Was it recession?

Was it really the worst depression since the Great Depression?

Jobs were going begging while unemployment figures soared and unemployment compensation was extended from 26 to 52 weeks and to 46 weeks for "supplementary unemployment benefits." Can it be that unemployment "insurance" — which in any event is something that the advanced, civilized nations — has been overrated into a counter incentive to work when one is under no apparent threat to the unemployment situation?

One reason is that the attractiveness of unemployment compensation is further enhanced by the fact that, because it is not taxed like other income, the net difference between taxed income when a man or woman is employed and when he or she is laid off may be very small. That is why, of course, Florida resorts boomed during the recession as hordes of jobless northerners took their unemployment compensation South to wait out the recession in the sun.

One would do well to keep all this firmly in mind when he hears in the presidential campaign now in the highest heat, the Hawtines so-called full-employment bill.

Harvard economist Martin Feldstein in a study for the Brookings Institution, finds that when unemployment was at its peak last year, about 75 per cent of those laid off were not immediately seeking re-employment. Rather, they were using the time to do such things as repair and put fresh paint on their homes.

What an Archie needs and what an Archie gets in school

Is architectural education in the United States in a state of evolution, revolution—or dissolution?

In the past several years, architecture schools have shown a decided preference for "real-world" education that gives the student his proper role in society. Architects are no longer the stern advocates paid technicians of their clients or of an abstract idealism, but rather as responsible members of the society in which they live. Architects who meet the needs of the people in a manner that makes the client who provides the money, are the models in schools today.

Today's architects need new tools—some of them social, some behavioral. These tools are in addition to, not replacements for, increased technical skills based on rigorous research. In a world filled with scientists who can quantitatively spell their way to a comfortable middle dimension, architects are forced to rely on more than intuition and visual appeal—although the idea of architecture as art is still an important premise of the profession.

The turmoil of the 18th's led to the rejection of absolute values; the needs of individuals became predominant. This trend, too, has begun to be evident in architectural training. The kind of projects currently given to design studios varies from a building whose role in terms of the human scale and social impact, where previously formal had been the sole criterion.

And architecture schools for the first time are becoming seriously interested in research as a means for finding some of the answers for new and new buildings.

Not many years ago, economics, or psychology or political science were only optional for would-be architects. Now there are fill time professors from these disciplines on the faculties of many architectural schools. An unofficial committee of architects and arch archaeologists, however, in the United States now offer courses in the social and behavioral sciences as a part of their regular curricula.

What has altered the practice of architecture, the training for it, and the kinds of buildings that are being put up, is the transition away from an emphasis on the economics of the business to nearly as attractive financially as working for a living, socialized planning and billions of tax dollars for job subsidies will represent merely the wrong solution for a maldevised problem clung to, curiously by politicians and ideologues who fondly recollect the Great Depression—a return to which their way is a sure way.

But against the Brookings Institution, finds unemployment was at its peak about 47 per cent of those laid off immediately seeking re-employment. Rather, they were using the time to do such things as repairs and put fresh paint on their homes.

Citing: Considering your editorial on "architects" in the Sept. 30 issue of the Mustang Daily.

I agree that there is a lack of architecture students at the College of Arts and Sciences. While it is important to have art and architecture programs that are supported and funded, it is also important to have a balance between all departments.

The composition of the committee was also bad. The student body did not have any representation. The faculty did not have any representation. The administration and police personnel to decide the future of the college was not fair to the students. This makes me worry. A similar fate might befall other schools if what will be included in the proposed game plan.

The possibilities for the future are limited. I do not expect the future to be that optimistic. The future looks as if the college will be neglected. What can be done to improve the situation?

Poly escapes record rain
with only minor damage

by STEVEN CHURM
Daily Cal-Beker

Despite minor damage, Cal Poly was
relieved to have seen an electronic current
that caused power outages and heavy
flooding in many parts of San Luis Obispo
County on Sunday afternoon.

Lightning strike electrical transmission
lines on Monday caused the礼
lights in some communities.

"We had some minor flooding,
but it wasn't too bad," Van De Vanter
said.

The storm, which provided some
relief from a record-breaking heat wave,
was described by Van De Vanter as a
"once-in-a-lifetime" event.

The storm came as a result of a
high-pressure system over the Pacific
Ocean that moved inland and caused
flooding in several counties.

Van De Vanter said the storm
caused minor flooding and
power outages in some areas of the
county, but he was pleased with the
outcomes.

Source of Energy: No. 5 of a series
If the Middle East were in the Middle West, electricity would be cheaper.

