Another year:
A long walk and heavy load
1979-80

As one of the individual prerequisites of college life, the press should figure heavily in your day-to-day campus activities. To know what has happened, even more important to understand why, centerfold's your responsibility as an adult.

But unfortunately, students often know too little about the press and how it may serve them. Relationships between the press and public, especially a student community, provides a scope of campus and community activity. Whether it regards the passing of a new ordinance banning student parking in certain sections of the city or the university president's decree prohibiting refrigerators in the dorms, students are affected and have a right to know.

The relationship only begins there. The Mustang Daily, like any newspaper, needs input from the readers. Letters to the editor serve to correctivity. The letters also serve to correct information. While we will always strive toward the accurate and unbiased reporting, we may at times fall short. There's no excuse, but it is your duty to correct us when you think we may have erred.

Letters serve another purpose—providing adversity to the paper's editorials. If you do not agree with a Mustang Daily editorial or opinion piece, tell us.

We reserve the right to edit letters for length, libel and style. Letters should be submitted to the Mustang Daily office in Graphic Arts room 226 or by mail to Editor, Mustang Daily, GRC 236, Cal Poly, San Luis Obispo, CA 93407. All letters must bear the name, signature and student I.D. number of the writer.

There are a few other things to look for during 1979-1980. Among them are:

—An outdoors section to be published every Thursday. The page will cover the best fishing spots on updates on the status of rare and endangered species living on the central coast.

—an agriculture section will appear once a month. Besides reporting on the production of Cal Poly crops, general agriculture news will be covered.

—Entertainment features will run every Friday. Among them will be album and concert reviews and tips to weekend nightlife.

—a consumer section will be published bimonthly. These pages will contain information ranging from the best prices of popular items to economic reports.

All these sections, along with daily sports pages, will provide a closer look at the campus and community.

Our primary goal, as campus newspaper, is to report the activities, events and news of Cal Poly. In addition, one page daily will be devoted to state, national and international news which is sent to the Mustang Daily from the Associated Press. Readers should know this news and often the Mustang Daily is the only access for some college students.

Non-profit organizations may have notices concerning upcoming events and dates expressed in our Newscope section. It will run in the newspaper twice each week and forms are available in the Mustang Daily newsroom. Please submit information at least two days prior to the desired day of publication.

The editorial page—appearing on page two every day—will try to provide the campus with a wide range of opinion. Unsigned editorials express the views of the Mustang Daily Editorial Board. All material herein is a joint effort of the editors and editorial assistants.

Congratulations. You finally made it to college. You passed the myriad of tests and obstacles standing between you and acceptance and now you're a full-fledged member of the college community. I hope you enjoyed the challenge, because it's probably the last one you're going to have for the next four years.

I'll get right to the point. The quality of teaching here at Cal Poly is hurting, you won't hear that from any administrators or instructors. They are here to criticize students, not themselves. Just as long as enrollment is up, nothing can be wrong.

But take it from somebody who should know—a graduating student.

Do not expect to see any of the teaching methods you've seen on "Paper Chase." There are no John Housemanes standing at the front of the room directing scintillating discussion, dissecting and analyzing students' minds with grading questions.

Some examples of the worst instruction I have received at Poly (no names will be mentioned so as not to cause further embarrassment to the instructors):

—When this instructor could not make it to class because of possible pop quizzes. You know how much he would record his lecture and have students buy a Handbook section to see where you screwed up. I found this a very cheap way of grading, not to mention the total lack of individualism involved here.

—One instructor was so dull that only 25 percent of his students ever showed up to class. The only reason I attended was because of possible pop quizzes. You know an instructor is hurting when he has to resort to pop quizzes to insure that somebody would show up.

—Another instructor loved to belittle her class. Whenever a student asked a question, she would make the student feel like a fool for asking it. People wonder why some students never speak in class.

Once she accused the whole class of being racist. No, not accused. We were racist. When somebody tried to challenge her, the instructor retorted to her off-said tact of "destroy the opposition." Try challenging her after that.

Scott Craven was the 1979-80 Mustang Daily Co-editor and recently graduated with a journalism degree.

—I once had an English teacher who, when grading essays, would mark papers with symbols and notation instead of comments. All students were to buy a Harbrace College Handbook. All those "12s" and "13s" on your essay referred to the ASI bureaucracy for any changes. The fruitlessness of this effort is time-tested. You just have to find them, and the search isn't easy. The bad ones aren't going away. There is little that can be done because you have to go through the administration or the ASI bureaucracy for any changes. The frustration of this effort is time-tested.

Remember one thing. Most instructors don't give a damn about your education. Just try to find the ones that do.
Jeff S., 19, is the son of a commercial ranch owner and a 1978 high school graduate. For the last 14 years, Jeff has spent his days going to school and coming home to work as a supervisor on the family's almond ranch in Northern California. When his parents go on vacation each winter, he is left in charge of the family's ranch, which does about $6 million business in a good year.

Unfortunately, since much of Jeff's time has been spent working on the almond ranch, his high school grades suffered. His grade point average was 2.8 when he graduated from high school, and was rejected when he applied to Cal Poly last year. The university was sorry, but the slots for new students had all been filled with those with higher grade point averages. Andrea J., 20, grew up in a high-rise apartment building in Orange County. Her folks work for an advertising agency in Los Angeles and her family is "well-off." Since she did not work in high school, her grades were very good—she graduated with a 3.8 average. She wanted to go to college, but had a friend that went to Cal Poly and applied to the Animal Science program. She was accepted as an Animal Science major in Fall 1978. Two months later she changed her major to Graphic Communications, because she decided she no longer liked agriculture enough to major in it.

There is a strange twist of irony woven between these two stories. On one hand, there is Jeff—already an experienced farmer and an immensely interested student of agriculture. On the other, Andrea—caught in the revolving door of high school, and grades alone were enough to get her admitted. But the real tragedy behind this ironic situation is that it could have been avoided. The present method of determining admission to Cal Poly has caused a large number of inconsistencies.

Tony Transia is a senior journalism major and 1979-80 Mustang Daily Co-editor.

Administrators know nothing about the experience and personal backgrounds of the students they admit to the university, and in more than one case, someone who should have gotten in did not. Since this campus is literally jammed to the doors with students, administrators have been forced to scrap the cream off the top of those who apply each year. When the university, which used to employ a selection system where qualifying students were admitted on a random basis, began growing more popular, it was forced to change its ways. The random system caused severe spillover when with 2.0 or greater.

The present method of determining admission to Cal Poly has caused a large number of inconsistencies.

Andrea made higher grades than Jeff in high school, and grades alone were enough to get her admitted. But the real tragedy behind this ironic situation that it could have been avoided. The present method of determining admission to Cal Poly has caused a large number of inconsistencies.

The real truth is that the system was not remedied at all—if anything its faults have been allowed to proliferate, and few people are taking the initiative to fix the problems. Simply, a new admissions policy must be instituted which would take into consideration both academic prowess and previous experiences and backgrounds of those who apply. Since practical education plays a large role on this campus, this new policy could clearly coincide better with its philosophies.

The change that must be made to fix this admissions contraption is this: the academic departments must begin holding interviews with applicants before they are admitted and must have the major voice in determining whether they will be let in.

Interviews would give applicants the chance to meet the department before they finally made up their minds to attend Poly. Interviews would also serve to dissuade students who are caught in indecision—like Andrea—from joining the revolving door of high school, and grades alone were enough to get her admitted. But the real tragedy behind this ironic situation that it could have been avoided. The present method of determining admission to Cal Poly has caused a large number of inconsistencies.

Baker says CalPoly will seek grants

BY JAY ALLING

President Warren J. Baker, still worn out from a racquetball game at down in his office to discuss Cal Poly's future. "A lot of people play racquetball around here so I'm going to have to change my game," said Baker, who usually runs three miles a day or plays handball. Baker's casual plaid attire complimented his soft-spoken manner as he envisioned the next ten years for Cal Poly. The university, he said, needs to explore new avenues if it is to remain a polytechnic facility.

In the wake of Proposition 13 cutbacks, the California State University and Colleges System has lost $20 million in funds. Budget cuts have been mandated by Gov. Brown. Baker said change, both his and of Cal Poly's will be needed during the coming fiscally-tight decade. Baker said he must adjust to a new setting—new people and environment. But he added there are many things here in common with the University of Detroit, where he came from in early August.

For example, as vice president of academic affairs at the university of Detroit, Baker said he helped establish research grants from companies such as Dow Chemical and Burroughs Corporation. (continued on page 5)
Pres. Baker says Poly must seek additional funds

Baker said one of his main goals at Cal Poly is to locate funds other than state and federal subsidies to the university. He said this will include contracting private companies to provide grants.

Baker said his experience at re-organizing curriculums while vice president will be utilized here to ensure all students graduate with a wide educational background. Even though this is a technical school, he said, students should have a rounded education so they can solve society's problems.

To that end, Baker proposes to have a continuing process of course evaluation. This would ensure the curriculum and all majors serve a student's need for the job market.

"It's important for a periodic reassessment of programs," Baker said in a slight New England accent. "I think there should be some counseling help."

The president said he hopes counseling, besides advisors, would provide students with an up-to-date job outlook and provide emphasis for helpful courses. Adapting to new situations is one thing University of Detroit colleague Father Norman McKendrick said Baker will have little trouble doing. The priest, who is an arts professor, said Baker's easy-going friendly attitude makes the engineer "instantly popular."

"His absolute integrity stands out in my mind," said McKendrick, who temporarily holds Baker's former job. "He was a standout in my mind." said McKendrick. The priest said Baker would sometimes have get-togethers for his students and was highly respected by them because he shared their problems.

"I don't want to sound like he walks on water, but he is superior," concluded McKendrick.

Besides sports, Baker enjoys social events such as theater and parties, said McKendrick. The priest said Baker would sometimes have get-togethers for his students and was highly respected by them because he shared their problems.

"I don't want to sound like he walks on water, but he is superior," concluded McKendrick.

Baker said he wants to update the problems of Cal Poly students also. One of the oft-mentioned pet peeves of the student body is the illegal status of alcohol on campus. Though Baker said he has yet to decide if alcohol should be allowed, he said he is giving the matter close scrutiny.

The University of Detroit had a campus tavern while Baker was the academic affairs dean there and he said no problems were ever encountered. He said the situation was much different than Cal Poly because the student population at Detroit had a higher average age and most students consumed.

But Baker said he enjoys having some beer or wine on occasion. "I'm Irish," explained the president, displaying his characteristic broad smile.

NEW POLY PRESIDENT—Curriculum here will be utilized to ensure all students graduate with a wide educational background.
Moped Thefts — Police report that moped thefts are on the rise in San Luis Obispo "because they are frequently left unlocked and unidentifiable."

According to Wayne Carmack, Public Safety Investigator for the Campus Police Department, the theft of vehicles that are locked and chained has not been an unusual occurrence this year. He said many of the moped thefts reported by students to the campus police department this year have included vehicles that were locked and taken from the interior parking lot during day time hours.

Traffic Officer Bruce Lahargoue of the San Luis Obispo Police Department said unlocked vehicles, as well as those well secured, have been reported stolen this year. "We've had cases where the person will just leave the vehicle for a few seconds, come back, and someone has taken off with it that quickly. Thefts have also occurred where the moped was locked and chained to a fence," he said.

Lahargoue said the problem appears to be on the increase, judging by figures for thefts last year compared to this year. He said the amount of mopeds stolen in the area can be related to the student population. A large concentration of thefts occurred around student complexes such as Mustang Village and Stanser Glen where many mopeds are congregated. "The relation between the drop in amount of thefts and the drop in student population since June could be looked at in two ways," he said. "It could mean that the people who ride mopeds are mostly students and thus there are not as many mopeds in the area to be stolen, or it could mean that the person stealing them was a Poly student. But no Poly students have been found to be involved in such thefts."

"Theft all tend to look alike," he explained. "Unlike a car, there are no visible license plates. There is generally good recovery rate for automobiles and motorcycles, but not for mopeds."

Lahargoue said in one case, a person was caught riding around on a vehicle that he had stolen from the same area two months earlier. He said most mopeds are recovered in response to a call from someone saying one has been lying around for a long time and they think it might belong to them.

Carmack said that out of five mopeds reported stolen to the campus police department this fiscal year, two were recovered. One of the two was recovered when it came to the department's attention that a man had been inquiring at a store about repainting a moped which turned out to be one which had been reported stolen.

