Booze is not only cause of alcoholism
San Luis Obispo counselors fault social attitudes, acceptance

BY JOHN KELLER

Most people know that, good or bad, alcohol is sometimes used to solve harasses temporarily. On occasion, partners believe solving a quarrel or giving a Speech 200 talk to a full classroom is all right to work out beforehand with some beers. What most people do not know is that alcohol has played a role for one-third of all suicide victims looking for a solution.

Psychologists and health educators can trace almost all the reasons why 10 percent of all adults in the United States are alcoholics. But why is one out of four 12-year-olds a heavy drinker? As reported in a 1978 Los Angeles Times article, "Teen magazine in 1978, published an article stating that 23 percent of all 13-year-olds are moderate drinkers. The definition of moderate was one who lightly drinks once a week or heavily on occasion.

The same story said that teenagers are drinking twice as much boozes as they are smoking pot.

Other statistics on alcohol abuse, either from a variety of sources include:
— alcohol has been associated in 64 percent of all murders.
— about 45 percent of all family injured drivers had at least 0.10 percent alcohol in their systems— the California legal driving limit.
— an association of alcohol has been found in 34 percent of all forcible rapes.
— one-third of all family injured alcohol pediatrician had 0.10 percent alcohol or higher in their blood stream.

Drinking has proved that drinkers suffer, on the average, twice as many off-the-job accidents as non-drinkers.
— 32 percent of the adult US population does not drink alcohol.
— drinkers, from age 21-24, have rates from 71 percent to 96 percent during a recent three-year period. The evidence above puts into focus why alcohol abuse is the number one health problem in the US.

"The basic abuse potential for alcohol and beer is about the same because of the way society views how two drugs can affect young men and women. hatch Hansen, alcoholism health educator at the San Luis Obispo County Alcohol Abuse and Alcoholism Services Center.

"Alcohol is the most dangerous drug considering it is so widely accepted," Hansen said.

"Alcohol primarily has a relaxing effect. It puts you at ease and it is good to feel that sometimes. But not to rely on it," said Hansen.

"Alcohol abuse" means work or relationships are affected, said Jeanette Reese, Health Educator at the Cal Poly Health Center.

When there is a continuous interference... a true addiction, then there is a real problem," the said Bill Arblaster, a reformed alcoholic, said alcoholism can be broken down to a formula.

"A steady intake of alcohol plus on-going emotional problems are going to create an alcoholic. That formula comes from the fact that problem drinking destroys emotional growth," said Arblaster. "It's a good emotional at ease and it's hard to wake up.

"These three percent of those experimenting with alcohol become alcoholics," said Arblaster, a Cal Poly graduate student who has not drunk alcohol in two years. "The tragedy is that 19 out of 20 don't make it!"

A common belief among drinkers and non drinkers is that a majority of all alcoholics are found lying in a gutter on skid row, said Arblaster.

"Bums under the bridge are very few (five percent of the total who drink)," said Hansen. "Most (alcoholics) are in family situations, maintaining their jobs, but not performing at their best."

Sciences do not make a single cause, but professionals who work with alcoholic individuals report in a Department of Health, Education and Welfare pamphlet that they have found an unusual amount of stress and much deprivation in the lives of these persons.

"Alcohol has a pleasant effect, something everyone likes. Stress in society is a cause," said Alcoholism Health Educator Hansen.

Besides serving as a relaxant, alcohol is a substitute for self-expression, feelings of achievement and courage and a cure of fears. Linger can be an escape from problems with family or job, to block out painful feelings of loneliness, inadequacy, self-doubt or self-confidence. A person may drink alcohol, drink to get drunk and use alcohol as "medicine" for troubles.

A sense of guilt develops, which can lead to more drinking and eventually a dependence on alcohol. For junior high school, senior high and college students, reasons of moderate was one who lightly drinks once a week or heavily on occasion.

The number of drinkers, from age 21-24, has risen from 71 percent to 96 percent during a recent three year period. Freedom from parents and shifting values experienced by the number of drinkers, from age 21-24, has risen from 71 percent to 96 percent during a recent three year period.

When high school graduates enroll in colleges and universities, they are thrown into a new environment, which Hansen said their values shift and added dimensions on the number of drinkers, from age 21-24, has risen from 71 percent to 96 percent during a recent three year period. Hansen said their values shift and added dimensions on new-entrants to college and university campuses, are thrown into a new environment.

Children and teenagers in junior and senior high schools are depending on alcohol more so than they can interact socially, have fun, or ask someone out on a date, said Hansen.

"It is easy for kids who get caught (in abusing alcohol) because it signifies being an adolescent. It is attractive, one who uses it is sexy (supposedly) and appealing," Hansen said.

For those reasons, Hansen said 90 percent of all high school students drink. Of those students in junior highs across the U.S. drink.

