symbolized in concrete and wood with the plaster of unity and hospitality abounding, through the presidential Poly House would stand as the sundered structure composite.

Even within its recent rejuvenation, Poly House still retains its title as the welcoming house of the campus as it did in quiescent days. Not for many years has the Poly Royal celebration been graced by an over-all unifying welcome mat. The celebration has been given by the Poly Royal over-all unifying welcome mat. The celebration has been given by the Poly Royal over-all unifying welcome mat.

A decade ago, Poly House has undergone extensive reconstruction by the combined efforts of the School of Architecture, and Environmental Design, and the School of Engineering and Technology, and the Department of Ornamental Horticulture.

Recently the Poly House celebrated its official dedication and grand opening after four years of sitting idle beneath the land of reconstruction. Quests at the dedication ceremony..."We wish to involve the faculty and students in activities that highlight the complex world. We can't solve all the problems of the world by actions or engineering alone. Indeed, we must have a broader outlook. We want to take this interdisciplinary outlook and work as a team. We hope that the conceptual involvement in Poly House will spill over on to our educational programs."

Formerly, the president's house was of residential nature. It has housed two of the college's presidents, Dr. Benjamin H. Crandall and Dr. Julian A. McPhee. Dr. and Mrs. McPhee raised all four daughters in this house and resided there for more than 18 years.

Reconstruction first began in 1938 with a dual purpose in mind. One, to uphold Poly's philosophy of "learn by doing" and also to provide an educational introduction to students, according to West. The unit class that aspiring architects were able to put theory into practice. The frame of the house was left intact but the inside has experienced complete renovation. There has also been an area of 4,000 additional square feet added to the original frame. All in the Spanish motif, Poly house has been furnished by the compliments of Mr. and Mrs. Armistead B. Carter. Carter is a retired member of the California State Board of Education.

Campus landmark is official welcoming mat.

Milk story told

The milk story will be deployed for visitors to the 60th Annual Poly Royal today and tomorrow. Students in the Dairy and Poultry Science Department have put on display exhibits of artificial breeding, calf care, and other management details at the Foundation Dairy on Sth, Bishop Rd.

As an added attraction, the hiring and showing competition, in which students prepare and show college-owned Holstein, Jersey, Guernsey and Brown Swiss dairy cattle, will be held beginning at 8 a.m. tomorrow. At the dairy processing plant in Sth, Pomerum Rd., visitors will view homogenization and pasteurization of milk as well as the processing of other dairy products.

Samples of ice cream produced by the students will be available at a nearby concession stand.

Floral displays

Members of the ornamental horticulture department have worked to present one of the finest floral displays ever to be seen at any Poly Royal. The unit will be open continuously throughout Poly Royal and will include tours through the green house, garden, and landscape projects. The unit will be open continuously throughout Poly Royal and will include tours through the green house, garden, and landscape projects. The department's main project has been the construction of a miniature golf course which will also be on display.

Floral displays will be featured throughout the day to the guests, who will be able to view the displays entered in Floral competition as well as floral competitions.

Horse show to include championship classes

by LYDIE PECK

Poly Royal's annual Intercollegiate Horse Show opened at 9:00 this morning in the new Cutting and Reining Club arena which is located just above the horse unit.

The general contest rules for the Intercollegiate classes are that participants must be regular students and be in good standing. Each college may be represented by one team of not more than six students. Another regulation for students from this campus is that they must be members of the Cutting and Reining Club and on an eligibility list.

The events that constitute the Intercollegiate division will consist of Showmanship, Hunters and Jumpers, English Pleasure and Equitation, Western Pleasure and Equitation, Trail, Stock and Hackamore Horses.

OPEN SHOW

Saturday, at 8:00 a.m. will be the open show. Anyone eligible.

In addition to the events in the Intercollegiate show, the open show will accommodate three more classes—Kindergarten, Tandem Bareback, and Intercollegiate Stock Seat Medal. Three Championship classes will be held during the show—Championship Hunters, Championship Reining Horses, and Championship Stock Horses.

The awards in the Intercollegiate classes will consist of silver buckles to first-place winners. Leather halters will be presented to Intercollegiate winners in the open show division.

This show is approved by the California Professional Horseman's Association and will be judged both days by Mrs. Betty Greene of Azusa, Calif, and Mr. Malcolm Russell of Chatsworth, Calif. Spectators are welcome to the free horse shows.

Math confab tests students

Some 600 students from high schools throughout California are expected to enter the 9th annual Poly Royal Mathematics Contest at California State Polytechnic College today.

Being presented under sponsorship of the mathematics department, the contest will take place in several campus buildings according to Volmer A. Polson, a member of the college faculty and chairman of the contest.

The top three individual winners in the contest will be awarded cash prizes of $250, $150, and $50, respectively, from a cash donation from Morris and Dee Insurance Brokers of San Luis Obispo.

The high school team which wins top honors will receive a travelling trophy, slide rules and drawing sets. Mathematics books will be awarded to the top ten contestants and members of the winning team.

Two written examinations will be given in the contest. In addition to the written examinations, the contest will feature a "Chalk Talk" competition in which high school pupils will participate in oral presentations.

Steel mushroom clouds salute weekend visitors

by JANIE GLOCKNER

Steel mushroom clouds have sprouted up near the library lawn to welcome visitors to this campus and serve as a reference point to the activities taking place this weekend.

Compliments of the School of Architecture and Environmental Design, this structure also serves as a graphic display of the school’s theme “The Dawning of a New Environment.”

“The mushroom cloud structure function as a system to define a new and moving spaces,” explained Scott Maurer, communications chairman for his school. “The second conduit structure were designed by Richard Choo, Joe Chow, Mohammad Sadeghi, Ed Wong, Danny Lim, Bob Lawrence, John Minton, Carl Schumacher, Rob Rambine, and Allen Tom, all fourth year students in Mr. Jake Feldman’s Design Analysis class.

Fifth year students are displaying their ideas of re-designing the internal and external features of the basic space capsule idea in the architectural critique room which is adjacent to the Archie Patio.

“The third, fourth, and fifth year labs are endeavoring to communicate an expression by means of creative lab design. The designed expression shall further enforce our desire as one school of Architecture and Environmental Design that recognize the need for change, and the need for a dawned of a new environment,” says Maurer.

Baja race car...

(continued from page 11)

Fix it then, rather than having to do it down in Mexico,”

The car is being modified for reliability, and not huge horsepower, said Mike Maher, who works on the electrical system. “It’s only a six-cylinder engine.”