Lt. Leroy Whitmer of the Campus Police Department said that mopeds are light, easy to steal and hard to trace. He said they are stolen to be sold, or sometimes stolen for the thief's own use. "I'm surprised that anyone recovers a moped," he added. Whitmer said students who live on campus should register their mopeds with the campus police department.

Lahargoue said mopeds have to be licensed if the owner lives within the city. "Moped owners should register them with the City Licensing Office (as is the case with bicycles) for greater ease in identifying and returning stolen property."

Lahargoue said mopeds should be locked with a good hardwired lock and chain and kept either inside a locked garage or in a well lit area. Further precautions he mentioned included keeping an eye out for suspicious activities near ones' home.

Thefts are on the rise in San Luis Obispo because they are frequently left unlocked and unidentifiable.
Prices vary on over-the-counter cold remedies

BY DIANA BURNELL

Fall quarter is here, and with it come the colds, sniffles and other various symptoms that make you feel miserable. Nurturing yourself back to health will take more than mom's chicken soup. Assorted remedies available in almost any pharmacy or grocery store in town are definitely in order to combat the common cold.

While you are sick you may not care what the price of getting well is, but the following is a comparison of the prices being charged in San Luis Obispo for the 'cures' to your aches and pains.

Aspirin, often a first choice to ease fever or headache, varies in price from $1.17 at Lucky's to $1.92 at Economy Drug for a bottle of 100 Bayer aspirin.

There's also the choice of going with the house brand of aspirin, usually cheaper than the better known brands. If you take this choice, 47c per 100 at Williams Brothers to 97c for the same amount at Lucky's.

Aspirin substitutes also have a wide price variance. A 100-tablet bottle of Tylenol ranges from $1.33 at Thrifty to $3.79 at Safeway.

Allergies are also common on the Central Coast at the end of summer, and allergy remedies abound. A typical one, Allerest, costs anywhere from $2.69 at Lucky's to $3.75 at Hurley's Pharmacy, Carpenter's Rexall, Economy Drug and Hurley's Pharmacy.

Another remedy for sniffles is Contac, available from $1.33 for 10 pills at both Lucky's and Williams Brothers to $2.29 at Hurley's Pharmacy.

Queasy stomachs maybe the problem. Alka-Seltzer's price ranges from 99c for 25 at Thrifty, Lucky's and Williams Brothers to $1.50 at Hurley's Pharmacy.

When your system may need an extra boost to stay awake and alert, NoDoz can be purchased for $1.47 for 36 at Lucky's and Williams Brothers to $1.93 at Hurley's, and when you can't get to sleep, there's Sleep Eze at $1.33 for 26 at Economy Drug to $2.39 at Hurley's.

Basically, lower prices are found at the supermarkets rather than the pharmacies, with Hurley's having the highest prices. Other stores checked ranged somewhere between the highs and lows quoted for each product.

Summertime sees changes for San Luis Obispo

BY GREG CORNING
Daily Edition Assistant

"Summertime, and the livin' is easy..." The lyrics from "Porgy and Bess" accurately describe the summer in San Luis Obispo. The small-town atmosphere and relaxed attitude of SLO-town residents make it hard to imagine anyone getting excited about anything.

But there was a little excitement when 20,000 people converged on Camp San Luis Obispo for an anti-nuke rally June 30. Several well-known entertainers were there: Graham Nash, Bonnie Raitt, Jackson Browne, Jose Celin Young. And Governor Edmund Brown showed up to declare his opposition to the licensing of the Diablo Canyon power plant. (Turn to page 12, section III for more information about the rally.)

Protest activity on a smaller scale was stirred up in the first two weeks of July when Cal Poly support staff members prepared to strike. The issue was Brown's veto of Canyon power plant.

BY GREG CORNING
Daily Edition Assistant

"Summertime, and the livin' is easy..." The lyrics from "Porgy and Bess" accurately describe the summer in San Luis Obispo. The small-town atmosphere and relaxed attitude of SLO-town residents make it hard to imagine anyone getting excited about anything.

But there was a little excitement when 20,000 people converged on Camp San Luis Obispo for an anti-nuke rally June 30. Several well-known entertainers were there: Graham Nash, Bonnie Raitt, Jackson Browne, Jose Celin Young. And Governor Edmund Brown showed up to declare his opposition to the licensing of the Diablo Canyon power plant. (Turn to page 12, section III for more information about the rally.)

Protest activity on a smaller scale was stirred up in the first two weeks of July when Cal Poly support staff members prepared to strike. The issue was Brown's veto of Canyon power plant. Brown's decision.

Howell Petry Harris pleaded guilty in the murder of Dr. Neman Alexander, Cal Poly head librarian. Harris was arrested on July 24 to a 27-year prison term.

- Cal Poly and San Luis Obispo together began a new program to collect on parking tickets, particularly those that are overdue. The program involves suspending vehicle registration for cars owned by people with delinquent tickets.

The city council voted to establish a no-student-parking on the north side of the Cal Poly campus. Only residents of the area who have purchased the correct decal from the city will be permitted to park on Grand Avenue, Fredericks Street, Bond Street, Hathway Avenue, Longview Lane and Slack Street.

U.S. Secretary of Agriculture Bob Bergland addressed a group of agricultural educators from Cal Poly and Mexico who had gathered for an education exchange program. Bergland praised the exchange and said more like it should be held.

Dr. Warren Baker arrived to take his place as president of Cal Poly. In a press conference soon after his arrival in mid-August, Baker said one of the major problems facing Cal Poly is to find sources of funds besides the state subsidies. He said he believes a summer quarter curriculum should be retained. Concerning alcohol on campus, Baker said he needs to learn more about the issue before taking a position.

There were several other changes in Cal Poly staff and faculty. Dr. Kenneth Barclay arrived from the State University of New York to begin work as the director of Activities Planning Center. Dr. Raymond Yeh of the University of Oklahoma was chosen to be dean of the School of Architecture effective January 3. Dr. Robert Hoover, who has been on the faculty at Cal Poly since 1970, was named head of the Social Sciences Division.

More history on county added to campus library

Additional information on the history and development of San Luis Obispo County has recently been added to the Cal Poly Library collection. The materials—dating back to the 1870's—include books, pamphlets, documents, original letters and maps. The collection will be housed in the special collections and archives department.

The section was obtained from the collection of William P. Wreden of Palo Alto, a book dealer and longtime ranch owner on the Carissa Plains in Eastern San Luis Obispo County. Among the materials are some of the earliest subdivision maps of San Luis Obispo, Nipomo, Pismo Beach and Grover City, said Robert Blesse, the department mental librarian. There is a large amount of early printed material in the collection, including some dealing with the founding of the Atascadero Colony and tourist attractions of the county.

A near-perfect edition of Myron Angil's book on the (continued on page 9)

This quarter, try something impossible.

Many young men and women say they are going to college for the challenge.

But it's tough to test yourself and find out what you can do just by taking quizzes and finals.

Add Army ROTC to your program and you'll automatically challenge both your physical and mental skills.

Unlike strictly academic subjects, Army ROTC will teach you to think on your feet. To make important decisions quickly. And it will help you to develop your confidence and stamina. One quarter at a time.

In short, you can prepare yourself to handle the impossible, on campus or off.

Additional county history acquired by library

(continued from page 6)

history of San Luis Obispo County published in the 1880's is also in the collection.

The new collection has been at the library for just over a month and will be treated with "the most modern archival preservation techniques available," said Robert Blesse, director of special collections. Blesse is specially trained in the preservation and conservation of books, documents and photos. Blesse said the collection will be available to all students, faculty and San Luis Obispo residents who would like to do research on the area's past.

"Basically we hope the collection will become the heart of a San Luis Obispo regional history collection," he said.

Blesse said he thinks the collection will be beneficial to many students, but of special interest to history majors.

"The maps of the towns during the 1880's are of inestimable value in locating place names which have long since gone out of use," he said.

LIBRARY ADDITION—Betty Schum and Scott Lewis study an 1887 map of Pismo Beach which is among the history collection recently acquired by the Cal Poly library.
Lindvall new associate dean of business school

New associate dean for the School of Business, John Lindvall, said one of his goals is to work with the staff to give Cal Poly the best business school in the state system.

Lindvall has taught finance courses at Poly since fall of 1973, and accepted the new position on August 31. The new administrator will direct the school's master's degree. Lindvall said he has assumed his position on August 31.

His job entails talking to student groups and individuals who are interested in Cal Poly's Master of Business Administration degree. Lindvall said he has already had several requests from students who want to be admitted.

"It's a period when no one is on campus (summer quarter break), I must have had 10 people at least come in to my office and talk to me about getting into the MBA program," Lindvall said.

The existing staff is already doing a good job, Lindvall said, but there are a great number of things to be done and evaluated.

The new associate dean said he does not yet know enough to be specific about what he will do, but increasing the number of qualified applicants allowed into the quarter's program will be a top priority. He also said he will try to market the program more effectively to get more applicants.

Taking on an administrative position will be a change for Lindvall, but one offering the best of both worlds—he will be able to teach as well as doing administrative work. Lindvall will teach one four-unit course this fall, leaving enough time to "find out" if administrative work is right for him.

Stepping down from the position of associate dean is Economics Professor Faust Tellew. Tellew tried out the position for several months, then decided he wanted to get back into teaching. He added he feels nothing negative toward the department.

"Tellew said he feels Lindvall is a good choice and will handle his new job without difficulty.

First-year Economics Professor Faud Tellew, vice president of academic affairs, recommended Lindvall for the job. He said he has the right credentials and can learn the administrative skills to handle the job.

Lindvall said he thinks Cal Poly has a good business department, with resources to make it even better. Good faculty, a rigorous curriculum and quality students are key factors that helped get him the job.

(continued on page 13)

Teaching positions cut

By Paula Kregel

Cal Poly will have to take a cut in teaching positions and campus monies that will hurt the university instructional program, according to Jim Landreth, director of business affairs for Cal Poly.

The cuts are due to slashes Governor Brown made in the recently approved 1979-80 budget for the California State University and Colleges system, said Landreth. The governor first recommended almost $21 million less than the budget the CSUC trustees originally submitted. Brown finally reduced the cuts slightly to $17 million out of a $179.9 million dollar budget.

Landreth said the effect on Cal Poly is a loss of 15.5 faculty positions and a mandated cut of $197,272 for campus supplies and services for the 1979 calendar year.

"We have the same enrollment as the year before," said Landreth concerning the loss of instructors. "So how are we going to meet our past instructional program?"

There are certain departments on campus that will be especially hard hit by the reductions, Landreth said. The chemistry department was one department which is concerned about double-digit inflation in some of the materials they use.

"The reductions will amplify the situation," Landreth said. "They are having to re-evaluate how they do things."

The chemistry department may have to come up with a different method of presentation in labs, or generally use less equipment and chemicals than in the past, he suggested.

Other reductions and staff cuts will be made at Cal Poly due to the final budget allotment, but these are smaller in comparison, said Landreth, and will not have the impact of the above cuts. Included in these are a reduction of 11.9

Sign up for your PG&E electric service while registering.

PG&E student representative will be at Union Plaza, 8 am to 5 pm, Monday, September 17 through Friday, September 21, helping students arrange for PG&E service.

After September 21, contact the PG&E San Luis Obispo Customer Services office at 544-3310 for service.
Cal Poly staff members in response to policy directives from the Board of Trustees. It provides three ways for students to meet the new graduation requirement, said Dr. Haust Jones, vice president of academic affairs. Students can satisfy the writing requirement by taking anyone of eight specified literature courses, earning at least a "C" grade and a certification of writing proficiency from the instructor, said Jones. Another way to meet the requirement is to receive a "C" or higher in one of six composition courses specified for meeting this requirement.

Questions regarding substitution of courses taken at institutions besides Cal Poly or before the requirement was established are being worked out by administrators and faculty. It may be possible to substitute courses already taken according to a policy stated in a handout from administrators.

The simplest way of meeting the writing skills graduation requirement is to pass the upper division writing test, Jones said. Possibly beginning winter quarter, the test will be administered once every quarter. A $10 fee will be charged to cover test costs.

English courses which lead to fulfillment of the writing requirement are limited, so more students will have to take the test, said Dr. John Harrington, coordinator of writing proficiency certification.

"There are very few slots open for people who want to satisfy the requirement by taking a course," said Harrington.

