Professor John O'Sullivan Enjoys His Office, A Former Jock Pad
Poly Map Plan

Follow the Cal Poly map proposed by American Publishing, Inc. of San Diego and you'll wind up going in circles. Associated Students Inc., President Mike Hurtado, recently signed a contract giving the university's approval of the project. The university administration denied it had approved any contract. Local merchants began to withdraw their advertising from the plan. A representative from the publishing company is planning a meeting to straighten out the confusion. A better idea would be to drop the project. What would be dropped would be to drop the whole project now.

Administration spokesmen have said the publishing company possibly could make $9,000 to $15,000 on this project. However, the map would be the latter one already in use by Cal Poly. Even if the map materials had to be altered, neither the university nor the Chamber of Commerce plan to disband it.

It's hard to see why the project was even considered in the first place. What was all this confusion allowed as a service to the students appears only to be a gold mine for American Publishing, Inc.

The ANI and Hurtado should spend their time trying to provide construction services for students rather than one already provided on the back of the quarter class schedules.

Wastepaper Waste

The Environmental Protection Agency has informed the government it could save $10 million a year by recycling some of its own wastepaper.

To expedite this step, the agency said it would begin a program this month at EPA headquarters and in one year programs will begin across the country.

Because the federal bureaucracy is so huge it wastes $10 million of paper, the EPA will create another level of bureaucracy which will generate a share of wastepaper to be recycled in order that it may help other agencies save that paper from the incinerators.

Then again, maybe that's what it is supposed to do. More wastepaper there is, the bigger the savings will be in recycling it.

On Private Affairs

The "total honesty" being generated by President Gerald Ford's family is enough to make one long for the days when cover-up was the main topic at the White House.

First it was Betty Ford saying she wouldn't be surprised if her daughter had an affair before she was married. Now Ford's son Jack tells us he has used marijuna.

Yes, it's true. More than any topic in the news today, these confessions make one long for the days when cover-up was the main topic at the White House.

Another Viewpoint

Reports will be reporters, but if they want opinions from the President's family it would make more sense to stick to more relevant topics. The President's family also isn't doing itself any favors by not protecting itself more from invasions of privacy.

Besides, who really cares anyway.

Good Care

I did spend the weekend. While being in the hospital isn't fun, the staff was helpful, the food was just right, and the pain was beginning to go away. It was nice to return to normal routines.

Now for the money-saving advice to fellow-students—always use the University Medical Complex.

It begins with a case of the flu that led me all the way to the two-day stay in the HealthCenter hospital. After a couple of days of minor suffering, I went to the center and they were most helpful. But the virus got worse, and I returned for some more visits, and it was decided I was sicker than we first thought.

Dr. Beausinger said bed-rest was in order, and said, "Why don't you spend the weekend with us?"

I did. I didn't have anything I wanted to complain about. In fact, I wanted to compliment some folks, and to try and offer a way to save hassles and money.

Late Paper

Due to printing problems and circumstances beyond control, yesterday's edition of the Mustang Daily was distributed between noon and 5 p.m., instead of the usual morning hours. We extend our apologies for any inconvenience.

U.S. Ingenuity, Stand-up

American technology not only can but should be intensifying efforts to develop an alternative, automobile engine to the inefficient, polluting internal combustion engine.

This technical progress ought to have been on the drawing boards long before the energy and petroleum crisis fell upon us, but until now we have had a spastic, fragmented research efforts by Detroit or other engineering fields.

The Jet Propulsion Laboratory insists it can be done and is progressing in research for development of one or the other of two highly promising engines which would be appreciably more fuel-efficient and practically non-polluting.

One is a form of turbine engine similar to those used on modern jetliners. The other is the British-originated Sterling engine which uses a closed system of heated and cooled gases whose expansion would push the piston of a conventional motor, more efficiently and without harmful emissions.

We see no reason why America's sophisticated technology, which was able to put men on the moon, can't solve fundamental emissions.

We see no reason why America's sophisticated technology, which was able to put men on the moon, can't solve fundamental emissions. We see no reason why America's sophisticated technology, which was able to put men on the moon, can't solve fundamental emissions.

Author Discusses Child Birth

It's A Medical Problem

by LINDA GENTRY
Daily News Writer

Birth in America is a medical problem. It is not "unnatural" as a medical problem. But it remains a problem.

That's the opinion of Suzanne Arms, who recently completed a study of natural childbirth in England, Denmark, Holland and Belgium as well as in the United States.

During a Monday evening lecture, the 35-year-old woman said "All I am is a person who has some information to offer you. I am a mother. I am a photographer."