"Kids are experimenting at a younger age than they used to," said Hansen.

Men, especially younger men in their early years as drinkers, use alcohol to establish a sense of masculinity for themselves.

"It's a masculine calling card," said Arblaster.

"If you have the guts to go into a Hawaiian village (as a minority) with a case of Pinto Beers, pick out the head honcho, sit down and drink 24 beers with him, you'll be accepted," said Arblaster.

It is easy to drink, but hard to be an alcoholic (in our society)," said Arblaster. "People make up a million and a half definitions of alcoholism."

Rene and Hansen said there is a common denial of abuse among alcohol drinkers.

"They say) all of their friends do it, but just look at the shift in friends when they drink increasing," said Rene.

But many signs reveal drinking problems in habits and behaviors of those who deny the abuse.

"Missing tests and classes because of hangovers," Rene gave as example.

Other signs include the need to drink before facing certain situations, frequent drinking to intoxication, a steady increase in the amount of alcohol consumed, drinking alone, early morning drinking, family quarrels and disruptions over drinking and the occurrence of blackouts.

For a drinker, a blackout does not mean passing out but is a period of temporary amnesia. He cannot remember what he did earlier when drunk.

The signs and symptoms of alcoholism are given in number and alcoholism of course would be impossible without alcohol. But alcohol can no more be considered the single cause of alcoholism than marriage can be considered the single cause of divorce.

Check List for symptoms of alcoholism

Does a person—
1. need a drink the morning after a party?
2. like to drink alone?
3. lose time from work due to drinking?
4. need a drink at a definite time daily?
5. have a loss of memory while or after drinking?
6. find himself (or others) hard to get along with?
7. find his efficiency and ambition decreasing?
8. drink to relieve shyness, fear, inadequacy?
9. find his drinking is harming or worrying his family?
10. find himself more moody, jealous or irritable after drinking?

Opinion

Pool resources

"A combination of exercise and pleasant thoughts helps banish anxiety." Psychology Today

School is a place of classes, studies, research and conversation, but there must be relief from all of this. If there is no relief, a person becomes stale and overworked.

The physical education department is making it hard for the student who is not enrolled in a PE class to find this escape. Specifically, this is the case for anyone who is interested in using the swimming facilities on campus.

During summer quarter, the pool located behind the mens locker room and between the gym and tennis courts was open to the public every day from 1 p.m. until 5 p.m., and for about a month it was open until 5:30. This gave students a chance to swim laps and relax in the sun between classes. This is not the case now.

The schedule for the outdoor pool and the Crandall Gym pool run as follows: Outdoor free swim is Monday through Friday from 7 p.m. to 9 p.m. and Saturday and Sunday from 1 p.m. to 4 p.m. The free swim hours in the indoor pool (Crandall Gym) are Monday, Wednesday and Friday from 5 to 6 p.m. and Monday through Friday from noon to 1 p.m.

This may sound like a substantial number of hours, but it does not even equal the total hours the outdoor pool was open during summer quarter. And Cal Poly has more than twice as many students in school for fall quarter. During summer the pool was open 28 hours a week. Now in combination, the indoor and outdoor pools are only open 24 hours a week.

Granted, there are swim classes going on, but there were classes going on during summer quarter also. Granted, we have a water polo team that needs time to practice and mens and womens swim teams that use the outdoor pool for workouts, but one can go by Tuesdays and Thursdays and an 8 a.m. free swim Monday through Friday.

It costs money to pay a lifeguard, but it was possible during the summer, with under 7,000 students here, so why isn't it possible now with over 16,000 students paying their registration fees?

Free swim time could be added for students from 11 a.m. until noon on Tuesdays and Thursdays, from 2 p.m. to 3 p.m. on Tuesdays and Thursdays and an 8 a.m. free swim Monday through Friday.

During the school year, the pool could be open from 8 am. until 3 p.m., being interrupted by classes from 10 a.m. until 11 a.m.

In the world where jogging is exploding in fadism and taking over the athletic market with shoes costing upwards of $30, it would be nice to slip on the old Hang Tee trunks, or Speedos if the spirit moves you, and dive in the pool for a few laps at the end of a long day of lectures and midterms.

Letters

Give Brown a break

Editor:

This is in response to Jay Alling's editorial "Brown neglectful of state in jaunts." Alling, like many other vocal but naive Californians, seems to expect Brown—a formidable contender in 1976—to give up his presidential ambitions in 1980.

Surely Alling and "the overwhelming majority of voters who chose Brown in the 1978 election" must have had some idea, after Brown's 1978 primary successes, that he might consider running in 1980.

Why is it so many are willing to back the man for governor but are unwilling to allow him to further his goals and ideals nationally? What is good for California isn't good for the country.

