**LNG: a disaster?**

No regulations protect us from a liquefied gas explosion worse than the one that has left over 65 people to die in July 11.

The tank truck that veered off a highway near Point Conception and caught fire on July 11 contained liquefied propylene gas. But liquefied gases are not the only non-toxic gases such as propane and similar gases that can have a similar effect.

Liquefied gas is carried by 6,000 trucks and 10,000 rail cars in the United States, the Los Angeles Times reported. While the mixing of many minor LNG transportation accidents can result in a cumulative explosion, such as the one that occurred in Weaverville, Texas, on May 16, 1976, killing 28 people and demolishing a city block.

The West Coast's first terminal for LNG development will be Point Conception, which will be built by Point Conception International, a joint venture involving the CIA, the United States, and the United States.

Security regulations on both storage and transport of LNG are not in place, according to James Z. Jr., an energy expert for Congress's Government Accounting Office. No restrictions limit shipping LNG by trucks on federal highways, the possible consequences of an accident in an urban area.

The 55-mile pipeline from Point Conception to a liquefied propylene gas terminal in Pennsylvania was expected to begin service in 1980. But the 20-foot LNG tanker docked at a terminal could cause damage up to 3 miles away.

A single spill of 87 cubic meters of LNG at China Lake Naval Weapons Center, where LNG has sometimes spilled up to 500 feet when ignited, a full tanker carries 18,000 cubic meters of LNG.

Point Conception became the LNG terminal for Southern California Electric Co. and Southern California Gas Co. after a series of safety improvements were made to ensure that any LNG installations in this area will be safe. The Point Conception LNG terminal can be built in the future.

A Coastal Commission report July 13 recommended a site in the Santa Barbara Channel for the LNG terminal, stating that "Ventura Plaza," is virtually safe from any accidents, and that the terminal could be built in Point Conception.

The report also states that the liquefied gas terminal would be located in Point Conception, and that the terminal could be built in any urban area.

Emergency planning is crucial, and Congress will act on both the Coast and the Ventura County to prevent the accidental release of LNG. The report should address the question of location, as well as the safety of the site, before the report is released.

The LNG tanker is not capable of carrying LNG in any urban area, and the citizens of Point Conception are now urged to move to a more densely populated area. But the report should be taken into account, as should the replacement of tank trucks and rail cars with LNG.

The PUC should rule against the Point Conception site for an LNG terminal, and it should be removed from the site. Melissa Hinett is a journalist who should be consulted.

**ERAG—Equal Respect for All**

"EPlity of Rights Under the Law Should Be Enhanced within the United States or Any State on Account of..."

Test of Proposed 1976 Amendment to Equal Rights Amendment by the United States or Any State on Account of..."

The proposed Equal Rights Amendment (ERA) is a bill to amend the Constitution of the United States to provide for equal rights under the law for men and women. The ERA is a bill to amend the Constitution of the United States to provide for equal rights under the law for men and women.

Not so, Today's proposed ERA amendments are not a test of the validity of the women's suffrage amendment, but a test of the ERA. The ERA is the basis for the women's rights movement. The ERA is the basis for the women's rights movement. The ERA is the basis for the women's rights movement.

Dorms alive

By Jill Hendelevich

In contrast to the anti-dorm phenomenon of the early 1970s, dorm rooms are now in great demand at Cal Poly, according to the director of student housing.

Robert Bostrum said at the beginning of the decade, students across the nation wanted total freedom from supervision. In exchange for the regulations of dorm living, many opted for apartments and houses, and in some cases very intimate living arrangements.

The housing shortage in San Luis Obispo is only one that has brought students back to the dorms, Bostrum said.

"Residence halls are much more popular because of student concern for academic purposes. Cal Poly has often had the convenience of the library and food services, and students are close to their classes."

Dorms are also a nice place to live because of liberalism, of rules, Bostrum said.

A few years ago, dorms were controversial; now they are an institution. Televisions were prohibited in student rooms for a long time, and refrigerators were not allowed until last year.

The pendulum began swinging back in favor of dorm living two years ago when the demand was so great, 700 students were rejected. At the time, students already living in dorms had priority.

New students who have lived on-campus quarter by quarter have priority for the next year.