After polling the 200-member audience, Ms. Arms said that no physicians had attended the program.

"I think it's really interesting that no physicians were here tonight after they were recorded as saying, I wouldn't miss it for the world."

"Obviously, something significant must have come out," she said.

The author of two books, A Sense of Being Born and Immaculate Deception, Ms. Arms began examining natural childbirth techniques after her own bitter experience in a hospital delivery room.

"I was prepared for natural childbirth, but I was unprepared for having medical techniques imposed on that birth," she said.

"My birth was a combination of downers, uppers, anesthesia, downers, uppers and antibiotics."

The photo-journalist said the experience left her feeling that she had lacked the courage, faith and determination to give birth naturally without help.

"What I came to realize is that normal birth is treated as a risky, dangerous, painful, abnormal process. Pregnant women have no choice other than to go along with their doctor, and their doctor generally takes a dim view of normal birth," she explained.

Through her research Ms. Arms said she came into contact with women who shared her upset and disillusion with the American way of delivering babies.

An advocate of childbirth alternatives, Ms. Arms cited interference as the major problem American women face when delivering their infants.

"As a matter of course, the natural process is helped along with drugs or machines," she said. "It is a woman who receives no drugs during the birth process."

"What we are not told is that normal birth is treated as a risky, dangerous, painful, abnormal process. Pregnant women have no choice other than to go along with their doctor, and their doctor generally takes a dim view of normal birth," she explained.

"There is no such thing as a riskless childbirth just as there is no such thing as a riskless life," she continued, "but there is no reason for a woman to die in labor today."

According to the young mother, a woman did die in labor in Kaiser Hospital two years ago. She said the expectant mother died because the medical staff did not care for her properly. She added that the general public seldom heard about the incidents.

"We are not told that women were not given sufficient time to feel the baby's movement and activity, she said, the drugs remain there for hours, days and, often, weeks.

Ms. Arms emphasized the American woman's need to educate herself about natural birth and take more control of the birth process.

"There is no such thing as a riskless childbirth just as there is no such thing as a riskless life," she continued, "but there is no reason for a woman to die in labor today."

ARE YOU A ² LIBERAL MAVERICK

Are you eager to consider religious questions with others who do not have all the answers?

Would you like the fellowship of others for discussion, friendship and mutual support?

Do you wish to preserve and extend the traditions of personal freedom and human dignity so nobly advanced by our Founding Fathers?

Then perhaps Unitarian Universalism is for you. Most Unitarians do not believe in myths or things supernatural, but are concerned with this life on this planet. Our beliefs cover the entire spectrum of human emotion and understanding and are bound by no creed.

Our approach is to consider that life is precious, that compassion must always be a component in human relationships and that we should concentrate on making life on this earth a better one. It is the feelings of hope, trust, self-sacrifice, joy and love shown in our behavior that really matters. In short, what counts is not what you worship or how you worship but, "Does it make you a better human being?"

If you are interested in finding out more about Unitarian Universalism, contact Professor Eugene Fabricius, Unitarian Universalist Fellowship of San Luis Obispo County, P.O. Box 1352, SLO, 93406; or phone 544-3486.

Brace yourself for our next installment, tomorrow...
The Saga
Of Chase: From Halfbacks
To History Pros In
One Year

by STEVE CHURM
Daily Associate Editor

The saga of archaic Chase Hall, the traditional home of
gifted athletes, has a new
chapter.

The pre-World War II building on Campus Way, which formerly housed
scholarship athletes and
students, is now the new
home of both the History
and Philosophy
Departments, academic
senate offices and inter-
national students bureau.

It is not certain how long
the new tenants of this once
last-night haunt of Poly
Dollars will remain, but ad-
ministration sources in-
dicate the new faculty en-
campment won’t be a perma-
nent one.

Executive Dean Douglas
Gerard, from his glass-
enclosed fourth floor Ad-
ministration Building Of-
fice, explained:

"This will in all
probability be a temporary
situation with an evaluation
of where faculty should be
housed upon the completion
of the faculty office
building." AND

The faculty office
building is currently in the
embryo stage of design. It
is third on the list of campus
building priorities, behind
the partially completed
architecture building and
the proposed life science
building.

The office complex, slated
to be fully operational no
later than academic year
1979-80, five years away will
provide office space for 196
instructors.

The thought of five years
in a building discovered to
have numerous structural
deficiencies by a 1976
architectural study is not
relieved by several of the
relocated instructors.

