EOP money allocated after three proposals

The EOP program was allocated $20,000 for the fall program by the Summer Interim Committee in a meeting held last Thursday.

Approval was granted for the release after three proposals had been turned down by the committee. Mike Moring from the finance committee introduced the first proposal that had been agreed upon in a meeting held earlier in the day.

The proposal was that $24,600 be released to the program with a use being placed on $6,900, the sum to be decided by SAC in the fall.

The second proposal was that $4,900 be released to the program with the remainder being held for release by SAC. This proposal along with one suggesting that $14,000 be released were defeated.

SAC had been requested to act on the matter by the program so they could make out the packages for fall EOP students.

The original request for $42,700 by the EOP program had been cut down by SAC in the spring and they had allocated $6,400 for the fall. The request from the program had been made before the state had granted any money toward funding it and the allocation by SAC had been made before the state had granted the program $86,000.

When Pres. Robert Kennedy signed the budget he stipulated that certain conditions had to be met. SAC Pres. Robin Baggett, said at that time the budget would have to be realigned since the program had received funding from the state.

Latti Salters, financial aid technician, said the only effect the allocation should have on the program is that there will be less money to distribute to qualified students. He said the money would be used to help students who have completed applications and their family income is $4,000 or under.

The committee approved a request from Baggett for $200 to be taken from the contingency fund and used for the payment of dues to the California State University and College Students Presidents Association. The 1973-74 ASI officers budget had proposed that only $1,000 be set aside for the dues, however the association set dues at $1,800 for universities with reduced rates being given to state colleges.

The committees passed an amendment to the reserve at previous meetings in Mustang Stadium which was approved earlier this year. Under the amendment faculty and staff members would not be eligible for the reduced rates of $130 for season tickets and $8 for reserved seats per game but would be encouraged to purchase an ASI associate membership card and purchase tickets at the student rates.

A discussion on the proposed College Union name change was postponed until today's meeting.

Meet ends in mock Olympics

A mock Olympics will highlight the 43rd annual California Physical Education Workshop for Women currently being held at this University.

The mock Olympics will be held at the end of the two week workshop that began last Sunday and will continue through next week. Some 80 secondary school teachers are attending the workshop from all over the country. Fifteen are from out-of-state and two from Taiwan.

Teachers from 21 to 68 years old are taking classes in different sports from some of the top experts in the respective fields from Mustang College, Montclair State College, and Pacific State College. Workshops in dance, swimming, basketball, badminton, tennis, volleyball, flag football, golf and many other sports are being offered.

Next week when the men's workshop starts they are going to hold co-ed workshops in bowling and archery.

"There are few workshops like this in the country and some teachers just come to see how the workshop is run so they can organize one in their own states," said Trish Moore, director's assistant.

"Many of the teachers have not taught P.E. for several years and are here to refresh about teaching sports," she said.

The teachers spend the weekdays in workshops and at nights from 7-9 they hold different tournaments against each other. After 9 p.m. many of them travel downtown to continue their bowling and pool competition. Several women get up at 6:30 a.m. to jog a few miles before breakfast.

A state has been placed in the cafeteria where the teachers all sign in and the only regret that the woman have by the end of the two weeks is that they have gained weight.

Volleyball topic for SIC

Appropriations for an NCAA recognized volleyball team at this school will be the major topic before the Summer Interim Committee at its meeting today in room 219 of the College Union.

Official recognition of the team by SIC would, according to Robin Baggett ASI Pres. mean practice facilities, coaching, scheduling and operational expenses for the team could be provided by the school.

Volleyball has been an unrecognized activity on campus in past years. Practice sessions due to the unrecognized status had to be held at 8 a.m. in the men's gym.

Coach for next year's squad will be Bobby Lane, who serves as an assistant football coach during the fall will step into active guidance of the team at the conclusion of the season.

With some practice games scheduled during football season, Max Bovert will be acting coach until Lane assumes his duties.

Volleyball season extends into early spring and, like wrestling, is built around tournament rather than league competition.