"There are very few slots open for people who want to satisfy the requirement by taking a course," said Harrington.
Off-campus living

Housing ordinance continues to trouble students

BY RHONDIA BOZARTH

After over a year of complaints, discussions and many hopeful solutions, controversy over the off-campus housing ordinance—which states not more than three unrelated persons can live together in a single family dwelling in San Luis Obispo—is still brewing.

Disputes over the ordinance began over a year ago, when several San Luis Obispo residents called for enforcement of the 17-year-old law because of problems they said were created by the overcrowded homes. Complaints included everything from too much noise, to not enough parking.

On the other side of the wrangle were students, who said they needed to live with more than three people because of limited housing in the area and to help cut costs.

An effort was started in summer quarter by the ASI to change the ordinance so it would be less "discriminatory" to students, said ASI President Rose Kranz.

ASI obtained a lawyer to do research on the legality of the ordinance.

The results of the research are not yet available for publication. ASI Vice President Jeff Land hoped to have the information as soon as possible so they could begin work on the case.

Land said he is not yet sure of the approach he will take to change the ordinance, but indicated he would either like to eliminiate or change the basis on which the present number of unrelated persons are determined.

Land is planning on taking all year to achieve this goal, but he thinks he can get a majority of the five council members to go along with his request. He said Mayor Lynn Cooper and Councilman Alan Bond are opposed to the ordinance, and he says he can get Councilman Ron Dunin to go along with Bond and Cooper.

In an interview, Dunin indicated a willingness to listen to anyone who has ideas of a better way than the ordinance to alleviate neighbor relations problems. He said if there were a more comprehensive plan to alleviate neighbor relations problems, he would be "very happy to suggest suspension of the ordinance."

Dunin said he sees a problem deeper than just the dissimications with the ordinance. He thinks the CSUC system should allow more land to be developed at Cal Poly for on-campus housing and thinks the student housing industry in San Luis Obispo is not catering to student needs.

"Student housing like it is now is too regimented for the modern student," Dunin said. He said he would like to see a new approach to this type of housing from the industry.

Dunin was one of the four council members who voted in favor of the ordinance—but he said he originally voted "no," but switched his vote.

"The only benefit the city derives from this ordinance is if someone complains about the behavior of a particular household, the city has the power to investigate," Dunin said.

According to Dan Smith, a planner in the Community Development Department, the ordinance is only enforced on a complaint basis.

"We've never taken anybody to court," said Smith, who also is the enforcer of the ordinance. He said when a complaint is brought to him, he will contact those violators and ask for "voluntary compliance." He said he has never had a problem so serious that enough evidence could be gathered to go to court.

Councilpersons Melanie Billig and Jeff Jorgensen, who said they would vote against the ordinance, pointed out that the R-1 ordinance is nothing new.

Jorgensen said the same provision was on the books in the early 1960s, but the way it was written was unclear. He said in 1976 and 1977 there were a number of complaints primarily because of noise. Shortly thereafter, complaints had almost disappeared.

Jorgensen said the council went to the city attorney who said the ordinance should be amended. So by the time the ordinance was simply clarified in October, 1978.

Billig has taken a rigid stand on the three R-1 Ordinance.

"It's not in keeping with the regulations in the homelessness and age group," said Billig. "Not only do I have to consider what's a real problem for students, but what's a problem with residents living in these areas."

Jorgensen considers the ordinance, "an additional enforcement tool."

"We made a decision on the city council to permit students to stay off campus."

"I don't think changing the law was necessarily the way to help relations between neighbors.

Help in finding a home

A plan to allow students to live in Cal Poly dormitories while they search for off-campus housing will hopefully be enacted in 1980, said Walt Lambert, coordinator of off-campus housing.

The difficulty many students have in finding adequate housing and the shortage of motel rooms in San Luis Obispo prompted the idea of permitting students to stay two or three days in residence halls while they look for a place to live, said Lambert.

The housing office will continue to provide its primary services of listing and mediation for students who live off campus.

Lambert said the housing office receives between five and 10 new listings of housing available per day. Most of the listings solicit roommates, and the vast majority of residences open are apartments.

The mediation service offered by the housing office includes helping students to get deposits back and giving non-legal advice, said Lambert.

BANK OF AMERICA

At Bank of America, we study student banking needs. And we've designed a Money Conveniences System® to help meet them.

What's the Money Conveniences System?

It's easy services. For example, our free Money Transfer Service is great if you're getting money from home. With it, funds can be transferred on a regular basis from one Bank of America checking or savings account to another for as little as $5 a month.

It's easy savings. Checking and credit. We have a wide variety of plans to fit most needs. Students of sophomore standing or higher who qualify.

It's free. And easy financial information. Our Consumer Information Report gives a variety of financial subjects and they're free at any Bank of America branch.

It's easy to get to banking. Our Money Conveniences System helps fit banking into your schedule. With an early and late walk-up drive-up window available at most branches—just case you have classes during our regular hours. And, since Bank of America is the only bank in California, you can do business with us 24 hours a day, seven days a week, 365 days a year. So come in and get to know the Finance Mayor. And you'll get to know easier student banking.

10% Off to Poly Students

Terra has all sorts of things to help turn your "college housing" into a home:

And they're on sale now.
Marching band holds tryouts

BY PEGGY DEWANE

Cal Poly's marching band is unique according to William Johnson, conductor of the Mustang Marching Band. The music is current and written especially for the marching band and there is an emphasis on sophisticated musical performance, said Johnson.

The first meeting of the marching band will be Thursday, Sept. 20 at 8:00 p.m. in Room 216 of the H. P. Davidson Music Building.

Auditions for students who want to be in the band will be held Friday, Sept. 21 at 3:30 p.m. Johnson said experience is necessary to get into the band, but if a prospective member was active in a high school band auditions should not be too difficult.

With $28,000 from ASI for new uniforms, the band may expand this year, said Johnson. The ASI money is enough to buy 150 new uniforms, which allows 30 more musicians to march with the band.

New Budget (continued from page 10)

Staff positions. However, these are spread over many campus departments and services to lessen the effect. Only in Plant Operations and Custodial Services—where there is to be a cut of 4.9 positions—should there be a significant impact, Landreh said.

The other reductions in funds scheduled are $4,328 for textbooks, $15,821 for campus farm supplies and services and $2,980 for newly-added-faculty furniture.

Lindvall (continued from page 10)

To make Cal Poly's business school unique, he said, "I do believe that the quality of education a student receives depends partly on the quality of the other students," said Lindvall. "I think this could be one of the best or the best in the system."

**Charges dismissed, Hank Harris released**

**BY CATHY SPEARNAK**

Charges against 17-year-old Howell Henry "Hank" Harris were dropped on September 11 in San Luis Obispo County Superior Court.

The young Harris—along with his father, Howell Petrey Harris—was held on suspicion of the homicide of Cal Poly's head librarian last January.

Judge Richard C. Kirkpatrick freed Harris in the request of District Attorney Christopher G. Money. The elder Harris continued July 3 to the shooting death of Dr. Norman Alexander and was sentenced July 24 to 27 years in prison.

Money and Sheriff George S. Whiting announced plans to dismiss the case against the younger Harris just before the early September court proceeding.

The decision to seek a dismissal was reached "after an extensive re-examination of the evidence" in the staying, Money said Sunday.

The new turn in the case to free Harris was made possible because of the father's confession to the murder and extensive interviews and two lie detector tests given to the younger Harris by different operators.

It was determined, Money said, neither brother knew their father was armed with a pistol and intended to kill Dr. Alexander. Money said during separate interviews, both brothers told the same story.

Harris and his father were arrested by San Diego police on Jan. 18—three days after Alexander was shot in a campus parking lot. Alexander died January 18.

Speaking briefly with reporters after his release, Hank Harris said he plans to go to school in San Diego after receiving a few credits to get his diploma from Arroyo Grande High School.

City joins Cal Poly in collecting parking fines

Students with unpaid parking tickets will have to pay additional fines as a result of a new procedure to collect delinquent parking fines.

Cal Poly and the City of San Luis Obispo have devised an automated system to collect overdue tickets through the county municipal court.

Vehicle owners will have to pay an additional $10 per ticket plus the original bail before they will be allowed to renew their vehicle registration at the Department of Motor Vehicles.

Prior to Sept. 1, 1978, the county court issued arrest warrants for delinquent parking tickets as a service to Cal Poly. This was the amount of outstanding fines issued during September of Proposition 13.

When the public learned of the inability to enforce parking tickets, there was a marked upswing in violations, said Cal Poly Parking Office Director Glinda Souza.

In September alone, officers issued a total of 2,950 tickets according to the campus police officer. The amount was more than twice the amount of citations issued during September, 1977.

Lee Diaz, state cashier, sent a list of 500 vehicle license numbers with outstanding parking tickets to the DMV to get the names and addresses of the registered owners.

Beginning with tickets written on Sept. 1, 1978, the plans to send batches of 500 license numbers in the order they were written until the backlog of 11,732 unpaid parking fines is caught up.

"We hope to be caught up in two months," Diaz said.
SLO life far from slow

This is your first time in San Luis Obispo and you've been invited to go out strip hunting. Well put down your burp bag and head for the coast. There's Obispo and you've been invited to go out jogging, bicycling, sailing. Fishing off the to §LO Town than you can shake a stick at. Do something outdoors. Grab your suntan to pick up a head of steam, so you decide to do it. It's all available here on the central picnicking, rollerskating, hang-gliding, etc, etc. It's all available here on the central coast; you just have to go out and do it.

Ah, you're the competitive type. How about some tennis, or basketball or a quiet walk around, lay on the grass or meet people. There are several parks in San Luis Obispo, if you just want to kick back or throw a frisbee.

Well, you've now exhausted yourself at the beach and you're ready to just sit back and relax before you go out and shake your boot at the local bar spots. The Syndicate in the Network, the Darkroom next to the Fremont Theater and Tortilla Flats all have pool tables, where you can sit and relax, have a draft and a sandwich or a plate of hot nachos.

Get together with your dorm, wow group, fraternity, sorority, friends or individually. Join in the fun!!

3 STORES TO SERVE YOU:

•Copeland's Sports

962 MONTEREY DOWNTOWN
Copeland's Sports offers you the most complete sport shoe department in the area as well as carrying the latest in equipment and apparel in every department:
Athletics  Ski Equipment  Watersports
Tennis  Ski Rentals  Camping
Backpacking  Shoes  Skateboards

•Copeland's Clothes

MADONNA ROAD PLAZA
One stop at Copeland's Clothes and you'll be sure to find the fashions you've been hunting for; from head to toe.
School is much more fun if you're dressed well for it. Here is part of what you'll find at Copeland's Clothes:
Dressy Pants  Dresses  Shoes  Menswear
Casual Pants  Blouses  Suits  Accessories

•Copeland's Shoes

894 HIGUERA ST. DOWNTOWN
Being the oldest of Copeland's Stores, Copeland's Shoes has an established reputation for fine footwear. Their young people's shoe department for men & women is one of the biggest, but they have shoes for the children and older ages too.
Some brands include:
Birkenstock  Shakti  Selby  Frye
Famolare  Bass  Clarks  Dexter

WE'VE GOT IT ALL!
The Cal Poly Invitational held in Oct. 1978 had UCSB runners eagerly going out in the lead, but the National Champion Mustangs, led by Jim Schanckel (third from left), John Caprilli (second from left), and Manny Bautista (far left) went on to win.

Why would anybody take ROTC?

Here's 5 good reasons why:

**ACADEMIC CLASSES:**

1. "American Military History"
   - From Washington to T. Roosevelt
   - MSc 102

2. "US Defense Establishment"
   - Relationship of the Military with American Society
   - MSc 101

3. "Orienteering"
   - Map and compass skills with field application
   - MSc 201

(MSc classes listed under Military Science in catalogue)

**ACTIVITIES**

4. Physical Conditioning
   - PE 131-02,07 (MW 1600, TTH 1600)

5. Adventure Training
   - Rappelling 29 Sept.
   - Backpacking 27 Oct.
   - Orienteering 17 Nov.

**CLASSES HELD IN BLDG. 34, ROOM 117**

If confidence grew on trees, Miller would have an orchard

BY GREGOR ROBIN
Daily Mustang Miller

If you are planning to go out for cross country this season and better yet win a spot on Cal Poly's Division II National Championship Team, you had better think twice...make that thrice. With four returning runners virtually guaranteed spots on the team and over twenty other runners in the hunt for the three remaining spots, Coach Steve Miller is looking for another national championship trophy already.

