Poles turn out for big cheer

by STEWART HENSLY

Warsaw (UPI)—President Nixon was given a rousing welcome in the capital of Poland Wednesday on his final stop before returning home and reporting to Congress and the American people on his historic eight days at the Moscow summit.

A crowd estimated at 7,000 persons swarmed around and forced his limousine to halt as he left the tomb of Poland's Unknown Soldier following a flight from Tehran, Iran, where his visit was marred by terrorist bombs.

Polish police surrounded his car as the President stood up, held his head and shoulders through the open top and shook hands with the welcoming Poles, calling "Good luck, good luck." The crowd shouted "Nixon! Nixon! Nixon!"

Some young men struggled with police and several women were hustled away by the officers, but the President never appeared in danger when the crowd stopped the car about 100 feet from the monument where he laid a wreath.

Finally the limousine lashed off toward Nixon's next stop at the parliament building. "The Polish people very much love Nixon," a little white-haired old lady told newsmen in broken English.

The President also laid a wreath earlier in the day at a monument in Tehran, where his departure was delayed somewhat by the explosions—one of them set off near the shrine about 45 minutes before the scheduled appearance there. The ceremony took place after the area had been thoroughly checked.

Program cards available

Students interested in attending summer quarter should meet with their advisors at College Hour today to pick up their program cards, according to Gerald Punchea, registrar.

Summer quarter, lasts from July 5 to Sept. 14, has one holiday scheduled on July 4. Registration will take place July 1 from 8 a.m. to 9:30 p.m.

There will be a change this year, said Punchea. "This is the first year we're attempting to handle summer quarter the same way as all other quarters." For example, the seniors will register first.

As usual, there will be two summer sessions, starting June 18 and July 16. Any student who doesn't have to be "a matriculated student," to earn up to 12 units of college credit, Punchea said.

Campus mass transit or bus(t)

by JOHN TEVES

Your dollar, your environment, your nerve and your soul are under siege by an attacker most people don't recognize.

In investigating the need for a mass transit system in the area, two students at this school have let upon the automobile as the culprit responsible for anesthetization of the public's psyche, natural heritage and state of mind.

Dennis Smith and Ken Silva, fifth year architecture majors, have compiled a stunning yard of information which seems to conclude that a mass transit system in San Luis Obispo is the logical answer to the several life crises confronting because of the automobiles.

The problem of the auto is born out in figures compiled by the two in the course of completing a senior project on a local mass transit system.

The average insurance, car, gas, and maintenance costs the average car owner runs about 18 cents a mile, according to Smith-Silva statistics.

The American Automobile Association has released figures showing the public spends 100 billion dollars on gas, taxes, parts and wear and tear on its automobiles. In 1969, 100 million each month for every licensed automobile was spent that year.

An issue much publicized pollution problem the auto produces, the figures, to start, comprise the biggest problem.

Twenty five gallons of water are required to produce one gallon of gasoline. Another 188 gallons of water are necessary to produce one pound of rayon material used to produce tires.

The figure of 66 percent of all pollutants in the air was sup- plemented by Silva and Smith in laying responsibility for air pollution to the auto.

Increased demand for roads and parking lots, and the resulting destruction of creeks and natural runoffs is another vital aspect to the environmental picture.

In addressing themselves to the problem the auto presents to the public's psychological structure, Silva and Smith cited the frustration, tension, nervousness and headaches incurred in driving. The aesthetic damage done by auto lines, and sheer mass of auto was another aspect they presented.

Request for cooperation in preserving gym floor

Editor:
The concert this Friday, June 1, with the Youngbloods and League and Massia may be the last major concert at Cal Poly. Damage which resulted after the Bonnenground concert (April 18) was bad enough to warrant a warning from the support groups (Maintenance and Custodial) that a repeat of the damage would eliminate any future concerts in the gym. These threats have been issued in the past. We must be sensitive to the threats that have been issued to the administration as well as the students.