Scheduling for the team has already begun, according to Baggett. Preparations are being made for eight home games and one all day tournament to be held on campus.

Also on the agenda for the three day meeting will be a request from Skip Kelley for more funds for his Catch 22 project. Catch 22 is the project name for the computation of all codes and bylaws from the state level on down which effect student government operation.

The name change for the College Union is another topic scheduled for discussion by SAC. According to Baggett, SAC will be asked to make a recommendation to the College Union Board of Governors on an acceptable name.

Application filed to get new land

At the regular July board meeting of the Trustees of California State Universities and Colleges, a formal application was submitted to the Health, Education, and Welfare Department for the acquisition of an additional twelve Hundred acres of land for this university. The United States government is considering declaring the 1,000 acres of rangeland at Camp San Luis Obispo as surplus to be used for educational purposes. The land is situated north of Highway 1, starting one-half mile from the National Guard camp and running for a mile along the highway.

The new acreage would be used by the agriculture department and the biology department for environmental study. The additional land would be in the campus the largest state university in California, in terms of acres.

Mozart schedule

Thursday, August 1, concert 1, 8:30 p.m. in the CU Student Life Center, hall E.

W. A. Mozart, Concerto No. 1 ("Philharmonic")
M. Seiber, Notturno for horn and strings

W. A. Mozart, Concerto No. 3

Dirty politics: promise game

By MALCOLM STONE

I grew up with the unshakable conviction that politics was a dirty game. This was not a conviction gleaned from a lifetime of experience, but from the mouths of others.

I never took the position that there was anything innately wrong with dirty politics—it just was. Everybody accepted it as a fact of life.

Politicians have never attempted to make it out to be anything more than a rough and ready business of self-promotion. A favor here for this favor there, just a little back room dealing between me and you.

I’m a lifelong skeptic who believes anything good is also bad. I just marked time waiting for the dirt to show.

Eagleton (you’ll remember his first name is Tom) was dumped in the mud and bounced back as Mr. Clean. Senator what’s his name got burned in the Silk bag.

The whole situation is revolting and I’d like to complain, but I’ve seen the old girl on television and when she gets angry! Can you imagine what might happen to California if she started shivering during one of those cold spells.

Castle found for Mandala

"I want my kindergarten students to know that they really do take up space...that they are important."

For Dave Taxis, a program counselor here, the reward in the church on the corner of Sidney and Johnson Streets in San Luis Obispo. Although the structure is actually a renovated, two bedroom house, he visualizes it as a "dreaming castle." The church received approval to house Mandala School, which will open its doors on September 5. Taxis hopes to enroll 30 or more five to 12 year-old students for the school's first year.

The idea more or less began for Taxis in 1968 when he started a three year teaching career at two public high schools. He said, "I always looked for a sense of community with the people I worked with. People who obviously had common goals, teachers who were concerned with the great unknown of educating children. "It was a great ideal at age 22. I never lost sight of it," Taxis said. During his teaching experience, Taxis said he saw the goal of helping, caring, and working with children "buried deep down in a hierarchy of priorities." He listed making more money, fighting for better working conditions, better food in the teachers' lounge, and instructing fewer periods a day as some of the top priorities. In 1970, Taxis attended Stanford Graduate School. He learned about free schools in California. "I learned about (Alexander R. Neill's) Summerhill before I went to Stanford, but I didn't think I was in the position to do that," he said. "But now she is making plans to begin instructing kindergarten students at Mandala in September.

"I want my kindergarten students to know that they really do take up space, that they affect others. That they are important." She continued; "I want them to learn that their feelings are important, but not automatically known. That they must say how they feel. They really do take up space, that they affect others. Public schools lack a stimulus for creativity. It's a static thing." 

"Public schools lack a stimulus for creativity. There's no change. It's a static thing." 