Jim Schankel heads the list of runners back from last year's team, said Miller. He placed eight in the national meet.

Danny Aldridge should be the number two man, said Miller. Although he is a miler, he placed eight in the national meet.

Eric Huff is ready to fill the third spot, said Miller. He ran 24 in the national meet and placed well in the 5,000 meter run in the 1979 track nationals.

Manny Bautista will probably be in the fourth spot, after a summer of training in the high altitude of Lake Tahoe.

"I think these four spots are pretty settled," said Miller. "The two guys I see in the fifth and sixth spots are either Terry Gibson or Jeff Small." Gibson is a transfer student from Glendale Community College and he placed second in the Junior College State Meet in 1978.

"Jeff, who red shirted last year, but ran great track," said Miller. "I think these four spots are pretty settled." said Miller.

Gibson is one of the few people that I look to as being a solid member of the team without being in the program," Miller said in reference to his transfer from Glendale.

Steve Miller is expecting another national championship in cross country this season. With a strong group of returning runners and depth in recruits, he thinks it won't be too difficult.

PAUL MEDVIN, two-time California State High School Mile Champion from University High School in Los Angeles, is his first choice for number seven. He has run a 4:05.3 mile and a 3:46.01,500 meters.

Dan Strangio and Jack Marden from Mission San Jose High School have run 4:11 and 4:10 miles respectively.

Their endurance will be tested in the 10,000 meter cross country distance, according to Miller.

And Ivan Huff, Eric's younger brother, has a chance for the seventh spot also, said Miller. He was the second man on Alan Hanford's State Champion Junior College Cross Country Team. He also placed 100 in the state in both the 1,500 and 5,000 meter runs last season.

Other runners Miller thinks might have a outside chance are; Tom Trimble, John Wendler and Terry Bauer, all returning students, and Robert Hallinan from Santa Barbara City College, Doug Arvitt from Chico and Syd Leibovitch from Northridge.

STEVE MILLER, Division II Track and Field Coach of the Year is expecting another national championship in cross country this season. With a strong group of returning runners and depth in recruits, he thinks it won't be too difficult.

Mustang gridders start with untested man in the middle

By GREGOR ROBIN

With an All American running back and two of the best receivers on the west coast. Coach Joe Harper sees the Cal Poly Mustang football team headed for another successful season—but there is a catch. The top two Mustang passers of 1978—senior Craig Johnston and sophomore Lloyd Nelson—are not expected to be able to start the 1979 season.

Johnston is recuperating from knee surgery performed last winter and Nelson is recovering from a broken wrist.

"We don't anticipate using either Johnston or Nelson in the early season," Harper said.

Johnston's injury has, for the time being at least, put him out of the running in his quest to become the top Cal Poly passer of all time. He needs just 82 yards through the air to overtake Don Milan (1968-1970) who finished his career with 2,348 yards.

The team will go with a novice quarterback in Reid Lundstrom. He played in three games last season, completed one of three passes for four yards and rushed four times for ten yards. The 5-11 170-pounder from Anaheim was the number one quarterback throughout the spring practice, said Harper:

The offensive strength comes from Lewis Jackson at running back, Robbie Martin and Dwight Allen Crump at ends, and a veteran offensive line, led by junior tackle Mike Deon (6-4, 200).

Jackson is coming off a strong performance last season. He placed fifth in the nation in rushing (1131 yards) and eighth in the nation in scoring (74 points).

On defense Harper is looking to see development of individuals on the front line as Cal Poly lost three of its four starting linemen and two of its three starting linebackers through graduation. They also lost starting defensive tackle Fred Razo to a knee injury which he suffered in preseason, and starting middle linebacker Kevin Hardcastle because of academic ineligibility.

In the defensive secondary the Mustangs have two juniors returning in 1979: strong safety Tim Hanft and cornerback LeeCharles McDonald.

The season at a glance:

Coach recruits top women spikers

BY GREGOR ROBIN

The women's volleyball team had their first winning season since the sport was established at Cal-Poly. With two returning starters and a group of strong recruits, Coach Mike Wilton is looking forward to an exciting season.

"We had a very successful season last year," Wilton said. "We won 12 of 20 matches and established a good climate to build upon for women's volleyball."

Laurie Borogaro and Susan Forte, both seniors, will be back for one last season, Wilton said. They were two of the reasons for getting the Mustangs out of the cellar. The team placed fourth in the Southern California Athletic Association Conference.

Marie Lundie has transferred here from USC, one of the leading volleyball schools in the nation. She was All CIF 4-A Player of the Year at Newport Harbor High School in 1977, and Wilton sees her as a dominant force on the team.

"She's going to run the show for us," Wilton said. "She is the setter and we're going to run a five-one offense around her." This means five hitters around one setter.

Lundie is here because Wilton had time to recruit this season, he said. Last season he was appointed women's coach near the start of the season. Many high school and junior college players were already taken by other schools when he started recruiting.

Two high school players Wilton picked up this season are Ailcen Semonsen, All CIF First Team Player three years in a row, from Corona del Mar High School, and her teammate, Monica Park.

Semonsen went to the Junior Olympics in Colorado Springs, Colorado. She has been an All American in the Junior Olympics many times and Wilton said: "She is one of the best athletes I've ever coached."

From junior college Wilton recruited three other teammates and they are now looking for a spot on the Mustang team. Erin Wetzel, Wendy Lewis and Kathy Lynch played on Orange Coast Colleges State Champion Junior College Team last season.

Cross country (continued from page 2)

The only thing Miller needs now is a race to see where each runner is in relation to the rest of the team. He will get just that in the City to Port Run Sunday, Sept. 23.

Getting Married?

If you are tired of choosing a ring that may not fit you, let us make it for you. We have hundreds of styles in every molding ring for every budget. Your wedding ring should be very special. After all, it's the most precious piece of jewelry you'll ever wear.

Students obtain help in solving legal hassles

Legal problems with landlords or automobiles get the most common reasons Cal Poly students use the ASI Legal Services Program, one of the program's attorneys, Rick Rabbin, said. He also dealt with the most frequent problems thatPoly students face. Civil cases, domestic and contract cases, such as landlord-tenant disputes, are the most common, he said.

"Most of the theft cases, I have been able to get the cases dismissed," said Rabbin. "The student usually didn't mean to take anything," he said. But Rabbin later added that other cases are not often dismissed. The trial for a misdemeanor usually lasts one or two months, said Rabbin, and a felony trial can last four, five or six months.

Rabbin said the fees for criminal cases are set at the clinic. For a drunk driving charge, the charge can be public $275 and students $225. There is a $50 cut on other criminal cases for students, said Rabbin.

In civil cases—usually personal injury or automobile accidents—the clinic takes 25-33% of the money won in the case.

And that's flexible," added Rabbin. The clinic gets 10 to 20 phone calls a day, said Rabbin. About two-thirds, he said, are from Cal Poly students.

The clinic provides a 20-minute free consultation for Cal Poly students, staff and faculty, said Rabbin, pointing out that staff and faculty are eligible for the clinic's benefits also.

Rabbin said most of the consultations are handled on the phone.

"There are a lot of landlord-tenant problems," Rabbin recommended that students not sign a lease unless they have read it and understand it. He said a common problem is that only one of several students living in an apartment has signed the lease and then roommates cannot leave until the lease expires. The only solution is to sublet the apartment, said Rabbin.

Rabbin had these suggestions for students when they are involved in a minor automobile accident, where the police do not arrive on the scene, call the police before moving the cars.

Rabbin said the officer's testimony can be used in court to win damage claims.

The San Luis Legal Clinic has no formal contract with the ASI. The ASI only refers students to the clinic and in return the clinic offers a discount on its rate. Rabbin said that many students believe the clinic only handles Cal Poly students, but only a fourth of the clinic's business is from Poly. The clinic has had the agreement since shortly after it was established in March, 1979, said Rabbin. Recently, because of an increasing workload, Rabbin has added a partner.

"It's been too much for one person to handle," said Rabbin.
Silent film star works on her ‘Castle’

BY JACK BRADFORD

Former silent film star Gladys Walton is quietly working on her own version of Hearst’s Castle. A Morro Bay resident, she has been working on her house—which she calls Glad’s Castle—since she moved there in 1970.

Walton had the lead role in 38 silent films from 1919 to 1925. Still full of creative energy, she is directing this energy toward her home. Besides containing moments from her film career, the house and grounds exhibit an abundance of her personal creations—tingly, crusted glass mosaics, intricate woodwork, beautiful landscaping, and hand-carved furniture.

One of the most eye-catching features visible from the land or water is a two-story lighthouse she had constructed from her designs. Complete with elevator, it gives a commanding view from the top of the Morro Bay harbor.

Walton explained she came home into a museum in honor of her days as a silent film star. While her movie career, begun at the age of 15 in 1919, started in Hollywood, she said, “It’s sort of fun in the twilight of my years, so I call it,” she said. “But it would not be any fun if I couldn’t share it with people.”

Another reason she is doing it, she said, is she hopes the state will turn her Walton explained she came home into a museum in honor of her days as a silent film star.

Her movie career, begun at the age of 15 in 1919, started in Hollywood, she said, “It’s sort of fun in the twilight of my years, so I call it,” she said. “But it would not be any fun if I couldn’t share it with people.”

(Continued on page 7)
Film star builds castle

(Continued from page 6)
asked her uncle if he wanted to put her in the movies.

A talent scout saw her and "made my first movie, " she said.

"I was given a five year contract at $150 a week and with a $50 raise every six months."

In November of last year Walton joined other silent
film stars Mary Pickford, Mae West, Pola Negri,
Jackie Coogan and Lillian Gish, in receiving the prestigious Rosemary Award.

These go to movie stars who were in films before the Academy Awards were initiated. The Rosemary awards are belated recognition based on work done and talents shown. Walton's award is proudly displayed in her home.

"After she married and left the movies, in 1923 she started her education which had been stopped when she entered the movies."

She felt a person's inner and outer beauty is represented by their actions, a lesson she attributes to her mother, she said.

Her present projects include building a dock and building on the waterfront below her home.

"The building is being constructed from her designs for use by Morro Bay fishermen, she said. It will have showers, a fireplace and a card room. On the outside will be landscaping and a movie all day, the director would come up to me and say, "OK kid, come on and work tonight." " Walton said.

"I even had to do my own hair and make-up.
"She has no regrets, though. "It's fun to look back.
"And now I can share it with others."
NEW LIBRARY—The Robert E. Kennedy library is predicted to be completed by late 1980.

Library construction ‘right on schedule’

BY TERI BAUER
Daly Staff Writer

It may seem like construction cranes have been on campus forever... but the end of it is near.

The new Robert E. Kennedy Library is almost 70 percent complete and will be finished before its Aug. 8, 1980 completion date.

“It’s right on schedule. If anything, it’s ahead of schedule,” said Doug Gerard, dean of Facilities Planning.

The plumbing, windows and carpeting are being worked on now and the contractor thinks the building will be finished by June or July, Gerard said.

In contrast, the new faculty office building located near the science buildings is about three months behind schedule.

The building was originally planned for completion on October 8, 1979, but labor disputes and material delays at the beginning of the project set it far behind schedule.

“We would like to have it finished by the end of fall quarter so we can move the teachers during the Christmas break,” Gerard said. “But it looks increasingly less likely that it will be done then.

The split two- and three-story building will have 140 individual faculty offices, eight offices for department heads, a dean’s complex and conference rooms.

The decision as to which departments and teachers will move into the building is to be made by Cal Poly President Warren Baker.

Look For The Slide On The Roof
Mrs. Cal Poly

Carly Baker and clan adjust to life on the hill

BY TERE BAUER

The middle of 3-year-old B.J., Baker's Superwoman told, Carly Baker, Cal Poly's new First Lady, has finished moving her family of six into the President's house on campus.

The two youngest Bakers, B.J. and his 4-year-old brother Chris, don't seem to mind living on a university campus rather than in a neighborhood.

But President and Mrs. Warren Baker don't want their four children to feel isolated from friends and their own age.

"I was concerned about living on campus for the kids' sake," Mrs. Baker said. "It bothered the girls that there were no other houses around."

But the Bakers have found that life on the hill is not as isolated or private as expected.

"It doesn't bother us when students take a short cut through campus by walking up the private drive," said Mrs. Baker. 

"Privacy is in the attitude we have," she said. "But I worry when cars drive through because they could hit one of the boys on their Big Wheels (tricycles)."