In an attempt to reduce floor damage we ask those attending this concert not to drink or smoke in the gym. To enforce this we have been asked to confiscate all bottles, cans, boba bags, and any other liquid-containing vessels. During the concert, cigarette smokers will be asked to go outside or put their cigarettes out. To avoid hassles for everyone involved please do not make these "policing tactics" necessary as it is an uncomfortable situation to us as it is to you your cooperation is vitally needed to ensure the continued improvement of concerts at Cal Poly.

Forum

considering both sides, come to a conclusion relevant to the issue and the facts involved.

The person who only looks at one side of an issue is usually considered "uneducated" or ignorant. It is too bad in a country as advanced and educated (1) as America, there are so many "Mullets." You know, the one who bases his or her viewpoints on uninformed interpretations, or personal feelings. How foolish to try and excite or persuade the Mullets to believe it is all true. When in reality it is usually a few misrepresenting acts presented at a rally or through the various media's and embellished, blown, and twisted by: our friends, theMullets. I guess they must water down their glib at night, for once a Mullet raises to the bait, takes it and the line that accompanies it, he is hooked and usually reviled in.

Unless one is willing to look at both sides of any issue and take time to consider all the available facts on both sides and then reach an educated decision based upon the value derived to the individual, the Bank, the Federal Government, and our country is a general, then his opinion is biased, and not worth a damn in anyone, including this individual.

PROP 9: POORLY WRITTEN

Editor:
June 9 is a maiden voyage for many of us in this whole year. Perhaps for the first time in our life our ability to think with responsibility rather than emotion will actually influence the future life styles of millions of Californians, who have no recently extended this voting privilege.

Proposition 9, the Environment Initiative, is an example of the need for deep thought. No thinking student could believe that any corporate employee, industrial leader, or working farmer wants anything but a clean environment as they work to fill our daily demands for products and conveniences. We don't use a guillotine to cut our headlines. Will an untrained worker, and no politicians cure our environmental mess or cure economic problems? We can be sure that the many Eligibly rigid controls proposed in Proposition 9 will hurt us all, and without significant effect on environmental improvement. If the availability of electrical energy in the state was original businesses which need electricity to operate would be forced to leave the state, and take along with them the employment which came with them. The better way to do the needed job is in the support of those who have selected, who are working on an intelligent and creative solution which will clean up our environment. On June 9, read the Environment Initiative and realize for yourself what the efforts of the poorly written initiative would be. Vote no on proposition 9.

VOTE FOR
BERRIGAN
FOR ASSEMBLYMAN
29TH DISTRICT

ELECT THE CANDIDATE WHO TELLS YOU WHERE HE STANDS!

TAX REFORM

Berrigan stands for a realistic tax reform that will eliminate loopholes and other means by which many large corporations and a few wealthy individuals avoid their public responsibilities.

UNEMPLOYMENT AND BUSINESS

California's high unemployment and the problems of the business community are directly related to each other.

When business is bad, unemployment is high. A good business is good unemployment is low.

Berrigan feels that if it is the duty of the state to offer incentives to businesses so that it will again become profitable to get California's unemployed off the dole and back on the payroll.

FARMING

Berrigan is deeply concerned about the huge gap that exists between the average farmer and the consumer. While feed prices remain high the farmer's share of the profit gets smaller and smaller. It is ultimately fed with bankruptcy.

Berrigan feels that it's time the farmer received a fair share. As Assemblyman for the 26th District, Berrigan pledges that he will speak for the average and the small farmer.

Campus mass transit...

(Continued from page 1)

Two students maintained that the key realization here is that transportation must be seen as the key realisation here. The Smith and Silva maintained that the municipal bus system was the answer to more than one way. The 35 percent of the California populace without a car would be well served by a public bus system. The need for a second car would be eliminated, as well as a great deal of the insurance and gasoline and other associated costs. A bus system would cut down on road and parking expenditures, as well as help clean up the air. Parking, rush hour, and car breakdown worries would also be attached through the bus system.

Vatican relaxes rules for marriage annulments

The Smith-Silva senior project is not enough to institute such a system. Thereafter, with the creation of a local businessman informed the local officials that the local bus system supposedly in the city of private industry. Smith and Silva confined their approach to public education of the mass transit problem.

