California energy

We Californians sit in our cocoon of balmy weather and look eastward to the energy crises. "First, one of the school's two main transformers broke down, leaving the campus with only half the normal power available. Corridor lights were shut off to prevent straining the remaining transformers."

Then on Friday, Jan. 28, another power failure struck the campus due to the breakdown and loss of lighting in many buildings. "I was in the library at the time, and it was rather surprising to have the lights suddenly extinguish and the heater slowly quit its job," said Lillian Ceballos. "Librarians had to go out and turn on the opening window blinds for light. It makes you wonder how much electricity is taken for granted."

It is plain that we need and will need more energy in the future, if California is not to be inundated by people fleeing the cold of the eastern states. "This is a dangerous fallacy, and we would do well to look at the plight of our eastern countrymen as a warning of what we face."

A new world record

The Carter administration is wasting no time setting the time line to the conduct of foreign policy. By publicly rebuking Checoslovakia for harassing human rights activists in violation of the Helsinki declaration, the State Department has taken an unusual and pointed step. It has thereby sent out a signal not only to the Prague government but, more importantly, to Moscow and indeed governments everywhere that it intends to pay more attention to human rights in the spirit of President Carter's pledge that "because we are free we can never be indifferent to the fate of freedom elsewhere."

Long believing that the United States has somehow impaired its image as a defender and advocate of human freedoms, we can only applaud this step. In too many instances over the past few years the United States government has failed to seize opportune occasions to take a forceful moral position. We recognize at the same time that the pursuit of morality in foreign policy is a difficult and complex one. It must be remembered that only a few of the nations of the world today subscribe to or share America's democratic values and that the U.S. must deal with and even often assist governments whose policies are antithetical to its own.

What policymakers must try to do is balance judiciously the requirement of maintaining peace and stability in the world, improving the economic lot of peoples everywhere, and fostering governments' attention to human rights wherever this is feasible. The latter position is important. For if Washington seriously means observation of civil rights a condition of cooperation—with the Russians, for instance—it could produce the opposite reaction, suffering the backlash in a host of crises and bringing about rather than easing tension."

"California energy"

Energy, particularly natural gas. Such a strain has been placed on supplies that schools, government offices, and stores have been closed to save fuel for heating homes. Add to this the fact that approximately two million workers are being laid off because of plant shutdown, and the economic ramifications of this make the situation look rather bleak.

Perhaps equally disturbing, however, is the predominant California view saying, "We're sure it's just a spell, and when we get through with it, we'll worry about energy crises."

This is a dangerous fallacy, and we would do well to look at the plight of our eastern countrymen as a warning of what we face. What are you doing in a world starved for energy? Do you have a use for electricity? Where do you have to worry about such energy crises?

Poly affirmative action plan approved

by GITA BERRYEBA
Daily Staff Writer

Many people who have tried to look for a single polytechnic institution have been frustrated through proposed classes on the list and are familiar with the term "equal opportunity plan." Equal opportunity employment is the subject of Cal Poly's Affirmative Action Plan that was approved last November along with similar plans for each of the other 18 institutions of the California State University and Colleges system.

Cal Poly's plan restores the university's commitment to recruit, hire, train and retain a diverse faculty and administration staff, and to enroll a diverse student body in all job classifications according to race, religion, age, sex, national origin, veteran status or handicapping.

"This is a plan to bring in any substantial change to the campus hiring procedures," said William Blikkauker, plans specialist.

The voluminous Affirmative Action Plan contains a set of detailed goals and timetables for the employment of women and ethnic minorities. These goals and timetables are based on national data and criteria provided by HSW.

"They are not quotas," Wilkins emphasized. "They are goals and timetables based on a study of utilization analysis." The plan establishes for the academic area (faculty) a goal of 18 additional male minority members and 21 additional women members to be employed between now and September, 1979. Goals for the support staff, which is divided into several categories, include a goal of 12 additional male minorities and 27 additional women support staff.

According to Wilkins, these goals affect all areas of the university that have the right to hire, such as dormitory residents assistance (RAs). The plan covers some 3,800 Poly employees, including those employed by the University of California, Associated Students, Cal Poly Foundation, and the Career Center.

