PG&E: Awaiting go-ahead on Diablo

The company is trying hard to convince people that its SI.6 billion Diablo Canyon nuclear power plant is a benefit to California.

Four reporters and two photographers—representing three Los Obispo County newspapers—set out Sunday for a media-only tour of Diablo Canyon.

Media tours, in which PG&E has ushered most of the coastal publications through the plant, began Sept. 1, said Information Specialist Chris Piper. Piper leads groups once and sometimes twice daily through the plant.

Piper began the tour at the Highway 101 Nuclear Information Center by exposing what he said are common misunderstandings.

"Could a nuclear plant explode?" No way, said Piper. The plants do not work on the same principle as do nuclear bombs and they are not run with the same concentration of nuclear material.

"Wouldn't the plant be a health hazard to nearby cities?" No, answered Piper. The radiation received per year by nuclear power plants one-fourth mile from the site—called the Fence Post Dose—is less than that from one chest x-ray.

PG&E scientists already know and proven are effective for storing nuclear waste—such as containing it in a glass blanket which is then placed in a steel container and buried in salt mines.

He said he hopes the industry has decided on no approach by the time Diablo Canyon flips on its electrical switch to distribute energy capable of lighting three San Francisco homes.

"It is hard to sell a product which has stirr public discontent," said Piper at the plant site.

Piper led the group to the company's on-site visitor center. Before PG&E stopped public tours to the facility about two years ago, this served as an information center to visitors.

Inside, up-to-date equipment can detect bombs and weapons on visitors. One chemical-sensitive "sniffs" the bodies of visitors for bomb substances.

"We have a couple of eagles out here and deer all over the place," said Piper at the plant site.

"We're hopefully working for a certain way so that it doesn't seem biased," he said.

Meyers said that questions will be carefully formulated to elicit legitimate results.

"They have to be asked in a certain way so that it doesn't seem biased," he said.

The survey idea was devised by Tony Krantz, a member of the Institutionally Related Activities Committee.

In general the ASI wants to know whether students favor the sale of alcohol at a specific campus location, whether they prefer formal or informal commencement proceeding, and whether they want changes in the campus athletic program.

"I consider it a way to communicate to students the things we're working on—a kind of PR thing," said ASI President Rose Krantz.

She estimated the project will cost less than $50. The computer selection process will double as Eberhard's senior project, and telephone interviews will be conducted by volunteers from the Student Affairs Council. The only expenses, Krantz said, will be computer cards and duplications of the results.

The survey will affect ASI stands on campus issues, she said. "We're making an attempt to be known, how students feel," said Krantz.

Studens spend evening gazing at the stars

"It's really a good social affair, even if it clouds up," said Lee Coombs, vice president of the club and Cal Poly student,Harold Benson, whose hommade telescope is featured in one of his astronomy magazine Sky and Telescope, brought some of his equipment to a share with others.

Benson said he "got hooked" on astronomy in the second grade. Now, at 71, he is still learning about astronomy.

"It's a good hobby. It keeps me out of mischief," he said.

Most of the people at the star party were bigger than Benson, who dellaed his knowledge of astronomy but were there for the casual fun of oberving.

Pork prison loop

If you run behind the school, past the pig yards to the train tressel, then turn left and up a rugged hill, you come upon The California Men's Colony.

The tressel is 2.4 miles from the Cal Poly Main Gym, which means the men's colony is about 2.9 miles from the gym. So close to the Main Gym, which means the men's colony is about 2.9 miles from the gym. So close to the gym. So close to the gym. So close to the gym. So close to the gym.

It may be true a lot of men in there are dead or in prison does affect the town because the inmates are the town. They are the state and not affect the town. But what they do in the minimum security prison like the mens' colony, is different.twenty two years

I have known he killed someone. That person is dead and will never be able to even spend 22 years in prison. It is right, to put, this guy away and close his life so violently that when he does get out at 44, he will probably be more harmful to the society than he was before.

The last time I ran the "Park Prison Loop," which goes by the mens' colony, I was lucky because he could spend the time in a minimum security prison like the mens' colony. Twenty two years

Regroup for 1980s

Speaker says black movement declining

BY JOHN KELLER
Daily Cal-Banner

The black movement in America has fallen during the 1970s from achievements of the 1960s, and blacks are "on the brink of disaster," said Manning Marable in a speech Tuesday night.

"Many black people have fallen asleep like Rip Van Winkle," Marable said. "At least he woke up."

Marable, a 29-year-old historian and political theorist of the Afro-American experience, spoke to an attentive audience of 200 in Chumash Auditorium about the problems of the black movement in the 1970s and the prospects of the next decade.