Gov. Brown is bright, progressive and a bit off the beaten track. It is in precisely these reasons that it is so important that he become involved nationally, to challenge the American people and to act as a catalyst for political thought. For Brown to further his career and ideals takes a great deal of financial as well as personal support, which he is actively soliciting here and back east.

The only bad part is that we're left with Lt. Gov. Mike Curb to govern, with his buddy relationship to big business and casual smears against Hazeid and Forda. But I ask you, whose fault is that?

What do we want? Someone good, but not talented enough to deserve national attention. I for one feel fortunate to have Brown, even with his current schedule, as governor. Considering California's unique and complex demands, 41 out of the 49 other state governors probably wouldn't last 4 months in Sacramento.

It seems to be in vogue to criticize our elected representatives and this is certainly beneficial given some restrictions. Brown does deserve our critical evaluation in some areas, but leaving the state to pursue political ideals is not one of them.

Financial aid clarified

Editor:

The efforts of the Mustang Daily to inform the public of the availability of student aid programs is appreciated. However, after receiving initial responses from students to Teri Bauer's article on student loans, I feel some clarification about guaranteed student loans, financial aid, and the concept of borrowing must be made.

Although guaranteed loans are not made to students as the result of a detailed financial or "need" analysis in the manner of financial aid or Basic Grant awarding, most lenders do require that applicants complete a financial statement which will determine their need for a loan, as well as the availability to the applicant of adequate income resources to stay in school.

To imply that financial aid recipients are "poor" is unfair. The calculation of the ability to pay for educational costs is complex and many factors are considered when awarding "need"-based financial aid.

The Guaranteed Student Loan is a need-based program per se. However, students must be aware that borrowing is a serious responsibility. This program is not designed to "play now, pay later." The GSL can ease the financial burden of educational costs if there is no burden, DON'T BORROW.

Brown opposes licensing of Diablo Canyon

SACRAMENTO (AP) - Gov. Edmund Brown Jr. will oppose licensing the Diablo Canyon nuclear power plant because there is no adequate plan to respond to an accident triggered by an earthquake, his top aide said today.

Gray Davis, Brown's chief of staff, said Brown has asked permission to take part in the licensing hearings by the U.S. Atomic Safety and Licensing Board. They are expected to start in San Luis Obispo early next year.

Davis said the board to let the Democratic governor or his representative appear at the hearings, with power to call witnesses and interrogate witnesses others have called.

"It would be foolishly to license that plant when we know we are not adequately prepared to respond to an emergency that could be triggered by an earthquake," Davis said at a news conference.

Davis said there wasn't any adequate accident plan for Diablo Canyon because there was no assurance that there would be any prompt evacuation from the area that might be affected.

"We have no assurance that the governor is going to determine if there is at least a feasible, affordable alternative," Davis said.

He said the Diablo Canyon plant is 216 miles from an earthquake fault.

The Nuclear Regulatory Commission recently directed that evacuation plans be extended to 10 miles from nuclear plants, rather than five as directed by the federal General Accounting Office, which said the danger area around the Rancho Seco plant could be 150 miles.

Davis said Brown opposes starting construction of new nuclear plants, and wants those that are under construction to be reviewed on a case-by-case basis to determine if there is "a feasible, affordable alternative."

He said the governor felt that "California can continue to sustain a prosperous economy with minimum reliance on nuclear power."

YMCA offers swimming, courses in yoga

The San Luis Obispo County YMCA has scheduled a Hatha Yoga class for Tuesday nights beginning October 30.

Joanne Woolman will be the instructor. Classes are therapeutic and provide breath and relaxation techniques, along with intensive working of all body systems.

Classes will be held from 6 to 7 p.m. each Tuesday through November 20 at Sisemore Elementary. Fee is $12 for YMCA members and $15 for non-members.

Registration forms are available in person at the YMCA office, 1133 March St.

The YMCA has also set a few classes for the fall.

Circulating petition

Neighbours trying to oust sorority

BY JOE STEIN

BY TERI BAUER

The 45 members of Gamma Phi Beta sorority now face another obstacle in their efforts to occupy a large house near downtown.

One of the neighbors of the 1978 Higuera Street house announced at a press conference yesterday that she and others are circulating petitions to stop the sorority from moving in.

Laverne Schneider, a 25-year resident of San Luis Obispo, said the petition calls on the City Council to reconsider a preliminary action it took to allow the sorority to move in.

In that action Oct. 2, the council rezoned the northside of Higuera Street between Poppy St. and Johnson Ave. from R-2 (medium density) to R-3 (medium-high density).

The sorority needed the council action to move in. It still needs to get a use permit from the city's planning staff and then have it approved by the city's planning commission.

After those two steps, opponents of the sorority have until Oct. 21 to petition the council's decision to city council. Schneider said she and others hope they will not have to go that far.

