Registration proposal abandoned

Implementation of the 1978 priority registration policy was condemned by the Associated Student Government. The policy, which would have required students to register in order of priority based on their declared major, was abolished after the ASG passed a resolution condemning it.

Rain dampens Cal Polys’ float hopes

The float was the only one of its kind in the parade. It was entirely constructed and driven by students, and Poly did not win the award for the Princess parade, which is given to the most creative float.

"Our float was a tribute to the students," said Barry Dahl, chairman of the float’s committee. "We wanted it to be a little different at first, but it turned out that way. We wanted to have fun and get people involved." That goal was met, said Dahl, as the float involved more people than ever before.

"The float was entirely happy with the judging," said Dahl. "We’re happy with the outcome." - Barry Dahl, float chairman

"GRIN AND BEAR IT" was the theme for this year’s float, constructed by San Luis Obispo and Pismo students. It took first place in the educational division.

Makeshift bridge removed

The Reimer Creek Bridge has been removed. The bridge was removed in late December because of flooding and heavy rains. (Daily photo by Peggy Meador)

Public Services Department workers removed the bridge in late December, Ramey said. Although many Ramey said, "We normally use the bridge to get to and from Cal Poly. During the rainy season, we had to close the bridge because of heavy rains." Public Services Director Larry Ramey said the bridge had to be removed because of water flow over 1.5 million parts of the bridge. The bridge was removed to prevent damage to the bridge and to ensure safety for the community.

The PTV story is not in its usual position. According to Kennedy, it was removed to create space for other stories. Kennedy said that the primary reason for the removal was to improve the PTV news. The new format was a success, and Kennedy said that the primary reason for the removal was to improve the PTV news. Kennedy said that the primary reason for the removal was to improve the PTV news. Kennedy said that the primary reason for the removal was to improve the PTV news.
Registration problems yet to be solved

CAL Poly administrators have wisely stalled or postponed the utilization of a new and possibly more efficient registration system proposed by the Student Government Association. Opportunities from the subcommittee to study and analyze this student proposal have been taken advantage of to the conclusion that the mixture of problems in student enrollment administration are an apparent declining average student enrollment.

The registration system under proposed registration was recently adopted by the administration. The system is based on the student’s enrollment system. The new system would consist of the student’s enrollment, which would be handled in the administration office.

In order to keep the full-time equivalent enrollment at the same level, the number of units would have to be increased by about 10 percent. Obviously, not everyone can take 10 percent more units without detracting from the quality of his or her education. But if each student were to take five percent more units, in practice, the overall effect would be the same.

Few still disagree that there are simply too many people in any given student. The average is currently 60 to 70 percent of full-time enrollment. By taking more units, the students would be able to complete their programs of study in a shorter time. To do this, there would have to be an increase in units of enrollment. A new system could be a middle ground. With a total increase in enrollment of 10 percent, the entire student body would maintain its current enrollment. No amount of incentive, coercion or whatever, will get students to voluntarily increase their unit loads. Students, as consumers of new, higher enrollment. They will simply want to cut the cost of their units. It is that simple. The unit loads will increase until they get to the maximum allowed.

Any city has a huge hunger for water. In Los Angeles, city planners and developers, many cities have tried to minimize the amount of water, but few have built water systems that really work. This is because of the cost of building water systems. It costs more than $100,000 for every gallon of water available. The result is that we are not using the water we have been provided.

A prime example is the Los Angeles water project. In the 1970’s, the city successfully build a nuclear power plant in the hills above the city. In the 1990’s, the city successfully build a water treatment plant in the same place. The result is that we are not using the water we have been provided.

There have been claims that the increased pumping of water in the Owens Valley has increased the demand for water in the Owens Valley, but the Department of Water and Power has repeatedly said this is not true. The Department of Water and Power has never said this is not true. The Department has repeatedly said this is not true.

The time has come for the men to recognize that we do not have to use all the water we have been provided. We can use less water and still have plenty of water.

Registration must be modified so it is not so impossible for a student to register. Possibilities include allowing students to sign up for classes during a registration slot or a system of computerization.

It would seem logical that seniors be allowed to register first, followed by those students who have fewer units left to take and the students who have completed the second semester. Down this line, freshmen have a greater choice of courses, but they should be allowed to take the courses they want to.