"The movement has panned out," said Marable. "Now blacks have to critically understand the past and build the framework for a realistic future," Marable said.

The achievement of blacks in the 1960s has been lost in this decade, said Marable. American blacks are in the most serious period since the Civil War.

Marable cited a variety reasons for the decline of black consciousness. He said the 1970s have been projected in the media as a "bad" time for blacks, and that blacks are the most serious period since the Civil War.

In addition, whites are afraid of blacks replacing them, said Marable. There is a war to prevent equality between whites and blacks economically, politically, racially and spiritually.

A "new white minority" by whites, they are moving against them, said Marable. Geneticsists have attempted to prove blacks are inferior and that slavery was not all that bad. Scientists, according to Marable, have tried to rewrite black history.

Afro-American history was taught for the first time in a college in 1942, said Marable. Eight years later, a second college offered Afro-American history in its curriculum.

And now, said Marable, the white majority must face what it is afraid of—degeneration and mixing of minority quotas.

The frightening dilemma in the minds of the white majority has reached deep into education and black study programs, said Marable. Black teachers were hired in non-mainstream programs and in black colleges, Marable said. Southern judges force administrators to hire white faculty members because of "reverse discrimination rulings in the early 1970s."

"Hundreds of (black) principals and superintendents were demoted and faculty didn't get the same salaries," said Marable.

Economically, blacks suffered in the 1970s after making significant progress in the previous decade, Marable said. In 1963 black unemployment dipped to seven percent. Now unemployment among blacks is about 13 percent.

Marable said the top 20 percent of all blacks in the country are making about half the total black income. Due to inflation and unemployment, 20 percent of blacks did not have enough to buy food.

So, said Marable, blacks have to ask themselves, "Where do we go from here?" and "What do we do?"

They have no Dead Sea scrolls and no hidden Manuscripts in which to find answers, said Marable.

Instead, blacks must critically understand what goes on in the community. Marable said this blacks must understand political theory and activity to find their own road to freedom.

"What do we have to fight against," he said.

After his speech, Marable said the obstacles are great and blacks may not succeed.

"But deep in my heart, I believe we shall overcome someday," Marable said.

Mark Schechter may be a doctor, but he doesn't make a practice of healing people. He uses no drugs and no technical equipment. His hands are his tools and patients usually feel better after a visit to his rustic office at 1414 E Pacific St. in San Luis Obispo.

How he does it could be a riddle for people who are accustomed to visiting doctors only when they are sick. But Schechter invites even people who have no uncomfortable symptoms to come by for a free consultation. As a licensed chiropractor, Schechter said he believes he can help prevent pains from developing in the first place.

"I don't feel like I'm a healer," the slighty-bald Schechter said. "What I do is remove interference from the central nervous system. The body heals itself."

Schechter is unconventional in his holistic approach to healing. A magna cum laude graduate of the Life Chiropractic College in Marietta, Georgia, Schechter said his curriculum was similar to those followed in traditional medicine.

Chiropractors—meaning "effective hands" in Greek—differ from conventional medicine because of its emphasis on prevention rather than treatment of disease, Schechter explained. He traced its roots back to the days of Hippocrates.

Dr. Manning Marable

History today

Today is Thursday, Oct. 25, the 298th day of 1979. There are 67 days left in the year.

Today's highlight in history:

On this date in 1971, Communist delegates replaced Nationalist delegates in the Chinese seat in the United Nations.

On this day in 1970, Philadelphia was granted a city charter.

In 1854, British forces conducted the Charge of the Light Brigade in Russia in the Crimea War.

In 1954, for the first time, a session of the U.S. Cabinet was televised.

In 1962, the Cuban Missile Crisis caused its climax as the White House released an intelligence report showing a rapid Russian buildup in Cuba.

In 1973, American forces around the world were put on alert amid fears that Soviet troops might be sent to the troubled Middle East.

Ten years ago: The United States and Soviet Union announced that they would soon open Strategic Arms Limitation Talks.

Five years ago: Secretary of State Kissinger and Soviet leader Brezhnev discussed new strategic arms limitation measures in Moscow.

One year ago: President Carter invited Adolph Kados to head his anti-inflation efforts.

Today's birthdays: Singer Helen Reddy is 38. Country Music star Minnie Pearl is 67. Retired baseball player Bobby Thomson is 56.
The Central Coast Theater

Music in the night: rock shows vary from brilliant

BY JIM HENDRY

Entertainment

"You've got to sell them," the drunk wished to the other people in line. "She's really good in there and they're just barely clapping."

