Poly Music: The C-Notes Go Sour
Bring Back Espionage

Exposing Central Intelligence Agency agents in order to catch the CIA is like executing your own soldiers for losing a battle.

The source of the defeat was the officers who gave the orders, but the soldiers are the most vulnerable to retribution because they're out on the front line. The same is true for CIA agents operating abroad whose identities are being revealed by ex-CIA employees and anti-CIA publications such as CounterSpy.

The motivation behind these actions seems to be the desire to dismantle the CIA by derailing the employers and leaving them open to assassination. The justification claimed is that the CIA has been responsible for the spread of Communism.

However, the transgressions of the CIA should be dealt with by the President of the United States and Congress. The structure of the CIA and its policies should be examined and supervised more closely in the future. The original intention of the CIA was for it to gather and report strategic intelligence from abroad to promote the security of the United States.

The CIA should be reoriented in that direction. Another name for this direction is espionage. The purpose of the activities for which the CIA was meant was to make understandable the policies of the CIA agents not be left susceptible to exposure by self-styled vigilantes who take it upon themselves to save us all from the excesses of the CIA.

The CIA is guilty, but the cause should be treated rather than the symptoms. The CIA was revealed to have been contributing funds to anti-Communist political parties in Italy. It would be fascinating to know that it was agents for Smith who had over the checks.

Senator Frank Church of Idaho, the chairman of the Senate Intelligence Committee, has said he favors criminal sanctions for CIA employees who expose active agents or agency sources.

Church pointed out this would have to be limited to prevent it from becoming a shield for illegal activities on the part of the CIA. As long as this can be done effectively individual agents should be protected rather than the persons who are calling the shots.

Clarification

Editor:
It is interesting to note from your Jan. 16 edition of Mustang Daily that you believe Cal Poly is beginning to be a University and all because the student union has finally received recognition.

From this, all the many, many years of effort of the part of everyone at the University and those who have departed have been for not.

These people have all helped to make Cal Poly known far and wide as an exceedingly outstanding University.

The gay student union, I think, lost in the outmaneuvering—that is, to take a party instead of the party they had to change its bylaw!!!
There is no such thing as "one man rule" at this University. Be realistic as well as so critical.

M. Johnson

Eliminate Lawyers

Editor:
Mono's editorial cartoon showing a crucified doctor and entitled "Forgive Them, Doctors, For Insurance Company Care Not What They Do" (Jan. 26) has the blame for rising medical malpractice insurance and resulting increases in medical costs at the wrong feet.

Since insurance companies must pay the huge settlements granted by juries they must increase their rates if they didn't there would be no malpractice insurance at all.

In my opinion there are a couple of reasons for the rate increases that doctors and patients are now experiencing: an eloquent lawyer can play on a jury's emotions causing her/him unheeded of awards to be made (a million dollars for the borrowed relative; a million for the struggling lawyer). Only when the jury members dry their eyes and look back upon their judgement may they realize that they (we) are the ones who end up paying the price.

Will a million dollars compensate for a lost loved one? Will it make the incompetent doctor more skillful, intelligent or caring the next time? Monetary awards to be made (a million dollars for the borrowed relative; a million for the struggling lawyer).

The incompetent doctor (rarely mentioned in such discussions) if he or she errs badly enough or often enough should lose the right to practice.

If those who incur a loss due to malpractice were compensated out of court (as Health Center Director Dr. Mounts suggests), malpractice insurance rates could drop as much as 50 per cent due to the lawyers' "share" being eliminated.

Back on the drawing board, Mono.

Wasted Effort

Editor:
I wish to clarify one point made in last Friday's article concerned with the speech made by Dr. Mounts.

It was reported that $25,000 in student fees will have to be appropriated to pay for malpractice coverage for 10 Health Center physicians.

I would like to make the distillation that student fees refer to those collected during registration for the Fall semester and not to the "money allowed by the Cal Poly Foundation Budget to the Health Center for the next year. Part of this money comes from the sales of Health Cards.

I hope that this would clear up an item of possible confusion rather than creating any.