“We’ve got a lot of parts donated,” said Maher, a senior in printing. These include two engines, 18 tires from Sears, and a cab from Yellow Cab of Los Angeles. Work on the car is being done by four divisions, said Rewlnkel. Baja is in charge of the electrical system, Jeff Hendrickson, the body and roll cage; Bill Hayes, the front and rear suspension; Chuck Ragglo and Rewlnkel, the engine and drive train.

“Under these there are sub­groups like brakes,” he said.

The National Off Road Racing Association, and “Hot Rod,” “Cycle World” and “Car Craft” magazines have approached the car team with a unique idea, Rewlnkel said.

“What we’ve been presented with is a fantastic thing,” the coordinator said. “NORRA has said, ‘Why don’t you guys (Cal Poly) get involved and we can have a Midwestern, off-road race entirely for collegiate teams.’

“The magazines have expressed the idea of taking the Cal Poly teams, as two cars, as student teams, and making the challenge to other colleges, ‘Does anyone else want to try?’”

The entry fee of $500 is being paid by the Society of Automotive Engineers. Maher said. This includes insurance for the car — amounting to $400,000 total coverage. A written report will be submitted to the SAE on the condition of the car following the race.

“We’re working on the car under the auspices of the Engineering Council,” said Baja. “A class, ET 400-09, has been organized so that the (18 to 20) students working on the car can get college credit.”

“Hopefully in the future senior projects could be performed on the car with the race being the test of it,” said Rewlnkel. “We’d like to be able to give problems in design to classes. That’s what Pomona is doing, and it’s very practical.”

“We’ve got support from instructors in Ag Engineering, ME, and ET. The support from the school has been fantastic, it’s going to be rough, but I feel we have a good chance of finishing the race. That alone will be an accomplishment.”

Processing of food on tours

Tours, displays and demonstrations will be shown by Food Processing Club members throughout Poly Royal.

Visitors and students are invited to tour the Food Processing plant where members will display the use and techniques of machinery and equipment used in making goods sold in the campus.

The apple peeling machine will be in operation full time, which is usually of interest to visitors.

Phyllis Stewart named honored guest

by JOHN TEVER

Poly Royal's honored guest this year is a woman whose service to this college has maintained the sanity of many a frenzied student.

Mrs. Phyllis Stewart, who has recently retired after 11 years, held down the embattled post of accounting officer for Associated Students Inc. In that position she was responsible for the financial transactions of student government, the various boards, and the clubs of the A.S.I. Included in her responsibilities was supervision of the financial transactions involved in Poly Royal.

The selection of the honored guest is determined on the basis of contributions made to Poly Royal. General supervisor of Poly Royal, Randy Dettmer, explained Mrs. Stewart's selection. "During her 11 years of service, Mrs. Stewart, working with just about every club on campus, not to mention Poly Royal, immeasurably aided countess student undertakings. During the course of her efforts, hundreds of close relationships were struck up between Mrs. Stewart and flustered, weary students. Our selection of Mrs. Stewart as honored guest at Poly Royal is our way of recognizing her work and those many relationships."

When informed that she had been awarded the honor Mrs. Stewart replied that she was "flattered and honored by the committee's election."

When describing her years of student oriented activities, Mrs. Stewart smilingly said that "everything that every student organization needs to do is an emergency, and it needs to be done yesterday."

"In a more serious vein, she said, "The people who work on the A.S.I. staff are a wonderful group of people to work with, and I feel very close to all of them. I enjoyed every single moment of my work on campus. The Poly Royal Board has a huge job and yet they are the finest in people to work with. They are all just great."

When asked if there might have been at least a few dark clouds on the horizon during those years, Mrs. Stewart, after a bit of searching, said, "Every once in a while I would get frustrated when I saw something that needed changing and I wasn't able to do anything about it." Continuing, with a smile now, she recalled how "it seemed in the final days before Poly Royal was to begin there was just no way we were going to be ready. But somehow we always were."

Mrs. Stewart recalled Carl Beck, whom she called Mr. Poly Royal, as one of the more memorable personalities involved in putting Poly Royal together.

"When asked for her thoughts on Poly Royal, Mrs. Stewart had nothing but praise. "Poly Royal has been characterized as a country fair on campus. But it's more than that. It's a campus wide open house for everybody. I think it's just wonderful."

During her years at the college, Mrs. Stewart saw the student population grow from 4,300 to 13,000. Mrs. Stewart cited the opening of the College Union as the most major change in her work during those years. "The CU involves a lot of expenditures, what with employees, recreational facilities and other costs. It takes a lot of money in and puts a lot of money out. There was quite a commotion there for a while."

Mrs. Stewart's affiliations with this college have not all been financial or pleasant. She lost the youngest of her two sons in the plane crash in 1960 which wiped out almost all of the school's football team. Mrs. Stewart's opinions on the young people of today were optimistic. "I think the young people of today are the hope of a world that has lost its bearing. What might appear to be radical actions on the part of a few are highly desirable efforts to improve the situation."

Mrs. Stewart believes that there is such a thing as the generation gap, but feels she doesn't suffer from it. "I have been fortunate enough to work with students closely and thereby avoid the generation gap that others not so fortunate have come to experience."

Philadelphia Born

The Philadelphia-born widow lives in a beautiful house overlooking the ocean. She loves traveling and her grandmother as the activities which occupy most of her spare time.

When Mrs. Stewart retired with 11 years of service to the State of California, having worked for the Department of Agriculture 13 years and for this college 11 years. When asked how many hours a week she worked, she said she had retired, did the most in putting the two day open house on its feet during her tenure, she said.

"When asked for her thoughts on Poly Royal, Mrs. Stewart had nothing but praise. "Poly Royal has been characterized as a country fair on campus. But it's more than that. It's a campus wide open house for everybody. I think it's just wonderful."

Mrs. Stewart retired with 15 years service to the State of California, having worked for the Department of Agriculture 13 years and for this college 11 years. When asked why she had retired, she said she could have stayed on longer, Mrs. Stewart replied, "I can't say I don't miss my work, but I felt it was time to retire. I was anxious to retire before the quality of my work became less than my own standards."

Problems cut...

(Continued from page 1 a)

Kelley said he began the system analysis because he has done them in the past and is aware of their potential. "I started it to help Pete and Marianne accomplish some of their goals. It grew into something which would be of value to all students," he said.

"I was offered six units of 'A', plus using the study standards." Kelley said he refused, "I am doing it because I am involved and it needs doing."

The analysis is A.S.I.-funded to pay for copying facilities and a graduate student worker. Kelley is not being paid.

Kelley hopes to finish this analysis this quarter but needs volunteers. Anyone interested in helping can call 546-3011 and leave their name with the secretary.
Craft classes offered by the college center

by EVAN DAVIE

On a Tuesday evening, between 10 and 11 p.m., a class in ceramics, and one in leathercraft, was in session. These are two examples of the student-organized-and taught classes that are the minority of the craft classes offered.