The wobbly man in the stained t-shirt was referring to Maria Muldaur and that night at the Central Coast Theater she wasn't really good. Financing back and forth across the stage in a see-through blouse with a figure that betrayed her age, Muldaur tried to put on a good show but it was obvious her heart wasn't in it. The theater was less than half full for both shows Thursday night and a good portion of those attending were either too bored to clap or too wasted to see, let alone good show but it was obvious through, however, with a spirited voicing of It Ain't Over 'Til It's Over, the Meat's the Motion and Don't You Feel My Leg? Don't You Git Me High?, but two songs don't, make a show. Muldaur's band also failed to live up to standards established by her previous groups which have included Paul Butterfield, Freebo, Ry Cooder, David Grisman and J.J. Cale. It is hard though to play to an almost empty theater. And after all, it was only Thursday night!

Depending on the night and the show, the Central Coast Theater ranges from the below average to the brilliant. For only three days after Muldaur, Tom Scott brought his slick Los Angeles-based jazz group to the theater and literally blew the audience away. "This is our job, our mission in life," Scott quipped during one of the lulls between songs, "Going from town to town helping people get down." And Scott and his group did get down. With David Garfidd on keyboards, Neil Stubbenson on bass, Vince Carluda on drums and Carlos Rios on guitar, Scott provided himself with an excellent back-up band to show-off his talent on saxophone. Solo after solo, Scott showed who he is one of the most demanded studio musicians in Los Angeles. Using songs largely from his latest album Innocent Strangers and an as yet unreleased album, Scott satisfied an almost full theater audience with his own blend of stylish jazz-rock.

Guitarist Carlos Rios also provided some tasty solo work even though he broke two strings in the course of his performance. The crowd being more supportive than the Thursday night audience, Scott and his group played with much more enthusiasm and flair than did Muldaur and her band. Finishing with the song Tom Cat, performed previously by Scott's old group the L.A. Express, the audience easily came to its feet without any encouragement from t-shirted fans.

Aside from the Muldaur and Scott shows, the Central Coast Theater has been the scene of a wide variety of performances during the past year and a half that it has been used for rock shows. From the Talking Heads to Little Feat, to Elvin Bishop and Steppenwolf, the dash green walls of the theater have housed many a wild-eyed concert-goer. Each show varies, with both the performer and the promoter. At least three promoters: Central Coast Concerts, Success Promotions and Sky High Concerts currently put on shows in the theater.

Being centrally located in downtown Pismo Beach on Pomeroy Ave. right next to an arcade, the theater has the same problem as does most of the downtown area of Pismo Beach—too many young kids with nothing to do but hang around on the streets. More than one young opportunity has tried to crash past some burly bouncer positioned at the dirty plate glass front doors of the theater.

Inside popcorn, coke, candies and hot dogs are sold like gasoline on Memorial Day weekend in Los Angeles to the many red-eyed patrons. Used as a movie theater when shows aren't being held there, the Central Coast Theater is a very comfortable place to see a concert. Scars with some padding on them are always a welcome change to the folding chairs and beanbag cushions.
to...well...

bleachers used for all Cal Poly concerts.

The sound at the theater is also usually good. But depending on the promoter, it can also be very bad.

Visually the concerts held at the theater are brilliant. Close proximity of the stage to the audience gives everyone a good seat. Plenty of crowds have ventured into the act by surrounding the stage.

Restrictions on the audience being few and far between, the shows at the theater tend to get a bit rowdy. Elvis Bishop had them dancing in the aisles and so did Randy Hansen.

Pipes, bongos, flutes, gongs, mirrors, and joints are passed around casually during the shows. Sitting in the dark seems to provide a sort of protection from the broad-shouldered houseons who watch and don't seem to care.

The atmosphere at the theater can get a bit dingy at times, as the theater is an old one.

The prospects for more shows at the Central Coast Theater are very good, as all three promoters working the theater are still alive and making money. A few local promoters have laid their financial lives on shows at the Pismo theater and lost.

Compared to big city music halls the Central Coast Theater may not be much—but for the Central Coast it's almost all we've got.

Shah undergoes operation

NEW YORK (AP)—Surgeons removed the shah of Iran's gall bladder Wednesday and checked, to see if his longstanding cancer of the lymph gland had worsened. A spokesman for the deposed ruler said "recovery without complications is anticipated."

Outside the hospital, as Shah Mohammad Reza Pahlavi went under the knife, about 150 demonstrators chanted "Death to the shah!" and waved banners reading, "A peaceful death is too good for the shah!"

