**Hubert fires brimstone!**

**by JOAN CAMPBELL**

A wave of high emotional intensity hit the College Union Plaza Wednesday when a large crowd of students got a strong dose of "Holy Roller-lam" in the tradition of typical Bible-belt evangelism.

Despite jeering from the crowd, "Holy Hubert" was able to get his message across more than adequately. **"You sex perverts, you pot-smokers, you wretched sinners!"**

Hubert’s voice was inaudible amid the din of condemnation and quotes from the Bible seemed to brush from his mouth in a constant stream, various members of the audience managed to get a few words in edgewise (though it was a contest of vocal chords, not wit).

"What is sin?" asked one student quite innocently.

"You want to know what sin is?" shouted Hubert while pointing an accusing finger at the lad. "I’ll tell you what sin is. You see sin every morning when you get up and LOOK AT YOURSELF IN THE MIRROR, you sinful little devil!"

Moments later he accused a student who was probably Jewish of being an "anti-Semitic racist."

Another student held up his hand for a slight donation from Hubert ("Ah come on, Hughie, or Hubert, whatever your name is, just a dollar, that’s all I’m asking") as a test to see if he was indeed the Christian he professed to be. Fortunately the student was ignored.

Though Holy Hubert was not received with any degree of seriousness whatsoever, he certainly provided delightful entertainment for a crowd of students that lingered for several hours. One voice remarked offhandedly that "it was better than Laugh-In." "You’re right?" said another in response. "I haven’t seen a crowd like this since the tricycle races."

**Community has chance to take part in environmental air program**

One hundred students, faculty members and members of the community will assume the roles of city officials for two days.

The Office of Air Programs of the U.S. Environmental Protection Agency is sponsoring Air Pollution Exercise APEx. Nov. 13 and 14. The exercise is to be held in Room 306 of the College Union from 7 to 9 p.m. both days.

According to Lachlan MacDonald, director of the experiment, the 100 persons will simulate politicians, planners, industrialists, developers, citizens or air pollution control officers in a two days role playing. The participants respond to air pollution problems, compile data and feed this into the IBM 1130 at Cuesta College. From the participants' decisions involving pollution problems, a simulated year's passage and data for the second meeting is produced.

Four groups of of officials will be involved in this "game."

Three members from the Environmental Engineering Department, a consulting team from the University of Southern California, students from the course Humanities 402, "Human Values in Engineering," and officials and students in the Environmental Engineering course E330, "Environmental Quality Control."

The purposes of the experiment are to provide a working application of theoretical knowledge by creating "real life" situations, and to focus on problem solving through an interdisciplinary approach.

**Withdrawals**

Today at 5 p.m. marks the end of the seventh week of instruction for Fall Quarter. No withdrawals from classes will be permitted after this time unless they are college-recognized emergencies.
Budgeting is a crummy deal for many

STAFF NOTES

Some call it mad money; others save it for rainy days. Nevertheless, most look ahead when it comes to finances. Apparently the ASI didn't look ahead when it came to budgeting. The funding group has grown progressively nearsighted in its spending. The result could be bankruptcy.

After a period of fluid spending to initiate new programs and ensuring everyone funding would taper off in expectations of those rainy days, it finally happened. At last week's Student Affairs Council meeting a $6,190 proposal for a six-month Student Housing Service program was rejected. The ASI contingency fund fell short of implementing the program. Tiny Laster, SAC representative from engineering and technology, suggested proponents of the program seek financial aid from the community.

Some call it mad money; others save it for rainy days. Nevertheless, most look ahead when it comes to finances. Unfortunately, no one decided what could be poured out of the pot.

Tom James, ASI auditor, recently said the ASI is in good shape. However, recent spending indicates student body program funding will get leaner. Some might ask how student financiers can scrape the bottom of an $11,800 reserve fund barrel so early in the year. Well, it all began early in the summer.

On July 1 as a matter of fact. With a bright new slate of new student programs which received a generous helping of funds, SAC served the student body well—without much foresight. Unfortunately, no one decided what could be poured out of the pot. The funding group will have to scrimp and cut corners to serve the needy later this year. It is unlikely that SAC will generously fund new programs.

But for now, it has been let the good times roll while money is available. Over the summer, SAC may have received a second helping of the pie which could serve hungry new programs. That unpleasant question will be answered soon enough.

After two quarters of scramble and cutting corners to serve the needy late this year, it is unlikely that SAC will generously fund new programs. Especially when new programs turn out to be of questionable worth because no one can afford to perpetuate them.

Roundhouse Questions? Problems? Call Roundhouse at 644-6014 for more information. The performance will begin at 9 p.m. Tickets are on sale at the Information desk of the College Union and Stewart West on campus. In downtown San Luis Obispo.

Bring your own to help environment by Bruce Patrovsky

During coming weeks, this column will contain hints as to what you, as a person, can do to help improve the environment. Nothing earth-shattering; just some small things which add up in the long run, and reflect a concerned attitude by the individual for the environment which we all share.

Many of us eat in the Beach Bar, and drink coffee from those nice styrofoam cups. Have you ever wondered where those cups go after you toss them into the garbage can? They eventually find their way to the ugly Cal Poly landfill dump, which is the first right-hand turn after you enter Poly Canyon. These things don't decompose in the ecosystem like paper, and will be with us for a long time to come.

Why not bring your own ceramic cup to the Beach Bar?

Unless you take a turn for the worst. So, if you're part hotdog, go for it. Front flips are more fun than endless parallels, anyway. Let it all hang out... with confidence. Salomon's dual independent spring system takes up the punishing shocks of free style skiing without pre-release. If things don't go exactly right, you know there's a way out. When it really is up to you because you program the precise release tension into your bindings yourself. Salomon doesn't forget because its memory is never clogged by ice or snow. Go for it!

The Condor count is up a bit this year, to 36. Last year, only 33 of the endangered, giant birds were sighted in the annual count. In 1970, the number was 36. Some of the Condors are undoubtedly missed by the counts, as are the young Condors who don't have their flight wings yet. So, the estimated number of the largest North American bird (wingspan to 10') remains about 90.

The California Condor is an unfortunate victim of blind progress. There were thousands throughout the Western U.S. when Lewis and Clark saw them in 1806. Indiscriminate slaughter reduced their range and numbers to the verge of extinction by the early 1900's. The fact that collecting Condor eggs was popular (an egg brought up to $300) is important in that a pair of Condors lays but one egg every 3 years.

A few far-sighted men were instrumental in setting aside 3 sanctuaries in the Las Padres National Forest, near Ventura, after 1936. These contain most of the remaining nests, and human entry is forbidden to permit the condors to nest undisturbed.

A man named John Boroeman is employed full-time by the National Audubon Society to patrol the area of the sanctuary, and expand public knowledge of the Condor. He will be at Cal Poly on Jan. 6, 1973 to present his excellent program.

Mustang polio loses heartbreaker as Riverside edges through for win

by MIKE SMITH

It was a typical, cold San Luis Obispo evening for both spectators and players last Thursday. The Mustangs' advantage as Bill Graves hit a field goal and came back out to the half. The game itself started without much excitement, but Mead wasn't done yet. When Fullerton spectators were looking for their California Drivers

Mustangs keep truckin' with a 27-3 win

by ERIC NOLAND

Two Fullerton Mustangs knocked out of the game in the first thirty minutes as running backs took to the air successfully and broke the Mustang's advantage as Bill Graves hit a field goal and came back out to the half. The game itself started without much excitement, but Mead wasn't done yet. When Fullerton spectators were looking for their California Drivers