The center (CU II) is a huge, well-lit glass-lined room with benches and pottery wheels, a wood and unseen amount of equipment in the cupboards that line the walls.

Segregated into a side room, about a dozen leather-students are busy before the benches, at the side of the small mobile, and around a long table. Most are working on thick belts made of prime leather. Little tools and punches are scattered within easy reach.

Some belts are being decorated with waxes and flowers, detailed with red and blue dye, and patterned with black dye to contrast the colors and leave the natural pigments in spots impressed upon by tools. Other belts have sections cut into five stripes that are piled over each other. When this folding reaches a twisted section, the belt is folded inward, between some of the stripes, until the leather is woven into a weave that seems to begin and end from nothing.

Instruction Spoken At another bench to the side sits a young maestro and long-haired figure who is drawing with a pen on a piece of newsprint.

He is the teacher, Graham Graham, an Industrial Technology major. His drawing hand is heavy with a cast, but the drawing is freehand and lumped.

He is working a striking pair of suede leather pants, floated at the legs, over the jeans and tucked under the belt.

His drawing is a series of circles representing the construction of a hat. To a student he says, "You cut a hole in the center for the head, and save the outer piece for the top. It'll be large enough if you taper the hat, but not if you make the sides short because you have to allow for the seams."

He continues, "Visualize the cross-section of a hat." Graham draws some lines that fan out at the sides and overtap with others, making the side-view of a hat and showing the different pieces of its construction. "You don't want to lose rivets here," he explains pointing to the rim, "but use them up here where they don't rub your skin."

The boy wanders off with a piece of paper around his head to find the exact comfortable size. Then Graham turns to you and begins a discussion about the types and sizes of leather working—mostly tops. "You can make anything out of leather if you know the basic construction and have some patience, which are the first things I had to learn myself," he said.

"I got into this about four years ago when I told my sister that I would make a pair of leather pants for Christmas and when our parents saw, they gave me a couple pieces of really odd leather and told me to make my own!"

Which is what he did. It was the beginning of a hobby that, in a short time, resulted in his working for the local leather shops of his hometown Redwood City.

"It lasted till I got caught up in school, so this is my second love," referring to his student-teacher role at which he earns a modest income for his 10 hours for the 3 week course. He teaches two separate classes that each meet twice a week, three hours a night. The leather is a rich and soft, expensive looking material. What does it cost?

"There's about 30 dollars worth of leather in a pair of pants like the ones I'm wearing," he said. "The belt's cost about 0.03 a piece. A student usually spends about 30 dollars in materials for what usually is one belt and one purse, plus the six dollars for the class—that includes all the tools and instruction."

He features toward the jars of dye and little racks of stamps and punches, the knives and rivets—"Of course if a person doesn't finish when the class ends he can check out the tools on his own."

One good thing about the class is that we get some money ahead to buy tools we need. A lot of these tools we bought because the class pays for them."

He jumps up to answer a student and has an hour to go before he has to go down to talk some more about himself. He raps up about his leather making, about the new craft store that is opening in a few weeks, and what he would like to do with his craft.

Concerning the what-end-how of leather crafting he says, "Sometime I'll write a book about it. There's a gap around it in sort of an instructional brochure, because there is nothing on the market that goes about telling you how to make these things."

He informs you he is "also into broadcasting journalism somethings." As a disc jockey for KCFB, he works a regular shift. "There's the music side of It, but there's also the electronic side of It. I'm making an in-vogue stereo amplifier and receiver that I designed myself."

He explains he is also designing and building a fiberglass body for his car. Plus having just spent over 400 hours on a similar project.

"I keep pretty busy."

"Do you ever have any spare time?"

"Not more than about five hours a week."

On that note he wanders back to his convey of puppets, stopping here to help a girl weave the strands of a belt, stopping there to assist someone punch a design onto a purse.

"If you're interested," he shouts over his shoulder as he leaves, "there's a new class starting on May 1st."

Student takes advantage of facilities.

'Triken' and drinkin' on a Sunday afternoon

Photos by Max Boveri
Change in school goals

by JONNIE T. FUENTES

And by the way, if you hate to go to school you may grow up to be a mule, or a robot or a mere idea that this type of education was conceived and nurtured by Stanford University. Ranuio, both are devoted to the schools and at the college level.

The distinguishing characteristic of a mandala is its perfect balance. Taxis said the Mandala School is committed to the concept of balance in an integrated curriculum which draws upon and develops children's inner resources.

Among other factors, the Mandala School is committed to the faith that each child is basically good, uniquely gifted and will naturally reach out to learn, discover and function in the world.

According to Taxis, the children are free to shape their own learning methods at their own speeds. In addition to the three R's, crafts and skills such as pottery, wood-working, weaving and the like will also be available. Children will be able to pursue educational activities not merely because they are educational but because they are interesting, said Taxis.

The basic tuition for the school, which is scheduled to open in September of 1973 will be $79 per month for each child. A lower tuition based on need may be possible if sufficient scholarship funds are available.

Taxis does not compare Mandala School to a progressive nor private academy, but rather as an alternative free school. "We are hopeful that the school will draw the poor and the rich as well as all the races. We are striving to instill creativity, vitality not the production of automatics or conformists."

The ratio for individual attention between staff and children will be one to five. According to Taxis, the most important qualities for teachers or assistants is to have a true dedication and love for children, to have a caring, concerned warmth and to help children realize their own potential.

A typical day at the Mandala school will begin with small, hour-long group meetings with individual teachers. These meetings will be for solving problems, sharing things and for making plans for the rest of the day. The rest of the morning will be devoted to academic instruction. The afternoons will be used for helping the children pursue their plans based on their needs and interests.

As a new concept of learning in the San Luis Obispo community, the Mandala school system hopes to foster greater community interests and support some September. In anticipation of this situation, the Mandala School hopes to realize that education at its best is everyday.

Money spent on the dorm and dining halls now under construction does not come from the California taxpayer, according to E. Douglas Gerard, executive dean.

“We get mail from parents and others complaining about Yosemite and the College Union being ‘frills’,” Gerard said. “People don’t want their tax money going into anything but classrooms.”

Basically, that is where the money goes. The California taxpayer’s money only builds the classrooms and administrative offices.

The dorms, dining halls and the College Union were funded through loans, grants and student fees, said Gerard.

Part of the funds for the new dorms came from the Department of Housing and Urban Development HUD.

“The federal government has programs that permit the college to borrow at a lower interest rate—three percent,” said Gerard. “This is the plan the new buildings are funded by.”

The College Union, Yosemite Residence Hall and even the brick dorms that were constructed in 1969 are on a similar program.