Robert Armao, the spokesman for Pahlavi, said following the 2½-hour surgery that the shah would be hospitalized for two to three weeks.

Armao added that Pahlavi had suffered from lymph gland cancer, for about six years, but that recently an infection had signaled that something was wrong with the gall bladder or the bile duct leading from the liver.

"He did not wish it to be known, Armao added. The demonstrators, mostly men, were kept behind police lines and their chanting and shouting was out of earshot of Pahlavi.

By contrast, inside New York Hospital-Cornell Medical center, four Iranian women in American dresses kept a prayer vigil for the shah.

The operation was begun with Dr. Benjamin Kean, personal physician of the former Iranian ruler, joining a team that also included Dr. Burton Las, a noted lymphoma specialist.

Worsened. A spokesman for Pahlavi, said "recovery without complications is anticipated."

The report found that when vaccinations were stopped, the disease would be 71 times more common in the United States than it is now. Almost four times as many children would die from whooping cough than did from complications of the vaccine itself.

Whooping cough is a highly contagious disease caused by a bacteria. It is most dangerous among children under 2. They are plagued by fits of coughing followed by a gasping intake of breath that sounds like a whoop.

Until about 30 years ago, the disease was a leading killer of children in this country, and it still is a major cause of death in developing countries.

The study, directed by a doctor at the federal Center for Disease Control, concluded that the benefits of vaccination outweigh the risks and that the savings outweigh the costs. It added that there is a need for "development of a less toxic vaccine."

Infants now routinely receive a series of shots that immunize them against whooping cough, tetanus and diphtheria.

Recently, some doctors have questioned the wisdom of giving the whooping cough vaccine because of the rare chance that the medicine will cause encephalitis, an inflammation of the brain.

In Great Britain, where the controversy has caused more attention, many parents have hesitated allowing their children to be vaccinated, and there has been more than a tenfold increase in whooping cough.

The latest study, directed by Dr. Jeffrey P. Koplan of the center in Atlanta, was published in Thursday's New England Journal of Medicine.

"Immunization hasn't really eroded an overall controversy here," Koplan said as an interview. "In part, we wanted to clear the air before it did."

October 25, 1979

House changes price decree

WASHINGTON (AP)—The American Medical Association has kept doctors' bills high by campaigning against competition among physicians, the Federal Trade Commission ruled Wednes-

The FTC, in a decision likely to be appealed to the federal courts, found that the AMA, illegally restrained competition among its 200,000 members, a majority of American physicians.

It ordered the AMA to end "exclusionary" practices that restricted on membership doctors rolling out advertising and other ways of attracting patients—through low fees.

"Consumers lack access to the house and information necessary to make an informed choice of a physician," the decision by the FTC said.

"He did not wish it to be known, Armao added, as the demonstrators, mostly men, were kept behind police lines and their chanting and shouting was out of earshot of Pahlavi.

The study, directed by a doctor at the federal Center for Disease Control, concluded that the benefits of vaccination outweigh the risks and that the savings outweigh the costs. It added that there is a need for "development of a less toxic vaccine."

Infants now routinely receive a series of shots that immunize them against whooping cough, tetanus and diphtheria.

Recently, some doctors have questioned the wisdom of giving the whooping cough vaccine because of the rare chance that the medicine will cause encephalitis, an inflammation of the brain.

In Great Britain, where the controversy has caused more attention, many parents have hesitated allowing their children to be vaccinated, and there has been more than a tenfold increase in whooping cough.

The latest study, directed by Dr. Jeffrey P. Koplan of the center in Atlanta, was published in Thursday's New England Journal of Medicine.

"Immunization hasn't really eroded an overall controversy here," Koplan said as an interview. "In part, we wanted to clear the air before it did."

October 25, 1979

House changes price decree

WASHINGTON (AP)—The American Medical Association has kept doctors' bills high by campaigning against competition among physicians, the Federal Trade Commission ruled Wednes-

The FTC, in a decision likely to be appealed to the federal courts, found that the AMA, illegally restrained competition among its 200,000 members, a majority of American physicians.

It ordered the AMA to end "exclusionary" practices that restricted on membership doctors rolling out advertising and other ways of attracting patients—through low fees.

"Consumers lack access to the house and information necessary to make an informed choice of a physician," the decision by the FTC said.
Glass paintings in art show

Medieval works by modern Los Angeles artist Ruth Schrier are currently on display in the Art Department's Vestibule Gallery at Cal Poly.