Active Fault Shakes Future of Diablo Canyon Nuclear Plant

by JANET Mc BRIEN
Daily Staff Writer

Questions concerning the potential danger of an active fault zone offshore of two large nuclear reactors now under construction at Diablo Canyon have been raised once again.

U.S. Geological Survey scientists have estimated the Hosgri Fault Zone is both longer and younger than previously believed. Further analysis has shown the fault to pass as close as 2.5 miles to the reactor site.

Dick Davin, spokesman for Pacific Gas and Electric Company, owner of the nuclear facility, said construction was continuing on the plant site.

"We've known about this fault since 1969, about every six months though it seems to make the front page of the Telegram-Tribune."

Diablo Canyon Nuclear Reactor plant is designed to withstand a hypothetical earthquake of 6.75 magnitude on the Richter scale with an epicenter directly under the facility.

USGS scientists have concluded, based on evidence that an earthquake of 7.5 magnitude reported in 1927 took place on the Hosgri Fault, that the same fault could unleash an earthquake of up to 7.5 magnitude on the same scale.

Davin dismisses the assumption that the differences in estimated magnitudes automatically makes the nuclear facility unsafe.

"It's ground acceleration, found by translating epicenter intensity into movement, that is the important figure," he said. "Ground acceleration and magnitude are really not related."

Despite the confidence of PG and E officials the LA Times quoted members of the Nuclear Regulatory Commission as saying the differences between the design of the plant and the continuing revelations about the offshore geology is likely to lead to a delay in the issuance of an operating license.

The two units at Diablo Canyon are being built at a cost of $983 million. The first is 96 per cent complete and the second is 60 per cent complete.

"I just can't accept the possibility that the facility would never be used," said Davin.

"As the very worst, and it is something we do not expect, the NRC would require us to make changes in the plant's design."

August is the target date for the first reactor to begin operation but many procedures must be completed first, among them public hearings in San Luis Obispo, dates have not yet been set.

Additional evidence concerning Hosgri Fault came to light in an article published in the December issue of Science magazine authored by Clarence A. Hall Jr., chairman of the University of California at Los Angeles's geology department.

His evidence showed the fault being 100 to 150 miles long and having undergone 50 miles of movement, some of it recently.

"The fault is looking like a big lulu, and I've been just conservative," the LA Times quoted Hall as saying.

His article concluded that the San Simeon-Hosgri Fault system, "could be a potential hazard to any engineered structure located along the coast from San Simeon south to the vicinity of Purissima Point."

A reference to the Diablo Canyon Plant was removed by the USGS, which had funded his work. Hall was told the reference to the plant "did not contribute to the science of the report."

Davin refused reports saying the Diablo Canyon plant could not withstand high magnitude earthquakes, stressing the "conservatism" of the facility's design.

The plant is designed not only to withstand, but to operate through such an earthquake," he said.

"If an earthquake of much greater magnitude than can logically be expected does occur," Davin continued.

"Then the whole plant is designed to automatically shut down."

In his final argument Davin pointed to a study, conducted by Dr. Worman Rasmussen of MIT and a team of 60 scientists, known as "Reactor Safety Study and Assessment of Accidental Risk in U.S. Commercial Nuclear Power Plants."

This study, which was not financed by PG and E, concluded the chances were one in a billion per plant, per year of an accident of major magnitude occurring, according to Davin. The study did refer specifically to the Diablo Canyon facility.

In a LA Times interview Harold Denton, director of NCR's division of site safety and environmental analysis, summed up the confusion of facts and evidence.

"There are differences in the technical community on how to interpret data close in," he said.

Put less money where your mouth is

With a Stenner Glen meal plan that doesn't bite back. We have plans to fit any appetite - from 5 to 19 meals a week and a 40 punch for 30 bucks meal card. Your per meal cost can be as low as $1.30! This is one case where better costs less. There's variety, quality, lots of tasty choices every day, and everyday is different. Good music, special surprise treats, nice people and going back for as much as you want.

We're right next to campus, so when hunger strikes you can pop in for a quick bite or a full-on feast. Stop by soon and see how you can put less money where your tummy is this quarter. It's one of the few times it's polite to talk with your mouth full. See you soon.