"I don't want to pigeonhole my students into categories. "People who obviously had common goals, teachers who were concerned with the great unknown of educating children." It was a great ideal at age 22. I never lost sight of it," Taxis said. During his teaching experience, Taxis said he saw the goal of helping, caring, and working with children "buried deep down in a hierarchy of priorities." Concert getting dull

Concert getting dull

Reviewed by Cynthia Lybarger

Sunday evening played host to the third Concert Under the Stars this summer. But somehow the effect of the previous concerts just wasn't there.

The reason—lack of variety.

Three straight concerts dominated by male vocalists and a fixed attention to the Stephen Stills sound creates an unavoidable sameness. Where is the female talent and the rock groups?

Although there have been a number of rewarding performances, the entertainers would command greater recognition if they were contrasted. Performers are remembered for their uniqueness—something that makes them different from the others.

This dullness is not due to the past performers themselves but to the disinterest on the part of the musicians who have not stepped forward to play.

If you have any musical talent (that you’re not too chicken to share with a very appreciative crowd, and concertgoers for it in informality) please contact the concert coordinators (but do not call the Activities Office) and help make this summer’s concerts the successes they’ve been in the past.

Despite the deficiencies mentioned, the talent Sunday evening was qualitatively good. Jack Roswell got the crowd into the ground with some Randy Newman stuff and a very believable version of Bert Stovall’s “Rocky Mountain.” He impressed the audience by his familiarity with his voice and it’s capabilities, and he quickly won the affection of a scattered crowd.

An hour later Gary Elster, a veteran of the Concert Under the Stars, entertained with some slightly older tunes from Simon and Garfunkel and John Sebastian. But Elster deserves credit for his attitude, the guy who is familiar with his voice and it’s capabilities, and he quickly won the affection of a scattered crowd.

The inevitable monotony of hearing only one voice was broken by the addition of Elster’s group on a few songs. All that can be said is that they really had it together for something that was evidently well-planned.

A second break between performers, Janet Wilson came on as last week with another little pleasant poem—this time about a snake.

By this time the weather had become considerably colder and people were huddled together in groups here and there trying to keep warm while listening to Jim Bowell who was also trying to keep warm. Bowell sang some Bob Dylan, Carlos Santana and some Neil Young stuff and a variety of others.

Bottle and the band had definitely achieved an atmosphere of their own—something a single musician would not ordinarily try.

The inevitable monotony of hearing only one voice was broken by the addition of Elster’s group on a few songs. All that can be said is that they really had it together for something that was evidently well-planned.

By this time the weather had become considerably colder and people were huddled together in groups here and there trying to keep warm while listening to Jim Bowell who was also trying to keep warm. Bowell sang some Bob Dylan, Carlos Santana and some Neil Young stuff and a variety of others.
Students give impressions

If you were to suddenly find yourself embossed in a culture thousands of miles from your own, how might you react? How many of your reactions would be preconditioned?

When first impression reactions were sought from six of the 12 Japanese students who have currently invaded Stenner Glen, the responses were based around a single factor: The United States has had enough influence on Japan, and undoubtedly vice-versa, that the culture gap has been bridged to a large extent.

One of the girls, Kun Kudo, stated that nothing seemed strange, everything was just about what she had expected. But could one ask if a student would see things differently had he not been told what to expect?

The Japanese students, who range in age from 15 to 20 years, were chosen within their schools to come to the West Coast under the sponsorship of Christian Hospital International. The majority of them are high school students who attend Protestant and Catholic schools, live in Japan's cities and surrounding suburbs and can be labeled, if need be, middle class.

They are here primarily to study English as a second language, and, as more popularly voiced, to see what America is really like "in our own eyes" rather than through others' sources.

"In Japan it is very important for us to be able to speak English," said Gemma Azawa, a helpful young translator. "Especially if we want to pursue a higher education. English is a required course throughout high school and an efficiency test is included in college entrance examinations. However, although they are required to read and write English, the students have little chance to speak it and this is one of the reasons the travel program was developed.