The exhibit, which was established by students in the art class, Exhibition Design, is titled Ruth Schrier: A Novel of Fantasy and includes a collection of 25 original paintings, monotypes, and linocut prints.

Eight of Schrier's unique monotypes, which take months to complete, are featured at the exhibit.

In making a monotype, Schrier first paints an image on a sheet of glass. She then drapes a paper over the paint, inks it, and brings it to the press to come through. Oil paint washes to "crisp the image" are applied and pastels over the oil result in a textured effect.

"My inner realities take form in these compositions, expressing the richly textured exciting affluence I often feel," said Schrier.

Schrier said she is constantly drawing and studying life surrounding her to put together her work.

She said when she paints the subjects take their positions in a "somewhat mysterious manner" on the canvas.

Schrier has participated in various exhibits, including one showing at Glendale Community College and at the office of the mayor of Los Angeles.

Her display, located in the foyer of the Art Conditioning Engineering Building, will be seen between 8 a.m. and 5 p.m. on weekdays through November 1.

Admission is free.

The display is part of a continuing sequence of exhibits by students, faculty, and other artists.

Holistic

from page 3

"Don't let anybody try to tell you that you can't study for it," said Phil Dunn, a Cal Poly student who recently took the test. "I put in close to 40 hours studying for the LSAT." "There are a couple of ways that students can study for the test," Dunn said.

- Students can purchase books containing past LSAT exams and study guides. From their results on the practice exams, the students can find their weak points and concentrate on improving them. Most of these books offer information about the different law schools. Students can purchase the books at El Corral Bookstore, or at any one of the bookstores in town.

- Students can also go through one of the courses which are offered to help students prepare for the LSAT. These courses feature practice tests, lectures and tutoring. A number of groups offer the courses, which cost between $135 and $250. The course lasts from two weekends to seven weeks, depending on the cost. Usually these courses are offered during the last few weeks before the LSAT.

Information about LSAT preparation courses can be obtained from the political science department or the Pre-law Center in the business administration building.

The LSAT lasts about three and a half hours. There are seven sections on the test, each one takes from 15 to 40 minutes. Question type and length of time for each section determine the number of questions in that section.

There are a number of different types of questions on the LSAT. Included are math problems, logic questions, law principles and cases, business decision problems and English language usage. There are two different English sections—one dealing with sentence correction and the other dealing with reading ability.

Information about the LSAT can be obtained from the political science department or the Testing Center. The next LSAT will be offered in early December, and the registration deadline for the exam is in early November. Most law schools require students wishing to enroll in the fall of 1980 to take the test no later than December.

Sensitive nerves may result in impaired functioning, sickness, disease and lowered resistance.

Schechter said his eight years of study and practice, including two years at the undergraduate level, four years of chiropractic school and two and a half years as a clinical intern, have made his hands sensitive to locate misaligned bones.

He occasionally uses a more topographic X-ray, which uses three-dimensional photographs of the spine. Although he is qualified to prescribe X-rays, Schecter said he is not like most chiropractors.

"Most chiropractors do use X-rays," he said.

Schechter said his eight years of study and practice, including two years at the undergraduate level, four years of chiropractic school and two and a half years as a clinical intern, have made his hands sensitive to locate misaligned bones.

He occasionally uses a more topographic X-ray, which uses three-dimensional photographs of the spine. Although he is qualified to prescribe X-rays, Schecter said he is not like most chiropractors.

Looking younger than his 27 years, he emphasizes a contemporary, holistic approach to health including diet, exercise and mental health.

"I deal with each person as an individual being—mind, soul and body are all one," he said.

Schechter not only guides patients in the relief of existing body pains, but said he offers his knowledge and training in a consultative capacity as well as for families who want to make their children healthier.

"I want patients who are genuinely interested in their health," he said. "When they are healthy, they realize that this function being physically, intellectually and emotionally.

Schechter designs a health care program to suit the interests and lifestyles of each of his patients. He encourages the elimination of toxic substances from the diet, such as alcohol, drugs, and fast or artificial foods.

In order to design a suitable program for each patient, Schechter said he tries to find out as much about them as possible.

Schechter emphasizes that "we have the ability to make life heaven or hell. We're not well, it's hell. No doctor can take care of the health of another person. We have to live in our own bodies the rest of our lives. It's up to us to make the choice," Schechter said.

Operators sit inside control room testing the plant. A sign on the desk states "less kooks, more nukes." Public Information Officer Chris Piper said the operators are frustrated with plant delays.

