Money makes the university go 'round

By WAYNE SAROTAN
Daily Staff Writer

Raising a university is not a easy task. According to U.S. News & World Report, California Polytechnic State University was ranked 21st among public universities in the country. Without money, the university would not have reached that status.

At California Polytechnic State University, the traditional philosophy has been "education first". This philosophy allows the school to maintain a high level of quality in its courses and programs. However, it also means that the university must constantly seek new sources of revenue. This is where money comes in.

Money is generated in a variety of ways. Tuition fees are one source, but they are not always enough to cover the costs of running the university. Grants and donations are also important sources of funding. The university also receives money from the state, federal government, and private foundations.

The impact of money is evident in the university's programs and facilities. The quality of education is enhanced by the availability of state-of-the-art equipment and up-to-date teaching methods. The physical campus is also improved by the construction of new buildings and the renovation of existing ones.

In conclusion, money is crucial to the operation of California Polytechnic State University. Without it, the university would not be able to maintain its high standards of education and provide the best possible facilities for its students. It is essential that the university continues to seek new sources of revenue to ensure its continued success.

IRA distribution tentatively approved

By MICHAEL GOETZ
Daily Staff Writer

A tentative agreement has been reached by the Board of Trustees and the California Police Employees Association (CPEA) regarding the distribution of the university's IRA funds.

The agreement, which was reached after several months of negotiations, provides for the distribution of the IRA funds to all full-time employees who are members of the CPEA. The distribution will be made in two phases:

1. A one-time distribution of $1,000 to all eligible employees
2. A quarterly distribution of $250, over a period of five years

The agreement also includes provisions for future increases in the IRA distribution, as well as for the retirement benefits of employees who remain with the university.

In conclusion, the tentative agreement reached by the Board of Trustees and the CPEA is good news for all full-time employees who are members of the CPEA. It represents a significant step forward in the ongoing efforts to improve the financial well-being of university employees.
Legislators computerized at Capital

California legislators have at their disposal a number of methods to monitor their presence and record their vote.

If voting is the essence of democracy, why then is it computerized?

Voting can be a cumbersome task for legislators, especially when they are dealing with numerous bills and amendments. The introduction of computerized voting systems has simplified the process, allowing legislators to quickly and accurately record their votes. This has not only increased efficiency but also improved the accuracy of voting records. Furthermore, it has enabled legislators to vote remotely, ensuring their presence is accounted for, even if they are unable to physically attend a session.

In conclusion, computerized voting systems have proven to be a valuable tool in the legislative process, enhancing the democratic function of legislatures. As technology continues to advance, it is likely that further innovations will be developed to optimize the voting process, ensuring that the voices of all legislators are heard in a timely and accurate manner.

Our Readers Write...

Editor:
I've read a lot of democracy jargon lately about the need for more "participation" at the grass roots level. The idea that people are redefining "administration," food services, and the electronics department in the "compromise of the voter" is impressing me. I'm starting to believe that the only way to make democracy work is to rely on the people themselves.

It seems to me that the only way to make the people feel like they are a part of the process is to involve them. The people need to know that their voice is being heard. They need to feel that they are a part of the decision-making process. And the only way to do that is to involve them.

In conclusion, I think we need to do more to involve the people in the democratic process. We need to make them feel that their voice is being heard. We need to make them feel that they are a part of the decision-making process. And the only way to do that is to involve them.

Kathleen M. Soderick

Involvement deadened by apathy

Involvement deadened by apathy

Most of the students at Poly are busy... too busy to be concerned with the upcoming election. It seems that the democracies of things, and that they don't really care.

The other day I was walking to class, and I saw a group of people talking. They were arguing about something, and I couldn't make out what it was. I thought it was strange, because I didn't see anyone else around.

As I reached the corner, I heard someone say, "Why bother? It's not like anything will change." I looked back and saw that the people were still arguing, but they didn't seem to be paying much attention to what they were saying.

I walked into the classroom, and I thought about the people I had seen earlier. I wondered if they had voted in the last election. I wondered if they would vote in the next one.

I don't know what happened to those people. I don't know if they voted or not. But I do know that involvement in the democratic process is important. It's important for people to be active, to participate, to care.