Under Federal regulations an approved affirmative action program is a requirement for educational institutions receiving Federal contracts.

When asked if there is a possibility that reverse discrimination could occur against white males for example—Wilkins responded: "I certainly don't think so... and I hope not.

"It is possible that those who would not accept the plan could file a lawsuit as an excuse for not accepting affirmative action."

Wilkins wrote a large part of the plan with input from Cal Poly President Robert E. Kennedy, administrative dean and other administrators.

"We review all appointments and staff hiring," Wilkins explained, "and I try to make sure that as far as possible, equal opportunity has taken place first before an appointment."

Wilkins has been attending numerous meetings with the school deans to hear their comments and recommendations concerning the plan and its implementation. The plan's implementation will also be monitored by a department by department basis.

"New job openings will be created as part of the plan," Kennedy explained. Rather, goals will be approached by replac-

Filming of "The Stunt" yesterday on Monterey Street. (Daily photo by Bill Faulkner)

ing people who die or retire and with additional hiring where new job openings occur.

He commented on reverse discrimination: "I can't be certain that there won't be some people who will consider the implementation of goals set in the Federal Affirmative Action Plan as a form of reverse discrimination. However, I would hope that they would understand that in the final analysis we are expected to appoint only the most qualified individuals."

Kennedy noted since he has been president at Cal Poly, the minority ratio of all employees in academic and non-academic positions has risen from three per cent to 15 per cent.

Although the programs for the CSUC Schools are fairly similar, the same formal, Kennedy described some of the differences that must be taken into account in Cal Poly's situation.

"It is difficult to compare a rural area to an urban center," he explained.

He explained that Cal Poly is a technical school and "the kind of people we're trying for to take faculty positions graduated in greater numbers in liberal arts fields.

"Where we're hiring there's not always the availability," he noted.

Kennedy also noted that Cal Poly prepared its first Affirmative Action Plan in February and changes had to be made for a revised plan compiled in July, 1977.

"We were rare early," he commented. "The plan was held by orders of the chancellor's office. The 19 State Colleges and University plans could be approved all at one time.

Californians asked to curb natural gas use

by STEVEN CHURM
O.R. News Co-Editor

Southern California Gas and Electric Co. officials yesterday urged Central Coast industrial and residential natural gas users to curb consumption to conserve the precious fuel for other parts of the nation suffering from shortages. O.P. Cha, a Southern California Gas and Electric Co. spokesman said the utility company has asked Los Angeles County to curb luxury uses to conserve natural gas for the country.

The utility company's chairman, John M. F. Batinovich to Californians to conserve natural gas.

According to Cha voluntary order is effective immediately in Los Angeles County and is only in effect for the San Gabriel Valley portion of Los Angeles County.

"We have been asking them so cut back on luxury uses to conserve natural gas," Cha said.

"We have also been asking them to cut back on luxury uses to conserve natural gas," Cha said.

According to Cha voluntary order is effective immediately in Los Angeles County and is only in effect for the San Gabriel Valley portion of Los Angeles County.

"We have been asking them so cut back on luxury uses to conserve natural gas," Cha said.

Although the critical gas shortage in the frozen East have drawn the immediate attention of federal energy experts, Cha said Californians may be facing a shortage as "severe or worse by 1980."
Tattooed T-shirts: Bumper stickers for the bodies

Some people put their thoughts down on paper. Others prefer to write them on T-shirts. T-shirts can be an art form, a means of self-expression or an eye-catching way to advertise. Aside from regular stock, many stores allow their customers the chance to buy T-shirts stamped with the merchant's logo. Proudly displayed on shirt fronts or backs, attracting a stare or two, are names of clubs, bands, schools, products and slogans.

The versatility of a T-shirt allows people of all ages to wear these soft articles of clothing everywhere from restaurants and parties to college campuses. Naturally, Cal Poly is no lacking in T-shirt wearers.

Bill Schuck, a senior business major, dressed in a shirt that read, "Skiing is Heavenly," said all his T-shirts have sayings on them. "It's a kind of shirt I should wear when I'm in a bad mood because people are nice to me when I wear it."