Photos by
Vince Bucci

One construction worker leaves the site after work. About 900 people work at Diablo Canyon now, and there will be 250 regular workers if the plant is OK.

PG&E has spent $20 million to meet NRC earthquake standards. The monitor above can detect minute shakes in the Hosgri fault.
The cap, upper left, moves nuclear rods in and out of the reactor vessel. The vessel sits inside a cement cavity, above. During changing of the rods this cavity is filled with boric acid to prevent the escape of radiation.

In all, Piper said, $20 million has been spent in seismic upgrading.

The rest of the control room was more impressive. Here, all plant functions are monitored by a NASA Space Center-type set-up. Video monitors, green and red lights along with hundreds of levers constitute the nerve center. For every plant function, there's a button or light to match, Piper said.

That way operators can keep 24-hour vigil over the activities within the reactor and electrical turbines.

But Piper said the operators are at an emotional low point.

"The degree of frustration in this project is highest among the operators," he said.

"It's their work and the delays are frustrating." Piper said not only the operators have been awaiting the OK from the Nuclear Regulatory Commission.

"Ideally we do not ever want to store it here. But that is not realistic," Piper said.

"All this just to make toast," said Piper later.

That toast may have to wait a long time now that licensing hearings are to reopen. Perry speculated the earliest Diablo Canyon could be licensed in the summer or fall of 1980. This is after the Three Mile Island reports, due in November, and about six months after follow-up hearings beginning probably in December.

"I assume that if Three Mile Island had not happened, we would have had it by now," Piper said of the license to run the plant.

"This plant is older than its sister plant in Portland, Oregon. But it has never operated because of hold-ups."
**The Sting**

ASI Films Committee presents "The Sting" Friday, Oct. 26 in Chumash Auditorium. Admission is 90 cents. Showtime — 9:30 p.m.

**Travel slides**

These will be a slide presentation today at 11 a.m. of universities in Europe, Asia, South America and the Middle East at which Cal Poly students may study in an overseas program. The presentation will be in the Chumash Auditorium wing 204.

**Grand Opening**

House of Candle-Lite
San Luis Obispo's Newest, largest Selection of Candles & Accessories

**CONTEST DRAWING**

1st prize — $100 gift certificate
2nd prize — $50 gift certificate

**Campus Crusade**

Crawford Leverty, staff speaker with Campus Crusade for Christ, will speak tonight at 11 a.m. on the library lawn and tonight at 7:30 in Chumash Auditorium. Admission is free.

**Blood drive**

The campus Health Center and the Tri-Counties Blood Bank are seeking donors of blood. Anyone wishing to give blood may do so between 9 a.m. and 4 p.m. on Tuesday, Oct. 30 in Chumash Auditorium.

**Birth control**

Workshops designed to help men and women choose a contraception method suited to their lifestyle will be held every Wednesday from 3:45 to 4:30 in the Health Center Conference Room. Discussion will cover advantages, disadvantages, side effects, effectiveness and proper use of each method.

**Backpacking**

The military science department is sponsoring a backpack trip in Pinnacles National Monument for all interested students on Saturday and Sunday, Oct. 22-23. More information about the trip may be obtained by calling 546-4144.

**Teetor-teller**

An Alpha Phi sorority teetor-teller marathon to benefit Thanksgiving Day will be held from 8 a.m. on Sunday, Nov. 4 with festivities in the University Union Plaza. The marathon will be continued by girls in the sorority until Saturday night. The sorority will have a table on Second Street in Baywood Park on Oct. 28, from 11 a.m. until dark. There is no charge for the day.

**Day on bay**

The Downtown Baywood Chamber of Commerce is sponsoring an Oktoberfest for local musicians, tonight at 8 in the Mustang lounge. Entries to the Downs triathlon in the University Union, Admission is 50 cents.

**Halloween dance**

The Iota pledge class of Gamma Phi Beta sorority is sponsoring a Halloween Dance tonight at 9. Costumes are required. Admission to the dance is $2.50 at the door. The dance will be at Station 5.

**Concert**

The Cal State Northridge Wind Orchestra will present a concert to benefit the Mustang Marching Band on Saturday, Oct. 27 at 8 p.m. at Cuesta Park. More information will be accepted at the concert in Chumash Auditorium will be $1.25 for students and $2.50 for the general public.

**Resumes**

Ken Lichten from the Cal Poly Placement Office will talk about writing resumes and interviewing tonight at 11 a.m. in the Science Building, Room E-47.

**Fee waivers**

Employees of Cal Poly who are full-time or permanent part-time and who want to take classes at Cal Poly this winter may obtain fee waiver applications in the personnel office, Administration Building. Applications are due by Nov. 5.