Having concluded a tough campaign of informing the public through exposure in the various local media, Smith and Silva were informed that the local citizens who had authored the county bus system idea had given up. The Vatican said local bishops can initiate hearings for dispensation of 70 percent of the California populace without a car would be well served by a public bus system. The need for a second car would be eliminated, as well as a great deal of the insurance and gasoline and other associated costs. A bus system would cut down on road and parking expenditures, as well as help clean up the air. Parking, rush hour, and car breakdown worries would also be attached through the bus system.

By way of support for their investigations, Smith and Silva offered the statistic that seven percent of the California populace without a car would be well served by a public bus system. The need for a second car would be eliminated, as well as a great deal of the insurance and gasoline and other associated costs. A bus system would cut down on road and parking expenditures, as well as help clean up the air. Parking, rush hour, and car breakdown worries would also be attached through the bus system.

The cook, Butch Carlsen, kept things going with good food.

The setting of the city: Cal Arts campus and Valencia.

Art Sanjabi takes it easy after the structures were completed.

Quick City, an instant Cal community, attracted about 300 environmental designers from Cal Arts college for four days of experiments and discussions on alternative lifestyles at Loyola California Institute of Arts in Valencia.

The event was attended by environmentalists from as far away as UC Berkeley. All together, about 100 people were in the city. All of the participants were concerned about ecology.

One of the high points was the weekend was Ian McHarg's book on "Multiply and Subdue the Earth". Cal Tech displayed a steam energy machine for discussion of alternative power sources.

The key talk was delivered by Alan Schoen, a physics instructor.
Arto. His topic was surfaces which involve our geometry.

Environmentalists hoped to start a perspective of the city life by removing us from it. Noland, an architectural major here, said the ideal "little communication environment." He wanted to investigate our needs," he said. "It was like a human behavior, we didn't rely on anything. We were at except everyone packed up and it was noticeable that a big had been held there. The as a little beaten down, was all."
A study of live arts is offered

by TONY SANTOS
News Editor

For student patrons of the arts—or those who simply want a broader acquaintance with the performing arts—an experimental class is in the offering this summer. The Arts in Live Performance (Humanities 218 X) promises to be a class which will round out any student planning to attend college here this summer.

David Evans, the class coordinator and college English instructor, has planned a tentative course outline which includes taking in the Mozart Festival in Carmel, and Mozart's "Don Giovanni" in full-scale production at Santa Barbara's Music Academy of the West. He said the agenda of activities would include theatrical productions, musical performances, and visits to art museums in Los Angeles, San Francisco, Berkeley, Oakland, Pasadena, and La Jolla to mention a few.

The class activities coordinator has scheduled a once-a-week meeting at 10 a.m. on Wednesdays in Ehart Ann. Evans listed the two reasons for the hour-long class session: 1) to provide background preparation from art, music and drama faculty so that students may get more out of the upcoming events and 2) to coordinate class activities.

"An extensive background in the arts is not a class prerequisite," Evans said. He pointed out that the class objective is to expose students to art and live music and drama. Evans indicated he will plan many more events than any one student will be expected to attend; he hopes this will provide a flexible, rather than a mandatory schedule for students enrolled in the class.

Each student will be expected to keep a journal of events that will record individual progress. Readings will be assigned to augment classroom discussion and preparation.

A fringe benefit of the class will be attending the events with tickets purchased at discount price, which keep ticket costs to the barest minimum.

"If you take a lunch, it will cost only $1 for a one-day trip to Santa Barbara to visit the art museum and to see a play," he said. Another example he cited was that students could attend the complete summer series of five professionally produced plays and musicals at the Santa Maria Performing Arts Center for $6.

"On the other hand, there is no discount for such attractions as the Carmel Bach Festival nor the Shakespeare Festival in San Diego, which will be considerably more expensive," Evans said. The class activities coordinator hopes the enrolled students will sponsor several on-campus movies this summer with any profits being used to support class activities.

Students enrolled in the class will be able to purchase an additional ticket for a wife, husband, or friend, usually at the same discounts, the instructor said.