Stones allow their customers the chance to buy T-shirts stamped with the merchant's logo. Proudly displayed on shirt fronts or backs, attracting a stare or two, are names of clubs, bands, schools, products and slogans.

The versatility of a T-shirt allows people of all ages to wear these soft articles of clothing everywhere from restaurants and parties to college campuses. Naturally, Cal Poly is no lacking in T-shirt wearers.

"I was going to wear another shirt today but I decided not to," he said. "I have a shirt that says 'Nike' but people always think it says 'Mike.' I get too many comments on it."

One thing Schuck noticed about the T-shirts he wears is that athletes wear the graffiti ed shirts most. "People who wear them are more vocal," he said. "They're more bold and confident. T-shirts reflect your personality at times."

Architecture student Dave Watson, wearing a worn football shirt with "WILSON" sewn across it in bright red letters, said that he would never wear a T-shirt with a logo. "It's like a conversation piece," he said. "People who don't even know me say 'Oh wow... and some stare at me.'"

When wearing his printed shirts, he says they often attract attention. "Sometimes I get too much attention," he said.

Schuck finds that sometimes he has to in the right mood to wear a certain shirt, "I was going to wear another shirt today but I decided not to," he said. "I have a shirt that says 'Nike' but people always think it says 'Mike.' I get too many comments on it."

One thing Schuck noticed about the T-shirts he wears is that athletes wear the graffiti ed shirts most. "People who wear them are more vocal," he said. "They're more bold and confident. T-shirts reflect your personality at times."

Architecture student Dave Watson, wearing a worn football shirt with "WILSON" sewn across it in bright red letters, said that he would never wear a T-shirt with a logo. "It's like a conversation piece," he said. "People who don't even know me say 'Oh wow... and some stare at me.'"

Another unidentified student whose T-shirt is stamped with the comment "Oh Wow," claimed that her shirt was fun to wear. "It's like a conversation piece," she said. "People who don't even know me say 'Oh wow... and some stare at me.'"

She thought a minute and then said, "It's the kind of shirt I should wear when I'm in a bad mood because people are nice to me when I wear it. It makes me feel good."

While some people stroll through campus dressed in T-shirts silkscreened, airbrushed, or patterned with an iron-on transfer, another student is busy creating the printed shirts and silkscreen transfers. Graphics major Debbie Werth, who teaches silkscreening at the Craft Center, is also involved in a business operation at the center called "Creative Sales and Services." Through this operation, Werth prints up T-shirts and T-shirt iron-ons for various Cal Poly clubs, faculty and town businesses.

She noted that the T-shirt business seems to be growing. "Once one club does it, others come in to ask about it," she said.

She explained that T-shirt silkscreening is relatively inexpensive. The shirts are the most costly investment. "At least 95 percent of the silkscreening work is iron-on," Werth said. She explained that when they make iron-ons, people cut out their own shirts in the sizes they rent.

Werth said that the "Creative Sales and Services" operation has been going on for about five years. She does her own art, estimating and therefore, she explained, she is able to cut prices.

"T-shirts reflect your personality at times."

-Schuck

The prices of silkscreening vary enormously depending on the colors, amounts to be printed and other operations. Werth is usually able to charge less for her work than most shops and companies.

T-shirts are worn to match the mood or the color of your shoes. And if you change your tastes, or your opinions, or your mind, don't forget you can also change your shirt.
Gersten: from White House to ASI

Gersten, director of the University and ASI business affairs, with Pres. John F. Kennedy. Gersten worked in White House communications under both Kennedy and Dwight D. Eisenhower.

Working so closely to the President and their families gave him an opportunity to observe the "human side" of the individuals.

History generally recalls the Eisenhowers years as somewhat dull and heralds Kennedy's administration as a Camelot. While Gersten agreed the Kennedys did tend to be liven up the place a bit, Eisenhower was not all that somber either.

"I remember one morning when I went in to wake my colonel on a trip we had accompanied the President on. There were a series of guess houses that opened out on to the green and we usually stayed there. I pulled the blinds in the room and there, standing right outside of the room seeing off was Eisenhower. He looked in and saw us and said the Colonel, 'So this is what you people do when I'm out here working.'"