Then came hardship cases, including financial, physical and emotional disabilities. After that priority goes to previous year's freshmen, sophomores, juniors and seniors.

The dorms will be filled so early again next fall. 2000 students are signed up for room. New students who applied only have been accommodated, but some juniors and seniors have been rejected because of space limitations.

High marks set admission levels

By John Roller

Assistant chalk writer

This fall begins the second year of Cal Poly's new admission standards.

Available spaces are now filled by students with the highest grade point average on the basis of the Scholastic Aptitude Test or the American College Testing Program examination.

Cal Poly previously and randomly selected students randomly who met the minimum admision standards. The only exam on the campus which allowed the School of Architecture and Environmental Design, began using cumulative selective scores before the rest of the campus.

The admissions office ranked students in all first-time freshmen applicants by ranking the SAT or ACT score. The students with the highest rank are admitted to each academic department on campus for which they are spaces available. Students compete only against others applying for the same department.

All non-freshman applicants are placed into either a lower or upper division transfer categories. Upper division transfers have at least fifty six semester or forty quarter units. Previous college G.P.A.s serve as the criteria for judging Cal Poly transfer applicants.

Cal Poly became impacted because all except schools of architecture, Cal Poly San Luis Obispo and Cal Poly Pomona, became impacted because of limited spaces for students on two campuses.

All other academic departments are offered at many campuses within the California State University and Colleges systems.

A spokesman from the School of Architecture said Cal Poly can send the surplus applicants to other campuses in the system if the available spaces are filled. Since architecture is offered at two locations, the university utilized admission standards for architectural and environmental design students.

Doshi arraigned

The former All vice-president who is being blamed for the death of a baby in an alleged midwife delivery in Los Olivos was arraigned Monday, July 21, in Superior Court.

Marianne Doshi, 21, was charged with murder and practicing medicine without a license. She declined to enter a plea.

All men in the courtroom were filled, and people stood against the back wall to listen as Judge Richard G. Kirkpatrick read the charges and set dates for future proceedings.

Preliminary motions will be heard Oct. 25. A preliminary hearing is scheduled for Nov. 11 and the trial is set for Dec. 30.

When the arraignment ended, Doshi said she was shocked that the whole thing was happening and expressed sympathy for the dead baby's parents, Robert and Christine Gustafson.

Criminal proceedings are being carried out despite their wishes. Both opposed charges that Doshi's actions led to their daughter's death June 6.

Previous attempts have been made to promulgate an anti-dorm movement in California, but this case marks the first time a murder charge has been brought.

By Paula Chambers
Summer Staff Writer

Cutbacks in the 1978-79 California state budget may result in a loss of over $1 million in funds to Cal Poly, according to James Lindbergh, director of business affairs at Cal Poly.

The changes in the budget, made by Gov. Brown and the state legislature before it was adopted and signed into law on July 6, are expected to affect every Cal Poly school and department in some way.

"We are losing about $179,000 in the area of operating expenses and equipment," he said, "and I expect that we will have to cut back on personal services by about $800,000."

Lindbergh said the funds will be accounted for by continuing to freeze staff positions, by transferring other funds, and eliminating new and replacement equipment.

The funds haven't actually been cut from the budget. This is money that we are expected to save," he said. "It is like having a bank balance of $100, but then having a statement that allows you to only spend $80.

The total state savings in the area of operating expenses and equipment, together with personal services, comes to $986,4 million according to Lindbergh.

The California State Universities and Colleges system is expected to lose about $14 million on personal services.

"The amount that each school is expected to save was determined by the size and expenses of the school," said Lindbergh.

We went over the CNUC budget and identified items that had inflation built into them," he continued. "Then we did away with the inflation factor to arrive at $400,000, which is our $400,000 savings figure."

Lindbergh said the areas affected are not cutbacks from the 1977-78 budget; rather, they are the same.

"We are not going to receive any more funds in a large area, and since a lot of areas are inflationary, it will result in reductions," he said.

"Of the $12 million that must be saved in personal services, we are required to save a firm $400,000, so far," he said. "But the money was divided into two parts, so we still have to decide among the CNUC system, how to save $6 million."