If Gamma Phi Beta's opponents get enough petition signatures—about 2,300, the council will have to vote on the city's planning commission decision at least until the council decides on the zoning issue again.

Working students take fewer units, survey says

BY TERI BAUER

The 13.3 units of Cal Poly students have partly compensated for working students' ability to add more in order to make ends meet. Now, however, they are still having problems getting general enough units to pass required courses.

All other schools have been paying back start funds for a long time," said Jones. Cal Poly's situation is complicated by the fact that it is impacted, which means that students who have outside jobs had relatively smaller unit loads, thus indicating this is the most significant reason.

Other, however, comparison with college freshmen throughout the United States in 1978 indicates that Cal Poly students come from wealthier families who contribute more to their education that the national average.

The national median family income for students attending four-year public colleges is $19,200, while Cal Poly families averaged $24,700.

The average national parental contribution toward a student's education is $1,200. At Cal Poly, students received an average of $2,200 from their parents.

"We work people say that our students are one of the wealthiest groups in the system," said Dr. David George, Cal Poly's associate vice president for development and education majors carry the smallest unit loads, thus indicating this is the most significant reason.

The Transportation Project, a citizens group working to better transportation in San Luis Obispo, said it is looking for ideas and support from the community.

The group has come up with five different projects but has only enough people to work on one today.

Rod Bearce said he organized the group because he wanted to see safe transportation in San Luis Obispo.

"We are not anti­automobile, but we would like to see better use of the bus system, and more bike riding and walking," said Bearce. "Downtown Higuera Street is set up like a freeway."

Rod Silva, a merchant on Higuera Street, said the traffic is bad but set up so cars can travel at 35 miles per hour. "With motorcycles weaving in and out, it is no shopping center," he said.

One project the group is working on is a proposed shopping mall to be built downtown on Higuera Street, said Bearce. The street would be partially blocked off and traffic rechanneled to other streets to provide a large walking area. "It would be something like the Mission Plaza," Bearce said.

Other projects being considered by Bearce's group include: installing public parking lots for greater capacity, obtaining better bus service, publishing a supplement in the Telegram Tribune explaining better transportation use and a transportation fair.

Bearce said the group needs more input from the community. Call 541-2615 for more information.

Civil engineers form club

Cal Poly can now boast of a national first—the country's only student club for aspiring public works engineers.

The two-week-old club, the Society of Civil Engineers, is affiliated with the nationwide American Public Works Association through a chapter in Santa Maria.

"We're the first in the world," said 23-year-old Bob Kelling, the club's president.

The society, said Kelling, is open to anyone "who feels his background in engineering is public-oriented." Kelling is a senior in civil engineering and is enrolled in both of the major options of the department—transportation and public works.

He said the club's officers plan to bring in professional engineers to speak to the group. Kelling said club members may also be visited by potential employers.

"There's been great interest," he said, "in hiring students for summer jobs."

Club socials are in the first floor pizza place feeds and "stuff like pizza," said Kelling.

The club so far has 40 members, and Kelling expects about 30 more before the end of the school year. Kelling said the Cal Poly organization is the first of an expected 300 clubs in the U.S.

One project the club is considering is a "parking lot" for increased walking and cycling.

The center does much of its work with the Council on International Educational Exchange—a company with extensive student-oriented travel information. Travel center information and aids is free to all students, and Woodward is optimistic about the future.

"We're going to do a bigger and better job from now on," he said.
Consumer
Bike shops have repairs under control

BY DEBBIE WARREN

With the start of fall quarter and gas prices sky high it is no surprise that most of the bicycle shops in San Luis Obispo were backedlogged with repair orders for the first two weeks of school. Each of the shops sells a few hundreds of bikes exclusively and offers comparable rates on repairs done on all models.

Ken's Bicycle Shop, located at 1255 Higuera, sells Schwinn, Nishiki and Criterium. According to owner Ken McLoughlin, the most popular bikes are Criteriums, followed by Schwinn and Schwinn Traveler III for $189. McLoughlin says his customers are mainly students and they buy bikes under $200.

A tune-up at Ken's Bicycle Shop runs $12 to $14 and includes servicing both derailleurs, the brakes and doing external lubrication. Ken's, has worked its way out of an early-quarter repair backlog king which has delayed orders usually done in one day.

An hour's work are Monday through Saturday from 9:30 a.m. to 6 p.m.

Mountain Air Bikes is the only shop in town that carries racing and touring gear. Williams who is assistant manager of the shop, said he works by the motto "different bikes for different folks."

"We sell more bikes in the upper price range than any of the other shops in town," said Williams.

Motobecane, Univega and SB are the brands handled by Mountain Air. Their most popular bikes are the Univega Nuovo Sport which sells for $175, Spartron which costs $240 and the Motobecane Grand Touring at $295.

