Who's Getting The Shaft in Ag?
Pacific Gas and Electric is beginning to look more like Richard Nixon every day. People are beginning to ask what did PG and E know about the Hoegri Fault Zone when did they know it.

As watergates evolved it became evident Nixon either knew about a coverup carried out by his subordinates or did not know what was happening within his own White House. He was either an irresponsible President or a crooked one. Either way he couldn't win.

PG and E is in a similar position and is feeling the fault. Recent discoveries have disclosed that the active Hoegri Fault Zone offshore from the Diablo Canyon Nuclear Power plant is longer and younger than previously believed, thus making it potentially more dangerous.

United States Geological Survey scientists believe the fault could cause an earthquake of up to 7.0 on the Richter scale. PG and E claims Diablo Canyon was originally designed to withstand a hypothetical earthquake of 6.75 directly beneath the plant.

The chairman of Californians for Nuclear Safeguards, David Pesonen, has requested the State Senate Committee on Public Utilities to investigate the charge that PG and E ignored the fault zone.

In the editorial on Thursday there are several misrepresentations which need to be cleared.

It is a fact that the Marching Band overspent its budget during its trip to Long Beach. Over $600 was spent on meals paid for by the students who went on the trip. In this case, participants, not government, came to the rescue.

I do not accept the verdict of staying home. Neither the students, faculty, administration, nor the governor were out to say home. I couldn't make a value judgment on the gaining prestige for the University is a necessity. You will have to decide what I mean when you are going to get a job. It implied that I recommend running student groups to gain additional support. Here is what I meant:

"As I don't have any funds unless they are someone else, and I can rent them to do that."

William Johnson

**Quake Problem Plagues Diablo Power Plant**

by JANET MCBRINE
Daily Staff Writer

Pacific Gas and Electric Co. was accused Tuesday of ignoring a potential earth-quake hazard at the site of its Diablo Canyon nuclear power plant.

A state Senate committee was asked to conduct a legislative probe into the charge made by David Pruten, chairman of Californians for Nuclear Safety, and SafeGuarda. The group is battling the nuclear power industry that will appear on the June primary election ballot.

"We must face the fact that other PG and E is unable to find an 8-mile-long earthquake fault at the doorstep of Diablo Canyon atomic plant, or it is found the fault and deliberately covered up the discovery," said Pruten in testimony to the Senate Committee on Public Utilities, Transit and Energy.

Evidently recently presented by the U.S. Geological Survey has completed analyzing and evaluating the facts," said Devlin. "If the Senate committee is looking for evidence of some kind of 'cover-up' it will be a very short investigation.

It has been estimated fault passes as close as 2.5 miles to the reactor.

"Neither conclusion is spurred any confidence in the atomic industry's ability to safeguard the public," he continued. "It requires for protection by a committee endowed with the power of subpoena than previously believed. It has been estimated the fault passes as close as 2.5 miles to the reactor site.

"I think it's a little premature to start another study before the NRC has brought the fault again under examination by the Nuclear Regulatory Commission," said Devlin. The evidence suggests the Hosgri Fault Zone, lying off the coast from the nuclear facilities at Diablo Canyon, is in both young and long power of submarine than previously believed. It has been estimated the fault passes as close as 2.5 miles to the reactor site.

"I think it's a little premature to start another study before the NRC has brought the fault again under examination by the Nuclear Regulatory Commission," said Devlin. The evidence suggests the Hosgri Fault Zone, lying off the coast from the nuclear facilities at Diablo Canyon, is in both young and long power of submarine than previously believed. It has been estimated the fault passes as close as 2.5 miles to the reactor site.

Devlin speculated that if nuclear power plants were allowed to continue to operate, there would be a very short investigation.

Witnesses to Alquist's committee have declared as well that electric bills would rise for the consumer if the initiative was passed.

**Skin Magazines: A Slick Way To Keep Abrace Of The News**

by KATIE KEEVIL
Daily Staff Writer

P图标s are popular at Cal Poly and current events collect as audience also.

A recent survey by El Corral Bookstore showed the best-selling monthly magazines to be Penthouse and Playboy while Newsweek was the popular weekly publication.

Penthouse, which includes the Penthouse and Playboy

The magazine racks are at the back of the bookstore, near what students consider it a service of the bookstore when students read "Current Events" magazines.

Is The School Of Ag Lubricating Sexism?

Ag engineering course is required of all, but women are allowed to deviate

Terry Grimm, OH major, at helm of tractor (Daily photo by Michael Shaffer).

by JUNE BROWN Daily Staff Writer

There is a scratch in the works in the School of Agriculture here involving questions of mechanics courses, but it is debatable what the nuts and bolts of the issue really are and who is getting screwed.