The $6 million that includes the federal savings of $410,500 to Cal Poly will be saved through an increase in salaries savings, Lindbergh reported.

"Each year we save about four percent of our personal funds through staff turnover, and two percent through faculty turnover," Lindbergh said.

However, the jobs that are vacant in the following year will be left vacant, with the exception of positions that are essential to a school or department, according to Lindbergh.

All positions that are currently open will be filled within the 10 percent," he said. "That will hopefully carry us in a year or two of the 10 percent, bringing our staff salaries to the 10 percent."

Lindbergh said the faculty increase in salary savings is expected to occur through this year.

As for the remaining $8 million, Lindbergh said he will be travelling to Los Angeles on July 30 to meet with representatives from the other 19 universities in the CNUC system to discuss possible areas of reduced costs.

There are three basic areas that Lindbergh feels will be assisted by the cuts, and he said that these areas will probably be the basic of the state Los Angeles location.

"The first is an overall savings on the individual campus budget," he said. "That will save some money, but it cannot make up $3 million."

The second area is systems of savings on funds that have not yet been accounted for.

"These funds, which amount to about $3 million, are still sitting on the Chancellor's desk waiting to be allocated," he said. "There is a possibility that some of these funds will be allocated to the areas of the university that need them."

"Included in the funds of $511,000 are bureaucratically required funds that must be cut," he said. "They are called the annual increase in salaries savings, and will come through the money."

Lindbergh also said that any funds will be used to support the programs in the state Los Angeles location.

"The third possibility is we cutbacks in proposed spending programs," Lindbergh said. "And I think most of these funds would be used to support the programs."

"There are 19 universities in the CNUC system, and this is the big program of proposals," he said. "We will see if the program will work out for our school, in the interest of the program and school."

"Unfortunately," he said, "these proposals are going to affect every department in every school. It may be a little less, but the cutbacks will be there.

"We are not going to cut any major programs," he said. "They all include costs, but not more people, and the right to propose the programs."

"Unfortunately," he said, "these cutbacks are going to affect every department in every school. It is not just a little less, but the cutbacks will be there.

SUMMER FASHION SALE

Thursday, July 27th
9:30 a.m.

ME 'n' YOU has the summer styles you'll love at savings of up to 75% storewide.

Expose yourself to soft romantic skirts, cool cotton dresses, draw string and wrap pants, classy camisoles, vests, gauze tops, shirts, bathing suits and big tops.

Jump into jeans in ice cream colors and refreshing new styles for guys and gals from Chezina De Fer, L.A.P.D., Rag City Blues and many other famous name brands.

Birkenstock

Feet in the sand make footprints.
Feet in Birkenstock footwear do the very same thing.

The Birkenstock footbed is heat and pressure sensitive, to mold to your foot, and become your footsize.

No variation in Birkenstock is like walking barefoot in the sand, with one very convenient difference.

You can walk in Birkenstock all year long.

Let your feet make footprints of their own.
Japanese students visit S.L.O.

Let's just be friends is a show that can really be understood in two languages: Japanese and English.

Every year, for the last seven years, about 100 Japanese students have been in from all over Japan to study in San Luis Obispo for one month. The program, which began in 1970, was started by the program which started in 1970, Educational Development International (EDI), is the program which has sponsored the event every year.

Jeff Bynea, special program director founded the organization seven years ago as a bus tour. "I met a group of Japanese people who had no place to stay because the hotels were full," said Bynea. "I was managing Mineral Springs at the time and since it was summer, no students were around, so I let them stay there. We built a friendship and began a program that hasn't died yet," said Bynea.

The Japanese students who stay at Tropicana range in ages from 15 to 20. They study English courses each morning at San Luis Obispo schools and receive credit in Japan.

"They are not here just to learn English," said Bynea, "but as our theme explains, to become our friends."

Don Foy, coordinator of the program, said the afternoon involves a variety of activities, including horseback riding, water skiing, sailing, and shopping in San Luis Obispo.

A number of merchants offer special gifts to all the Japanese students and display welcome signs written in Japanese in their windows.