Just five years ago we burned less than 10% of the natural gas used to generate electricity. That amounted to less than four percent of the power generated by the nation's total fossil fuel power plants. Natural gas was used for less than 60% of the time. The fuel oil burned then was about $2.50 a barrel and most of it came from California fields.

These have changed. Today we're using more oil gas because we're running low on gas supplies for this type of use. There isn't enough gas to go around and we have had to cut demand by our own power plants and try to industrial customers to maintain supplies to homes and other high priority users.

We now use about 25% of our total production which we expect to be about 50% of our total natural gas production by 1980. We have about 30% of our total energy consumption from oil. This is about 15% of the total energy consumption. The estimated cost of oil to be burned this year is more than $35 million compared to less than $4 million five years ago. That's the main reason your electric bills have gone up.

Other sources of energy

Oil and gas are two of the five major sources of primary energy, supplying 20% of the nation's energy. The others are hydroelectric, geothermal steam (from The Geysers) and nuclear fusion.

Northern California has one of the most extensive hydro systems in the nation. It produces relatively inexpensive electricity. But recently oil, economical and acceptable hydro sites are already being developed.

We have the nation's only geothermal power development, the world's largest. We have a geothermal power plant in the state of California.

Coal is the sixth source of primary energy, we have recently acquired substantial reserves in Utah, West, Utah, perhaps in, other areas, thermal differences, fusion and other developing technologies may someday help us supply your energy. Some may take years to prove out. Others may never become efficient or reliable enough to be competitive. But if and when they are ready, we'll be ready, too. In the meantime, we must meet your demands for electricity.

Facing the problem together

The demand for electricity continues to grow, partly because populations

by BETSY LOVELAND

In this presidential election year a new political force is stirring the electorate in San Luis Obispo County. The organization: The People's Wedge. Their goal: Raising the political consciousness of voters in the county.

City Councilman Keith Gurnse, one of the group's founders said the group was formed mainly to challenge the city rock concert ordinance that banned major musical events in the city.

"If the Middle East were in the Middle West, electricity would be cheaper."

"According to Gurnse, "The People's Wedge newsletter is mainly to inform people and to expose things in town that are changing."

Another concert sponsored by the group, primarily to test the city's anti-concert ordinance. All people who bought tickets to the concert received a year membership in The People's Wedge.

Gurnse said over 4,000 people are expected at the concert, and urges people to come in carpools because parking may be a problem.

"The Wedge is turning into a pretty undeniable force, especially since we will speak with our numbers, not our money."

Gurnse, former Cuesta College Associated Student Body president, said: "Howell is not an ideological figurehead."

"The concerts are a way to attract the attention to the anti-concert ordinance. The issue is still in court, but we plan to set the precedent that rock concerts are permissible in SLO County."

Meetings of the group are held Thursday at 7 p.m. in Arroyo Grande. Group activities include a newsletter distributed for the first time this week. According to Gurnse, "The People's Wedge newsletter is mainly to inform people and to expose things in town that are changing."

Students may get lost looking for stray pets

by MERRILL McCARTY
Daily Staff Writer

Students who brought a pet to school for company should be aware of two things.

First, a leash law covers every square inch of San Luis Obispo County, and second, the Department of Animal Regulation has moved.

The law includes all incorporated and unincorporated areas out to the farthest road one can find. According to Robert Dollahite, supervisor of the Department of Animal Regulation, 8 percent of a field officer’s time is taken up with answering complaints about stray animals. And the number of complaints has risen substantially since Cal Poly’s Fall quarter started, Dollahite said.

The major concern of Dollahite is that Cal Poly students don’t know where to go when looking for a lost pet. On Aug. 1, the county opened its new shelter north of San Luis Obispo on Highway 1. It is past the men’s colony on the left side of the road, the turnout marked by a sign stating Sheriff’s and County Operational.

“We don’t want to destroy someone’s pet simply because they didn’t know we were here,” said Dollahite.

Half of the animals obtained by the shelter are cats, most of them captured in live traps set by citizens. The traps are available from the animal shelter.

A license for a dog in San Luis Obispo County costs $5. An accurate address and phone number will ensure that the department will attempt to notify the owner. The waiting period of 72 hours will be extended indefinitely until all reasonable efforts have been made to notify the animal’s owner.

There are no cat licenses, but it is advised that some form of identification be placed on cats.

An out-of-county license, however, is useful.

“That would take a lot of phone work,” said Dollahite, “and we only have two people in our office staff.”

The procedure to reclaim a licensed dog is to identify it and pay a $10 impounding fee for the first offense in a calendar year. The fee is $20 for a second offense and $50 for a third.