**Grandma's House**

Grandmother's House Children's Center is having an open house today Oct. 31 from 9:30 to 11:30 a.m. The center is located at the intersection of South and Broad streets. Refreshments and tours will be provided.

**Skateboard**

A Skateboard demonstration is being sponsored by the Central Coast Surfboards Association and ASI Recreation and Tournaments Committee. The demonstration will be held on the University Union plaza on Saturday, Oct. 27 at 11 a.m. The demonstration will take place on the steps north of the Union. A drawing for a surfboard will be held at the demonstration.

**Landsape**

A vote on the existence of the Cal Poly chapter of the American Society of Landscape Architects will take place at a meeting today at 11 a.m. in Computer Science Room 235. The vote will determine whether the group will become an official student organization at Cal Poly. Anyone interested in the group may attend the meeting and learn about the organization. A tentative date for the first meeting is Nov. 10.

**Why take an expensive Speed Reading Course?**

This quarter only — R.E.A.D.S. Rapid Reading will let you bring your best buddy free — to our 6 week speed reading course for Polys! (Of course you can split the low regular tuition of $300 & each pay $150.) To enroll, call 544-2816 for further information.

**Hurry! Enrollment limited!!**

**October 28 in Chumash Auditorium. Admission is 50 cents with a ball and $1 without one.**

**Craft sale**

Applications are being accepted for the Craft Center's Craft Fair. The deadline for applications is Oct. 18. More information may be obtained at the Craft Center on the first floor of the University Union.

**Poly Royal**

A first prize of $30 is being offered in the Poly Royal theme contest. Anyone may enter the contest. The deadline to submit entries is Friday on the theme contest. Anyone may enter the contest. The deadline to submit entries is Friday, Oct. 26.

**Check cashing**

Checks up to $50 per person may be cashed at the Cal Poly Foundation, cashiers office located in University Union Room 212. Hours for check cashing are 7:30 a.m. to 4:30 p.m.

**Nuclear lecture**

Richard B. Hubbard, Nuclear consultant, will give a lecture on the role the nuclear power plants near San Luis Obispo should play in providing electrical energy. The lecture will take place on Monday, Oct. 29 at 7:30 p.m. in the Lummis Hall. Tickets are $1 each.

**Birth control**

The military science department is sponsoring a backpack trip in Pinnacles National Monument for all interested students on Saturday and Sunday, Oct. 22-23. More information about the trip may be obtained by calling 546-4144.

Crandall pool a perfect substitute ocean for kids

BY SEANNA BROWDER
Patty Staff Writer

Cal Poly's Crandall pool is being used as a substitute ocean by three boys who explore its depths on Tuesday and Thursday evenings. With snorkels, fins and masks, they plunge into the water and swim along the bottom, inspecting every crack.

The boys are part of a skin diving class taught by Les Hutton, an employee of Water Pro, an aquatic sports shop. The class is given through Water Pro.

Les said the purpose of the class is to teach the children how to feel comfortable in the water with masks, snorkels and fins. "Those that are good skin divers eventually become good scuba divers," he said.

A little boy with his fins on interrupted Les.

He has become a real fish since he started this class," said Les.

Marcus looked more like an otter as he floated on his back vigorously paddling his fins. The other two boys, Matt Frommel, 11, and Steven Foster, 9, seemed like dolphins as they spouted water out of their snorkels.

During a life-saving lesson, fathers are the victims while the boys rescue them with techniques they had just learned.

Steven Foster's parents are scuba divers and eventually hope to take the children down with them when they dive.

The skin diving class is a six week course. Water Pro also teaches scuba, safety courses, spear fishing, and diving. According to Les, Water Pro will teach anyone four years of age or older. "Even senior citizens take scuba diving," he said.

When Matt was asked where he would like to go diving, he replied, "Off the coast, by Port San Luis."

Steven decided that he would like to go to the Coastal Guard pier in Monterey.

With the wisdom of a nine-year-old. Marcus said, "Pirates Cove is a good place for skin diving."

Both parents and children agree one of the reasons for the success of the class is the instructor. Les, a former Cal Poly student, has been diving for six years and teaching diving for one year.

San Luis Obispo children getting ready to practice their water entry.
Scuba diving a popular, exciting sport for central coast divers

BY DEBORAH TUCKER
Daily News Writer

Scuba diving is not a macho sport, but instead, a hobby that anyone can enjoy, according to divers in San Luis Obispo County.