The Bakers moved to Michigan where their first child, Carrie, was born. Mrs. Baker was "born under the golden dome" in South Bend, Indiana, the daughter of a history professor at Notre Dame.

She met Warren in her freshman year at St. Mary's College, the sister school of Notre Dame. She was going to a local dance with a friend of Warren's who asked that she set Warren up on a blind date.

"I fixed him up with a real beauty," Mrs. Baker said with a grin. "So we didn't speak for three years after that."

Carrie was hoping to continue with her third year of French, but was disappointed to find it had been discontinued at San Luis Obispo High because of Proposition 13. So Carrie plans to take some courses at Cal Poly instead.

"I still have in the back of my mind that I'll finish grad school, but I haven't yet decided what I want to be when I grow up," she laughed.

Her energetic 3-year-old son, B.J., will be attending Cal Poly's Child Development Center for nursery school, which will give Mrs. Baker some time to herself.

"I'm looking forward to what is in store, but I can't anticipate what it is," she said reflectively.

Carrie, 16, and Kris, 13, will be attending San Luis Obispo High School, which is very different from their old high school in Michigan, Mrs. Baker said.

Carrie was hoping to continue with her third year of French, but was disappointed to find it had been discontinued at San Luis Obispo High.

Mrs. Baker was "born under the golden dome" in South Bend, Indiana, the daughter of a history professor at Notre Dame.

"I fixed him up with a real beauty," Mrs. Baker said with a grin. "So we didn't speak for three years after that."

"I doubt that I will travel as much as I used to," she said reflectively. "But I want to be able to go to college, graduate, and get married," Mrs. Baker said.

B.J. and Warren made the transition from two single young adults to a family of four in a two-year period.

"I was suffering from shell shock, but they were good years," she said. "I was concerned about living on campus.

"But I worry when cars drive through because they could hit one of the boys on their Big Wheels (tricycles)."

Outdoors
Adventurous types seek out Outings Club

BY SABEN ALLEE
Daily Beat Writer
The Associated Students, Inc. Outings Committee offers something in the way of recreation for anyone with an adventurous spirit. Students can go ASI Outings to join group trips, rent equipment and meet people.

"I got interested in it through a friend," said Jeff Anderson, a mechanical engineering major.

After talking to a friend and attending several meetings, Anderson decided to participate in some of the trips offered by the Committee.

His first trip, hiking and camping up Harakte Canyon, was followed at a later date by weekend river rafting on the Stanislaus River. Seven of the Twenty participants were homesick-veterans.

"The way the trip was set-up, ten people went down the river while the others day-hiked," Anderson explained. "The following day, those who had already gone rafting hiked, and the others got toraft down the river."

Anderson planned still another trip for the recent quarter break. He had the option of making a snorkeling trip to Anacapa Island or hiking in Wyoming's Grand Tetons.

The Outings Committee offers trips similar to these throughout the school year.

The Committee's office-known as the Escape Route-is located across from the El Corral Bookstore in the University union plaza.

Jean Eatherton, one of the volunteers staffing the Escape Route, said the workers know what is going on in and around San Luis Obispo and are happy to give out information.

"If we don't have information here, we can probably tell people where to find it or send them to someone who will know," said Eatherton.

Escape Route workers try to find places to go that are more or less tailored to individual desires.

For mountain lovers, Big Sur or Lopez Lake is recommended. Beach lovers are encouraged to visit Morro Bay or Los Angeles.

In addition to rafting and hiking trips, the Outings Committee sponsors rock climbing, backpacking and cross-country ski trips. For those who have not experienced group trips equipment can be rented at reasonable rates from the Escape Route.

Treasurer Karl Hovanitz said, "It would cost about $16 for a Sierra back-packing trip. If the trip is Committee-sponsored, food and gas expenses are included in the cost."

A special Outings Committee discount card is available at the Escape Route. On the back is a 12-item list of rentable items like backpacks, sleeping bags and inner tubes.

"Aside from outdoor activities, the Committee occasionally participates in cultural activities such as trips to the Madonna Plaza or plays in Los Angeles," said Hovanitz.

According to Eatherton, groups who want to go to a certain area should attend an Outings Committee meeting and make the suggestion.

The Committee meets every Tuesday evening at 7 p.m. in room 230 of the University Union.

National Hunt and Fish Day recognized over weekend

BY DOUG HUCKINS
Daily Beat Writer
In recognition of the sportman's contribution to conservation, September 22, 1972 was nationally proclaimed the first National Hunting and Fishing Day.

That day was observed again and with the help of the Pennsylvania Game Commission is the theme of this week's NEWS magazine and California Department of Fish and Game.

The purpose of the event was to provide an opportunity for you about our hunting and fishing heritage in the United States.

For many decades, hunters and fishermen throughout the United States have been in the vanguard of the battle to protect our outdoors from depopulation. Long before "ecology" became a household word, hunters and fishermen were talking and writing about the problems they had seen in wildlife habitat, destruction, water pollution, stream channelization, decreasing air quality and similar harmful conditions.

In spite of the efforts made to prevent, most of their warnings went unheard and sportsmen were compelled to fight in alone, they did it because they knew the fight was not only worthwhile, but also necessary. They went on talking, writing and putting up money for well-defined accomplishments.

"The time for the greatest part of the conservation effort in the U.S. today continues to be almost exclusively through the purchase of hunting and fishing licenses and sportsmen-supported tackle taxes on arms, ammunition and fishing tackle.

Here is a typical breakdown of what less than 17 million hunters spend yearly to support wildlife conservation, $60 million for state hunting licenses, $30 million in excise taxes on fishing tackle, $11 million in excise taxes on hunting and archery equipment, and $1 million for duck stamps. Money from duck stamps is used by the U.S. Fish and Wildlife Service to purchase wetlands for wildlife habitat.

If you would like to know what you can do to learn about and help our wildlife, contact one of our county sportmen's associations, the California Department of Fish and Game, 1416 Ninth St., Sacramento, California 95814, or the University of California Agricultural Extension Service at the county airport. Money from duck stamps is used by the U.S. Fish and Wildlife Service to purchase wetlands for wildlife habitat.

In the early 1970's the Pennsylvania Game Commission initiated a program aimed at eliminating "slob" hunters and poaching the ranks of Pennsylvania hunters. Called SPORT, the program is designed to weed out undesirable persons who are bringing in disrespect to sport hunting.

"The program worked so well that we decided to eliminate slob hunters from the hunting scene before that individual's individual's disrupted conduct can further damage the image of the hunter."

The ethical hunter shows respect for the law and its enforcement personnel and create pressure from within the hunting ranks that will build a solid base of law-abiding hunters.

"The opportunity to make a difference in the way the hunting scene appears to the world is available to every individual," according to SPORT. One of the points of the program is to encourage the cooperation of sportmen with law enforcement personnel and create pressure from within the hunting scene to eliminate slob hunters from the hunting scene before that individual's individual's conduct can further damage the image of the hunter."

The ethical hunter shows respect for the law and its enforcement personnel and creates pressure from within the hunting scene to eliminate slob hunters from the hunting scene before that individual's individual's conduct can further damage the image of the hunter.

The goal of SPORT is to encourage the cooperation of sportmen with law enforcement personnel and create pressure from within the hunting scene to eliminate slob hunters from the hunting scene before that individual's individual's conduct can further damage the image of the hunter."

EXPLOITING CLAMS—This picture, hanging in D.W. Grover’s restaurant, shows a clam digger capitalizing on the abundance of clams in Pismo Beach.

Wardens wary of rustlers, poachers

BY DOUG HUCKINS

Cattle rustling, deer poaching and overharvesting of Pismo clams are the three most serious problems confronting central coast game wardens.

Jack E. Bedwell, an associate professor in Cal Poly’s natural resources management department, said during an interview recently that these problems haven’t changed since the 1970’s.

“San Luis Obispo and Santa Barbara Counties have a serious poaching rustling problem because of the extensive farming and ranching that is done here,” said Bedwell.

Deer poachers will rustle cattle from fenced bordering country roads if no deer are seen. Most poachers use a .22-caliber, scope-mounted rifle and a hand held spotlight to shoot the deer or cattle.

“Poachers will drive slowly along country roads, pick the animal they want to shoot, kill it and drive farther along the road to a place where they can hide and watch their back trail until they feel safe enough to go back and get the animal,” said Bedwell.

Ironically, most ranchers don’t even know they’ve lost an animal from their herd. Many ranchers who have several-thousand acre ranches round up their cattle once a year, so they can only estimate how many cattle they’ve lost an animal from their herd. Many ranchers who have several-thousand acre ranches round up their cattle once a year, so they can only estimate how many cattle Bedwell, who spent 13 of his 29 years as a California game warden in California.

“used to be quite common for game wardens to get shot, maimed or killed in the line of duty,” said Bedwell.

Snowshoes, skis, scuba, horseback, airplanes, snowmobiles, boats, cars and four-wheeled travel are utilized in a warden’s efforts to uphold the game laws and educate the public.

courtesy, sportsmanship and respect for hunting companions, the firearms and/or bows and arrows, the land, on which the hunting takes place, the landowner and wildlife.

As the fall quarter at Cal Poly begins, many students are active in hunting on nearby ranches, national forest areas and state-owned and regulated hunting areas.

The SPORT program states, “Wildlife belongs to everyone. Don’t permit it to be killed unlawfully. The game law violator is a thief who is stealing from all of us.

There are many commonsense rules that should be adhered to in promoting these subjects, but the most effective one is just that—COMMON SENSE.

Here are ten easily remembered ways to improve your relationship with landowners and the public, whether you’re involved in hunting or some other outdoor pursuit:

GET PERMISSION—Always ask for permission before you hunt.

SAFETY ZONE—Don’t hunt within 150 yards of buildings.

AVOID CROSSES—Stay out of unplanted fields.

USE A DOG—Use a dog to find and retrieve game.

PICK UP TRASH—Don’t litter. If you carried it in, you sure carry it out.

OBERVER THE LAW—Know and obey the hunting and fishing regulations.

WHAT LIMIT?—You can have a great day without taking your limit.

SHARE GAME AND FISH—Share your game or fish with your host, the landowner.

USE GAME—Clean, care for and utilize your game or fish.

APPRECIATE—Just being out there is what it’s all about.

Enrollment applications at Cal Poly top CSUC

BY KATHIE LEDBETTER

Daily Scout Writer

Situated in a pleasant mountain valley, with excellent climate, geographical location and many programs establishing job preparation, Cal Poly is one of California’s most popular college campuses.

Cal Poly students are presented with an ideal location and future advantages in the job market, but many are also presented with impacted majors and difficulties in admission.

Jerald Holley, Director of Admissions and Records, said Cal Poly is becoming increasingly popular and over 4,500 students (out of 11,000 applications) for fall 1979 were turned away after 4,000 were refused admission in 1978.

“Students should send in applications on time,” advised Holley. “There are excellent chances of getting in, but the school is popular and we fill up quickly. We close most departments by the end of the filing period in November.”

Holley said about 50 percent of Cal Poly’s majors are impacted. He explained impacted technically means a department is closed and has to turn away applicants by the end of the November filing period. He said most of the remaining departments are closed soon after, but these are not technically termed as impacted.

Dr. Russell Brown, Dean of Students, said Cal Poly’s increasing number of impacted departments can be related to the university’s reputation as one of the top state institutions.

Brown added students are realizing jobs are harder to come by and this may be a main factor in the increase in popularity.

“Cal Poly’s practical career oriented programs are more appealing now,” said Brown. “Cal Poly has an excellent reputation in the job market.”

Holley said he thinks there are three main reasons for Cal Poly’s popularity. Many programs at Cal Poly are not generally available at all campuses, such as architecture. Cal Poly’s graduates have an excellent reputation and the geographic location is excellent—mountains, the beach and a smog-free environment.

Two of Cal Poly’s departments have traditionally been impacted majors. Architecture and agriculture are most popular and the business department is becoming an impacted major consistently in recent years.

“We had to turn away over a thousand students this year for the school of architecture, and we also turned away over a thousand in business,” Holley said.

Chris Schumacher, who is majoring in animal science (under the school of Agriculture and Natural Resources), said she didn’t realize how popular Cal Poly is until she was accepted.

Dr. Robert K. Coe, Dean of the School of Business Administration and Education, said all 19 campuses within the state university system offer the business degree, but reasons students may choose to study business at Cal Poly include the location, a strong statewide alumni recommendation, and that Cal Poly has historically been a professional school.