Some of Gersten's fondest memories are of those years open with John Kennedy and the "special services" he provided beyond his communications assignments.

"At the White House for example there were many people who visited there, and those you hear so much about. On one occasion I got in an escort "Miss Kitty" from Greenville through the President's office which was a lot of fun. There were little things like that," he said.

A task which Gersten laughingly related was a bit larger in scope, involving the President's service "Charlie.""I like it very much." He was real friendly and very appreciative of everything people did for him."Often when the President was hosting a reception or a party, the members of the agency and their families were invited said Gersten. In addition, the President arranged for an opportunity to follow the men of the agency as people were required to stay for extended periods.

Gersten left the agency during the Kennedy administration to come back to California and Sacramento State to finish his education, explaining to the President: "I'd like to stay, but I want to get out while I'm still young and can get back to school."

Monte Mills' success story:

by KRISTY MELLIN

Daily Mail Writer

Monte Mills is a country singer, who has been in the music business for over three years and is now a local man of note, with many friends and admirers. He has been working at their saloon, and has been offered a job at their saloon.

Monte prefers traditional music. His favorites are the old Hank Williams."

Monte Mills enjoys singing country-western music. He has a good voice, and sings with a lot of feeling. His singing is clean and clear, with a lot of emotion.

Spikers difficult chore; defeat UCSB Gauchos

by KEVIN FALLS
Daily Sports Editor

Playing a preseason schedule that one would wish on a professional volleyball team, the Mustangs spikers host third-ranked UCSB Santa Barbara tonight at 7:30 in the Main Gym. The match is the second dual meet in a row against a team ranked in the top five nationally by Volleyball Magazine. Cal Poly lost the first of the series in No. 2 Pepperdine three weeks ago in a five-game thriller. The Mustangs did compete in the UCSB Invitational where they finished sixth in a field of 22 teams. There Poly split with USC and No. 1 ranked UCLA, and had fans and coaches wondering how in the hell an 8-4 Pacific could even field a team, let alone win a game. A state college?

At a Southern California school? The audacity.

"We came out of the Santa Barbara tournament with some respect," said Head Coach Ken Presson. "People were coming up to me and saying, 'Hey, come out here.'" Like he didn't know.

For the first time in a long while Presson feels his team has a chance of beating the perennial volleyball powerhouse.

"I'm going into this match with the idea of winning. I think we have a good chance of winning it. Last year I had an idea we were going to win, but we didn't."

So did the Mustangs, They lost their previous two matches against the Gauchos. "I am glad I was a Muslim," he said. "It isn't easy to make a gorilla and things like that."

"We were friends socially. When he came into the room, I walked out. But I understood him and he understood me. He had to pop off to get his juices flowing. Me I was of another bag."

"Of course I ever had with the champ," he said, referring to Muhammad Ali whose he never mentions by the Muslim name, "was when he madeinside remarks about my background, called me an Uncle Tom, ignorant, a gorilla and things like that."

"We never were friends socially. When he came into the room, I walked out. But I understood him and he understood me. He had to pop off to get his juices flowing. Me I was of another bag."

Frazier and Ali fought three times, 41 fierce rounds after each of the fights left both men looking as if they had got caught up in a meat grinder. All won the last two, including the 14th round technical knockout Sept. 9, 1975 in the "Thrilla in Manila."

"We came close to having a fourth fight, unofficial," Frazier recalled, "that time Howard Cosell had us in the TV studio before our second bout."

"He—call me Ali—was an Uncle Tom. I challenged him. Then I saw his brother Rahman coming toward me. I grabbed the guy nearest me—it was Clay. We scuffled and fell off the platform."

Fortunately neither was hurt. "It was serious—not an act, I was mad," the former heavyweight champion said.

It isn't easy to make Smokin' Joe mad although in the ring he is a vicious tiger who bares his head, bunches his shoulders and flat sails away until something drops. He really has the soul of a poet.

"Looking back on my life, I wouldn't change a day of it," he said. "I am glad I was a fighter. Being the champion opened doors for me that never would have been opened otherwise."