Lack Of Funds Threatens 'Pride Of The Pacific'

Marching Band Walking A Thin Line

by JIM SWEENEY
Daily Assistant Editor

Arranged by inflation and slowly slipping into the scarlet depths of debt, Cal Poly's marching band is running out of loot to tune with.

According to Associate Professor William Johnson, the band's conductor, the financial wound began roughly around 1971 and has immobilized the band to the point of no return.

Johnson estimates the marching band overspent—so the tune of $1,000—on the recent trip to the Poly-Long Beach State football game in Long Beach—over 50 per cent above the trip's budgeted cost.

The story is one that has acquired frightening popularity.

No cuts, no increases—new last year's budget.

Since 1973, the band's sponsor, the Associated Students, Inc. has been asked to fund more and more programs. With no significant increases in ASI funds, the dollar spread is becoming microscopically thin.

Although the band's $1,115,500 budget hasn't been cut by ASI since 1971, it also hasn't been increased a cent.

The current sharp blades of inflation have shaven an estimated twenty per cent of the band's funds in the past two years according to Johnson.

And the Cal Poly marching band is no average college marching band. Deservingly known as the "Pride of the Pacific," the band has performed at National Football League games three times in the last five years—once before a national television audience.

This year on Long Beach State's home field, the band received a standing ovation for its performance.

The band's money miseries may be linked to the absence of a music major at Poly. According to Johnson, Poly is one of the few major universities without a music major.

Without a music major, the music program may be riding in the back of Poly's technological test, getting less recognition than its national and international performances.

"I'm not adhering to the creation of a music major," says Johnson. "I'm not advocating the creation of a music major."

"We're not here to turn out music majors. We're here to teach music to engineers, architects, and aggies and because of the shortage of students here, I'm perfectly happy in this capacity."

What I am advocating is that we do do a first class job with the program we have. Without more money, that just isn't possible any longer."

The band's budget is divided between the symphonic band and the marching band, with the latter's share $5,786 of the $11,358 total budget.

For a number of reasons, the marching band is bearing the money woes.

—People wiser, the marching band marches 183 people in the fall. Operating in music, literature, and spring, the symphonic band utilizes only the top 60 musicians from the marching band.

—Because it is a two-quarter organization, and is thought of more as an institutional program, the symphonic band receives more band support.

—The symphonic band uses much less expensive, published music. The published music is slightly older and is shared during concerts and practice. Due to popular demand, the marching band is forced to play mostly the latest music, line of which is very unprofitable and most of which has to be arranged. It is also used individually. Music costs the marching band $1,000 for one quarter while it costs the symphonic band $900 for two quarters according to Johnson.

—The symphonic band doesn't have the travel costs of the marching band.

The magnitude of the band's financial deficiencies is enlightened with a comparison to two similar schools.

The Long Beach State Marching Band is supported by a $43,000 ASI allotment, according to Johnson. This is more than seven times the Poly budget.

However, says Johnson, Poly has almost 50 per cent more enrollment—an enrollment which is largely commuter says Johnson.

"Being basically a commuter university," says the ten-year Poly professor, "not as many students participate in the activities program, and there is a lot more money."

Fresco State's marching band operates with a $15,000 budget according to Johnson. Marching only 60 musicians with almost three times the funds. Fresno State is almost equal to Cal Poly in enrollment.

Fresco's marching band reached a financial impasse in the late 1960's resulting in the temporary death of the program. The band's paymaster at football games was not only badly missed, with the attendant drooping from a solid 10,000 to less than 8,000 per game during the height of Darryl Won's coaching tenure.

In a 1966 Fresno Bee Story on the declining attendance, a fan summed it up:

"Going to a Fresno State football game this year is like ordering a sizzlin' steak dinner without the roast potatoes and vegetables, and without the soup, salad and dessert."

All you get is the game, and that's not enough. Don't you know that without a band and halftime amusement, the game melts away to almost nothing? The spirit isn't there, and without that spirit, you get nothing."

Backed by public support, Fresno's marching band budget was increased in E-1000. Poly's problem is an elusive one. The sources for increased revenues are tightly restricted. A re-ordering of ASI priorities is a possible solution.