Williams said the shop has been behind in repairs for the last month and a half because they handle more work than other shops. A tune-up at Mountain Air Bikes is $12.50 and takes one day when things are running on schedule.

Mountain Air's hours are Monday through Saturday from 9:30 a.m. to 5:30 p.m. and on Fridays until 8 or 9 p.m. and Saturdays from 10 a.m. to 2 p.m.

Muellers Power Plant, 198 South Street, sells Anaki and Astro Daimler, a professional bicycle. Bill Muellers offers a 10 percent discount to Cal Poly students. Rubley said, "We don't get as much Cal Poly business because of where we're located."

Muellers offers one-day repair service.

"We'll stay here till midnight to get it back," Rubley said.

The cost of a minor over haul is $21 but, Rubley said they would rather do only the work that is needed and cut the price for consumers.

In addition to repairs, Rubley said, "We carry replacement parts anywhere in the county, so our prices are ultra-competitive."

The hours of Muellers Power Plant are 9:30 a.m. to 5:30 p.m. Tuesday through Friday and 9 a.m. to 1 p.m. on Saturdays.

Sears and Benes, in Madonna Plaza, both carry bikes. Sears' handles only the Sears brand called Free Spirit. Free Spirit bicycles run from $69.99 to $119.99.

A tune-up, on that brand only, is $5 and ready by the next day.

Beno's carries Huffy's range and their prices range from $40 to $220. They do not do repair work.

Sugar up

CHICAGO (AP) — Sugar futures soared yesterday on reports, sugar market as basically "speculative in nature," said Ernie Simon, analyst for Bache Halsey Stuart, that states have sold sugar to Europe to meet its program needs, even though contracts have not been signed for the sugar to be delivered.

On New York's Coffee, Sugar and Cocoa Exchange, sugar futures rose from .31 to .53 cents a pound, 47 percent higher than nearby prices.

On other markets, cotton futures fell .23 to .41 a cent, depressed by commodity selling that offset brisk trade buying.

Analysts, saying a sugar market as basically "speculative in nature," also pointed out the need for some 100,000 tons of sugar. The consumer is expected to increase consumption of sugar by about 15 percent over the next 12 months, according to the United Nations Food and Agriculture Organization, which乐观 sugar prices for the second consecutive day.

On New York's Coffee, Sugar and Cocoa Exchange, sugar futures rose from .31 to .53 cents a pound, 47 percent higher than nearby prices.

Chief of the consumer bureau said, "We consider the sugar market as basically "speculative in nature," said Ernie Simon, analyst for Bache Halsey Stuart, that states have sold sugar to Europe to meet its program needs, even though contracts have not been signed for the sugar to be delivered.

PE boom sees women excell

BY GREGOR ROBIN
Daily Sport* Editor

In many magazines

taking advantage of the recent running boom, writers

are stating—with doctors backing them—that women

will eventually catch men runners in speed and en­

durance.

It would be a joyous day for all 'womenkind' when

Greta Waitz chases Bill Rodgers to the finish line in

the Boston Marathon and

outleans him at the tape. But

the Boston Marathon and

will eventually catch men

are stating—with doctors

in-the-forscenable

Greta Waitz chases Bill

Rodgers to the finish line in

men runners in speed and en­

Rodgers to the finish line in

women's records are both

Dr. Hampton said women

are competing more.

One would think that with

all the women joining the

running boom, there would

be a great drop in times for

female distance runners, but

the times still have not come

close to men's times. It will

take generations for women

to catch men, said Dr. Hampton.

"That selection process

takes so long," he said.

"We're talking about

hundreds of generations, but we

can make it happen in animals."

So when the doctors in

Runner's World speak of women's times dropping at a

racetic rate, it only has to do

with the great surge of

dominance.

cross country team. Her times have improved

through the years as women's time's

have improved because there are so many more

women competing now.

USF basketball goes on probation

SAN FRANCISCO (AP) — The University of San Francisco

basketball program will be put on

 probation this season by the

NCAA for several violations

committed between 1972 and 1975, the San Francisco

Examiner reported today.

The paper said that the

NCAA is expected to an­

nounce the one-year

probation soon as the result of a

36-month investigation

into the Donor program

under former Coach Bob

Gallard.

Such a probation would

keep San Francisco out of

post-season play until after the

1980-81 season.

Current Coach Dan

Bellomo said he would have no

comment on the report. As it has in previous

cases, the NCAA also would not

comment on the in­

vestigation.

The Examiner said that

none of the violations cited by

the NCAA were con­

nected with recruiting. It said that the most widespread violations were allowing athletes to use

school phones for long distance calls to illegally

buying meals for athletes and

giving cash loans of $5 to $10 to athletes.