"But through all my fights I always had my music beside me. When I went to the White House, my music was beside me. When I went to Rome, the same. I listened to all the records I could find. I took lessons. Music always was in the back of my mind."

"It's something I don't have a lot of control over. There are so many variables that could change in the music business—who you know, what you know. I really like singing. It's fun, but I really enjoy boxing. I don't think I would take a really good singing career to get me out of dual record. The swim meets here and there are just some promotions and their first win may not come easy."

"If you think swimming in boxing, it's not like boxing, it's not like boxing."

"The Mustangs will tune up for the 1977 season as they take on the Alums here at 1 p.m. Saturday. It's serious competition when Westmont wins for a $2.50 game Tuesday."

You may find it tiring to watch nine men run all over a little field, but it is different.

"If you're into legal violence, then wrestling is a sport that may be for you."

"All in all it should be a crowd pleaser. It's our biggest game of the year. There's every reason to expect a large crowd."

The Cal Poly women's basketball team is home to meet the challenge of Pepperdine. The Mustangs will meet the Mustangs Friday at 7 p.m. while Pepperdine follows with a game at 9:30.

"We may be trying to get some respect for Poly women."

"We are going to play a game against the Perp, a little less than our competition in the UCSB tournament there."

The action will be going on Thursday and Friday on campus. Pepperdine is in the competition of the year for the women, and Poly will be trying to get their dual record to 0-1. They dropped a 2-7 decision to CalPoly. The Mustangs won this year.

If you just don't feel satisfaction this weekend, remember, they are always playing. See you at the games.

Mills: Shoewing and singing for fun

(Continued from page 5)

(Cal Poly) has a surprise to him.

"It is kind of gone away from me," he said. "Ever since the film record came out, I've been expected to do all these things." Despite his success, Morse is not at all sure he wants to start singing any more music.

"I'm something I don't have a lot of control over. There are so many variables that could change in the music business—who you know, what you know.

Mustangs hold off Hayward State; win 80-69

by 5-11 guard Darnell Flournoy. The Pioneer's leading scorer put on an exhibition reminiscent of Ernie DiGregorio in his college days.

Flournoy darted in and out of Poly's defense, wreaking havoc in the backcourt. The highlight of his one-man act came with 5:56 left in the game and Hayward down 66-61. Taking an outlet pass after the Mustangs put up an errant shot, Flournoy weaved his way downcourt until he ran into traffic at the free throw line.

Seemingly left with nowhere to go, he committed himself by jumping up with his back to the basket. He couldn't find a man to dump the ball off to, so as a last resort he twisted his body and put up an off-balance shot.

The ball found its way into the basket and the Pioneers found themselves down by only three.

Poly now had a game to play. Realizing this, shots by Poly's basket*^«am joined its stranglehold downing die Hayward 5pSSen«<W9 Tuesday *fif once in dw 16-year of the Mustang-Mr series has Haywwd 

M r prevailed « W zL

The Mustangs didn't want to give Poly a chance to adjust to its stranglehold home court. The Mustangs scored a 79-76 defeat in this season. The early going was to go to the win. The score remained at 15 as the defense was one-sided. Hayward could score only two points in the last five minutes of the first half. The Mustangs took this cue and ran up a 15-point lead at the half.

Then in the second half, it was a one-up game for Hayward, and Poly was looking for a win against the Mustangs' running offense. The Mustangs scored 27 points in the second half, and Poly did not have a chance to come back.

Poly continued to struggle in the second half, and the Mustangs continued to score. The Mustangs scored 27 points in the second half, and Poly did not have a chance to come back.

A look of anguish registers on the face of Cal Poly's 6-6 forward Jeff Karl as he lets the ball go out of bounds. This was one of the few disappointing moments experienced by the Mustangs in their 80-69 win over Hayward State. The Mustangs are now ready to resume their quest for a conference championship as they travel to Beckerfield Friday to play the Roadrunners in their next CCAA game. (Daily photo by Tony Harris)

Wehner wasn't the only one who performed well. Gerald Jones' 19 points led the way for Poly while Keys led the board game with 11 rebounds. The Mustangs overpowered the Pioneers, 57-27, and outshot Hayward so they put up 24 per cent of their shots to the Pioneers' 49.