Repayment of the loans comes directly from the user of the facilities, Gerard pointed out.

When the loan is repaid, the building becomes state property—because it is on state land.

Sierra Madre, the $1.2 million residence hall that will house 540 students and Vista Grande, the $1.1 million dining hall that will seat 349 students, essentially complete this college’s long-range plan for residence and dining halls.

The total housing occupancy available on this campus in the fall of 1973, when Sierra Madre is projected to be completed, will be 2,500.

According to Gerard, Sierra Madre is basically the same design as Yosemite. The major difference in Sierra Madre’s plan is the room flexibility.

Sierra Madre was designed to provide for two, four, or six student rooms, with the closets as the room dividers. The walls between some rooms was a quarter-inch-thick hard board separating the closets. This arrangement provided little sound proofing, and until the walls were sealed, Yosemite had a noise problem.

Sierra Madre is designed with two-person rooms with sealed walls separating the apartments.

According to Robert Hostrum, director of housing, Sierra Madre will not offer single room residences.

“There is a need for single rooms, but for Cal Poly to pay back the loan, we would have to charge $500 a year for one person rooms,” said Hostrum. “It now costs students $60 a year to live in a double occupancy room.”

Hostrum added that students are living in single rooms now, but they could get roommates at any time. “It happens every year in the spring. People move off campus for one reason or another.”

However, there were vacancies in the fall, too.

“This is the first time in 10 years there’s been a vacancy in the dorms,” said Gerard. Because the priority system for admitting students in the dorms has been changed, Gerard does not expect any more vacancies in the future.

This college is the only one in the state college system that does not require its resident students to buy meal tickets. “This allows the student to make his own decision about where he wants to eat,” said Gerard.

Opening in the late summer, Vista Grande will expand the variety of food facilities available on campus.

According to Gerard, the dining hall is made up of two pods, with an area available to build a third when necessary.

The pod closest to the brick dorms will be a cafeteria. The other pod will be a sit-down table service restaurant. Both will be serviced by the same kitchen.

The idea behind the new eating facilities comes at variety on campus. “The student can buy a meal ticket and eat in the college dining hall,” explained Gerard, “or he can eat in the snack bar, get food from a vending machine, eat in the cafeteria or restaurant.”

Traffic eased by bike lanes

by TOM MARBEIL

A bike lane that just hit the charts says "everything good is bad, and everything bad is good." There seems to sum up the mixed feelings toward bike lanes on this campus.

Eight months ago bike lanes were marked along the perimeter roads with the main-purpose being safety and convenience for the student. The question remains whether the lanes are being used, and used correctly. According to Peter K. Phillips, facilities planner, "They are working and working quite well."

Phillips said that the lanes were installed at the same time as the incoming lane along Grand Avenue was widened to two lanes. According to Phillips, bike lanes were not installed along the interior roads because they are blocked from automobile traffic.

Entries soar in livestock show

The animal science department's annual showmanship contest will begin at 3 p.m. Saturday with a record number of contestants.

There are 130 entries competing for the top awards. Beef, sheep and pigs will be shown by students from many different majors. The Beef Pavilion is the site for the colorful, beef cattle showmanship category. The catagories will include Hereford and Angus bulls, heifers, and steers, as well as crossbreed steers. Fifty-five beef animals will be shown at the pavilion.

Judging the beef contest will be Tom McCord, fieldman for the American Hereford Association, according to Bill Jacobs, an animal science instructor.

The sheep unit is the place to be for the woolly competition. More than 80 sheep will be paraded around the ring while vying for the championship award. Judge Bob Cummins, will be choosing the top sheepshowmen from classes of Hampshires and British, Suffolk, and American sheep.

In the hog unit, visitors will see 18 pigs in competition.

"This is the largest turnout ever in showmanship competition," said Jacobs, "there will be twice as many sheep shown this year."

The winners in each of the respective contests will receive ribbons while the top two beef, sheep, and hog showmen will be presented the championship and reserve-champion award banners.

Public dazzled

The annual open house at Poly's academic departments for Poly Royal will attract more than 40,000 visitors to the campus. Engineers will tell the story of how they relate to today, architects will transform their school with live models of future interiors, mathematicians from all over the state will flock to a math contest that has become as popular as a teen dance, and the public with computerized graphics.
by CONNIE GARCIN

Journalism student Mary Robinson has helped to achieve what may be a first in developing a valuable internship program in the area of public relations.

Mary Robinson learned last winter that the Santa Maria School District was attempting to implement an extensive public relations program but was restricted by lack of trained personnel and money.

At the time the Santa Maria Elementary Education Association recognized the value and need to support such a program. They offered to help underwrite the meager budget for equipment and supplies.

Written media, radio and television were being considered as chief communicative tools for the proposed public relations program. Corps Mentati, a full-time kindergarten teacher in Santa Maria was selected to direct this ambitious undertaking.

Mary Robinson recognized the potential for the development of a public relations program in the school district if the program were adequately manned. She volunteered her services, without pay, offering to demonstrate that students could make a valuable contribution while getting first-hand experience.

Mary Robinson said she got many valuable suggestions and guidance from her instructors—Dr. Olaf Isachsen, Ed Zuchelli and Vincent Gomez, who were always supportive and encouraging.

Hoping to aid the program, Cable TV Channel 4 in Santa Maria, offered a 15-minute segment of time each week as a public service radio station KEMA, KEON, and KUHL offered time for 3 to 5-minute spots daily.

The objectives were directed towards getting these programs co-ordinated. The television programs are taped in classrooms or wherever students and teachers are working.

The purpose of the show was to acquaint the public with methods of teaching being used in the school district. Information on school issues were also filmed and aired. Miss Robinson acted as moderator and interviewer on the program.

Santa Maria principals and faculties were already burdened with work and lacked the time needed to be television performers. Miss Robinson and Mrs. Manassi persisted in encouraging and urging their participation.

Things began to fall in place. The results were astonishing and encouraging. Listeners reacted favorably to the program, and Cable TV Channel 4 began to show the program four times weekly.

Things began to fall in place. The results were astonishing and encouraging. Listeners reacted favorably to the program, and Cable TV Channel 4 began to show the program four times weekly.

Mary Robinson took charge of filming, rushing from place to place with video and camera equipment, getting people to the studio for interviews, preparing news releases.

Since January, she has given over 300 hours to the program. "I've enjoyed every minute of work and have gained experience I never would have in a classroom," she said.

Word began getting around that a small school district in California was operating a wide range of public relations activities—successfully—even a news release.

The California Teachers Association (CTA) heard about the program and asked about it. They were favorably impressed with the accomplishments of the program.

