A Student Trustee

Inclusion of a student as a voting member of the Board of Trustees of the California State University and Colleges should help prevent student interests rather than producing conflict of interest.

A conflict of interest would arise if the student trustee considered what was best for himself or his university rather than for the entire system and its students. We have enough in the judgement and ability of the student leaders of the upper campuses and Gov. Brown to respectfully nominate and appoint a student with the integrity to rise above potential conflicts of interest.

The trustees must have a good opinion of the students if they don't think so.

A student was recently appointed to the University of California Board of Regents and has earned the respect of her fellow students. She hasn't seemed to be troubled by any conflicts, and the same can't be expected of the student trustee.

Toothbrushes

People who are happy their names aren't being routinely supplied to the FBI anymore because they refuse to be thumbprinted when applying for a California drivers license can start worrying about their toothbrushes.

A president of a Maryland corporation which manufactures electronic surveillance and countermeasure equipment for United States intelligence agencies sold a Congressional committee his products are finding their way into untold numbers of unwatched un-American citizens.

On a visit to Ft. Holabird, Md., the corporation president saw his equipment being inserted into, among other things, mines, factories, golf clubs and toothbrushes.

The congressional committee is investigating electronic spying on American citizens. If they get their hands on any evidence produced by the corporation's equipment, it could prove more popular than the Nixon tapes.

Kennedy: The individual in the office and his wife give up their private lives almost totally...

journalism, is exactly what "scuttlebutt" has defined when I thought in the Navy as "un-endurable, usually incorrect." In the first place, the journalism department needs to be strengthened and returned to the status it once occupied when every journalist student in the department had to take an internship in the field for the entire summer period between the junior and senior years. As publications or assignments arranged by the departments, supervised by the departments, and for which the student was paid by the firm or organization for whom he was working. The student also received a maximum of 8 units of credit applied in the Fall quarter senior year. Work on...
The Forum: Splitting The Nuclear Question

'This is a spoiled country'

Counseling Center now open every noon.
Drop in and see us!

Nuclear proponent Dr. Lawrence Grossman addresses Saturday's forum as nuclear opponent Dr. Douglas DeNikr and forum moderator columnist Art Sidenbaum listen. Photo by Ellen Banner.

Views on the atom were split this weekend as Cal Poly played host to the Nuclear Forum.

Sponsored by 95 county physicians, the weekend affair was kicked off Friday night by keynote speeches by Dr. John Gofman and Dr. Edward Teller.

Gofman spoke first and warned of the dangers (and potential dangers) posed by energy plants powered by nuclear energy.

A long-time opponent of nuclear power plants, Gofman said if he had a choice, there would be no nuclear plants at all. He went on to say the power producers were not safe, economically unfeasible and sporadic in their energy output.

Teller spoke second and told the almost packed crowd in the gym nuclear energy development is important today. He said it would be a mistake to approve the nuclear initiative set for June.

While nuclear power may have its faults, Teller drew an analogy between a sick patient who needs x-rays. It doesn't make sense, he said, to stop production of more plants and at the same time fail to see where the problems lie in actual production.

Although former colleagues at the Lawrence Radiation Laboratory, the two nuclear pioneers are not on speaking terms due to their differing opinions on nuclear power.

Speaking against the Nuclear Initiative, Dr. Leslie Grimm.
Indian Caravan To Visit Cal Poly

White Roots of Peace, a group whose members have been active with such recent Indian movements as the Trail of Broken Treaties, Wounded Knee, International Treaty Meetings, Sun Dance and Indian Unity Caravans will be on campus and in various parts of San Luis Obispo County communicating their lives and experiences to those who want to know about native Americans.

WRO will be in the Cal Poly area Friday through Sunday, Oct. 24-26 when a series of programs will be presented by the Native Americans Club of Cal Poly.

According to Ed Mendosa, spokesman for the organization, WRO will arrive at 4 p.m. at the High School Equivalency Program Building, which last June was moved from the Air Conditioning Lab to the Palm Royal Apartments, 132 California Blvd. at 7 p.m., a series of films will be shown free to the public. Following the film presentation at about 10 p.m. the group will make its way towards the Willow Creek Indian Camp. Mendosa indicated that people are welcome to join the group in its trip where transportation and accommodations can be arranged if needed.

After breakfast at Willow Creek, the group will go back to the HEP building, where after an encore lunch and interviews with the local media and public, folk singer Dave Baker and the rest of the WRO cast will present a program of poetry, speeches and crafts at the Cal Poly Amphitheater located on the lawn behind the Cal Poly Theatre.