Abstract drama is set in the surrealistic world

By ROBERT HOFFMAN

Director and producer, Sacred Heart High School, Lodi, Calif. (Sacred Heart is a Jesuit school)

The story of the film is set in a college town in the Midwest. 

The main character is a young man, John, who is a bit of an intellectual. He is trying to make a name for himself as a writer. John is a bit of a loner and doesn't really fit in with the crowd. He has a love for literature and is often seen with a book in his hand. John's father is a successful businessman, but John is more interested in art and literature. 

John's alcoholic father, George, is a constant source of friction between John and his mother, Jane. George is often seen drinking and causing trouble for the family. Jane, on the other hand, is a strong-willed woman who tries to keep the family together. 

The film is a coming-of-age story that explores themes of family, identity, and the search for belonging. It is a touching and thought-provoking piece that leaves a lasting impression on the viewer.

Poison oak heralds an itchy season

By ANY FRITS

Daily Press Writer

It's that time of year again—the time when the climate is changing, the weather is warming up, and the spring season brings an increase in poison oak. Poison oak is a common plant that can cause irritation and itching for those who are sensitive to it. It is important to be aware of its presence and take precautions to avoid it.

With the advent of spring, poison oak is more prominent. It is a deciduous, thorny shrub that can grow in a variety of conditions, including dry, rocky areas and near water sources. Poison oak contains a sap called urushiol, which can cause an itchy reaction when it comes into contact with skin. The leaves are usually three-lobed, and the plant can be found in clusters of three to seven leaves. Poison oak has a distinctive appearance, with shiny, leathery leaves and small, yellow flowers that are not always present.

Poison oak can cause an itchy rash, swelling, and redness. The rash can be painful and may last for several days. The rash is typically red, and the skin may feel hot and itchy. In some cases, the rash may also feel webs or creases. It is important to avoid the spread of poison oak by wearing protective clothing and washing your hands after handling the plant.

To avoid poison oak, it is recommended to wear long-sleeved shirts, long pants, and gloves when outdoors. It is also important to avoid picking or scratching the rash, as this can spread the urushiol to other parts of the body. If you do come into contact with poison oak, it is important to wash your hands promptly to remove any urushiol. If you develop a rash, you should seek medical attention to ensure proper treatment.

3 file for ASI presidency

Three Cal Poly students have filed paperwork to run for the ASI presidency, according to the university's Student Activities Planning Center. According to the center, three students—two men and one woman—filed to run for the position. The candidates are:

- Max Lee
- Ryan Chang
- Leah Miller

The candidates will face off in a primary election to select the top two candidates to run in the general election. The primary election will be held on March 27.

Senate discusses IRA distribution

(Continued from page 1)

According to Curtis, the IRA bill is designed to help employees save for retirement. It would allow employees to contribute up to $5,000 per year, with a lifetime maximum of $1 million. Curtis said the bill is designed to help employees save for retirement and to encourage them to save more money.

To your health

French Hospital will hold a free nation-wide health fair on April 27th. The fair will feature health screenings, health exercises, and information on healthy living.

Board games

The Mustang Daily board games club will hold a meeting on Thursday, April 12th. The meeting will be held in the Student Union, Room 205. The meeting will feature a discussion on the latest board games and a chance to play with other board game enthusiasts.

Beer Is Not A Soft Drink

When Johnny was six years old, soft drinks were a favorite. He drank them while he played with his truck in his back yard. When he entered high school, he met his friends at the soda fountain and drank soft drinks while shooting rubber bands at the next door. He lived in high school and suddenly it was uncool to drink soft drinks — beer was the thing. His friends told him it was cool to drink a lot of beer, and he didn't want to be left behind. Johnny considered beer a replacement for his old soft drinks. It tasted good, and it was a social drink. But he sometimes forgot that it contained

6-9% alcohol, which doesn't sound like much, but after 3 or 4 or 5, it adds up. Alcohol and driving are poor combinations, so be a sober driver.

Today Johnny has an enormous beer belly, but he's on a diet. He still likes beer, but he knows it's good for him and it's what he does.

Beer can be fun. It's great with Mexican food, pizza, tacos and hamburgers. It's not a soft drink. It is "hard" as in "hardcore," a word usually used to describe drugs and that is something worth remembering.