"The most important and most memorable event for these kids," said Foy, "are the home visits with families in San Luis Obispo. We try to encourage everyone in San Luis Obispo to take a few hours and show and children the American home during their visit in America. This is the first time to America for most of these kids," said Foy.

They are thrilled to meet Americans and get an insight on what the people in America are like. Many students, most from Cal Poly, and five University teachers have volunteered or have been hired to teach the Japanese students conversational English each morning. Dr. Reed of the Speech Department interviews the 60 students who reach in the program. Most are scripture or teaching majors and are required to live at Tropicana during the program so they can become involved directly with the Japanese students.

Many of the Japanese families were here for two years to three years, so their children have the opportunity to come to America," said Foy. "It costs each student $1,000 to $2,000 for one month. This includes all meals, lodging, and any activities or field trips the kids go on. They do something every weekend. They have a chance to visit San Francisco. Yom рам and some of the schools in California such as Fresno, Santa Barbara and Wasikamini."

For the first time, American students involved in E.D.I. from the Santa Barbara and San Luis Obispo communities, will visit Japan this summer.

According to Foy, 10 American students will leave August 3 and visit Japan for three weeks.

"It will be quite a rewarding experience," said Foy. "The Japanese people take such pride in having American visitors. They treat you like royalty."

Masayo Tanami, dean of the Japanese students for seven years, said "After the war I hated Americans until I came to America. Now I wonder why we had to fight with the United States. I was surprised, the American people are very good to us. America is a beautiful place."

The most thrilling event for some of the Japanese girls was the Cheap Trick concert Sunday night. July 29. Forty students had a private interview with the group before the concert. Posters were distributed and autographs were signed. Some of the girls were kissed by members of the group, and a few even had their clothes photographed by the musicians.

International Friendship Day is Sunday, July 30 in Mission Plaza. The Japanese students will show the people in San Luis Obispo their native dances and customs. All are invited to attend on Sunday afternoon from 4 p.m. to 6 p.m.

"Black Sunday" is the one movie that you must see this year!

-Rona Barrett, ABC-TV
Cheap Trick overpowers audience

Review by
Miss McDonald

There was enough power coming from Cal Poly's Chumash Auditorium Sunday night to make a nuclear plant pale by comparison. Not only did Cheap Trick provide enough sheer energy that the entire county, but they managed to convert Chumash into what looked like a massive government experiment to see how much sonic energy the human ear could withstand.

Opening act Rick Glieder and his band started the sonic assault with several hard rock numbers in the Complex, followed by a magnificent set of Emancipated lead singer Glieder's songs. However, it was Cheap Trick's set that was truly remarkable. According to Glieder, it was a set that the audience was undoubtedly waiting for the real power breakers, Cheap Trick.

On a stage overflowing with huge speakers and amplifiers, Cheap Trick opened with a rocking "Rock This Town," in an explosive burst of light and sound. The band tore into the band's powerful set, and the crowd was left breathless. The band's setlist included "I'm The One," "I'D Rather Be," and "Dreamin' About You." The audience was left in awe of the band's energetic and powerful performance.

Rick Nielsen, the lead guitarist, was a force to be reckoned with. His guitar work was flawless, and he seemed to be playing the guitar with such enthusiasm that even the audience was left mesmerized. His playing style was a perfect blend of precision and passion, and he was able to captivate the audience with his talent.

At one point, he took his guitar and climbed on top of a speaker, creating a moment that was both thrilling and unexpected. The audience was left in awe of his performance, and it was clear that he was a true master of his craft.

Guitar picks seemed to be his favorite weapon of choice. However, it was his vocals that shone through. His voice was strong, clear, and filled with emotion. He seemed to be hitting each note with a precision and power that few could match.

The only complaint would seem to be the overwhelming demand for the encore. The audience was left wanting more, and they were not disappointed. The encore was a perfect way to end the show, leaving the audience with a sense of satisfaction and awe.

Cheap Trick's performance was a testament to the power of music and the energy that can be generated through it. They proved that they are not only capable of delivering a powerful performance, but also of captivating their audience in a way that leaves them wanting more. For those who missed out on this amazing show, or for those who want to relive the excitement, Cheap Trick's performance will be a highlight to remember.
Free calendars
Summer ASI events are available at City, Library or at ASI Student Services.