Then at 5 p.m., WRO will drive down to the Red Wind Camp at Santa Margarita. On Sunday, activities are open to the mood of the public at hand.

The unco.npromising ones.

Cash awards of up to $2 will be made to nine Cal Poly students participating in the Biennial Student Debate Program Oct. 0-0. Prizes will be given for first, second and third places in each of three events.

First and second place winners in the campus competition will advance to a district contest in December, and in turn, the top two persons in the district will advance to the sectional eliminations in February, where third place will be $1,000 and second place will be $500.

Following the sectional competition, there will be eight regional contests, with top awards of $6,000 for each winner.

A complete list of topics and rules for the contest may be obtained from Co-Director of Forensics Dr. Harry Sharp or Professor James Conway at their office, FO4ND, ext. 281.

Applications for two vacancies on the Student Affairs Council are now being accepted. The vacancies in the schools of Business and Social Sciences and the schools of Science and Mathematics are to be filled as soon as possible.

For further information concerning the Business and Social Sciences position contact Monica Agalar at MI-080. Bob Walters may be contacted at the Activities Planning Center for information about the Science and Mathematics position.

The Hewlett-Packard HP-25 Scientific Programmable
$195.00

The Hewlett-Packard HP-71 Scientific
$125.00

The calculations you face require no less.

Today, even so-called "non-technical" courses (psych, soci, bus, ad, to name a few) require a variety of technical calculations—complicated calculations that become a whole lot easier when you have a powerful pocket calculator.

Not surprisingly, there are quite a few such calculators around. There's no shortage of new ones on the market, and not all are alike. We started at them all when we introduced the world's first scientific pocket calculator back in 1972, and we've seen the way ever since.

The calculators you see here are new, newest, the fish of our second generation. Both offer you technology you probably won't find in competitive calculators for some time to come, if ever.

Our HP-21 performs all arithmetic, log and trig calculations, including rectangular/polar conversions and complex settling evaluations.

It's display is fully formatted, so you can choose between fixed decimal and scientific notation. Our HP-21 does all that—and much, much more. It's programmable, which means it can solve automatically the countless repetitive problems every science and engineering student faces.

With an HP-21, you enter the keystrokes necessary to solve the problem only once. Thereafter, you just enter the variables and press the Run/Stop key for an almost instant answer accurate to 10 digits.

Before you invest in a lesser machine, by all means do two things: ask your instructors about the calculations their courses require, and see for yourself how effortlessly our calculators handle them.

Both the HP-21 and HP-25 are almost certainly on display at your bookstore. If not, call us toll-free, at 800-938-7923 (in Calif., 800-445-8663) for the name of an HP dealer near you.

HEWLETT PACKARD
Kennedy: Must we have no choice in denying recognition to the Ku Klux Klan, the Symbionese Liberation Army?

As an example of the challenges faced in the 1970s, consider the case of the Symbionese Liberation Army (SLA), a radicalleftist group that carried out a series of high-profile crimes in California, including the 1974 kidnapping of the actress Patty Hearst. The SLA, led by a group of individuals including Patty Hearst and her boyfriend, the boxer John involuntary marriage, posed as a student organization and sought recognition from the University of California, Berkeley. The university's administration, led by President Clark Kerr, ultimately denied recognition to the SLA, citing concerns about the group's radical politics and the potential for violence.

The case of the SLA is significant because it raises questions about the role of universities in the democratic process and the tension between freedom of speech and the protection of safety and security. It also highlights the challenges faced by universities in balancing the rights of students and the broader community.

The broader implications of the SLA case are also relevant today, as universities continue to grapple with the challenges of recognizing student organizations that may have controversial or challenging viewpoints. The historical context of the SLA case, along with the ongoing debates about the appropriate role of universities in society, continues to influence discussions about free speech, freedom of association, and the role of universities in promoting democratic values.

In conclusion, the case of the Symbionese Liberation Army serves as a reminder of the complex and ongoing debates about the role of universities in society, the tension between freedom of speech and safety, and the need for institutions to balance the rights of all stakeholders.
Mustangs Win, Share CCAA Lead

Just as the first half was all LA's, the second half was all Cal Poly's.

Defensive Tackle Dennis Sherlock (corner), is assisted from the field by trainers Steve Vondera (right), and Roger Davis. Sherlock received a sprained ankle during the CCAA, Cal Poly game. (Daily Photo by Betty Ubeda)

That would have been the only score of the first half if Rich Robbins hadn't connected with Jon Childs on a 21-yard touchdown pass with less than a minute remaining in the half.