The flap has been fanned from a policy which allows women students to take additional agricultural engineering (AE) courses.

For the few, who have to take the courses, it seems like a pain rather than a pleasure.

But in many of the women, who are willing to deviate, the policy smacks a "juniors sex" outlook toward women studying agriculture.

All animal science majors must take either agricultural mechanics (AE) or AE E courses.

Richard Johnson, head of the Animal Science Department, believes the AE classes are valid and could help a woman in a dominant atmosphere.

"A woman needs to know if a repairman is servicing her car, if he can't figure out the mechanics it would be helpful at other times, too," he said. "So that she can be a better helper." The "open letter" explains why women are required to take the AE mechanics courses—keeping women workers with a justifiable reason is needed.

"The knowledge gained in working from the fundamental course AE 121) will be profoundly relevant in enabling them to make home household and farm repairs and take also the necessary step that will do justice to the course taken for the four additional units required in AE 125, 126, 127 and 128, 129."

The open letter also explains that women are not required to take the AE 122, 123, 124 courses if they are not mechanical, or if they are not interested.

But many women have been defying the policy and taking the AE courses.

"The women who have taken these courses have been doing well in the courses," Johnson said. "The women who have taken these courses have been getting good grades in the courses." The women who have taken these courses have been getting good grades in the courses.

"The students have been doing well in the courses," Johnson said. "The students who have taken these courses have been getting good grades in the courses."

"Some kids feel they shouldn't have to take AE 121. But I think it's a good basic course for home repairs in this age of women's lib," Rich said. "It should be up to the student's respective department as to whether or not it could be substituted, though."

Several girls have come back and said they were glad they had taken AE mechanics—since they were finished with it, Rich said.

Students in AE 121 learn basic skills such as springing light switches, fixing lawn washers, adding oil to the them, and repairing or installing a sprinkler system.

Men seem to hold the advantage in Rich's classes which are generally com-

Pautz said, "I suppose it is discrimination," he said.

A woman in poultry science is encouraged to take AE mechanics, if not for use in her career than as an additional skill for the home. "I wish my wife knew some of the things they teach in ag mechanics. She's all thumbs when it comes to a hammer and nail," Pautz said. The AE mechanics deviation rule does not hold true for the opposite sex in the Poultry Industry Department. "Men are expected to do these skills when they go into the poultry industry," Pautz commented.

All instructors Glenn Rich believes it is valid for the Animal Science OH and Poultry students to take AE mechanics.

"Some kids feel they shouldn't have to take AE 121. But I think it's a good basic course for home repairs in this age of women's lib," Rich said. "It should be up to the student's respective department as to whether or not it could be substituted, though."

**Poly Twirlers Dance To The Call Of A Dance Professional**

by DAN LALLY
Daily Staff Writer

Like an auctioneer culling gics at a horse auction, Dave Brown culls the Poly Twirlers through the different square dance steps as the tune of Rubert Dally, spellbound by the portentous voice of the 21-year-old Ag Business major, the dancers move rhythmically through allemande lefts, rights and lefts, grands and promenades until the dancing squares become circles of confusion.

There is an art in the different calls made to turn the couples, spin them, separate and bring them together again, and Brown seems to have mastered this technique. The colloquial rhyming between the calls has its own country flavor.

A few of Brown’s fillers as he calls are: “Chicken in a bread pan picking out dough. Get your partner and天鹅 gong, and 'Chicken in a fence,oppotium on a rail,* get your honey and let’s set sail."

Brown didn’t start square dancing until he was a junior at San Luis Obispo Senior High.

The dancing class he took wasn’t at the high school, however, it was a Monday night class taught by the Twirlers.

“I learned to square dance first at Cal Poly,” says Brown “It just appealed to me and I went.”

Just about a year later he started culling to squares which he has been doing ever since. His calling has developed to where he has his own sound system for the dances he calls to.

Calling to the squares just seems to be part of Brown’s personality. Born and raised in San Luis Obispo, he pictures himself as a ranch kid.

“I’m just a basic farmer,” says Brown. “I wish I could stay on a ranch because I enjoyed it. He added that “work is good for you, it’s healthy.”

The caller is also a self-taught musician.

Reserves Has New Chairman

PINE RIDGE, S.D. UPI — Richard "Dick" Wilson, the barrel-chested plumber who was a chief target of the occupiers of the hamlet of Wounded Knee on the Pine Ridge Oglala Sioux Reservation three years ago, has been deposed as tribal chairman, final results showed Wednesday.