“Cal Poly has maintained that reputation. He added one reason the school is becoming increasingly popular is because it is difficult to get in.”

“Society tends to create its own demands,” he explained. “There are more people who find it more difficult to get in, it becomes a challenge.”

Holley said he suspects the business school is the most impacted on campus.

Dr. George Eastham, Acting Economics department head, said Cal Poly students have an excellent college reputation.

“Employers like Cal Poly students and the students know it,” he said. “A degree from here is worth something in the job market when it comes to architecture.”

Business major Dennis De Sousa said one reason he chose to study at Cal Poly was because of Cal Poly’s good job placement record for graduates.

Business major Allison Barnes, pointed out an unmeasurable aspect of the “impaction” of the business department.

“There is a strong atmosphere of competition among students and the department is not very personalistic,” she said.

As another heavily impacted major, architecture is impacted on system wide and locally, according to Teri Jaber, coordinator for supplementary admission procedures in the School of Architecture and Environmental Design.

“Employers like Cal Poly students and the students know it,” she said. “As people find it more difficult to get in, it becomes a challenge.”

Jaber said she was turned away after 4,000 were refused admission in 1978.

“T here are five majors in the school of architecture,” she said. “They are impacted system wide and fall under special admission procedures, and two are locally impacted and follow regular admission procedures.”

Jaber said she was turned away after 4,000 were refused admission in 1978.

“T here are four schools in California—San Luis Obispo and Pomona within the system and also Berkeley and USC,” she said.

Architecture major Mark Despres said Cal Poly is well known and highly thought of in the field. He said he was turned away after 4,000 were refused admission in 1978.

“I told them I was from Cal Poly and that was the main help in getting the job,” he said.

“Employers like Cal Poly graduates because Cal Poly stresses practical and work knowledge opposed to the theoretical orientation of other schools,” Despres said.

Because architecture is impacted, Despres said problems occur in that students are easily referred to as impacted both system wide and locally, according to Teri Jaber, coordinator for supplementary admission procedures in the School of Architecture and Environmental Design.

...ROCK-TOP HOME—Morro rock is the windy home of a peregrine falcon. A few of the

(birds eggs have been transplanted to a University of California breeding facility.

**Santa Cruz hatches breeding program**

BY HARRY ATCHISON
Daily Mustang, SLO

Some county residents are being carefully watched—so that their kind won't vanish off the face of the earth.

They're peregrine falcons. The once-cosmopolitan birds today are not found east of the Rockies, said Hyrum Strong, a fund raiser for the Audubon Society. Strong raised over $2,600 from 500 local society members to support a captive breeding program that is trying to enlarge the population of the endangered species.

The captive breeding program operates on the West Coast out of the University of California at Santa Cruz. In the program, eggs from nests in the wild are taken to Santa Cruz to incubate, Strong said. If they hatch, the chicks are put back—often in different nests.

There are two falcon nesting areas in San Luis Obispo County. One is at Half's Hole, a remote part of the north county's Santa Lucia wilderness. The other nesting area, at Morro Rock, is the only place in California where sightseers can catch a glimpse of peregrines, Strong said.

In April, the falcons on Morro Rock were given a pair of chicks that originally came from the Shasta Lake area. At last report, the small falcons are

Bishop’s Peak: A tough climb to the summit

BY BOB BERGER

Halfway to the top and already my tongue is sticking to the roof of my mouth. Hope I brought enough water. Midafternoon is not a good time to be climbing Bishop’s Peak.

Bishop’s Peak, that mass of rock and dirt in majestic repose west of Cal Poly, offers some very challenging day hikes. Bishop’s is also the hang-out for those locals who throw their bodies at the rock faces, with masochistic desire, for fun. Some call them rock climbers. Whichever poison one chooses, Bishop’s Peak is an excellent place for escaping to reality.

Some of the more distinct characteristics of Bishop’s are the brooding rock cliffs, the crown-like summit blocks, and the "P". According to local legend, the "P" was intended to be a "B" for Bishop. But before the legend ends perhaps Bishop’s Peak, that man of rock and dirt in majestic repose, would finish his work of debauchery, he fell to his death leaving the half-finished "B".

Ahh, shade. I never thought I could feel so good. A fork in the trail. I’ll take the left one, it goes uphill. Poison oak—bummer. I lost the trail. Bushwhacking up hill. That isn’t fun. Why am I doing this? Because it’s there. No, too much of a cliché. The challenge. No, I could be doing homework. There’s the trail, just below that clump of boulders.

There are many ways to gain the top of the mountain, but the simplest route is from the southwest shoulder. Just after the last house on Foothill Boulevard, while heading west, there will be a turn-out on the right hand side of the road. This is the most convenient place to park since it’s at the base of the southwest shoulder. Carefully keep the hardy winter fenns and—cross the pasture in southerly direction towards a belt of scrub oaks about mid-way up the mountain.

From the oak trees there will be a trail leading up the side of the mountain. Follow it to the boulder field just below the summit. At the boulder field there is a trail that makes a southerly traverse of the west face. Follow it for about 30 yards then begin beating the brush up hill.

Because Bishop’s is climbed so often in the summer, there is a network of trails rather than just one. So just keep the summit blocks in sight and pick the trail with the least poison oak, and you’ll find yourself on the summit.

On top, there’s a trail that makes its way to the summit blocks. The second pinnacle is the true summit, but this first offers a better view. On a clear day it’s possible to take in the view of the P.G.&E. power plant tower in Morro Bay. One

THE ASI PROGRAM BOARD
WOULD LIKE TO INVITE YOU TO GET INVOLVED!!

Like to have a say in how your ASI Activities Fee gets spent? Join one of the various Program Board committees and help program and coordinate the many activities which are made possible because of those fees. The Program Board provides cultural, social and recreational programs for the student body through the following committees:

CONCERTS
The essential goal of the Concert Committee is to provide, produce, and coordinate a concert program of major entertainers from the various categories of the concert field in an effort to serve the varied interests of the students of Cal Poly. Meetings are held on Thursdays at 6:00p.m. in UU 220.

CRAFT CENTER
The Craft Center is a comfortable place to explore and express your creativity. Get involved in a low-cost student taught workshop, or come in and work at your own pace on your own projects. We offer a free tool checkout service as well as a supplies store to meet your basic craft needs. Come in and see us Monday thru Saturday from 10 a.m. to 10 p.m. and Sundays from noon to 10 p.m. downstairs in the University Union.

FILMS
The goal of the Films Committee is to bring the students of Cal Poly a variety of entertaining films each quarter for the students’ enjoyment. If you are interested in helping us select and show these films feel free to come to our meetings held every Tuesday at 11 a.m. in room 280 of the Student Union. We will be showing the complete Pink Panther series this quarter and the Monday Night Series and Television Programming will also be active.

FINE ARTS
The Fine Arts Committee is to bring quality art, music, drama, and dance to the Cal Poly campus for the enjoyment of the students and faculty. Fine Arts is responsible for putting on Galaxy exhibits, the Quinceanera series of music and other various programs. We welcome any and all interested personnel and wholeheartedly promote our fine shows. Please contact Holly Smith at the Activities Planning Center 546-2476 for more information.

OUTINGS
The Outings Committee provides the students, faculty and staff of Cal Poly with the opportunity to learn by practical experience the many varieties of activities in outdoor recreation. The committee meets weekly on Tuesdays at 1:00p.m. in the UU 220. New suggestions for other trips are always welcome and we encourage all members of the university community to take advantage of the Garage Raves based on the lower level of the University Union, room 104. Phone: 546-1287.

RECREATIONS & TOURNAMENTS
This committee provides programming and activities for students to enjoy during leisure time. Games, classes, demonstrations, tournaments and special events are some of our programming areas. For more information regarding meeting times and locations, check the ‘Pony’ or contact the Activities Planning Center 546-2476.

SPEAKER’S FORUM
The Speaker’s Forum programs and coordinates various speakers for the enrichment and enlightenment of Cal Poly students. The committee has brought such famous names as writer-Hunter S. Thompson, Ambassador Allard K. Lowenstein, writer George Plimpton, and actress Jane Fonda, among others to Cal Poly in the past. New members are welcome to our meetings held on Tuesdays at 11a.m. in UU 218.

SPECIAL EVENTS
We are the perpetual perpetrators of low budgets, high grade entertainment. The Special Events Committee provides unique entertainment in the form of small concerts, comedians, mini-recreation festivals and the like. We also sponsor performers featuring students and local semi-professional talent. Our first meeting will be on Tuesday, September 25 at 11a.m. in UU 216. Come join us!

JOIN THE PROGRAM BOARD FAMILY OF FRIENDS
For further information regarding these committees, please contact Randy Donant or Holly Smith at the Activities Planning Center in the University Union. Ph.- 546-2476.
PICKING CORN—Randy Steiger walks through a corn field project he shares with three other Cal Poly students. They harvest the corn by hand into backpack-like carriers. The corn is sold at Cal Poly and also at San Luis Obispo supermarkets, Steiger said. He said profits are shared by the university and students working on the project.

BY CAROLYN GOULDING

In this era of mechanized agriculture, Cal Poly has some crops harvested by hand. A two and one-half acre sweet corn project—located below the dairy unit—is being farmed by four students who have to harvest the corn by hand.

The students wear a special backpack into which they tow the ripe ears of corn that they pick. After the pack is topped with about three dozen ears, they have to trim and box the corn, said Steiger, who is a senior crop science major.

They try to harvest the corn early in the morning because the sugar content drops as the day warms up, he said. When the sugar content drops, the sweet flavor leaves the corn.

"We pick about 40 to 50 dozen a day," said Steiger. "We pick three or four hours a day because we have to pick it, trim it and box it."

He said that there are about 30,000 stalks in his project, each bearing two ears of corn. Calculating at five dozen ears per case, there are about 1,000 cases of corn for them to harvest.

Their work schedule for the corn is worked around their class schedule, he said. Their work hours are limited because of their classes.

Most of the corn is taken to the campus produce store to be sold. The store sells as much as the students are able to provide, he said. "If I pick 40 dozen today, I'm sure it will sell immediately," he said.

"We are billed separately for the use of the tractors and machinery."

"We think we will each make $800 to $1,000 this year."

Some crops are selling for more than $1,000 per acre because they are picked by hand, he said. "The corn was planted in five one-week intervals in order for the harvest to continue over several weeks," Steiger said. This also allows time for both classes and harvest.

Another sweet corn enterprise project was planned two weeks after Steiger's group began planting. Their harvest will continue for at least two weeks after his harvest is over, he said.

After the harvest, the students pay one-third of their gross income to the Cal Poly Foundation, he said. That pays for the use of the land, water and facilities.

"The school bills them for the seed, fertilizer and pesticides that they use, he said. When they were assigned the project, they were given the responsibility of cultivation, fertilization, and harvest. The net profit is then divided among the four students, he said.

"We think we will each make $800 to $1,000 this year."

Campus corn is pick of the crop

BY CAROLYN GOULDING

In this era of mechanized agriculture, Cal Poly has some crops harvested by hand. A two and one-half acre sweet corn project—located below the dairy unit—is being farmed by four students who have to harvest the corn by hand.

The students wear a special backpack into which they tow the ripe ears of corn that they pick. After the pack is topped with about three dozen ears, they have to trim and box the corn, said Steiger, who is a senior crop science major.

They try to harvest the corn early in the morning because the sugar content drops as the day warms up, he said. When the sugar content drops, the sweet flavor leaves the corn.

"We pick about 40 to 50 dozen a day," said Steiger. "We pick three or four hours a day because we have to pick it, trim it and box it."

Their work schedule for the corn is worked around their class schedule, he said. Their work hours are limited because of their classes.

Most of the corn is taken to the campus produce store to be sold. The store sells as much as the students are able to provide, he said. "If I pick 40 dozen today, I'm sure it will sell immediately," he said.

"We also sell to Ellsworth's Market on Broad St. and to Williams Brothers Market."

So far, they have been able to provide corn only for the campus store, he said. He said that many customers drive to the corn field to buy if the store is out. The people in this area prefer Cal Poly corn because they say it is fresh and sweet tasting, he said.

The prices they charge are competitive with the corn shipped in from the San Joaquin Valley.

The students sell the corn at six ears for $1. The valley corn is sold at five ears for $1 early in the season, he said, and when corn is plentiful it is sold at eight ears for $1.

The corn brought in from the valley, which is machine harvested, loses its sweet flavor before it is eaten. The corn has to be eaten within a day or two after being picked in order for the sweet flavor to be savored, he said.