"I don't want to tell ASI what its priorities are," says the frustrated conductor. "ASI doesn't have more funds unless they cut someone else and I can't ask them to do that. If we had just kept with inflation."

In an early December memo on the subject, Communicative Arts and

Theft, Mutilation Plague Library

by DAN LALLY
Daily Staff Writer

Sherlock Holmes had his famous "percent solution" and the students of Dreiser Library want theirs. They're looking for it, in books.

According to a library official, the library is losing books through theft and damage at the rate of seven to eight per cent per year.

"Some time during the life of every student, he or she comes across a library book which has been filled with university art work, getting holes which were once paragraphs of knowledge, or in other ways mutilated."

The head of public services for the library, Mr. Angelina Kleppinger, said that this type of mutilation sometimes occurs when an article is assigned to an instructor, "A student might take just the article assigned."

Mutilation costs must be absorbed by the university unless the culprit can be caught.

In reporting a book that has been damaged by the removal of pages, another copy must be bound and those pages that are missing must be photo copied, and then sent to the binder along with the damaged copy so that it can be rebound, says Ed Kleppinger, circulation librarian.

A sample inventory of the 47,405 volumes is class C—geography, anthropology, art, and music. Often mutilated or stolen are the popular ones, says Kleppinger. Keppinger, he said, "This usually occurs with pictures were they can stick it out."

The problem with mutilation is one thing but stolen books are something else. It seems that books tend to grow legs and walk out.

Some are even found hitchhiking under a shirt tucked behind a belt. The library officials have tried several approaches to stopping this migration of books from the library by placing locks on the turnstiles that could only be released by someone watching everyone as they leave.

The present day system seems to be satisfactory to students, employees and the faculty.

"I wish we could be more trusting" says Sr. Angelina Kleppinger.

"If someone has good security on material walking out of the building there will be an increase of mutilation," says Kleppinger. A sample inventory of books was taken in September, 1973, showed a total of 2,952 missing volumes. This is 77 per cent of the 7,105 volumes inventoried.

Leading the list of missing volumes is class G—(general, periodical). See Library Page 3.
**Good Demands**

**Removal Of Judge**

**SACRAMENTO, Calif. — Manson cultist Susan Murphy, who shared an attic apartment with would-be presidential assassin Lynne Fromme, accused MacBride of being prejudiced against her and asserted that he feared "reprisals from me."

During a pretrial hearing, MacBride who presided over the Fromme case, inadvertently called Miss Good "Miss Fromme." She immediately asked that the reference to Miss Fromme be reflected in the court record as "further evidence of prejudice."

MacBride, who sentenced Miss Fromme to life in prison replied: "I'm sorry, I misspoke." The judge postponed ruling on the disqualification motion until Thursday and said he may ask another judge to rule on the issue.

Miss Good, a 31-year-old apostle of mass killer Charles Manson and who acted as her own attorney, was accused of conspiring to mail 171 death threat letters to corporate executives and government officials and of making threats in telephone calls to the Detroit Free Press and radio stations in New Orleans, Alhambra, Pa., and Hamilton, Ont.

Susan Murphy, a Manson "family" hang-on, also was charged with conspiring to mail the threatening letters as part of the cult's sinister campaign to "clean up the earth."

**Marching Band:**

**Increased Funds**

Continued from page 4

Dean Jon Ericson had this to say: "A first step towards a solution is to recognize that we cannot fund everything. Priorities need to be set. In the case of some music and speech programs from which the students derive little benefit, the services really need to be cut, whether we want to be fair or not, and whether we are willing to provide for any survival."

The musicians themselves said about $250 a year in instruments, instrument maintenance, uniforms, and other necessities should be spent. While on the road, they receive a $6 food allowance and $4.90 housing allowance for each member. According to Johnson, this often suffers.

"It's unfair to me," says Johnson, "when parents on the east coast, expecting the university here to buy their own meals."

**Library:**

**Rip-offs**

Continued from page 4 (recreation) with 8,132 volumes in all and 4% missing in volumes.