The students readily talked about the friendliness and openness of Americans. The four girls interviewed seemed very enthused over the friendliness of the male population and the informality used in dating. "It's much more natural than our dating procedures used in Japan. We can't even go to the bathroom without locking ourselves out of the room! Only in some parts of Japanese cities do people use keys to such an extent, and in those parts we don't walk alone at night. But ordinarily we trust each other much more in Japan then you seem to in America."

Ozawa: The Only Way to Live

"Get Carter"
On a drowny weekend, take advantage of the Central California sights. Weekend trip doesn’t have to be limited to backpacking or sunning on a beach. A 40 mile jaunt north of San Luis Obispo to Hearst Castle at San Simeon might be just the visit which really tops off a summer.

If your interest is tapestries, paintings, sculpture, or architecture, it is there—expertly rendered—on the meticulously manicured 123 acres. The mansion juts 137 feet in the sky against the rolling background of Sanitarl Lucine Mountain.

While touring through the three guest houses which comprise 48 rooms or the 100 room, main mansion, what the eye may behold is worth the drive. As you pass through 400 year old Spanish doors, tread upon Roman marble floors, surround yourself with 500 year old choir stalls from Catalonia, look above—to lifelike carvings of saints from the 16th century, famed interior decorator Julia Morgan was responsible for coordinating Randolph Hearst’s momentous art collection into a pleasing, liveable atmosphere.

Sports enthusiasts may delight in seeing the 104 foot long, out door Neptune pool. Inlaid with Vermont marble, the pool has a 340,000 gallon capacity and a depth which ranges from three and a half feet to nine and a half feet. The Roman pool may be to the preference to those with sensitive skin. The Indoor pool accommodates 200,000 gallons of spring water.

Ornamental horticulture majors should find the landscaping amusing. Hearst incorporated plants, trees, and vines from near and far to augment the beauty of his house, which is now 50 years old. Not one square inch of Bermuda grass grows in the gardens, therefore lawns never need be moved.

Hearst Castle reflects one man’s influence on society. Known as an art collector the world round, he restored many of the world’s art treasures—from the depths of the Aegean Sea to the heights of Renaissance cathedrals.
by MELISSA RODRIQUEZ

Author of 15 books in the field of political science, Dr. John P. Carney, a visiting professor from California State College in Torrance, spent three years writing his most recently published work, "Nation of Change." Dr. Carney's book stresses the ethical and power bases of American politics. The book discusses the American political system rather than a conglomerate of seemingly unrelated and irrelevant facts. Change is emphasized in the study because the author feels the only way to understand a political system is to study the manner and nature of the way it changes. "My book corrects three weaknesses of our traditional civic education," said Dr. Carney. "The first weakness is the presentation of a bewildering array of facts to the student. Second, the presentation of the American government system as an essentially ethical system, whereas it is an ethical and power system. Third, the presentation of ethnic studies in a few courses instead of in the entire social science curriculum." Dr. Carney believes strongly that black students study only the black experience and not how the white ethnic minorities have been treated and how they treated each other here and abroad they would become more convinced that American society is essentially evil. Non-blacks studying the same curriculum would likely come to the same conclusion.

"Nation of Change," published by Harper and Row and after only five months it has gone into a second printing.

Dr. Carney has just completed an anthology of American politics that will be published in 1974 by Harper and Row. He is currently researching a paper on American politics for the International Political Science Association in Montreal, Canada. He is also doing an in house writing job for the California Journal, a publication about current California politics.

"I became involved in writing by doing 50 reviews of other books for publishers, said Dr. Carney. He wrote his first book, "Tensions in the Western Hemisphere," 12 years ago." He has been teaching college for 13 years and has been a Dr. since 1967. He has taught at Oregon State, USC and Dominguez Hills State College besides El Camino where he is now a full professor.

Dr. Carney wanted a change so he decided to teach here for the summer. He is teaching classes in Low Enforcement Process, California, U.S. and State Government.

He is a dual citizen of Ireland and the U.S. and spent six months in Ireland last year checking on the trouble first hand.