Weaver retires

BALTIMORE (AP)-Earl Weaver, manager of the

Orioles for 13 years, said he will retire after the 1982

season.

"Definitely," he said

with emphasis as he sat in

the Orioles dugout

Tuesday night and talked to

reporters prior to the sixth

game of the world Series

with the Pittsburgh Pirates.

Poly will meet the Chapman

College Panthers for the

second time this year. In their first game Chapman got

away with a 4-2 victory.

The Mustangs are now 2-2

in league play. Poly's next

two, possibly three, games

will be on the road. After

Chapman, the boosters next

opponent will be Cal State

Los Angeles and Cal State

Domínguez Hills. Their next

home game will be against

Cal State Northridge on

Saturday, Oct. 27 at 7:00

p.m.
Sports

Football team on roadtrip

Mustang football has moved up a notch in the NCAA Division II polls, earning a ranking of eighth in the nation after its 17-3 win over The University of Northern Colorado.

If Cal Poly is to earn a berth in the NCAA Division II post season playoffs in November, the Mustangs will have to win the next four games. The team will face Cal State Northridge, Portland State and Puget Sound on the road, and Cal Poly Pomona in its final home game on November 10.

Coach Harper is still puzzled over his team's lack of consistency in the first half. The team was behind at halftime in two of its victories.

The Mustang quarter of fortune has been the third quarter. The team has scored 62 points to the opposition's nine. The second half margin is 100-24.

Last Saturday, the Mustangs trailed UNC at the half, 3-0, but scored 17 unanswered points in the second half for a 17-3 victory.

"Again we weren't as good in the first half as in the second half, and that certainly was not by design," said the coach.

When the football team travels to Northridge to play the Matadors next Saturday, Cal Poly fans will probably hope the Harper coached Mustangs have a repeat performance of any of their past games against the Northridge team.

Harper coached Cal Poly teams have never lost to Cal State Northridge. The coach is in his 12th season at Cal Poly, and his career log against the Matadors is 11-0.

The health of the Mustangs is the only thing hindering their chances of making a bid for post-season play and it looks like this:

Split end Dwight Allen Crump is still nursing a hamstring pull, and may not see action Saturday. Noel Ledermann, who caught two passes against UNC will start.

Wide receiver Robbie Martin saw only limited action in the first half against UNC, and will not start Saturday. Instead, Mike Gilmore draws the starting role. Martin has been bothered with the flu and might have mono-nucleosis.

The loss of Martin is a great blow to the Mustangs. He leads the team in receiving with 20 catches for 392 yards, averaging 19.6 yards a reception. He also leads the team in punt and kickoff returns.

Another man the team has missed for two games and is still listed as doubtful for the Northridge game is running back Louis Jackson.

He does have an ample replacement in Paul Dickins. Dickins has run for 107 yards in the last two games, and has three 100 yard games this season.

Souvenirs like the ones Athletic Director Vic Buccola is modeling at the Home-Coming barbeque will be sold at upcoming sporting events on campus. The money generated will go toward various athletic programs and back into what Buccola hopes will be profitable.

Students teach handicapped kids swimming fun fundamentals

BY KARYN HOUSTON
Daily News Writer

Every Tuesday and Thursday at 11 a.m., 18 handicapped children invade Crandall Gym to take swimming lessons from Cal Poly students. The hour that follows has fun, laughter and learning for everyone, say participants.

"It's a terrific program," said Coach Thomas Lee. "When you see the students laughing and kid's eyes light up you can feel the enjoyment and closeness. It's a psychologically and physically positive process."

There are two Cal Poly students for each handicapped child. Students help the children get over their fear of water and learn basic swimming.

The only prerequisite for Cal Poly students who want to get involved in the PE course is an interest in helping handicapped children. The children have physical, autistic or mental handicaps. Some are capable of swimming while others just enjoy the freedom of being in the water.

All of the children are learning, both physically and socially.

Judy Cumley, a teacher at the Chris Jesperson School for handicapped children, said "For some kids it's really worthwhile socially. It teaches them to deal with someone outside the school environment. They can have relationships with other people and for some children it's actual physical therapy."

The children arrive at Crandall Gym in a large schoolbus equipped with a lift for wheelchairs. They start getting ready at 10 a.m., arrive at Cal Poly by 11 a.m., swim for half an hour and are back at Jesperson School at 1 p.m. The children range in age from seven to 17.

Identification problem to cut down theft rate

BY LOREN SCHNEIDERMAN

A program initiated by the Cal Poly Public Safety Department to reduce theft on campus will also help students in identifying stolen property, said Wayne Carmack, public safety investigator.

"Operation Identification," provides a deterrence to potential thieves by assuring that stolen property can definitely be identified by police anywhere, Carmack said.