CTA offered to sponsor a statewide workshop on public relations programming for educational agencies, to show other school districts how to achieve similar results in the Santa Maria School District.

The educational public relations conference, called "PUBLIC RELATIONS," is sponsored by the California Teachers Association (copyright-Mary Robinson), is scheduled for May 15, 16, and 17, at the Vandenberg Inn in Santa Maria.

The workshop will feature people from all phases of the media and from all parts of the country. Their primary purpose will be to help other districts interested in implementing the program with suggestions and ideas.

The workshop will feature people from all phases of the media.

Mary Robinson has been instrumental in starting a public relations program that has unlimited possibilities.

According to John Ridge, Superintendent of the Santa Maria School District, "Mary's pioneering efforts have served to demonstrate that there is a place for a student internship program in every public school district." We are very pleased with the addition and proud of the way our program has developed. The district has certainly benefited greatly from the type of interest on the part of Cal Poly and this student," he said.
Nine pages of college athletics in this section

Cal Poly San Luis Obispo is more and more becoming recognized across the country through its achievements in sports. The long list of athletic teams that represent this college is continually growing year after year. The teams are earning continued success not only on the conference level but on the national level as well.

Among the accomplishments of this college, the wrestling squad has won the national college title for five years in a row, the football team has won the conference title for three consecutive years, the rodeo team has won three national titles, and the tennis team has produced two all-Americans in the past year, while the track team has produced national place winners.

The following nine pages (311-319) take a look at the achievements of Mustang teams this year as well as the success of individual standouts.

Track draws members from nearby and far off
by MALCOLM STONE

The Mustang track team has in the last few seasons been an interesting mix of athletes from near and far. Two of those young athletes are Dave Hamer from near Santa Barbara and Bov Neilson from faraway Denmark. Coach Dave Simms thinks both athletes have a lot of potential which probably will not be fully realized until next season. The progress they make this year should be impressive.

Sophomore Hamer has been pole vaulting since the 10th grade at Santa Barbara High School. "I got into it because it was sort of a last resort," he said, "but I was too slow for the sprint and no heart for the distances." Hamer is the best of a one-two vaulting combination that Simms thinks may be the best in the NCAA's College Division. He broke through the 16 feet barrier several weeks ago and has consistently mastered the height since.

His concern now is with proper form and technique. He marvels at the body control of Kjell Issaksson currently the best vaulter in the world. Issaksson is a former gymnast, and Hamer is currently enrolled in a gymnastics class to develop more strength and better body control in the air.

"I'm not really worried about the height. I think the height will come if we work on certain things I'm weak on. I think I lack strength.

"I have a few things going for me that I think offset it." Simms thinks he will make the starting height of 16-8 at the Olympic trials this summer.

"He's getting stronger, and as soon as he gets strong enough to get on a bigger pole he'll go 17."

Neilson is a 19-year-old freshman from Helsingor, Denmark. He is a middle-distance runner concentrating on the mile and half-mile. His best time over the Olympic 800 meters is 1:49.9 with a 4:06.0 in the mile.

He is a member of the Danish National team and a prime prospect for his country's Olympic team.

Simms said, "I feel he's the best mile and half-mile runner ever to enroll here as a freshman, but his best marks won't come until his sophomore years.

Neilson admits that part of his problem so far has been simply adjusting to his new environment. He arrived in March at the beginning of the spring quarter and spent the first two weeks getting used to the time difference.

"I was sleeping during the day and awake at night," he said.

Tops in wrestling...

by RICK KNEPP

When the Mustang wrestling team wrapped up a successful season by walking off with the 1973 National Collegiate Athletic Association Division III Championships, the attitudes expressed on campus was not one of joy and pride. Rather, it was the fifth in a row for Coach Vaughan Hitchcock's squad, and the sixth in the last seven years. This does not excuse the lack of enthusiasm generated. In fact, the pleasure should double. There is much more to be proud of. In Hitchcock's reign at the Mustang helm, he has coached no less than 80 All-Americans. Seven were added this year. They are Gary McBride, Mike Wassum, Allyt Cooke, Keith Leland, Pat Farmer, Larry Morgan (the only placewinner in the '73 NCAA University Division Championships) and Glenn Anderson, the current college division champ at 148.

The teams here have been...but support from fans isn't what it should be...ranked in the top ten nationwide at all levels continuously since 1967! This season's 18-4 dual meet record boosted Hitchcock's total at Poly to a remarkable 181-89-2. He has been honored as a College Wrestling Coach of the Year.

"This year we met some of the top teams in the nation. We were able to hold our own against them, and, while we didn't win every meet, the season allowed us to successfully defend our national title," Hitchcock said.

Among those teams encountered were Iowa State, NCAA University Division champ, and top contenders Oklahoma State, Oklahoma, Oregon State, and Washington.

Recently, the Mustangs played host to a touring Japanese national team. These were the wrestlers who will represent their country in the 1972 Summer Olympics in Munich. The matches were wrestled under international rules, which call for free-style wrestling, a variety foreign to most of the local combatants. Still, they put up a good fight, winning one and drawing two of the seven matches scheduled. Hitchcock looks forward with enthusiasm. "Next year's team has the potential to become the best team in Poly history." This would also make it the best team in California's history, a distinction another Hitchcock squad now holds.

"We will be highly experienced in national competition, a most important element in our title defense," the mentor noted.

All seven of this year's All-Americans will be returning to next year's roster. There will be some holes that will need filling, and Hitchcock is looking at prospects now. One, Gary West, who redshirted last season after transferring from the University of Oregon, was the lone winner for the Mustangs against the Japanese.

"The 1973-74 schedule is one of the toughest that any team in the nation must face. It is also a vastly improved home schedule, with some truly great teams in the Men's Gym," Hitchcock finished.

Fans in this area can again look forward to some top notch wrestling next year.

---

Tennis team nets two all-Americans

by KEITH ELDREDGE

"It's really hard to have a good tennis team here because there is no way that we can recruit anybody," said Mustang tennis player Tom Martin. The fact that no scholarships are awarded doesn't stop the locals from gathering some excellent talent.

Of the six-man team, two members are National Collegiate Athletic Association College Division All-Americans. Sophomore architecture student Dan Lambert and senior physical education major Martin both achieved the position of honor last year.

In earning their all-American status, the duo led the Mustang tennis team to sixth place in the nation, "We won all but one of our total points," said Martin about Lambert and himself.

"This year should be different because our top four players are pretty strong," said Lambert. The NCAA nationals allow four members from each team that is selected to play. Should the home forces fail to qualify to send the whole team "then we hope to send our top two players, Dan Lambert and Tom Martin," said Coach Ed Jorgensen.