Class T (technology) pulls second with 27,655 volumes and 1,022 missing at the percentage of missing volumes in 3.38.

A few of the subdivisions, Electrical Engineering and Electronics has 215 missing volumes, Astronomy has 29, Home Economics has 343, and Architecture and visual arts with 145.

What do you do with people who mutilate or steal books?" I haven't caught anyone," said Kleppinger.

But there is a provision where the numbers are turned over to the Dean of Students for prosecution, expulsion or some disciplinary action.

The mutilators strike terrorizing. They have generated local up to the federal level.

**Correction**

"In a story in the morning Daily (Jan. 16) on the Central Coast Surf Shop was the first "Tallman Surf shop on the Central Coast."

The Central Coast Surf Shop is not the first surf shop on the Central Coast, but the last.

The Morro Bay Surf Shop, 1141 L St., Morro Bay, has been in business for over two years, selling custom surfboards, wetsuits, clothing, hand products and other according to part-timer Carolina Cates.

**The second generation is here.**

One of our second generation calculators can save you countless hours and errors on route to your diploma and on the job thereafter. Each offers problem-solving technology you probably won't find on competitive calculators.

**New low price.**

**HP-21 Scientific.**

**$100.00**

The HP-21 makes short work of the technical calculations even so-called "non-technical" courses require today. It performs most arithmetic, log and trig calculations automatically. It's also the only calculator at its price that offers full display formatting; you can choose between fixed, decimal and scientific notation.

If you need a calculator that does more than simple arithmetic, this is it—not especially at its new low price.

**New.**

**HP-22 Business Management.**

**$165.00.**

The HP-22 takes the sting out of the calculations you face in business courses today, in management tomorrow. You can solve most time-value-of-money problems in seconds. You can breeze through business math calculations (loans, root, etc.) And, most important, you can use the HP-22's statistical functions to build existing data into more reliable figures. No other pocket calculator at any price offers a comparable combination of financial, math and statistical capabilities.

**New.**

**HP-25 Scientific Programmable.**

**$195.00.**

Our HP-25 does everything our HP-21 can do—and much, much more. It's programmable—means it can solve automatically the countless repetitive problems every science and engineering student faces. With an HP-25, you enter the keystrokes necessary to solve a repetitive problem only once. Thereafter, you just enter the variables and press the Run/Stop key for an almost instant answer displayed to 10 digits. You can time, precision, flexibility.

All three offer you our HP-25 efficient HP-10B logic system that cuts keystrokes and scratch pads. All three are easy to use (e.g. the HP-25 requires no prior programming experience). And all three are almost certainly on display at your bookstore.
Supreme Court Hears
Insurance Arguments

WASHINGTON (UPI) — Lawyers for two national companies argued to the Supreme Court Monday that disability insurance plans excluding pregnancy benefits do not discriminate against women.

Attorneys representing working women who challenged the practice in lower courts — and who countered that denial of benefits to expectant mothers lies in the fact of Congress' intent in legislation governing such matters — "Employees can exclude something so long as it cannot be proven that it is a pretext for invalidation," said attorney Salvin M. Grove of Chicago, representing Liberty Mutual Life Insurance Co.

He said Liberty's plan also excludes self-inflicted wounds, acts of suicide, and alcoholism.

Grove and attorney Thophilis C. Kammholz of Chicago, who represents the General Electric Co., urged the court to follow the reasoning of a 1974 decision that a California state disability insurance system for persons in private employment could exclude normal pregnancies, without violating the Constitution's guarantee of "equal protection of the laws."

The weekly medical and nutritional counseling are both available free of charge to all students at the Health Center. More information contact Ann Marie Wedwood at 544-4567.

What A Weigh To Go

Get a jump on the bulging bathing suit blues by joining the Health Center weight clinic, designed for both men and women in order to make losing a favorite pastime of many bored students.

The weekly program which begins tomorrow at 5 p.m. will cover the psychology of eating, nutritious snacks and how to eat cheerfully. Other subjects will be selected by the members of the group, once in progress.

Patty's Lie Detector Test

SAN FRANCISCO (UPI) — Patricia Hearst's attorneys sought Monday to have the favorable result of the lie detector test taken by the newspaper heiress admitted as evidence in her bank robbery trial, which begins next week.