Impounding fees for unlicensed dogs are the same, but a license must be purchased, and, if a rabies vaccination can’t be proved, a $7.50 deposit must be left at the shelter to insure the animal is vaccinated.

The animal shelter is open from 8 a.m. to 5 p.m. Monday through Saturday. It is not open Sunday or on holidays.

The procedure on the Cal Poly campus is for the University Police to catch stray animals, which are held in a kennel near the police headquarters for about a day. If the animal goes unlabeled it is handed over to county officers.

The Department of Animal Regulation is working to inform people about the consequences of letting their animals roam free. Besides taking the risk of losing a pet, people also take a risk of being sued for any property damage their animal might cause.

Molesting livestock is a serious problem. A dog’s owner is liable for any livestock damage committed by the dog, and a livestock owner is within his rights to shoot any dog caught doing so, Dollahite said.

In addition, any traffic accidents caused by a dog in the streets are the owner’s responsibility.

We don’t want to destroy someone’s pet simply because they didn’t know we were here.'
Most sophomores, freshmen and new students probably don't even know what a TG is since the last ones held 1974. A TG is a party for Cal Poly students but "it just be a group of people in the dorm area," says Steve Holman, a member of Alpha Sigma.

"People said it was a good idea, but no one showed," explained Holman about the TG's fate. Besides, TG is for Friday and I just hope people know what it is.

Another reason given for the low turnout last Friday was the police cracking the party and finding that the TG was in session.

A spokesman for the San Luis Obispo Police Department said there was no city ordinance against the number of people at a party. Outside the county, the only local code for how many people can congregate in a small area. Also, there is not new and never has been any law on parking at TGs.

"The amount of crime going on at a party determines whether it is an unlawful assembly," said the cops. "If it's lawful, there's not anything we're going to do about it."

The City of this situation, though, is how do you keep a TG lawful?" "We've conquered all of our problems," said Holman. "There's nothing wrong with a TG if everything goes right.

Various sold sanitary facilities to stop people from rustling on the neighbors' lawns and getting up to all sorts of tricks, such as parking in someone's driveway.

"You can't have any more than three complaints for a party. If you have more than that they close you down," said Holman.

So the TG is on for today, weather permitting.

"I don't know what people will have some answers for history TGs and we're not going to send to Muscular Dystrophy," said Holman. "That's college without a beer party!"

TGs try a charitable twist

by CHUCK DUNCAN

Daily Staff Writer

A new era in Theta Chi's Friday parties in San Luis Obispo may have started after a two-year moratorium on the TGs in the town.

Alpha Sigma Fraternity's Peace Lane, held the first TG of the year last Friday, but with a new twist. With all TG parties, Barrows is setting the charge and the first house takes the profit for its own use, but Alpha Sigma turns back all the profit to the Muscular Dystrophy (MD) campaign office in Burbank.

Muscular Dystrophy is a chronic, noncontagious disease marked by a progressive wasting of the muscles.

"We want to do something that's more profitable to our neighbors and the community," said Don Long, vice president of Alpha Sigma. "We thought it was a good idea to raise money for a good cause and have a good time."

Women's team seeks a plus

A tough schedule from Cal Poly women's volleyball team but the female spikers will start the upward climb from the past season point they have ever had.

Providing positive impact, according to the team's coach Linda McArthur, is the two weeks the women spent in presence training camp. This is the first season the team will begin with that advantage.

Additional funds provided to Women's Intercollegiate Athletics made the presence practice possible.

"They started at a lower skill level than last year's team, but the rate of improvement is better," McArthur added. Two returning starters, Kim Frank and Tammy Trush could lead the way for the Mustangs this year, but McArthur does not put any player above the others. "The team does not want anybody to be above anyone else," McArthur said. "They want everyone to be equal."

Whether the Mustangs added practice will make a difference will be decided Friday when McArthur's team plays Cal Poly Pomona in Pomona to open conference play.

At Nomadic Furnishings, we have selected the finest, most durable furnishings possible. You may choose from a complete selection of imported and domestic items, that are easy to move, easy to handle, and fun to live with.

Women's volleyball team hopes to jump ahead as season kicks off Friday. (Daily photo by Louis Beck)

Soccer team loses edge... and three-game tourney

by CRAIG KEEN
Daily Sports Editor

Cal Poly's soccer team arrived out of shape and overwhelmed for the Par Western Tournament at UC Santa Barbara Sept. 11 and left three losses later. The Mustangs were forced to play the three-day tourney after only eight days of practice. The situation put a clamp on the team's chances for victory since Cal Poly's opponents had at least a month to prepare.