"I have two years of eligibility after this one but I don't think that I will graduate for two years after that," said Lambert. "In the meantime I do a lot of teaching tennis on the side. There are quite a few summer training camps that I would like to work at," he added.

"When and if I graduate from this place, I would like to go to work for some construction company," he said.

Martin, Lambert's doubles partner, chooses to keep in closer contact with the sport.

"Next year I have a job giving lessons at a student housing facility here in town," said Martin. "After I graduate I am considering to try the pro circuit just to see how I would do. If that doesn't work out I suppose to become a tennis coach," he added.

The only competition that the Mustangs will receive this season in the California Collegiate Athletic Association is from one other team, "It seems that the team to beat this year is Valley State," said Jorgensen. The San Fernando Valley State Matadors are the defending champions.

League competition is slated at three different times throughout the season. The three round robin affairs take place at San Fernando, Fullerton and here.

"We're better than Valley State," said Martin. "The league..."
TRYING FOR FOURTH TITLE

Rodeo team puts on royal show

by JERI TOMMON

Shooting for its fourth national championship, the rodeo team will be displaying their talents in a competitive rodeo today and Saturday during Poly Royal. Over a half dozen colleges will be competing for honors in front of what promises to be a sell-out crowd.

Team advisor Bill Gibford remembers the first official rodeo team at this college of which he was a member. Gus Beck was the advisor at that time, and he also was the man who encouraged the start of local rodeo competition. A history of rodeo competition started here before it ever started intercollegiate. It was also the springboard for other coastal teams to organize.

In the years that have followed, the team has acquired a host of honors. It has won the National Finals Championship three times so far this year, the team has travelled to Reno, Flagstaff, and Shasta, among other distant cities for contests. The team boasts a roster of immensely talented young people, five men and three women. The two Ferguson brothers, Tom and Larry, are, in Gibford's words, "two of the toughest competitors we've ever had here at Poly. Pressure doesn't bother them. The more pressure the better in most cases," he said. Tom is leading the West Coast region in calf roping, ribbon roping, and steer wrestling. Larry is standing third in calf roping and steer wrestling.

"Our two outstanding rough stock riders would have to be designated as Dave Clark and Lee Rosser," Gibford said. Clark, new to the team this year, had one year of competition experience at Bakersfield Junior College. "He's probably one of the beat bull riders we've had here," he said. "He's probably the best since C.W. Adams and Bobby Berger," he added. Dave is currently first in bull riding and bareback riding in the West Coast region.

"Lee Rosser is the most capable freshman we've even had on our team without a doubt. His main event is the saddle bronc riding, a classic event which takes a lot more time and skill to perfect than perhaps any other event in rodeo," Gibford observed. An all-around cowboy, Lee is first in saddle bronc riding and fifth in bareback riding, while placing in ribbon roping and calf roping in the West Coast region.

Lee Rosser is the most capable freshman we've even had on our team without a doubt. John Seymour, the 1972 Rodeo Club president, learned his rodeo competition at this college. In his last year with the team, John stands second in bareback riding, and also places in bull riding.

On the women's team, Gibford says, "We're better this year than last year, being a transfer student, leads the barrel racing in the West Coast region. Colleen Semas, a sophomore from Auburn, is captain of the women's team. "I would think that at this point, Colleen is just about the best break-away roper (Continued on page 3B)"
CONFERENCE CHOICES

Three locals in top five

by KEITH ELDIDGE

When it comes to playing basketball, "we try like hell," says head Mustang basketball coach Neal Stoner. Here's proof: three of his players were selected to the California Collegiate Athletic Association all-league first team this year.

Juniors Billy Jackson and Bob Jennings along with sophomores Pinky Williams and Mark McRae received the top honors. They were joined in the line-up by Sam Cash of UC Riverside and Paul McCracken of San Fernando Valley State.

Jackson repeated as an all-conference pick in the forward spot and as the league's leading scorer with a 21.5 point average. Two records were broken by the junior physical education major as he picked up 386 points on 48 field goals in the season. "I don't worry about records, I just play," said Jackson.

He came here from Moreno.

LOS OSOS RD. and U.S. 101

by KEITH ELDIDGE

Not since the 1964-65 season has any Mustang basketball squad ever placed first in the league. This year's team ended the drought by virtue of a three-way tie with San Fernando Valley State and UC Riverside for the top spot of the California Collegiate Athletic Association.

Five records were broken during the season which saw the locals pick up 16 wins in 28 outings. Two of the records were captured by a single player.

Junior forward Billy Jackson smashed his own record in sinking the most field goals in a season. The 6'9" center has completed three years of a test month. We try like hell," he added. "The difference next year is going to be our depth," said Stoner. Assistant Coach Ernie Wheeler is trying to recruit two junior college guards to help Williams with the ball handling.

The San Fernando Valley State last six games included over the Christmas holidays momentum was restored as five consecutive losses were collected. Those of the defeats were obtained in the Armed Forces Classic.

The front line will have a new look when seventh-year college division LSU-New Orleans visited this campus. The Mustangs emerged victorious with the 16 points on 48 field goals.

When league action resumed in the Winter Quarter "we improved as the season progressed," said Head Coach Neal Stoner. "December is sort of a test month. We try to be strong by February," he added. The home forces came from behind to force the three-way tie for the conference title.

Next season will see the return of four starters as only four of the team members will not be returning. Seniors Randy Genung, Mike Jackson, Alan Gage and Rick Stickelmaier have all lost their eligibility.

Juniors Billy Jackson and Robert Jennings along with sophomores Pinky Williams and John Parker will return to the starting positions. "We'll have all kinds of strength next year," said Billy.

"Everybody has confidence from last season. We'll be as good at the start of next season as we were at the end of last season," said Williams. "All of the coaches knew that we were the strongest team in the league," he added.

The front line will have a new addition in six-foot-nine-inch Jim Coleman. The Garden Grove center has completed three years in the armed forces.

Cal State Bakersfield enters the CCAA next year and will make it a league," Stoner said with an emphasis on league. "Our goals are first to win the conference and then go to the National Collegiate Athletic Association College Division regionals," he added.
Basketball...

(Continued from page 26)

"Bob Jennings deserved to get it," said Boomer in reference to the all-CCAA pick. The industrial technology major led the locals in rebounds and shooting percentage from the floor.

"We want to use Jennings on defense more next year," said Boomer. "Our offense last season concentrated on getting the ball to Jackson. Jennings has improved so tremendously that we want to get him the ball more often," he added. Jennings said, "I've improved quite a bit over last year. I have more confidence, my shooting is a lot better and I work especially hard during workouts," he added.

Being a native of Los Angeles, Jennings appreciates the clean air and beautiful country that 30 amateur fencers meet for six hours of grueling practice. Under the skillful guidance of Miaa Irvin, the precision, speed, timing, and distance are developed. These strenuous ordeal have paid off as the team has claimed both state and national recognition.