The defense said the test was "a trap" designed to undermine the witness, but declined to discuss them. However, in the Lake City, Idaho, polygraph expert who conducted one of the two tests which indicated they were favorable and said he would testify for their admission.

A hearing before U.S. District Judge Oliver J. Carson a discuss the motions was set for Wednesday morning. Miss Hearst will be present, but defense attorneys declined to say whether she will testify as she did at an earlier hearing last week.

Self-Paced Basic Computer course, offered over the age of 18 — both men and women — of the subway work stoppage. Aimed at obtaining higher wages and improved to give the people more say in the country's institutions.

It is "obvious that without participation you cannot have democracy." said Arias. But he added that the "people is not negotiable," Prime Minister Carlos Arias Navarro said the powerful National council of the Movement, Spain's only legal political parties.

MUSTANGS WIN OVER WEITMONT

DENNIS HALLADAY
Daily Staff Writer

The Mustangs defeated Boise 41-0 in last Friday's meet. (Daily photo by Alan Halfhill)

The California Collegiate Athletic Association meet began the following night, in last Thursday's game, Cal Poly turned its best half of the year into a second tough dual meet of the season, or sometime next year.

Coaches Ernie Wheeler and head wrestling coach, Hitchcock. In its "second toughest dual meet of the year," Poly had an easy time of disposing of Boise 41-0.

Everything went the Mustangs way. Mark DiGirolamo, returning to action last weekend after a quarter in ineligible, showed he hadn't forgotten how to wrestle as he manhandled Hector Cedillo, 14-4, for the first of 19 straight Mustang wins.

At 126, Roger Flook pinned Leon Madden last in the second period. Flook roughly upped Madden throughout the match and he was penalized earlier in the second period for slamming the Bronco to the mat.

Dennis Bardiley then beat Randy Warnick, 13-0, and at this point the Mustangs were holding a commanding 24-0 lead. Kim Waack improved his record to 13-1 as he scored a superior decision over Don Evans, 19-3. Jurrell Thompson remained undefeated when he registered a 14-6 major decision over Steve Needs. Chris Anaya at 190 picked up Poly's second pin of the night. Another Pin was Tim Matthews with 44 seconds left in the bout.

Defeating Boise 41-0

The Mustangs will open California Collegiate Athletic Association play with a brief look to Northridge Jan. 8, and then to conference rival Cal State Los Angeles the following night.

In last Thursday's game, Cal Poly turned its best half of the year into a 50-14 victory over Western Oregon College. A private Christian school of 80 students nestled among the mansions of Beverly Hills.

Both teams got off to an even enough start, with Poly leading 8-3 after three minutes of play. For the next 11 and one-half minutes, however, the Mustangs shut out the Warriors and widened the score to 25-5. Western eventually began scoring, but found the going slow at best, thanks to 10 timeouts. The Mustangs led by as much as 46-14 with 5:36 left in the half, and the game would have been a nail biter had Westminster not blistered the Mustangs 8-0 before intermission.

It was practically a different Warrior team that took the floor in the second half. After making just two of its first 14 field goal attempts in the first half, Westminster connected on 10 of its first 14 in the second half.

The Mustangs did not know their poise when their lead shrank to 48-39 with 5:12 left to play, but continued to run their offense and play tight defense. Westminster's hot shooting predictably fell off and Cal Poly quickly responded by widening the gap to 15 at game's end.

Three men got all but 20 of the Mustangs' points, with Andre Keys netting 28, Gerald Jones scoring 10, and Paul Mills adding 14. Mills led the team in rebounds with 10.

In Saturday's contest, U.C. Irvine gave the Mustangs all they wanted, forcing the game into an overtime period before losing, 58-54. The loss was the Anteater's first at home in 11 games, and evened their record at 5-7.

Action in the first half of play centered around the officials and the free throw line, with Cal Poly being tied for ninth Most and Irvine scoring eight of its 22 points from the charity stripe.