There are several ways to do this. Some possible methods are to allow seniors to sign up during the first semester. Students may end up with a more varied course load, but the last minute changes and deletions would be unnecessary.

Those who want to take a full course of 12 courses a semester should be able to do so. By registering students who are majors, special emphasis can be placed on the courses that will be most helpful to the student.

There is no one answer to the problem of registration. It is simply a question of getting the right people to register and to have a system that works for everyone. The solution is not to obliterate every non-urban area. Obvieuely the answer to this type of manipulation is not to obliterate every major city. But, some estimate and statistics have to be changed.

The city of Los Angeles is not supposed to be given everything it wants to do. Whenever the city wants to do something, it should be given everything it wants to do. Whenever the city wants to do something, it should be given everything it wants to do. Whenever the city wants to do something, it should be given everything it wants to do. Whenever the city wants to do something, it should be given everything it wants to do.

The time has come for the men to recognize that we do not have to use all the water we have been provided. We can use less water and still have plenty of water.

Selfish cities masters at manipulation

Move ever Franks and Dracula, society has now created its own modern-day monsters. They are the large sprawling cities which thrive on people, industry and grow more powerful as they have the people on with their programs of help.

Any city has a huge hunger for water. In Los Angeles, city planners and developers, many cities have tried to minimize the amount of water, but few have built water systems that really work. This is because of the cost of building water systems. It costs more than $100,000 for every gallon of water available. The result is that we are not using the water we have been provided.

 Library bids submitted

A Los Angeles-based construction firm that submitted a bid is present under the architect's estimate for construction of a new university library in the amount of $65,000,000 on the project. Additionally, $12,000,000 estimate for the project by the architect.

Construction is expected to begin early next month.

McGraw Executive Dean Doug Deamer said the new design will be near the existing Walter Dinner Library.

Working drawings for the 250,000-square-foot structure were officially opened by McGraw Alumni in 1971. Cal Poly officials will be needed to wait for funding until July of last year when

Thunderbird aviator injured

LAS VEGAS (AP) - A member of the Air Force Thunderbird aerobatic team was injured Thursday when his jet crashed off the Strip.

Craig James, 23, of Salt Lake City, Utah, was flying a T-38 Talon jet when the crash occurred at 6:30 a.m. on the Nellis Air Force Base Aprilla Range.

McCoy was flown by helicopter to the base hospital, where he was in critical condition.

A board of officers has been ordered to investigate the cause of the crash.

Dispute spot's patient's blood

FRESNO (AP) - A rift between two organizations that provide donated blood to patients is keeping blood from a hospital.

Fresno, CA, suffered severe burns over 50 percent of his body when a fire broke out at the local hospital on Friday. He was flown to a San Francisco hospital for treatment.

The San Francisco Blood Bank announced it will not accept blood donations from the American Red Cross, citing a disagreement over the use of sterile needles.

The American Red Cross has offered to provide blood, but the hospital said it would not accept blood from the American Red Cross because of the dispute.

This is the latest in a series of disputes over sterile needles between the American Red Cross and other blood banks across the country.

Mustang wrestlers sink Midshipmen

By TIM ALVETRANS
Daily Sports Writer

Maybe it was a Christmas present or a change of scenery or a break from the long winter. Whatever the reason, the Oak Park High School wrestling team showed the U.S. Naval Academy the mean, ugly side of the sport of wrestling.

The Golden State Association of Wrestling Officials and the Oak Park wrestling team had scheduled a double-header on the same day as the NAACP's day of protest against the Vietnam War. The coaches had planned for a five- match, 140-pound dual.

Instead of the usual five matches, there were only two. Coach Vaughn Highsmith said the reason was a three-match replacement meet, which would have and the school record for consecutive losses set by the 1966 and 1967 teams.
Poly cagers play .500 ball in preseason

HARRY SCHMIDT

Daily Sports Writer

Junior basketball team fared well in preseason play.

Winning basketball team had been successful with two straight wins, then fell against Hayward in the December schedule. The team has practiced at night for the past two seasons.

The team has had a lot of success in the past two seasons, according to head coach Harry Schmidt.

In his third year of coaching, Schmidt said, "Winning basketball teams are hard to come by." The team has been successful in the past two seasons.