"Right now I am doing more research on the political aspects of controls of Mexican migration to the U.S. said Dr. Carney. "My major interest is the Mexican Brokers." He likes sports and runs two miles a day. He also enjoys playing ping pong.

Dr. Carney is married and has three children. His family lives in Manhattan Beach and he is driving home every weekend to be with them.

Baggett seeks evaluation team

Student faculty evaluations move one step closer to reality Tuesday when the Student Evaluation of Faculty Committee convenes.

Composed of three members each from the student, faculty and administration interests, the committee will be the augmentor of the campus faculty evaluation system.

Primary concern of the committee will be to construct a campus faculty evaluation system through review of this year's pilot program and other similar endeavors. Student representatives to the committee will be appointed by ASI President Robin Baggett. Baggett has announced he will be interviewing prospective committee members today, Friday, and Monday.

All students concerned with student faculty evaluations were urged by Baggett to apply for a position. "I will be seeking a combination of new blood and experience for our representatives to the committee," he said.

The evaluation team is scheduled to make its report to the campus faculty evaluation committee next semester and the report will become a part of the annual faculty evaluation report. The team will consist of five members each from the student, faculty and administration interests.

Season ticket sales to start

Season football tickets go on sale Monday on a first come, first serve basis with BankAmericard holders having an edge on the competition.

All President Robin Baggett has announced that students will be able to use their BankAmericard to purchase season tickets for the football season and other major public events during the next year.

Tickets for the five home games will cost $7.00 for students and $11.50 for all others. Faculty members will be eligible for the student rate with the purchase of an AML card.

Purchases will be handled at the College Union information desk, the College Square branch of Bank of America, Stereo West and the Bridge and Beadle shop.

Table tennis
tournament set

An intramural table tennis tournament is scheduled to be held in the College Union table room on August 7 through 18 from 7 to 10 p.m.

Students are asked to sign up prior to the tournament and the cost is 10 cents for the trophy.

PROJECT
Course restructured

A relatively new concept in teaching lecture courses with related laboratories is under way in the Engineering department. The project will be funded through a National Science Foundation grant.

"More Effective Teaching of Technological Subjects," the project is under the joint leadership of John Rapp and Dr. C.R. Russell, both of the School of Engineering and Technology.

"I applied through the college over a year ago for a grant to permit me to spend some time in developing a new approach in teaching engineering technology," says Rapp. In a regular lecture, lab class, the student hears the theory in his lecture and then tries to prove it in the lab. Sometimes the student will wait two or three days before he gets into the lab, the lecture no longer being fresh in his mind, and this proves to be a very definite disadvantage to the student," said Rapp.

"What I'm doing is integrating the lecture and lab. Students will get the lectures in bound form which they can read, they will also be on tape. There will be film strips accompanying each lecture. Students will actually go into the lab, listen to the lecture, see film strips which demonstrate the lecture and at the same time lecture is going on they will make their own experiments," says Rapp. There is no gap between learning and doing.

This learning process does not take the instructor away from the students. He is still available for individual questions. It is an individually taught course and allows the student to proceed at his own speed. He will not spend any more or less time in the class than he does now.

"I think what we find is his time will be spent far more efficiently and he will learn much more than he does under the present system," according to Rapp.

This new concept will be under development and study this summer and next year. The first course to be taught under the new system will be in the fall of 1973.

Power needs met

At 4:30 in the afternoon when air conditioners, ovens, and television sets start being turned on, San Luis Obispo hits its peak.

In this area the average customer used 106 kilowatt hours of electricity in the month of June. For the total residential area the average was 29,902 kilowatt hours.

San Luis Obispo county used 158 kilowatt hours on the average, and 18 million was the total used.

District Customers Service Director David Bailey said, "there is no chance of a power shortage as things look today, but in 10 or maybe 15 years from now we may find ourselves in trouble."

By 1973 a power plant in Rancho Soche will be completed, and we'll be buying some power from them. A long as power plants continue to be built there is likely to be no problem with power shortage.