Wilson, one of the few ever to be elected to two terms as tribal leader, was ousted in Tuesday's election by Allen C. Smith, the former Bureau of Indian Affairs supervisor on the reservation. 1,801 to 1,094.

Wilson became a national figure of sorts in 1973 when a band of armed Indians and sympathizers, led by the American Indian Movement, took over the historic attit...
Pot May Trigger Insanity

NEW YORK (UP!) - Excessive use of marijuana probably triggers insanity only in persons who are little unbalanced already, University of California researcher said Tuesday. Dr. Sidney Cohen was among authorities participating in a conference on marijuana sponsored by the National Institute on Drug Abuse.

Cohen, an investigator of marijuana for four years, said in a 94-day study of 50 pot users, one became psychotic. He was something like a pre-schizophrenic, according to the investigator. Cohen said that marijuana seemed to trigger insanity only in persons of a pre-schizophrenic nature.

An Unnecessary Problem

by JON HASTINGS

DAILY SPORTS EDITOR

Mike Dahl, a frustrated basketball player who was upset with a call, slammed the ball to the hardwood and while screaming and yelling uncontrollably, slammed the referee.

"Why don’t you just put on a green jersey on," yelled Mike as he was screaming at the mouth. "You haven’t given us one break all night, you sonuvabitch." The referee had no other choice but to assess two technicals on Mike and eject him from the game.

Comment

Was this incident taken out of the archives of the NCAA finals? Or was it just a important conference game where the composer of players could understandably be lacking?

The incident, however ridiculous it may sound, occurred in a recent intramural basketball game at Cal Poly. Mike is an average basketball player, Mark is an average football player, Mike is probably a great guy, he just happens to take his basketball seriously. That's fine, but there is a limit.

In an era where many people are ragging on the overreaction of winning in big time college athletics, is it the intramural not the intercollegiate athlete, that is in trouble.

Cal Poly has a well rounded and well organized intramural program on campus. Many of the participants, however, are choosing to ignore intramural contests. Intramural contests have a time limiting factor to begin with and most of that time, in many games, is spent arguing. Some of the participants are great at it. They should use their talent in front of a large number of people who are out there to have fun.

The officials are usually P.E. majors and intramural basketball players who are doing stuff like Mike a favor by being out there for the mostly two hours an hour.

The average score in an intramural official receives in one night would make Mende Rudolph contemplate retirement. And he makes over a hundred thousand dollars a year.

Intramurals are trying to give ex-athletics and non-athletics alike, an opportunity to have some fun. In most cases, it succeeds. But that action is often hard to achieve when people insist on playing the games as if the outcome was a life or death situation.

Competition is great. Winning is important. But let's keep it in perspective.

Drought Hasn't Affected Poly's Water Management

As the rain still refuses to fall, the people in charge of bringing water to Cal Poly are not worried.

"The drought is not bothering us at all," said Executive Dean E. Douglas Gerard in charge of facilities planning.

We are judicious in the use of water, and the drought isn't affecting management.

Cal Poly has two sources of water. The primary one is Santa Margarita Lake. The school pays the city of San Luis Obispo from $5,000 to $6,000 per month for this water.

The raw ass-on-the-shelf is Whole Rock Reservoir, built in 1900 and jointly owned by Cal Poly, the City of San Luis Obispo, and the City of Arroyo Grande. It's nearly full. The city and Cal Poly have chosen to use it as a reserve. The Men's College gets most of its water from there, supplemented by a small processing plant on Chorro Creek.

"We have elected not to use Whole Rock water," said Gerard, "because the city uses Santa Margarita Lake water." Gerard indicated it was more convenient to use water from the same source.

The biggest use for water at Cal Poly, according to Gerard, is domestic. The dorms and the food services use the most water. Irrigation is also a big user. Raw water, which is cheaper, is used for irrigation. The area is processed at the City Water Treatment Plant, owned by the three partners of Whole Rock, capable of treating water from both major sources.

Even with the secure backup of Whole Rock, Gerard doesn't foresee a time when Cal Poly would have to use that water.

"There have never been to my knowledge, adverse affects from drought at Cal Poly," he said.

"The drought has been no trouble whatever," Young said. "The only extra water we have had to use was a little for landscaping."

"Young feels that fog and dew have helped minimize the damage done by the drought.

He is hopeful that the drought will not last much longer. Most of our moisture comes in February, March and April. If we don't get rain in those months, we'll be in trouble," he says.

"We have enough to last through twenty years without any trouble at all," he says. Instead, he is concerned about electricity.

"There is no good snow pack right now in the Western United States," said Young. "And without it, the hydroelectric plants won't generate electricity."