Hotline help
Students needing help may call 644-8868.  

Free films
Free films of interest to students are being shown at the AMLRC, 644-8674.

Our Salesmen Stand Behind Their Recommendations

BIC 940 $95
Includes walnut base and dresser. (We had trouble getting Bob to pose for this photo since he still gets kicked about appearing in PLAYBOY funding a BIC turntable.)

There are two reasons I recommend the BIC 940: It does what people want it to do: belt drive, auto start and stop, you can even stack records if you want. The second is when I sell one, it stays sold. They almost never screw up. And the $85 sale price makes it an outrageous value. Oh—that’s three reasons.

Meet the Warehouse Sound salesmen. They’re a great bunch of guys who not only understand sound—they think it. And each one believes everyone should be well informed about various components BEFORE buying a music system. That’s why we have the most relaxed showroom in town.

People come in just to ask questions. And we let our systems give the answers. Sure, we have the lowest prices around. But there’s a difference between our store and all the others . . .

You’ll come away knowing a lot more about stereo gear than when you came in. Take a minute and check out some of our sound-sense savings!

Electro-Voice ETR-16C
It’s easy to recommend the ETR-16C. All you gotta do is listen to the speaker . . . That’s why it’s our best seller between $50 and $100. High efficiency too: any decent amp or receiver will do a good job with ‘em.

$75ea.
Reg. $129.95ea.

Let’s face it: there’s a lot of good 20-watt channel receivers on the market. This one happens to be superior to 99% of them at a really low price. I especially like the phase lock loop FM tuner—less hiss and no drift on KZ0Z, for instance. Feels good to use, too.

BIC 1000 $199
Belt drive turntable/charger. BIC’s best. Twin motors, deluxe walnut base & cover.

BIC Formula I $52ea.
Two-way with 8 inch woofer and bicones high frequency unit.

Electro-Voice Interface I $211 pr.
Compact, equalized two-way speaker system. Compare with speakers twice as large and expensive.

Sharp RT3388 $285

Once you’ve owned the Sharp RT-3388, it’s hard to go to any other cassette deck. Nothing else combines its great specs with computer control and convenience. And playing with the quarter timer and search/mem function is almost addictive.

Sansui AU-717 $446
Reg. $550.00

I’ve been listening to our demo Sansui AU-717 in the showroom for several months now. And every time I turn it on, it impresses me with its clean, well defined sound and logical, well laid out controls. It’s smooth as silk and built like a tank. My kind of amp.

Marantz 6150 $120
Reg. $169.95

The Marantz 6150 has exactly what I want in a turntable: no noise, no speed errors, no feedback problems and no frills. It’s a simple, clean, manual turntable with lighted strobe, hinged dust cover, FM tunability and a price tag about 50 bucks too low.

AND HERE’S A BUNCH OF GOODIES WE ALL RECOMMEND—THIS WEEK AT SPECIAL REDUCED PRICES

Belt drive turntable/ranger. BIC’s best.

Two-way with 6 inch woofer and bicone high frequency unit.

Two compact, equalized two-way speaker systems. Compare with speakers twice as large and expensive.

Reed drive turntable with strobe and speed change control. Sophisticated "S" shaped tone arm. Hinged dust cover.

Electro-Voice ETR-16C

It’s easy to recommend the ETR-16C. All you gotta do is listen to the speaker . . . That’s why it’s our best seller between $50 and $100. High efficiency too: any decent amp or receiver will do a good job with ‘em.

$75ea.

BIC 1000 $199
Belt drive turntable/charger. BIC’s best. Twin motors, deluxe walnut base & cover.

BIC Formula I $52ea.
Two-way with 8 inch woofer and bicones high frequency unit.

Electro-Voice Interface I $211 pr.
Compact, equalized two-way speaker system. Compare with speakers twice as large and expensive.

Akai 4000DB $309
Three head open reel deck with Dolby. Extra low noise.

Superscope CD301 $79
Reliable top load cassette with locking pause and limiter. Perfect for making car cassettes.

Toshiba SR 355 $115
Direct drive turntable with strobe and speed change control. Sophisticated "S" shaped tone arm. Hinged dust cover.