One of the 19 relocated
staff members of the History
Department, Dr. Baruc
Olsen, exposed many of the
interior shortcomings of
Chase hammering the effec-
tiveness and quality of facul-
ty work:

"Lack of telephones, in-
adequate bathroom facili-
ties, no air condi-
tioning, little or no view,
lack of sufficient working
space and poor proximity to
parking are drawbacks to
having an office here, com-
pared to Tenaya Hall," he
said.

According to Barbara
Cavaliere of the university
purchasing department, all
56 offices in Chase will be
granted, for I feel fortunate to
have an office and with the
the present over-crowded
conditions on this campus
and I am not blaming any
one person on the ad-
ministration department.

But when faculty is asked to
provide a first rate job in sub-
par conditions I do feel that
the priorities of this campus
must be reassessed and
shifted.

Dr. Lloyd Beecher, a
colleague of Olsen described
the acute facilities shortage
as "unsatisfactory.

"The problem seems
almost insurmountable," he
said. "If you construct more
offices then you’re cutting
off your right hand to satisfy
the left. But on the other side
of the coin, the more
classrooms we construct the
few available office space we
have for increased faculty."

The stark setting of
Beecher’s new cubicle,
brightened only by the fre-
quently changed stick figures,
tackled to a make shift bulletin
board, moved him to reflect on
his former Tenaya Hall office.

"That was fat city com-
pared to this office, which in
reality more closely
resembles a typical
historian’s quarters," he
said.

With the sounds of pound-
ing nails and other remova-
tion activity just beyond the
door to his office, Beecher
found some optimism in his
situation and sympathized
with colleagues.

“I can’t really complain
because I have my own of-
cice, but due to the seating
system, some newer staff
members are having to share
offices, and, believe me, in
this size office it’s a real
problem.”

While all eight of the
philosophy faculty members
have their own offices on the
second floor, six of the
history staff have been forced
to share double occupancy in
the 10 x 8 rooms.

Several of the first floor
offices have been carved out
of a former study hall and are
divided by "inadequate par-
titions."

The partial partitions ex-
ceed only two-thirds of the
way from the floor to ceiling
fail to effectively
block out noise and move-
ment in the adjacent hall-
way and neighboring offices.

One of the 19 relocated
instructors explained the lack
of adequate funds for restruc-
turing rehabilitation projects
from Chase Hall.

What money that was
scraped and scratched
offices have been spent on
interior renovations, accor-
ding to the central planning
operator Richard Targalis.

"Our crews have spent the
better part of the last two
months washing and pain-
ting office walls, installing
fire boxes to bring the
building into accordance
with fire standards, instali-
ing fluorescent lights to im-
prove illumination quality of
the offices and are proceed-
ningly finishing the painting
of windows on page 8.”

Business Prospects
They're Good If You Leave Town

By SANDY MAZ
Daily Staff Writer

If you're a business major, chances of finding a well-paying job outside of San Luis Obispo County are good. But if you want to stay in the county, prospects are a bit slimier.

According to Bill Burrell, Placement Associate here, major majors like Riley, Seari, and Warehouie Sound Placement Center here, out the belt bet (or finding such a job ii in a major city counting concentration*, good for buiineu major ai a or accounting," he laid, can uie lomronr in buiineu companiei hire plenty of ac-

Finding a job in a major city can be challenging for business majors and accountants, as competition is high. The big companies are looking for women and men with experience in the field, while a person looking for a job may not be accepted in such a position.

The Placement Center here will demonstrate how to write resumes and letters. They will also show them a list of possible job positions.

According to the Placement Center, there was a 13 per cent decrease in the number of representatives from companies recruiting on campus between 1979-73 and 1974-75. But according to Pam Summerville, Placement Associate here, "the decrease isn't very significant when taking into consideration the national economic condition."

This decrease is due in part to reduced budgets and tight money affecting school districts and the large number of teaching candidates applying for the decreasing number of teaching positions.

The Placement Center here will help candidates find work at local companies in the area. They will also show them a list of possible job positions.

Burr says recruiters come from various companies and usually interview 10 or 12 people. They choose the best candidate and arrange a second interview wherever the company is located.

The average monthly salary offered to 1974-75 business graduates was $1,189, with the lowest offer being $757 and the highest $1,500.

"The Placement Center can help. Getting the job depends on the interview and while a person is never assured of a job, they are there if the prospective employer is interested," Burrell says.

"Employers look for good grades and prior work experience, so it's important for students to be prepared," she added.

Ms. Connell said that the proposed changes in the curriculum are great for business majors, as they will be better prepared for the job market.