 Financial aid workshop

 A financial aid workshop will be held today at 7:30 p.m. in the Old Science Building. Eligibility requirements for grants and loans will be discussed. Financial aid packets will also be available at the meeting.

 Student art show

 An all student art show entitled "Chameleon 77" will be held in the University Union Art Galerie, Rm 221, Feb. 14 through March 6. The exhibition is open to all San Luis Obispo county residents property owners and professionals and semi-professionals. All work must be original, produced within the year and not previously shown in the Galerie.

 CAHPER & PEMOW sharing info.

 CAHPER and PEMOW members are invited to spend Saturday night together at the Pismo Roller Rink in Pismo Beach. The evening will begin at 11 p.m. and skate time will be from 11 p.m. to 4 a.m. Cost will be $1.50.

 Intervarsity Fellowship

 The Intervarsity Christian Fellowship is hosting Dr. Robert Rodin, 7:30 p.m. Feb. 4. "Can a scientist believe in the Bible?" is the topic of Rodin's presentation. The public is welcome and the event is free.

 Controls on DNA urged

 STANFORD (AP) — Scientist controls have been urged on experiments with restructured DNA until the potential for hazardous risks can be more fully defined.

 Growing research involving DNA—the material which carries the information of heredity from generation to generation—has prompted fears that scientists may accidentally "create" a new life form that could menace human health.

 "The curse of our age has been feeble controls on science," said Dr. Jack Francon, citing errors in nuclear research before full dangers were exposed.

 Francon, an anesthesiologist at the Stanford Medical Center warned that scientific conditions could allow organisms lacking in high security laboratories to escape if an earthquake hit.

 But Paul Berg, a Stanford biochemist professor, cited 30 years of experience with the basic elements of the research, which he said have resulted in safe techniques now in use.

 The comments came during two days of hearings on the controversial issue at a Stanford University. About 150 people attended the two sessions held before an administrative panel looking into the health and safety aspects of 10 projects now under way.

 Recombinant DNA research, according to the restructuring of genes, can be transferred from one organism to another.

 At Harvard, for instance, scientists have taken DNA from E. coli, a bug version of a bacteria that lives in the intestine, and placed it in several materials and animals to create recombinant DNA.

 "We just don't know how to turn it off," said Richard Goldstein, a microbiologist, who said the results might produce a new man that is not equipped for the same life as a normal human.

 The jury in the case, which was brought by the now defunct Ltd. magazine falsely stated it had ties with the Mafia.

 He then urged both sides to try to take steps to insure that the master he finally decided in the case jury failed to reach a verdict in the fourth trial.

 Alito takes magazine to court

 SAN FRANCISCO (AP) — A federal judge Wednesday refused to extend former San Francisco Mayor Joseph Alioto's $12.5 million libel suit against Look Magazine, setting the stage for a fourth trial March 21.

 U.S. District Court Judge William Schwarzen der motion filing by Gowen Communications.

 The annual ceremony in which the Punxsutawney Groundhog Club gathers on the hill to certain of Phil's prediction. They were delaying air, it was seven degrees with a wind chill factor of minus 5 degrees.

 When his presence isn't required for the ceremony, Phil is housed in a warm cage in town at the greenhouse museum. The museum also holds a stuffed groundhog, one of the original "Phil's."

 A crowd of about 190 people watched as Charles Erhardt, president of the club, walked his one on the burrow's door to call Phil out. Club member George Menas lifted the groundhog up from his man-made, heated burrow, just as the glow of dawn touched with Phil in "groundhog's" and announced Phil's predictions.

 There are those who say Punxsutawney's groundhog is infatuated and others who call them downright dishonest. But that doesn't bother local residents.

 The event it open to all San Luis Obispo county residents property owners and entries an limited to one per exhibitor. Entry forms and further details are available from Noble, 549-5470 or the Art Center, 549-8562.

 The art squad is accepting entries in the Health Careers' Programme, "Spotlight on Recombinant DNA research." The event it planned for Feb. 28, 1977.