"There is no reason why a person of average physical condition can't scuba dive," said Lee Hutton, who works for Water Pro in San Luis Obispo.

Hutton added that old episodes of "Sea Hunt" and Jacques Cousteau documentaries have promoted the myth that scuba diving is a manly sport.

"Wading into the water and feeling fish is just as good as catching them," said Hutton.

Scuba diving classes given at dive shops offer certification with nationally recognized diving associations, such as the National Association of Scuba Diving Schools, National Association of Underwater Instructors and Professional Association of Diving Instructors. These associations are the sanctioning bodies that govern the sport. Each association stresses education in its classes.

In-class education is not the only form of education that is important to the potential scuba diver, according to Hutton and Bettencourt. People interested in diving should spend a lot of time skin diving, getting used to the currents and learning to feel comfortable in the water. Divers should also learn to know their physical limits, according to Bettencourt.

"I think that if a student learns his limits through a diving class then the instructor has taught him something. You have to get in the water and do it step by step. Education and self-educa

Help for Trinity steelhead

WASHINGTON (AP) — The House approved at least $3.3 million Monday for a sand-dredging system on California's Trinity River intended to help bring back salmon and steelhead trout.

A report from the House Interior Committee said the sand-dredging system is one of three steps recommended by the Trinity River Basin Fish and Wildlife Task Force to bring the salmon and steelhead back.

Women's volleyball

You're gonna admit, volleyball has come a long way in the past few years. Even since Willy Chamberlain and Keith Erickson, both now at Pepperdine, joined forces with us, the Lady Mustangs have become a national powerhouse. Nationally recognized and popular, the Lady Mustangs have earned their place in the national rankings. This year, as the Lady Mustangs prepare to play Division I, I think Cal Poly has the potential to play Division I. Of course, what will determine Division I status eventually will be the play of the ladies themselves. And in this the Mustangs may have started what may be a fine tradition.

Last year's team finished seeded 12-9 and fourth in their conference. This year's team is 9-8, but the schedule involves much better teams. So far the Mustangs have fared well in every match.

They placed fifth in the Davis tournament, beating Stanford, Stanford-Davis, and losing close to a powerhouse Berkeley, 11-13, 8-11).

They lost to Pepperdine, a known powerhouse and among the top 10 in the nation, but not without a fight, the last game going into overtime 15-15.

They again ran into Berkeley, and again the last game went 15-17. The Mustangs had won the first game 15-13. They then went to Berkeley, whom they defeated earlier.

But it was the five game distance. The total point spread told the closeness of this one: Stanford 63 Cal Poly 60.

Then came the highlight of the year, the Brigham Young tournament. They beat Utah and Northern Arizona before running into no. 9 ranked Houston. They lost the first game 15-3. When many teams would have thrown in the towel against a Houston team that sported three six-footers, the Mustangs fought back to win the next two and stay alive. They proceeded to defeat Montana State and Portland State (last year ranked 10th) before losing in the finals to Long Beach State. And after 11-15 and 12-15 losses, the Mustangs again took it to overtime, losing 15-17.

The second place finish was exactly what the Mustangs needed to gain a little recognition and respect. Nobody picked them to play in the finals, and they were seeded 13th out of 17 teams.

The S.C.A.A. is a tough conference, the only tougher one possibly being the one the Mustangs will play Division I.

This year the Mustangs are playing their first year of Division I volleyball. They are finding it pretty tough, tougher than last year, but when this season closes a lot of folks west of the Mississippi are going to know exactly where Cal Poly is located.

Head of women's athletics Eve Pellaton explains: "These first three years of Division I play are on a trial basis. At the end of the three years we'll evaluate the team to see if they are viable to play Division I. I think Cal Poly has the potential to play Division I."

Commentary by Brian Miller

This week's game is against Cal State Northridge. Game time is set for 7 p.m.

"Cal Poly's team is un
defeated, but maybe she has
not met the people Maggie
has met in competition," Harter

The course at Sacramento
State will be a true cross
country course with hills and
twists and turns in the path,
but it won't be as tough as the
Cal Poly women's home
course, said Harter.

WASHINGTON (AP) —
Three states so far have
established "silver-haired
legislatures," special bodies
that give senior citizens more
influence on laws effecting
them.

The chambers have no
power actually to make laws,
but they give the elderly a
voice in the legislative
process. The elected body of representatives citizens over the age of 60
was pioneered in Missouri in
1971. Delegates, elected by elderly citizens, meet in a
three-day session and then
follow through as lobbyists
trying to convince regular
lawmakers to put their ideas
into law. Similar programs