Elorriaga took second place in senior division oratory with a speech on the danger of underground disposal of industrial waste material.

Trophies mark debaters finish

The Northern California Spring
Championship, held recently at San Francisco State College, marked the end to a season of competition for the campus Debate Squad. For Upinder Singh Dhinsa, a foreign student from India, and one of the best speech competitors for this campus in the last two years, it was his final tournament.

Dhinsa went out in grand style capturing the first place trophy in speech analysis with a presentation on one of Mahatma Gandhi's speeches. He also took home a fourth place trophy in expository speaking with a speech on palmistry.

Steve Doyle picked up another first place trophy in junior division impromptu speaking for his campus. Doyle, a sophomore speech major, led in speaker's points throughout the tournament.

Ricardo Elorriaga, a transfer student from Harbor Community College and who now is a speech competitor for this campus, also brought home a trophy.

Elorriaga took second place in senior division oratory with a speech on the danger of underground disposal of industrial waste material.
Two mountaineers aided halfway up El Capitan

by LOYD G. CARTER
Yo Semite National Park, Calif.

(UPI)—Two Swiss mountain climbers went up the sheer face of Yosemite’s El Capitan Wednesday to aid two mountaineers dangling at the 1,500-foot level for two days.

The two climbers were stranded when one of them became ill.

Park information officer Law Albert said it was believed the ill climber was David Paterson, about 31, a student at the Feather River College at Quincy, Calif.

He and his partner, tentatively identified as Blair Glenn, got into trouble about half way up the 8,000-foot mountain.

Albert said a Swiss mountain climbing rescue team was assembled at the top of El Capitana's favorite challenge to expert climbers in case they should be needed.

Tuesday, Paterson was reported “out and in conscious¬ness” and Albert said it was believed the youth had a recent history of stomach problems.

"From what we understand, he is feeling better this morning," Albert said. He said the only communication with the climbers was by shouting to them from the top of the mountain.

The two unidentified Swiss climbers were about 400 feet below the two stranded men when the trouble occurred, and Albert said the two reached the ill climber late Tuesday.

Albert said the park service rescue probably would not be used if the Swiss climbers and the sick climber’s partner appeared able to bring him down safely.

Last day to get a hole-in-one

A new campus golf pro may be discovered yet as the three day hole-in-one golf tournament took off today behind the Men’s Gym between 11 a.m. and 1 p.m.

Today is the last day for the contest, sponsored by Sigma Delta Chi, the on-campus journalism fraternity, according to Jonnie Fontes, the organization’s secretary.

Competition price is three shots off 10 cents and seven shots off $1. Prizes will be awarded to first through fourth place winners.

Booster seek contest entries

Hay bails, hay bales . . . swing into first place and win $100 in the First Annual Mustang Over-the-Line Tournament.

This exciting first prize will be presented to the winning sluggers of this Saturday’s contest at the athletic fields. Three-man teams will begin at 8 a.m. batting into fair territory of the long rectangular court to score runs.

Runners-up will not go home empty-handed as a $15 second prize and two valuable gift certificates will be presented to the third and fourth place teams.

Although no gloves may be used, contestants are asked to supply their own softball bats. Teams must be prompt or their games will go to the Mustang Boosters’.

Both men and women may form teams of three for the event. Participants may pick up entry blanks at the Intramural Office, MPE 104. Entry blanks along with the $1 entry fee may be filed at the same place or be mailed to Over-the-Line Tournament, Box 2208, St. Louis, Missouri 63180.

PE equipment due for return

Male students, faculty, and staff members are reminded to return all physical education equipment (including baskets) to the physical education equipment technicians in MPE 104. The deadline for all equipment is June 8.

Assistant baseball coach Berdy Harr lends a hand to Georgians Hays as Anna Groetsch displays sign for Over-the-Line tournament to be held Saturday.

Concert given

A “Super Coffee House” will be in session from 5 to 11:30 p.m. on Sunday in Chumash Hall. Admission is $1.

According to Janet Wilson of Special Events Committee. “The Un-Concert” is a cross between a full scale concert and a regular Coffee House.