Carmack said merchandise is engraved with the driver's license number of the owner. He said that this alone can identify stolen property and increase the recovery rate.

Students have been slow to take advantage of the protection offered by the identification program, Carmack said. To help students cooperate with the program, a free engraving service is offered by the Public Safety Department. Students may take valuable possessions to the campus police station to have their driver's license number engraved on them.

"It might be repulsive for students to engrave ID stickers on their personal property," he said, "but they should at least record the serial number of these items."

Operation Identification provides students with a permanent investment which allows room for a description of personal property and serial numbers of those items. Carmack said that any identification number can greatly increase the chance of recovery should property be stolen.

The Public Safety Department offers bicycle riders the opportunity to register their bikes. Registration stickers are available free of charge at the police station and these, Carmack said, will also aid in identifying a stolen bike. Most of the thefts that have occurred on campus this quarter have involved autos, Carmack said. He said that the major problem is burglars breaking into a car and walking away with a stereo. He said that if these stereos were marked with an ID number, they would be able to be reclaimed at a pawn shop or at the police station.

"It is easy to get into a lot of American cars without found entry," he said. "That is why it is important to mark your equipment."

The crime rate has dropped on campus, but Carmack said that the peak period of crime is still yet to come. He said that at the end of the quarter burglars went on a "nadir" and students do not take precautions now, they will never recover the loss.

Carmack said that students should come into the police station on campus to have their valuables engraved or call 546-2281.

You Were In The 3RD Grade When We Started...

COMPUTER AUTOMATION!

The year was 1967. You've changed quite a bit since then. Where your attention was once focused on baseball cards and the next recess, now your concerns are finishing college and looking ahead to a career.

Microcomputers remain the taxotone of our business, but of late we've directed a strong and significant effort into industrial products, commercial services and the international marketplace. There is much happening in the world of computers and CA is expecting its greatest growth in the years yet to come. That's why we are here, actively seeking Computer Science and Engineering majors. Even a third-grader could tell you that this adds up to a wide range of challenging career opportunities. Our small group environment creates an ideal setting for you.

Get the facts. The professionals who are getting it together... Computer Automation. We'll be on campus to discuss your career opportunities at Computer Automation. Contact your Placement Office for further information.

Carter cleared in investigation of bank loans

WASHINGTON (AP)—A special counsel, saying "every nickel and every peanut has been traced," announced today that no criminal charges will be brought in connection with $10 million in bank loans to the Carter family's peanut warehouse in Georgia.

"It is easy to get into a lot of American cars without found entry," he said. "That is why it is important to mark your equipment."

"It is a feasibility study for Jimmy Carter commutized any crimes," said special counsel Paul J. Curran said in a statement accompanying the 239-page report that ended his six-month investigation.

Curran disclosed that the investigation included a four-hour deposition he took from the president at the White House on Sept. 5.

"My overall conclusion set forth in great detail to the attorney general is that based on all the evidence and the applicable law, no indictment can or should be brought against anyone. "No one will be filed," Curran said.

The special counsel said the president's deposition was submitted to the federal grand jury in Atlanta, which has begun to file perjury charges. Curran said that under subpoena, Carter produced all documents that Curran had sought.

Curran said there was no evidence that any of the loan funds to the Carter family's peanut warehouse in Georgia were diverted to the president's 1976 presidential campaign.
**FALL FOR SPORTS**

**ADIDAS CHICAGO RUNNING SHORTS**

Slightly Blushed. Full Functionality. Spun polyester shorts with leg pocket and nylon liner.

**WESCO 80/20 DOWN PARKA WITH HOOD**

Hooded comfortable down parka with 100% ripstop nylon shell, cargo and handwarmer pockets, zip and snap up, mandarin collar.

**SARATOGA POLYFILL PARKA**

Hooded parka only in the vest style. Machine wash. Zip and snap up; cargo and handwarmer pockets; mandarin collar. Same general description as above.

**History today**

Today is Wednesday, Oct. 17, 1979. There are 75 days left in the year.

Today's high light in history: On this date in 1777, British forces under General John Burgoyne surrendered to American forces in Saratoga, N.Y., a turning point in the Revolutionary War.

On this date:

- In 1855, Henry Bessemer, an English engineer and manufacturer, patented his steel-making process.
- In 1933, Albert Einstein, a refugee from Nazi Germany, arrived in America.
- In 1945, Jovanka Peron staged a coup in Argentina and became dictator.
- In 1973, Maynard Jackson was elected mayor of Atlanta, becoming the first black mayor of a major Southern city.
- In 1977, West German commandos turned back a hijacked Lufthansa airliner in Somalia and freed all 86 hostages aboard.
- Ten years ago: Arthur Burns was appointed head of the Federal Reserve Board by President Nixon.
- Twenty years ago: President Gerald Ford went before a House Judiciary Subcommittee and said that, in his pardoning of Richard Nixon, "there was no deal, period."
- One year ago: Pope John Paul II, taking the name of the Vatican, promised a "ministry of love."
- Today's birthdays: Actress Jean Arthur is 71. Playwright Arthur Miller is 64. Stuntman Evel Knievel is 41.