Ms. Connell explained that there is a need for more business courses, especially in areas such as accounting and finance.

"Companies are looking for graduates with experience in these areas," she said.

She added that the proposed changes will make the curriculum more relevant to the job market, and will help students better prepare for future jobs.

Ms. Connell concluded her presentation by saying, "I'm not worrying about the worst pictures. I'm not telling you the worst stories. I'm telling you about a normal birth."
Patty's Mental State Probed

By Seymour Pollock of the University of Southern California and Donald G. Lange of Stanford University examined Miss Hearn at the San Mateo County Jail in Redwood City during the last two weeks. They were instructed to determine the "mental capacity" of Miss Hearn to stand trial on federal bank robbery charges and to be freed on bail.

After her kidnapping Feb. 4, 1974, and still has trouble concentrating on her preparation.

Carter insisted a preliminary report was expected in 10 days to two weeks.

Miss Hearn's attorneys conceded she was "brainwashed" into joining the violent Symbionese Liberation Army after her kidnapping.

Carter definitely postponed a hearing scheduled Tuesday on the psychiatric report. It was tentatively rescheduled for 10 a.m. Oct. 10.

YOU ARE INVITED TO A NO-HOST LUNCHEON, THURSDAY, OCTOBER 9, 11:00 a.m.-1:30 p.m. AT VISTA GRANDE (Cafeteria Side)

"Persons who are or have been Christian Church (Disciples of Christ) members, and persons interested in the Christian Church, we would like to get to know you. Stop by, eat and visit with us during your lunch break. We can be found at the sign of the strawberry shown below."

Dave Bentley, Minister.

$1 a month buys all the bank you need.

Bank of America's College Plan is a complete banking package just for students. It's simple, convenient, economical and includes everything you're likely to need. Here's what makes it so useful:

1. The College Plan Checking Account.
   Unlimited checkwriting for just $1 a month. With no minimum balance required. And no service charge at all for June, July, August, or for any month a balance of $300 or more is maintained. You get a statement every month. And the account stays open through the summer even with a zero balance, saving you the trouble of having to close it in June and reopen it in the fall.

2. Personalized Checks.
   Yours inexpensively. Scenic or other style checks for a little more.

   For students of sophomore standing or higher, who qualify, the College Plan can also include BankAmericard. It's good for tuition at most state schools, check-cashing identification and all types of purchases. Parental guarantee is not required. And conservative credit limits help you start building a good credit history.

4. Overdraft Protection.
   Our Instant Cash helps you avoid bounced checks, by covering all your checks up to the limit of your available BankAmericard credit.

5. Educational Loans.
   A Bank of America specialty. Complete details are available from any of our Student Loan Offices.

   Lots of plans to choose from, all providing easy ways to save up for holidays and vacations.

Depend on us. More California college students do.

Center Of  
Attention
by JON HASTINGS  
Daily Sports Editor

"Hey, great run! Gary Davis can really chew up the defense!" junior Mark Dewitt said while watching the Prado-Cali Poly game. "Number 64 sure opened up a nice hole for him. Who is 64 anyway?"

So goes the life of a linenman. Running backs are referred to by name and linemen by numbers.

In three games this year, Cal Poly running back Gary Davis has run rampant through opposing defenses. Why? Partly because Davis is a great back who hits the holes quickly. But there are other reasons.

One of them stands 6'8" and weighs 250. He is Gordon Shaw and he is the man in the middle of the Mustang offensive line. He gets things started by snapping the ball to one of the quarterbacks and from there his job goes unnoticed by most people. But not by the coaching staff. Mustang coaches feel Gordon has the potential to be the best center Cal Poly has ever had. Shaw is entering his third season at Pol and his second as a starter.

He hails from Kennedy High in La Palma, where he had the rare privilege of playing for a CIF championship team. He came to Cal Poly in hopes of continuing his winning ways. "Gordon was a good football player when he came here. He has been very tough since the day he arrived" offensive line coach Andy Brennan said.

Gary Davis is a good football player when he came here. He has been very tough since the day he arrived" offensive line coach Andy Brennan said.

Gary Davis is a good football player when he came here. He has been very tough since the day he arrived" offensive line coach Andy Brennan said.

Poly was able to recruit Gordon out of high school after most of the bigger schools bypassed him for his lack of size. He has gained 15 pounds since last season when he opened up the year as a guard. He is not far from pro center size and some scouts have already joined his name down.

Gary Davis is a good football player when he came here. He has been very tough since the day he arrived" offensive line coach Andy Brennan said.