Cal Poly, a Division II team in the Southern California Intercollegiate Soccer Association, faced three stronger Division I teams.

"We played teams that were more aggressive and more physical than the teams we have previously met," said Coach Manuel Castillas Wednesday. "They play in a higher caliber division."

The Mustangs opened against Chico State, the eventual winner of the tournament, and lost 0-6. The next game was dropped to UCSB in a closely matched affair, 1-0.

The third, a 3-0 game against Chaminade, was confusing in that the starting time was changed and was lost for a few weeks. "Bonchonsky did a really good job," Castillas said. "I expect him to help us out next week. He has the strongest leg and is the most accurate kicker on the team.

Cal Poly opens league play Saturday against Chapman College in Anaheim. Chapman was the division winner last year.

Hewlett-Packard wrote the book on advanced pocket calculators.

And it's yours free!

Hewlett-Packard built the world's first advanced pocket calculator back in 1971. As it led the way ever since.

If you're about to invest in your first pocket calculator—one that will serve you through college and beyond—you'll need all the information you can get to make a wise decision. That's why Hewlett-Packard put together an objective, informative 24-page guide entitled, "What To Look For Before You Buy An Advanced Calculator" And it's yours—free!

In it you will find such helpful information as:
- A survey of types of calculations available: Simple; Convenient; Financial; Business; Scientific.
- Programming: Logic systems. Applications: Calculations; Functions; Construction; Accounting; Memory. Service and much, much more.

Get your free copy of 'What To Look For Before You Buy An Advanced Calculator' at your campus bookstore or telephone 800-536-7922 (In Calif. 800-662-9662) toll-free for the name of your nearest dealer.

HEWLETT-PACKARD PRESENTS
THE FIRST FAMILY OF ADVANCED CALCULATORS.

HP-21 Scientific.
New low price: $80.00*

The HP-21 makes short work of the technical calculations even scowled "nontechnical" courses require. If you need a calculator for more than simple arithmetic—this is it—especially at its new low price.

- Performs all standard log and trig functions (in radians or degrees).
- Performs rectangular/polar conversion, rectangular/polar coordinates.
- Performs all standard log and trig functions.
- Performs rates of return and discounted cash flows for investment analysis.
- Performs extended percent calculations, accumulated interest, amortization, etc.
- 10 addable memories.
- Full decimal display control.

What to look for before you buy an advanced calculator.

The HP-21 Scientific is our keystroke programmable scientific calculator. It can solve automatically the repetitive problems every science and engineering student faces. What's more, its Continuous Memory capability lets you retain programs and data even when it's turned off.

- Continuous memory capability
- 72 built-in functions and operations.
- Keystroke programmability
- Branching, conditional test and full editing capability.
- Eight addressable memories.

- We also offer the HP-25 (without the Continuous Memory feature) for $145.00*

HP-22 Business Management
$165.00*

The HP-22 easily handles the kinds of calculations you face in business courses today, in management tomorrow. Breeze through business math calculations. Build existing statistical data into reliable forecasts. If you're going into business administration, this is the calculator for you.

- Combines financial, mathematical and statistical capabilities.
- Performs complex time-value-of-money computations including interest rates.
- Performs rates of return and discounted cash flows for investment analysis.
- Performs extended percent calculations, accumulated interest, amortization, etc.
- 20 memories, 40 program steps.
- Fixed decimal, scientific or engineering display formats.

The HP-25C Scientific Programmable with Continuous Memory.

The HP-25C is our keystroke programmable scientific calculator. It can solve automatically the repetitive problems every science and engineering student faces. What's more, its Continuous Memory capability lets you retain programs and data even when it's turned off.

- Continuous memory capability
- 72 built-in functions and operations.
- Keystroke programmability
- Branching, conditional test and full editing capability.
- Eight addressable memories.

- We also offer the HP-25 (without the Continuous Memory feature) for $145.00*

HP-27 Scientific/Plus
$200.00*

The HP-27 is for the science or engineering student—whose work extends into business administration. The reason: It features every pre-programmed scientific function we've ever offered, plus comprehensive tax and financial functions. That's why we've dubbed it our Scientific/Plus.

- 28 pre-programmed exponential, log and trig functions. 15 statistical functions. 60 financial functions — 53 in all.
- 10 addressable memories — 20 memories in all.
- 6 selective clearing options give you flexible use of memories.
- 4-1/2 selective decimal, scientific or engineering display formats.

And it's yours free! *Suggested retail price, excluding applicable state and local taxes — Continental U.S., Alaska and Hawaii only.