**Few doctors take physicals, report says**

BOSTON (AP)—Many doctors say everyone should have a checkup before exercising to make sure that his or her body will stand the strain. Everyone, that is, except the doctors themselves.

A survey of physicians who ran in the Boston Marathon last year shows that jogging docs are reluctant to follow their own advice.

And the doctors who conducted the poll conclude that maybe these physicians are correct to eschew their own medicine, because the battery of tests now in vogue for budding runners is probably a waste of time.

The survey found that 57 percent of the marathon-running physicians recommended that their patients have physical examinations before they begin an exercise program, even if the patients are outwardly healthy.

But at the same time, only 17 percent of the doctors—all of them regular runners—took the time to have checkups themselves.
CARTER not to recognize Cuba

President Carter vowed today the United States will not recognize Cuba until the Caribbean island nation recalls its troops from an "unauthorized" involvement in other countries.

As a town meeting in mostly blue-collar suburban Dolton, Ill., Carter was asked why his administration delayed recognizing Cuba. He responded that Fidel Castro's government "is a surrogate" of the Soviet Union. And Carter accused Cuba of being "the market for propaganda and weapons."
Cal Poly is limited by a "growth moratorium," a promise that was made to the surrounding community that the campus enrollment will not exceed 16,000 individual students.

"We are almost there this fall," said Tom Dunigan, director of Institutional Research.

As full registration, 15,884 students were enrolled. This is only 116 students short of the 16,000 limit.

The budget is based on 14,200 full-time equivalent (FTE) enrollment for the fall, winter and spring quarters.

"In (FTE) standardizes the part-time and full-time enrollment among the 19 campuses by arriving at the equivalent, number of students carrying 15 units each," Dunigan said.

He estimated the FTE enrollment for this fall at 14,300. This is computed by adding up all the units taken by all students and dividing by 15.

Cal Poly's FTE can vary 2300 higher or lower than 14,200. If it drops below 13,950, the university will be forced to start making budget cuts, Jones said.

"If we can't go over 14,000 students, and units keep dropping, the FTE will go down," Dunigan said.

"We are in a dilemma," he said.

Right now, the campus is 10 percent short of facilities for full-capacity FTE enrollment, he said. That is another reason why it's impossible to admit more students.

Here is an example of what will happen if the declining unit load continues:

Each FTE below 13,950 would cost the university $1400. If it dropped to 13,750, that would be a 200-unit deficit. Two hundred multiplied by $1400 is $280,000.

"That would be a lot of money to pay back, and we just do not have it," Jones said.

"If it dropped only ten units below 13,950, that would be $16,000," she said.

"That would mean we would lose one instructor," she said. "An 'instructor' is the lowest paid faculty member on campus."

Eighty percent of the budget is people," Dunigan said. "So it could result in leaving positions vacant or layoffs."

If budget cuts have to be made, faculty members could have to be laid off, it will be even harder than it is now for students to get the classes they want, Jones said.

"Then the vicious circle starts," she said. "It's a no-win situation.

In comparison to the other 18 campuses, Cal Poly has always been the leader in highest unit load. But in fall of 1978, Cal Poly dropped below the Humboldt campus.

"Long Beach, Humboldt, Los Angeles, and others have cut," Dunigan said.

But Cal Poly is still drooping, by 25 to 30 average units per year. A 0.1 unit drop equals about 100 FTE, Dunigan said.

"I don't know when it's going to level off," he said.

"I hope it's soon. CAR (computer registration) may help."

Dunigan said he would like to see the university level off at least at 14 units. An average of 13.7 units per student is the absolute lowest the campus could drop without making budget cuts.

"It could easily drop that much in two years if it goes the way it has been going and if there is no improvement with CAR," he said.

Vice-president Jones said she hopes CAR will allow students to take more units by giving the department heads some extra time to rearrange class offerings according to demand.

"CAR will give us the opportunity to make a better match if we can," she said.

"It will give us a lead time on planning."

However, Jones said, CAR cannot solve the problem entirely. Even if there is an extra large demand for a class, a department head may be unable to add new sections because there may not be available instructors.

"We cannot hire anybody. We're at the bottom of the budget now," Jones said.

"Proposition 13 did this to us. People don't realize the impact of it," she said.

The only alternative is to strengthen the lobbying in Sacramento to convince Governor Jerry Brown and the Legislature that the entire university system is hurting.

"Right now they are not much into the universities," she said.

"I don't know when it's going to level off," he said.