The corn was planted in five one-week intervals in order for the harvest to continue over several weeks, Steiger said. This also allows time for both classes and harvest.

Another sweet corn enterprise project was planned two weeks after Steiger's group began planting. Their harvest will continue for at least two weeks after his harvest is over, he said.

Manager turnover rates high for Plant Shop

BY CAROLYN GOULDING

When it comes to managers, the Cal Poly plant shop probably has one of the highest turnover rates on campus.

The turnover is not due to poor management, but to allow several students the opportunity to gain authentic experience in retail sales and customer relations, said Mrs. Charlotte "Cheri" Burns, Poly Plant Shop adviser.

The Poly Plant Shop, located in the Ornamental Horticulture unit, is placed under new student management each academic quarter. In summer the plant shop was run by senior horticulture major Ed Perry and Chris Murphy, a design major.

Manager Perry, 21, said he had the responsibility of running the shop. He explained that his duties were to work 20 hours each week and be available during the 28 hours that the shop is open.

He said he often came to work early so that he could change the displays, restock items on display and begin any work on flower arrangement orders.

He said that he tried to get those chores done before he opened for business because once the customers began arriving, he would not be able to later.

"Perry worked alone in the shop. He said that he helped the customers select plants and answer any questions. He had reference books on hand if he did not know the answers.

He also offered advice to his customers during a sale.

"Before you put this in water, be sure to cut the stem," he told a customer as he wrapped a Long-Stemmed Rose with some Leather-Leaf Ferns and Baby's Breath in green tissue paper.

The 22-year-old manager shared the responsibility of running the shop with assistant manager Murphy.

Murphy, 21, said that she marked 10 hours each week—the hours that Perry was not at the shop. She said that both of them worked together two hours on Saturday.

The most interesting part of her job, she said, was filling orders, setting up the displays and helping the customers select plants.

Murphy said she benefited from "the experience of sales and dealing with people when they come in. I try to sell a little something extra."

Perry and Murphy had conducted business in a different location than the original shop next to the ornamental horticulture greenhouse. Now, the plant shop is inside the corner of the greenhouse.

"The business was set up in a fragrant but busy intersection of ornamental horticulture labs and the everyday managerial duties of the greenhouses. The cross traffic disturbed the shop's business according to Perry.

"I feel we've been doing quite well."

The move allowed two floral design courses to be held in the old shop. One was held in the beginning of the quarter and another in the second quarter, he said.

Perry explained that one of the reasons for being selected as manager was because of his floral design experience. During the rest of the school year, he said, there are at least two floral design students assisting the manager with cut flower orders. That help is not available during the summer.

"About five people help with setting up for weddings and banquet," he said.

WELCOME BACK POLY SEIKO

BY BEVERLEY HENDRICKSON

When it comes to meat, the moral dilemma of using animal waste is old news, said professor Edward Petrie, a 38-year-old animal sciences professor.

"The concept dates back at least to the Ming Dynasty, and during the second half of this century it has been tried in Europe and North America."

The close quarters used for raising pigs lead to a slow market value of meat, but you increase the efficiency of animal waste," he said.

Not only can farmers convert animal waste into energy, research accelerated to a sufficient," Petrie said.

"I feel we've been doing quite well," Perry explained that one of the reasons for being selected as manager was because of his floral design experience. During the rest of the school year, he said, there are at least two floral design students assisting the manager with cut flower orders. That help is not available during the summer.

"About five people help with setting up for weddings and banquet," he said.

WELCOME BACK POLY SEIKO

FOR EVERYONE YOU LOVE: WATCHES THEY'LL LOVE. SEIKO AND LADY SEIKO.

There's a Seiko gift for every important person in your life. For men, there are day/date calendars, chronographs, deep-sea diver models, elegant dress watches, wrist alarms, and many more. For women, beautiful fashion watches, attractive and sturdy sport watches, with many styles and dial colors to choose from. Come make your selections today.

Snakes give grad research he can sink teeth into

BY JACk BRADFORD

Most people might be slightly uneasy if they had over 70 reptiles in their basements, but it doesn't bother Terry Lilley.

Lilley, a Cal Poly graduate, has several different species of snakes and lizards—most of which are rare or endangered—that he is doing extensive research on and observing with at his Morro Bay home.

Although he owns some of the reptiles, others are on loan from dealers and Cal Poly.

What he hopes to accomplish is to give both wild and captive reptiles a better chance for survival by supplying accurate information on the peltic and dealers.

He also hopes to establish captive breeding programs for rare and endangered species.

"I started in biological sciences at Cal Poly with an emphasis on conservation, but I am now more concerned with animal research for conservation purposes," Lilley said.

Dr. Fred Andoli of Cal Poly, who was Lilley's senior project advisor, said he feels the Cal Poly grad is working on a good program and has a good chance for success.

Lilley pointed out that one reason for a need to study reptile conservation is the poor and indifferent attitudes of dealers in this country and importers abroad.

He said naive importers look at how many specimens they can ship at one time and not at how many will survive. As a result the reptiles are grossly overpackaged when shipped, consequently, Lilley said many die.

When a dealer receives a shipment he is not concerned with how many are dead, but instead he counts the survivors and adjusts his prices to compensate, Lilley said.

Lilley suggested that to help alleviate these problems dealers should refuse a shipment if a certain percentage are dead or unhealthy.

Another problem affecting reptiles, Lilley said, is the lack of knowledge of those who handle them.

According to Lilley, 99 percent of all people who handle reptiles have no biological knowledge about them. Instead, their knowledge is concentrated on reptile identification.

Not knowing the physiological aspects of reptiles when dealing with them can be harmful to the reptiles, Lilley said. He said it results in improper care, whether by a pet owner or a dealer, and usually in the death of the reptile.

At the present time, Lilley has several Indigo snakes—an endangered species from Florida—on loan from a dealer in Costa Mesa.

"Because of its population as a pet—and being easy to capture—it has been overhunted and is now on the endangered species list," Lilley said.

Dealers are interested in the reptile study, Lilley said. Currently, his snakes are being observed and used in a captive breeding program.

A rare species that Lilley has been working with is the Jackson Horned Lizard from Mt. Kenya, Africa.

The biologist explained that what little information he could find on these lizards states they rarely breed in captivity. He said that besides having the lizards give birth several times, he has some that are three years old. He said they feel that, if handled properly, they could live up to 13 years in captivity.

Something else he said he discovered that was not previously known about Jackson Horned Lizards is that they eat garden snails and slugs.

"Even David Leakey, who is the only legal collector (of Jackson Horned Lizards) in the world, didn't know this," Lilley said.

Because of the expense involved, Lilley said he occasionally sells some reptiles to friends or dealers. He said that whenever he sells a reptile he always includes a supply of food, instructions on care and his phone number in case of problems.

Because some of his dealers were not giving out the instructions on care, Lilley said he has quit selling to them.

Lilley admits he is having some problems covering expenses and is lucky if he breaks even. He said he plans to apply to get grants for reptile research.

Besides research and observation, Lilley and his wife, Karen, take some snakes to local grade schools and present lectures.

Lilley said they tell the children snakes are good and that the vast majority of them are harmless. He does caution them against looking for snakes unless they know what they are doing or are with someone else that does.

"Kids are very willing to learn and have not yet learned to fear snakes. Kids through the fifth grade have not yet grasped the idea of their parents that the only good snake is a dead one," Lilley said.

ENDANGERED SPECIES—This Black Indigo snake belongs to an endangered species. They are threatened by over-capturing and poor handling. The snakes are indigenous to Florida and Texas. Also, they are popular as pets because of their docile nature and glossy coloration.

POTENTIAL BREEDER—This is one of the two Iguana lizards that Terry Lilley hopes to use in a captive breeding program. If the breeding is successful, Lilley said it will be a first. The lizard is one of many Lilley is trying to breed at his Morro Bay home.
Economics may stop the mining of tar sands

BY RHONDA BOZARTH
Managing Editor

There's a lot of oil in some tar sands south of San Luis Obispo, but it isn't yet economically feasible for Phillips Petroleum Co. to mine it, according to Lowell Zelinski, a graduate student in agriculture.

Zelinski has been involved in a year-long study with three other professors in the Soil Science Department to see whether revegetation of the Indian Knob area would be possible if Phillips were to surface mine the area, it must be able to extract oil from tar sands that Phillips sent after processing.

"We considered those because they're what would be the quickest in revegetating the site," Zelinski said. He said those species would grow rapidly and reduce erosion.

Biological Sciences Professor V.L. Holland, who was also given a grant by Phillips, is studying the process vegetation at Indian Knob. Holland's assistant, Julie Venander, is taking data on the site as part of her master's thesis.

Holland said he and Vandewere have been collecting, identifying and determining the density cover of each plant type as well as maintaining two weather stations at site soil temperature, moisture, air temperature, and precipitation. Holland said most of the data collecting is finished and the study should be completed by this October.

Holland said he would like to see native plants used to restore the area, which consists of Oak Woodland and chaparral.

"If they can't revegetate with native plants, it leaves in aesthetic appeal," Holland said. He also said it the vegetation is changed, the animal life and the watershed will change too.

Three rare and endangered species have been identified at Indian Knob, one of which is a manzanita shrub that only grows in three places in San Luis Obispo county—another grows in the world, said Holland.

Holland stressed that the work Phillips is doing now is in the preliminary stage. He said an EIR would need to address such areas as wildlife, environment, hydrology, potential smog, traffic, geology, economy, noise and aesthetics.

He said there is no way the study can sell for any whether revegetation would work and they just have to determine the probability that it could work because, "You can never be sure until you do it."

The owner of the 3,000 acre at the Indian Knob area, Joseph Guiderii, said, "I'm strictly a cattleman, but I'd like to be an oilman." He said he is starving in the cattle business and if the oil were to be mined, he would get a royalty of one-eighth of each barrel of oil from Phillips.

Cal Poly offers myriad of services for students

Students who need help in studying, test taking, or reading, or budgeting their time can attend one of the Learning Assistance Center programs scheduled each fall.

The exact times that the programs will be offered are listed in the Unscholar or can be obtained by calling 546-1234.

The Learning Assistance Center is a part of the Cal Poly Counseling Center, which is room 211 of the Administration Building.

Fear, anxiety and loneliness in individual sessions and public speaking, self-assertion and life planning in group sessions are among the subjects dealt with in the Counseling Center.

The center also administers vocational career tests, personality tests and national testing programs, such as the Law School Aptitude Test.

Other services at Poly include:
- a listing of temporary jobs, on and off-campus, at the Placement Center.
- Director Richard Equinoa said demand is usually high at the beginning of each quarter and then tapers off.
- a free tool check-out at the Craft Center. The tools can be used for items from bicycle repair to woodworking.
- the Craft Center silk-screening service, for posters and T-shirts.
- recreational equipment rentals at the Recreation Center. Sign-up sheets for trips and sports and artistic activities in the store in the University Union. The average cost for a weekend-backpacking trip, with equipment, food and transportation is $18 to $14.
- The Activities Planning Center, room 219 in the University Union, has a master calendar for major activities and it publishes weekly activities schedule.

LAND STUDY—Cal Poly grad student Lowell Zeiinski has been involved in a year long study with three other professors in the Soil Science Department to see whether revegetation of the Indian Knob area would be possible if Phillips were to surface mine the area, it must be able to extract oil from tar sands that Phillips sent after processing.

"We considered those because they're what would be the quickest in revegetating the site," Zelinski said. He said those species would grow rapidly and reduce erosion.

Biological Sciences Professor V.L. Holland, who was also given a grant by Phillips, is studying the process vegetation at Indian Knob. Holland's assistant, Julie Venander, is taking data on the site as part of her master's thesis.

Holland said he and Vandewere have been collecting, identifying and determining the density cover of each plant type as well as maintaining two weather stations at site soil temperature, moisture, air temperature, and precipitation. Math prof starts petition against nuclear power

By Mac McDonald

The tall bearded man in the blue T-shirt and shorts looked more like a college student than a college professor. Even the cluttered living room looked more like a berried college student's than a college professor's. Two dogs romped around the room in mild disinterest while their master excused himself to take care of a crying voice in the back room. A small stereo system was lightly playing classical music.

A few simple art objects adorned the bare walls. The bookshelves held books ranging from "The History of Art," to the "Art of Frisbee." Next to the frisbee book were several volumes of books about nuclear energy.