Although the score was tied 7-7 at halftime, the first thirty minutes belonged to the Mustangs. As the intermission they led in every statistical category possible.

Just as the first half was all LA's, the second half was all Cal Poly's. The Mustangs turned up an effective passing game with their awesome ground attack.

Rushing back Gary Davis added to his CCAA leading rushing total, picking up 118 yards on 27 carries, John Benson, ground out 41 yards in only nine carries.

Tight ends Ray Hall and Kula Kureaa, both had their best games of the season. Kureaa hauled in three passes for 52 yards while Hall picked up his first touchdown of the season.

But Harper saved most of his praise for the defense. "We played a fine defensive football game, Cal State LA has a fine quarterback and an excellent overall passing attack" said Harper.

For the first time in a long while, Joe Harper's crew came out of a game relatively injury free. Last Saturday night only two Mustangs sustained injuries and both were minor.

Dennis Sherlock, went down in the third quarter with what appeared to be a serious injury. But Sherlock's injury was only an ankle strain and he should be ready by next week.

Sophomore Kula Kureaa twisted his knee in the fourth quarter and it might keep him out of the Northridge game next week.

The win moved the Mustangs into a first place tie with Cal State Riv. Both the Mustangs and the Highlanders have 1-0 CCAA records.

The fever that won't break: The RISING COST OF A MEDICAL EDUCATION.

Like most things, the cost of attending medical school has risen sharply over the last twenty years. To many medical students that cost represents a heavy burden. A financial problem that can affect your concentration. I need to be frank, the Armed Forces Health Professions Scholarship Program was organized to free you from those worries. Men and women who qualify will have the costs of their medical education covered, and will also receive a substantial monthly allowance.

If you're a good student, have a strong interest in the medical field, and think you can handle the commitment of four years of medical school, The Armed Forces will provide you with the best education you can get. As a health care officer in the military branch of your choice, you'll find yourself working with responsible, experienced staff officers as you train, and with the time and opportunity to observe a spectrum of medical specialties.

When you decide on your specialty, you decide what is going to be your primary area of concentration. As a health care officer in the military branch of your choice, you'll find yourself working with responsible, experienced staff officers as you train, and with the time and opportunity to observe a spectrum of medical specialties.

Why the NEW CORVUS 500 is the most important SCIENTIFIC CALCULATOR since the HP-45.

...Because you know the HP-45 is a lot of calculator for $195.00, read why the Corvus 500 is a lot more calculator for $119.95.

With MOSTEK single chip technology, the new Corvus 500 is the first nondisposable scientific calculator. With Reverse Polish notation, 10 accessible memories, 4 level roll down stack to be introduced. If you compare the Corvus 500 feature by feature with the HP-45, you will find striking similarities. There are also some important differences:

WHAT ABOUT THE CONSTRUCTION?
With our new features, the next most obvious question must be in regard to the quality of the unit itself. We are proud to report the Corvus 500 is to be enclosed molded with "tactile" feedback keyboard. The compact, confined case is "l" by 2" by 7" by 3'/4" high, and weighs just 1 lb.

The COMPLETE CORVUS 500 for $119.95 includes:
- Rechargeable and replaceable Nickel Cadmium battery pack, which under normal use provides 6 hours of operation on 12 hour charge. Optional penlight operation.
- Adapter/Charger
- Soft carrying case
- Owner's handbook

The Corvus 500 is SACRED by the BEST WARRANTY in the CALCULATOR INDUSTRY.

The Corvus is warranted against defects in materials and workmanship from the date of delivery. For those of you who have the HP-45, or any advanced calculator on order, aren't you glad you still have the opportunity to make advantage of the release of the Corvus 500 for $119.95? Hurry! Order today.

An INVITATION:
T.K. Enterprises is proud that we are able to introduce the MOSTEK chip Corvus 500 to your, our disbelieving readers.

TO ORDER YOUR CORVUS 500 SCIENTIFIC CALCULATOR, phone: (213) 370-5795 or mail coupon today, or come in to our showroom!

YES...I'd like to try the Corvus 500 for 7 days. Please ship me the Corvus 500 Advanced Scientific Calculator, complete with accessories at $119.95 plus $2.50 for shipping and insurance. I understand that if I'm not completely satisfied I may return the unit and accessories with 7 days for full refund (or, at my option, receive full credit toward the purchase of any other calculator carried by T.K. Enterprises).

WE CARRY ENTIRE NOVUS LINE

WE HAVE THE LARGEST SELECTION OF CALCULATORS FOR EVERYBODY. Prices start at $9.95.