With only a few seconds remaining in the half and the score tied at 20, things took an apparent turn for the worse for Cal Poly when Mills was called for a flagrant technical foul, and was ejected from the game. An enraged coach Wheeler came down to the same lane also.

"Go up for the rebound, grab it and then muscle your way back up to the basket," Wheeler told his players at halftime. "You'll get fouled and the officials will call them!"

The Mustangs carried out their coach's orders in the second half, and sure enough, Irvine had as many fouls in two minutes as they did the entire first half.

A couple of baskets by the Anteaters and several fouls by Poly Blanks Boise

Both sides still left Cal Poly with a 50-48 lead and 07 to play, but Keys gave Irvine the chance when he fouled Jeff Butler and sent him to the line for a one-and-one situation. Butler was perfect on both his shots, bringing on the overtime.

Irvine made the most of its second chance by jumping out to a 54-51 lead with 1:16 to go. But Jeff Kerl and Keys each scored a basket to give Poly a one-point edge. An over-anxious Anteater defense resulted in two costly over-anxious Anteater fouls, and were converted by the Mustangs into a four-point win.

One of the major inabilities of Cal Poly has been its inability to maintain a sizeable lead and dispatch an opponent without the nail-biting, last-minute comebacks that have been featured several times already this season.

But the team is a young one and the tendency is not unique to Cal Poly. The Mustangs are likely (if not hopeful) to pick up the killer instinct later on in the season, or sometime next year. 
The Cal Poly Women’s basketball team will be working for a win against its old rival Fresno State when it plays its first away game of the season Friday.

Earlier this year Poly fought Fresno for the consolation championship of the Cal Poly Premus Invitational Basketball Tournament. After leaving the court with a 51-point spread at half-time, Poly gave an excellent performance, edging closer to Fresno’s lead, and finally losing 67-59.

Coach Mary Stallard feels confident that the Mustangs will beat their old rival. Although the team has lost its last two games, the Mustangs played two of their best games when they were defeated by San Diego State and Cal State Fullerton last weekend.

“We played a super good game against San Diego,” coach Stallard said. “We had some tough breaks, but it was the best game we played so far. It helped the team gain confidence in themselves, which helped when we played Fullerton.”

Fullerton placed third in the national tournament of the Women’s Intercollegiate Athletic Conference. Fullerton boasts Nancy Dunkle, an All-American, who was strong in all facets. Nancy will be playing for the American team at the Olympics this summer. This is the first time women’s basketball has been included in the Olympics.

The game against Fullerton ended in a 105-46 score, but our team continued in trying to break their press, she said.

As for the upcoming game with Fresno, Coach Stallard said she was looking to play the way we have to beat them. The team must have its ability,”

Jan Albertoni, team captain for the game against Fullerton, agreed since its team’s ability.

“We are a together ball club, on the court and on the bench,” Jan said. “There are only two players returning from last year, all the rest are new. Yet we show a lot of maturity for a team that is young, in terms of experience in playing together. We have great morale and a super coach.”

The win-loss record for both the varsity and junior varsity is 0-3 for the conference tournament. For the total season the records are 0-3 for varsity, and 1-4 for junior varsity.

Cal Poly’s New Faces

Three members of the 1975 U.C. Riverside football team, which captured the California Collegiate Athletic Association championship the past two years have transferred to Cal Poly.

Riverside dropped its football program at the conclusion of the 1973 campaign. Because of that fact all squad members with remaining eligibility are permitted to transfer to other colleges and universities and will be eligible to compete during the 1976 season.

The former Highlanders currently enrolled in the winter quarter at Cal Poly are: All-conference fullback Jeff Jones, regular defensive end Tom Ray and backup quarterback Bob Antari, who doubled at a punt returner.

Jones, a 6-0, 212-pounder from San Jose’s Leland High School, was the second leading rusher in the conference last fall. He leads only Cal Poly’s record-breaking tailback Ken Davis.

If you ever get the chance to hire a Marine officer...grab him.

But if we have our way you’ll never get the chance.

For additional information see Captain Williams and Staff Sergeant Bailey, between the hours of 10 a.m. to 2 p.m., on 20 through 22 January 1976 in the Student Cafeteria.