Tim & Lee Hagan - Owners/Mgrs., 486 Osoa St. - San Luis Obispo - 543-7700

We at Homestead Motel thank you for your patronage and your friendship.

Welcome.

Welcome to Poly Royal from the Network.

The Pant Works: jeans & tops.

The Gazebo: Information.

The Gold Crucible: Handcrafted Jewelry.

The Nut Barrel: nuts, dried fruits.

The Pair Tree: women's maternity, footwear.

Rock Island Leather Works: Handcrafted Leather.

Bookhaven: books, bindery, paperbacks.

Cinderella's Bicycle: women's fashion.

The Corner: junior women's fashions.

The Mudslingers: pottery.

Whittler's Mother: handmade for home & baby.

Photo-Graphic: custom photos, graphics, silk-screens.

Puff 'n Stuff: photo restoration.

Tesseract: spinning & weaving workshops.

The Spindle: restaurant, eat and drink Miaa Irvin has held that inexperience was a major factor in her team's showing.

On Saturday the Mustangs look forward to sponsoring an Amateur Fencers League of America meet on campus. Two women's teams will face Northern California contenders at 11 a.m. while the men's competition starts at 2:00 p.m.

By Canary Irvin.

Looking back at the season, Barney Ousenske, the team's captain, said, "The sabre, used by both Skilling and his accomplished teammate Andy Perchan has a flat, thin blade and is usually thrust in a chopping motion.

Barney Ousenske, for his masterful use of the epee, placed third in the Western Intercollegiate Fencing Conference Tournament in January. The previous weekend, they claimed the Northern California Intercollegiate Fencing Association title.

Three Mustang standouts emerged as the locals dominated the West Coast fencing competition. Doug Skilling, individual foil champion at the NCIFA Tournament, captured fourth place in the WIFC marathon for his expert use of the foil and sabre.

Track strongest at finale

by MALCOLM STONE

Dave Simmons announced at the start of the new season that his track team would be right in the thick of the battle for the NCAA College Division national title.

Now the season is well under way, and the optimism remains. The ambitious predictions are no longer heard. He sounds more like coaches are supposed to sound—cautious. Simmons did make some accurate appraisals though. He predicted the Mustangs would not be dominant dual-meet team, and they have not been.

He predicted the team would be strong in large meets and relays and the only opportunity so far has proven that. The Mustangs scored 30 points at the Easter Relays to tie for second in spite of several key injuries and two mishaps during races.

Sacramento, the winner, scored only 38 points. "I think we have some national-caliber athletes," Simmons said. "We have some definite national placers. I think as a team we're going to do well at the nationals." "Looking Lamar Anderson and (Reynaldo) Brown takes away a great deal," he said.

Brown is the most consistent seven foot high jumper in the world. He is also the NCAA College and University Division champion, as well as AAU champion.

He is setting the college season out in order to prepare for the Olympics. Anderson is a junior college transfer who is ineligible because he sat out winter classes.

"Anderson was definitely a place winner," Simmons said. "He is one of the top shot putters in the nation (college division)." Simmons is also happy with the progress some of his athletes are making. He thinks they are right on time for this point in the season.

At the top of his list is Dave Hamer in the pole vault. Also coming along are Rolle Mc Cormick in the long jump and Dali Horton in the distance races.

Mike Bearden and Rich Walline have been impressive in the sprints while Tom Murphy has been a consistent winner in the high jump.

Simmons sees the California Collegiate Athletic Association meet as a light four-way race and the Mustangs, Cal Poly, Pomona, Fullerton, and San Fernando Valley State. The conference is going to be a very close and competitive meet. It will be decided one way or another by three or four points.

Tracksters...

(Continued from page 11)

In his home land the news is just disappointing. His friends in Denmark are involved in cross country which is a fall sport here.

Nelsen was recommended to Simmons in 1971. Simmons was in Denmark for the summer as assistant coach of the Danish national team.

"They (several Danish coaches) mentioned a couple of athletes to him and I was one of them," Nelsen said.

"I think I was ready to come. It's interesting to come to another country and see a lot of things." Nelsen thinks his chances of making the Danish Olympic team are improved by being here. "It's easier to work out here. You can start earlier."

Simmons is looking into the near future and seeing the NCAA's College Division National Championship. "He's got to be one of the contenders for the national title, but you have to realize he's never had to be ready this early before."

BRAHMSневк

Good start by swimmer

by ERIC NOLAND

Unlike most freshmen, swimmer John Reynolds was to withdraw from school tomorrow, a more than impressive mark would be left on this college, its athletic conferences, and the National Collegiate Athletic Association.

Reynolds literally rewrote the swimming record books in this, his first season as a Mustang, establishing four new individual marks and contributing to one relay record.

Despite a rather disappointing season for his team, Reynolds maintains consistency at a high level—first place. The victor came in his most familiar event, the 100-yard butterfly, and were rolled-up against weak opponents.

In the first dual-meet outings of the season, John took on the best that Cal State Hayward and UC Santa Barbara had to offer. In both contests he came out on top and found little company in the Mustang half of the winner's circle.

It is significant (and somewhat astounding) at this point to note that prior to this season, Reynolds had never done 100 yards of butterfly in high school competition the longest race for the stroke is 100 yards.

When faced with the job of doing the 300-yard race this year John admitted being "scared the first time." Nevertheless, he set his sights for the moon and vowed to take a shot at an 11-year-old school record.

He shattered that one in style—at the conference championships.

Datsun started with one winner...

The winner, we started with is the one you drive on the street. The standard Datsun 510 is the result of a spirited overhead cam engine, the fully independent rear suspension, and the beefy front disc brakes.

So building a top Trans-Am performer for the new 2.5 Sedan class was almost easy. There's Trans-Am strength and safety in every one of our seven Datsun models. Check'em out at your friendly Datsun dealer, the Small Car Expert.

Drive a Datsun, then decide...

...and now there's another—the 510 Trans-Am sedan.

Money doesn't grow on trees,

But your think it does when you buy

Record-breaking quarterback takes high school coaching job

When Steve Breanahan stepped into the limelight as the football quarterback last fall, there were people in some circles who seriously doubted he could handle the job.

They said his 5’9” height would prevent him from doing anything of value at the key position, and that he would never come close to filling the shoes of his predecessor, Don Milan. During his senior year here, Milan had set four school records and was an all-conference, first team selection.

It was a tough act to follow, but Steve certainly wasn’t going to let his lack of size hinder him. The determined senior passed and ran with consistency and excellence through the seven games he played (two were missed due to an injury) and led his team to its third straight conference title.