After temporarily exiting his three-month-old son, Bob Wolf is ready to talk. And nuclear power is what Wolf likes to talk about.

Wolf, a mathematics professor at Cal Poly, has been involved in the anti-nuclear movement for the last two years. But more importantly he's been active in the movement in the last three months—ever since his son was born and the Three Mile Island accident occurred.

"After the Three Mile Island accident I decided it was time to do something at Cal Poly," said the 33-year-old Massachusetts Institute of Technology and Stanford graduate. "I had already been involved in the student anti-nuclear movement in Iowa, so I talked to a few people I knew and started a faculty petition."

The petition in opposition to the Diablo Canyon nuclear power plant was hurriedly circulated around various campus departments during the last three weeks of Spring Quarter. Wolf and several of his friends managed to get over 160 signatures of Cal Poly instructors but were only able to reach about half of the more than 800 full time teachers because of lack of time and resources.

"It's not easy to get names on a petition," said Wolf, "and that's why I just get a hold of 12 faculty members in architecture it took us seven to eight hours; it's hard to track down everybody."

"We hit the departments where we other know someone in the department or where we thought there would be good sentiment toward the petition."

ANTINUKES—Cal Poly math professor Bob Wolf cradles his young son as he talks about his feelings about nuclear power.

Therefore Wolf and friends missed such departments as Child Development and Agriculture and, according to Wolf, did not "put out much energy" to circulate the petition in the engineering department because of its "links to the atomic industry."

One professor wrote a letter to the Telegram-Tribune wondering why he hadn't been approached to sign the petition. Wolf said he plans to call him and invite him to join the list.

The petition was run in the Telegram-Tribune, with a brief statement in opposition to the plant followed by 160 names. But Wolf is quick to point out that it doesn't end there, that in fact his work has just begun.

"The petition isn't over yet, a petition is valid even if it is not yet complete," said Wolf as he got up to investigate the source of the crying. "After those two minutes later, he held his son—wrapped in a bright pink towel—in his arms trying to quiet him down.

"We only bit about half the department, he continued as he bounced the baby in his arms. "The other half we didn't have time for, but we expect to add hundred or more to sign it, that's why we added 'signed to date' to the petition to indicate that it's an open-ended thing."

Wolf said the petition would be circulated again during Fall quarter and that an organization of concerned professors would more than likely become a reality. In fact Wolf's even got a name for the group if it ever materializes—Cal Poly Professors for Public Safety.

When asked how a mathematician like himself got involved in the anti-nuclear movement and why so many engineers and scientists have so far stayed away from the petition, Wolf, by this time standing up and pacing around in order to quiet his crying son, said, "We have to avoid an elitist attitude when it comes to nuclear power, it's not just the engineers and scientists who have to decide on an near this. Einstein once said a decision concerning the use of nuclear power has to be decided in the village square. A lot of people are affected by technology, not just scientists and engineers."

Wolf said the issue of nuclear power really hit home (two weeks after the Three Mile Island accident). He called it a "mechanical error and a dumb move" that almost set off a disastrous chain of events. His son was born then. With both Wolf and his wife involved in preparations for his big Diablo Bay petition as an infant son to take care of, things around the Wolf household got "pretty crazy."

But they managed to keep up with the movement, took care of the accommodations of the speakers and performers for the rally.

Wolf changed into a yellow anti-nuclear T-shirt. Wolf got his pet interest together and his wife, who he has two small children, and said he didn't have to take care of things around the Wolf household.

"I don't want you to freeze in the dark—yeah, that's why I'm doing all this."

A long climb up SLO's Bishop's Peak

(continued from page 1)

should be careful while walking around on top since poison oak is everywhere.

That breeze feels great. Poly more looks small from up here. Look at that little black bird. He sure is having a good time riding the wind currents. Dining, baking, swimming...

Disabled students finding fewer physical barriers

Poly basically accessible

BY JILL HENDRICKSON
Daily Mustang reporter

Ralph Council chose to come to Cal Poly because the campus is small and centralized. Easy access means a lot to the 36-year-old journalism junior, because he has to memorize every route he takes to class. Council is blind.

"I would say it's easier than most campuses," he says. "The buildings are closer to each other."

Council is one of about 250 permanently and temporarily disabled students who benefit annually from the Disabled Students Services, says Department Secretary Harriet Clendenen. The wide range of assistance offered includes special equipment, such as braille readers made for blind students, nooters for deaf students, on-campus tram transportation, tutoring and academic counseling.

Some students, such as Van Romine, a 16-year-old chemistry freshman, also use the Disabled Students Services as a place "to chew the fat" and store books. He says, "The only obstacles Romine cannot tackle are faculty officers locked in trailers, and the second floor of the men's gym, which has no elevator.

As a chemistry major, Romine also finds late a problem. The labs were designed for students to stand while they work on experiments, and a lot of equipment is out of his reach.

He jokes that he overcomes the setback by making a deal with his lab partner. "I do the hard stuff, and he does the manual labor," he says.

Clendenen points out that the wide range of special lab units for people confined to wheelchairs are on the market, but Cal Poly has not bought any yet. Aside from lab situations, when disabled students enroll in lecture classes that are difficult to get to, the Disabled Students Services arranges to have the classroom changed, she says.

New accessibility projects offered at Cal Poly include a ramp to the bowling alley and several electric doors at the entrances of both the University Union and the Disabled Students Services.

Fifty-five new curb cuts that enable wheelchairs to get on the sidewalks were completed during spring quarter break. Plans to modify 35 campus restrooms are now underway. However, material aids are only a part of the support disabled students find at Cal Poly.

"The people are very friendly and open towards disabled students," says Council. "The in itself makes a lot of difference. When you've got people who want to help you, it gives you an incentive."

A day under sun in protest of nukes

WATCHFUL EYES—The rally attracted people from all over the country, including this man who said he hitchhiked from Florida. "Doc," who wouldn't give his full name, surveys the crowd while Albert Einstein looms in the background.

BY MAC MCDONALD
Date: Sept 20

Gov. Jerry Brown told a crowd of over 30,000 cheering anti-nuclear protesters gathered at Camp San Luis this past June that he would do everything in his power to prevent the licensing of the Diablo Canyon nuclear power plant. "Brown told the massive throng, perhaps the largest gathering of San Luis Obispo county has ever seen, that he would "pursue every avenue of appeal if the Nuclear Regulatory Commission ignores the will of this community."

The NRC is presently reviewing the licensing of the Diablo Canyon plant which has become the focal point of a growing statewide and nationwide anti-nuclear movement. In question is the safety of the almost completed Pacific Gas and Electric plant located just a few miles from an offshore earthquake fault.

Brown, whose appearance on stage brought the crowd to its feet cheering and applauding, had previously asked the NRC to delay licensing of the plant until several safety issues had been satisfactorily resolved. This appearance however marked the first time that the governor had come out in direct opposition to the $1.6 billion plant near Port San Luis.

However before Brown was allowed to appear on stage for his brief speech he had to assure a five member "rally collective" from the Abalone Alliance that he would in fact negotiate his appearance but declined to say what compromises, if any, were made. The Abalone Alliance, a coalition of over 30 anti-nuclear groups in California, organized and financed the huge rally held on the O'Sullivan Airfield next to Cuesta College.

The rally itself, which was dubbed a "Legal Rally and Alternative Energy Fair," was a festive and peaceful affair. Anti-nuclear signs, banners, buttons, hats, T-shirts and bumper stickers in a wild array of colors were seen all over the rally site. Hundreds of "monitors" trained in non-violent crowd control techniques kept the people under control by keeping aisles open, discouraging alcohol and drug taking and providing first aid and general information.

Rally-goers came from several miles to several thousands of miles away to hear anti-nuclear speakers and entertainers, stop at various food and information booths and to watch forms of alternative energy in action at the adjoining energy fair or just to listen to music and soak up the sun's raft on a sunny but slightly windy day.

Besides Brown, performers such as Jackson Browne, Graham Nash, Peter Yarrow, Jesse Colin Young and Bonnie Raitt, actors Mike Farrell (from M.A.S.H.) and Max Gail (from "Barney Miller"), activists Daniel Ellsberg and scientist John Gofman (who helped isolate plutonium for the Manhattan Project) joined other presenters and speakers in denouncing nuclear power and supporting alternative sources of energy during the six hour-long rally.

The rally was virtually free of any major problems or incidents. There were no arrests, about a dozen people were cited for minor traffic violations and only one item was reported stolen—a camera from an unlocked car. The only problem seemed to be the lines at both the portable toilets and at the entrances and exits to and from the rally site.

By late afternoon, as the rally was winding down, the mass exodus of people created a tremendous traffic jam that tied up traffic the entire six miles from San Luis Obispo to Cuesta College.

By 9 p.m. the grounds were all but deserted, only the workers dismantling the stage and alternative energy fair remained. The grounds were left almost spotless. Most of the trash had been hauled out by the rally-goers themselves with relatively little left for the Abalone Alliance clean-up crews. By Sunday morning there were few signs to indicate that over 30,000 people had come and gone just several hours earlier from the largest rally that the county had ever witnessed.

HAPPY FACE—There were many activities other than speakers and singers at the rally. Above an artist paints the face of a young friend.

The Brown and Browne show

NO NUKES—Singer Jackson Browne was one of many performers who spoke and entertained the large crowd at Camp San Luis.

TEACH YOUR CHILDREN—Graham Nash, a strong supporter of the Save the Whales movement, also showed up at the rally.
Elvin Bishop rocks, rolls Pismo into ‘Hog Heaven’

BY JIM HENDRY

Two youths about 16 years old, pressed their faces against the dirty glass doors of the Central Coast Theater in Pismo Beach in mid-July and tried to focus on what was going on inside.

As the crowd pushed them closer to the doors, the tall Coors were each carrying smashed against their shins. Struggling against the weight of the crowd, the youths were mining from Bishop’s show. But nobody seemed to notice as most of the crowd was up and dancing anyway.

Bishop’s latest album, “Hog Heaven” features him and his band has undergone a change since his nationwide hit “fooled around and fell in love.” Bishop said one of the reasons he changed his band was so that he could sing more often.

Does he raise them for county fairs or a commercial market?

“Yeah, those are my pigs. I raise chickens too, with a big garden and everything.” Bishop says answering a question evasively between long drags off his cigarette.

He grinned like a crafty hayseed who’s just pulled one over on a city-slicker.

“I just sit down and after a while I get a real strong reelin’ notice as most of the crowd was up and dancing anyway.

Bishop explained his roots were in the southern gospel tradition with an emphasis on the blues.

“Stay in one place...No, really, I go fishin’, I raise a garden, raise my pigs, play with my baby daughter, argue with mama. I like to cook.”

Backstage, Elvin Bishop sat slumped on a couch in a small tobacco-fogged room between shows and eyed me wearily as his road manager told him I was here for an interview.

Escorted into a smaller room which are also shared with a coon they were each carrying smashed against their shins...a very amiable part.”

A few minutes later, Bishop and his band roar out on stage delivering his characteristic rough and rowdy, good-time music to an appreciative packed Pisano theater.

Does he raise them for county fairs or a commercial market?

“Yeah, just pork chops,” he says smiling like a crafty hayseed who’s just pulled one over on a city-slicker.

Who did Elvin Bishop listen to when he was throwing up?

“Mickey Thomas (now with the Jefferson Starship).”

What does he like to do when he’s not on the road?

“Stay in one place...No, really, I go fishin’, I raise a garden, raise my pigs, play with my baby daughter, argue with mama. I like to cook.”

Who did Elvin Bishop listen to when he was throwing up?

“Stay in one place...No, really, I go fishin’, I raise a garden, raise my pigs, play with my baby daughter, argue with mama. I like to cook.”

The smallness of the Central Coast Theater once again proved to be a great benefit to both the sound and visual impact of the concert.

Bishop explained that the split was inevitable.

“I asked him to leave, it was getting too crowded. He wanted to sing more and I wanted to sing more, so something obviously had to give. So it was better to go our separate ways...a very amiable part.”

What does he like to do when he’s not on the road?

“Stay in one place...No, really, I go fishin’, I raise a garden, raise my pigs, play with my baby daughter, argue with mama. I like to cook.”

A few minutes later, Bishop and his band roar out on stage delivering his characteristic rough and rowdy, good-time music to an appreciative packed Pismo theater.

In an educational first for the nation, students will be able to earn college credit for watching television and reading newspaper articles printed in Wednesday editions of the Five Cities Times-Press Recorder starting Sept. 26.