The season’s performance saw him erase two of Milan’s marks and replace them with his own figures. He also broke five records established back in the early ’80s and was voted to the all-conference, first team. Breanahan’s head coach, Joe Harper, passed off the state issue entirely, saying, “He set all the passing records, didn’t he? I don’t think it was a factor at all.”

Steve admitted the disadvantages of not being able to see over the tall defensive linemen, but he mostly relied on intuition more and avoiding throwing too many passes over the middle.

Breanahan was not particularly happy with the ’71 season and admitted they should have done better. “We were not a six and a team,” he said. There were a number of disappointments, beginning with the season opener at Boise State. The undaunted Mustangs showed what they were made of by sticking close to the bigger, favored team, only to fumble the game away with just seconds remaining.

This humbling problem met the Mustangs two other losses during the season. Of course, a personal lowdown for Breanahan was a shot he took in the Long Beach State game that put him in the hospital. Returning to the field after missing two games, Steve never did quite regain the physical condition he had had before the injury.

Despite this, the Lakewood lifeguard never wrote the books off, and the shortened season and now leaves his coach with the task of finding a replacement. “He was a super quarterback,” Harper said.

The level of excellence should be irreparable in a replacement Steve will begin to pursue this spring — coaching. The job will not take him far from his college scrambling grounds, as he will be working with the Morro Bay High School gridiron through their all-conference, first team, a two-time defensive co-captain, and a choice for the all-conference team.

Breanahan’s student record was another problem that helped to decide his lack of speed. Mike, however, wasn’t at all surprised. He had been given no indications by pro scouts about his potential, at least none that he could see.

John was not yet through. Near the end of March (when most students were in the midst of final season) he was in Lexington, Virginia, preparing for the NCAA College Division Nationals with teammate Art Carpenter and Coach Dick Anderson. He walked away from the weekend action with a third-place medal for the 300-yard (3:03.3) and a fifth-place medal for the 100-yard version of the same event (14.88). Both times merely put his school records further out of reach.

His other individual marks for the year were in the 100-yard freestyle (1:03.8) and the 100-yard free relay (1:40.81) and a five-place medal for the 100-yard version of the same event (14.88). Both times merely put his school records further out of reach.

Answering questions with modest indifference toward his overall level after getting his M.A. in coaching on the Junior college level after getting his M.A. in physical education. He admits being one-sport minded. Letters have been written to a number of pro teams but, as yet, no promising offer has been made.

Church admits being “amazed and a bit disappointed” about not getting his opportunity, but his former teammate is confident “he’ll get it.” “He deserves to be drafted,” Wegls went on to say, “he’s a very smart ballplayer, but he’s had his chances.”

The Mustangs head coach is a bit surprised at a free agent tryout, something he has been seeking for a long time. Letters have been written to a number of pro teams but, as yet, no promising offer has been made.

Baseball rebuilds for a strong season next year

by CHICO DIAZ

After finishing third in the nation last year, the Mustang baseball team set out to establish its own identity this year. With four returning all-California Collegiate Athletic Association players in Dave Kruskow, Dave Oliver, Steve McFarland, and Lee Ohm, the Mustangs were ready to battle for the league's title.

Coach Augie Garrido set out to rebuild his team just as he had done in 1972. Gone were almost the entire pitching staff and the entire Mustang outfield. Garrido said, "With the loss of many veterans, this year has been similar to the 1973 season. We had hoped to rebuild and come back strong next year just as we did in 1973 when we finished with a 30-11 record."

The Mustangs started the season off red hot as they rallied off an 8-4 record in the first 10 games. Sophomore Mike Kruskow continued right where he left off in 1973 as he posted a 4-0 record through these games. Since then the Mustangs have simmered down, due to injuries of two first-string ballplayers and now have a 23-13 record.

There is much to be gained in the remaining games. However, Garrido is looking to the future of the baseball program, one which promises to be exciting in the upcoming years.

He feels that the team's strength is in the fact that a lot of young players are playing college ball for the first time. Garrido cited Ted Bailey and Larry Silvestro as showing a lot of poise and maturity in their first year of college ball. He said, "We have the potential to play very good college baseball in the years to come with our fine personnel."

The Mustang pitching staff has been one of their bright spots this year. Pitching Coach Barry Harr has been extremely pleased with the pitching of Kruskow, Lee Ohm, and Dennis Root. CCAA Ohm and Kruskow have only pitched two years but in these two years Kruskow has 9 wins and Ohm has 10 wins and seven saves.

The locals will be home this weekend with four big games scheduled. East Henderson State, leaders in the CCAA, will open the weekend that high at this point in their program. The Mustangs will top the Poly Royal weekend off by playing an Alumni game on Sunday. Both past Mustang players as Doc Kline, Glenn Egusso, and Steve Freeborn will participate in the game.

Rodeo team

(Continued from page 18)

in the region, although she is not standing that high at this moment," Gilford commented. "She is a real top roper."

Freshman Linda Gill rounds out the women's team roster. "She's a real athletic girl whom I'm sure in another year will be a real tough competitor," Gilford said.

The men and women of this year's team, as well as teams in the past, have definitely earned the nationwide respect that is given to them.

A CHECKING ACCOUNT DOESN'T HAVE TO BE CONFUSING
(NOR DOES IT HAVE TO BE EXPENSIVE)

Bank of America introduces the College Plan. Here's what you get:
LOW COST only $1 a month during the school year.
NO CHARGE in June, July and August. Get a year round checking account at nine months costs!
MONTHLY STATEMENTS 12 months a year.

ALWAYS OPEN even during the summer. All college checking plans have this feature: You can keep your account open throughout the summer with a zero balance at no charge.

SPECIAL LOW COST CHECKS are available for a small additional charge. Beautiful, full color scenic checks that show sporting events or California scenery from the surf to the Sierras.

OPTIONAL SERVICES TO AUGMENT YOUR COLLEGE PLAN CHECKING ACCOUNT. Instant Cash—which protects you against the cost and inconvenience of overdraft checks. Plus our widely popular STUDENT BankAmericard.

COME IN TO YOUR NEARBY BANK OF AMERICA BRANCH SOON. Find out about this new service. Ask any teller or pick up a copy of our booklet THE COLLEGE PLAN which gives all the details.

Bend a little every day. It’s a good habit to pick up.

Imagine what would happen if every man, woman and child in San Luis Obispo picked up just one piece of litter every day. Think how much cleaner our town would be. How imagines what would happen if everyone picked up two or three pieces of litter every day.

All of a sudden, the litter problem wouldn’t be the problem it has been for so long. It’s that simple. But let’s face it. We’ll all have to bend a little. Every one of us. Because anti-litter slogans haven’t stop—
