Baker backs GE proposal by teachers

BY MEG McCONAHEY
Daily Staff Writer

President Warren Baker said Tuesday he "generally" supports the Academic Senate recommendations against increases in general education units. Baker said he intends to transfer those recommendations to the Chancellor by Nov. 15.

The Academic Senate made the recommendations Oct. 30 in response to a final report issued last April by the California State University and Colleges Task Force on General Education. Senate members disagreed with some of the report's major proposals, including a proposed increase in the number of general education and breadth (GE-B) units required.

Baker said he is uncertain an increase in GE-B would mean a better education for students.

"I'm concerned with the quality of general education. The number of units in a curriculum doesn't necessarily mean a higher quality curriculum," he said.

The number of GE-B units should reflect the educational goals each university is trying to achieve, Baker explained.

He said Cal Poly is different from other universities because of its emphasis on technical skills. Students may suffer if breadth is inappropriately emphasized for depth, he explained. However, he said he did not totally rule out an increase in GE-B.

"I want a great deal of emphasis placed on GE at this school—whether or not that means more units is too premature at this stage to judge," Baker said.

Baker stressed that faculty involvement is the key to success in improving general education.

"The faculty has to be convinced that an increase in GE units would improve education. It won't work without their support, because they are the architects of education," he said.

Baker added that he agreed with the Academic Senate that individual CSUC campuses within the Cal Poly should be given a certain amount of autonomy in deciding general education requirements.

The strength of a system is in its diversity, Baker said. He acknowledged that there is a great deal of "virtue" in discussing some of the universal objectives of education.

Vice President for Academic Affairs Hazel Jones agreed with Baker and the Academic Senate that the quality of the general education curriculum should be looked at more closely.

"The idea of GE is to have some common body of knowledge, but right now the curriculum is fragmented—there is no coherence," she said.

Jones, who will discuss the general education proposals of the Task Force and Academic Senate with Baker before he sends his final recommendations to the chancellor, said she wants a certain amount of autonomy for individual campuses in deciding GE requirements.

Both Baker and Jones said they do not expect the Board of Trustees to make a final decision on the Task Force report until late next spring.

State restores faculty positions to CSUC

BY ANDREW JOWERS
Daily Staff Writer

The state legislature has allocated the California State University and Colleges $2 million to fill some faculty positions previously cut from the 1979-80 budget.

The legislative intent of bill AB 1173, introduced by Assemblyman John Vasconcellos (D-Santa Clara County) and later amended in conference committee, is to offset some of the negative effects on the quality of instruction caused by a loss of 192.5 faculty positions systemwide, according to a report by CSUC Executive Vice Chancellor Harry Harmon.

The lost positions resulted from declining enrollments as well as from reductions in the 1979-80 budget stemming from Proposition 13.

The allocation allows for 107.5 filled faculty positions throughout the CSUC. Annulized with the School of Communication Arts and Humanities—0.26 to the Social Sciences Division.

The distribution was made by Hazel Jones, vice president of academic affairs, based on the need of each school and on consultation with various deans.

The 57.7 faculty positions not yet divided among the state universities will be allocated on the basis of an evaluation of individual campus requests submitted Nov. 1 to the Chancellor of the CSUC. The criteria used will include an assessment of the effect on employment of minorities and women caused by the initial cutback, and also on curricular imperatives. This means that campuses that have laid off minorities or women, and those with growing departments and impacted or backlogged programs, will get priority treatment.

Students maysuffer from faulty X-ray

BY MARY KIRWAN
Special to the Daily

Cal Poly students using Health Center facilities may be receiving excessive doses of radiation due to a faulty X-ray machine.

So says Alex Taylor, campus radiation safety specialist. The X-ray machines on campus are routinely inspected by Taylor every six months and by the state every five years.

In the most recent inspection Taylor discovered one of the machines was emitting what he said was excessive radiation while in use.

A collaborator—the plate which restrains x-ray beams and sends the adjustable light beam with the film on the other side of the patient—is not functioning correctly, Taylor said.

"I've discovered a disparity showing the light field is larger than the X-ray field. This means you've got all this excess X-ray that has no diagnostic value because it is not hitting the film. It is a waste and it goes to the patient," said Taylor.

Taylor said this radiation leak could be harmful.

"It's radiation, whether you get it from a power plant or an X-ray machine. It could appear 40 years later in a form of cancer in some people."

The radiation specialist said escaped radiation from X-ray machines is common in many hospitals and clinics.

"This type of infraction exists everywhere... It occurs at every hospital in the state and it occurs all the time. It's not a bad fraction."

There are no statistics on deaths and injuries resulting from nuclear power plants because in the short time they have been in existence there have been none, said Taylor.

But statistical studies on medical X-rays, in use since the 1940s, have revealed "that the cancer rate can be proportionate to its excessive use," Taylor said.

He said modern medicine utilizes too many X-rays. This is done, he said, because of competition between both doctors and hospitals. X-rays are fast, economical and an accurate diagnostic tool.

"There is not a doctor who wouldn't diagnose athlete's foot without taking an X-ray," Taylor said.

Taylor said human arms and legs can withstand the most radiation while the reproductive system can take the least. Determining exactly how much radiation each part of the body can safely take is still under study.
CUTTING THE FAT

After looking at Tuesday's election results, it's easy to see voters are no longer willing to empty their pockets to government coffers.

Voters OK'd all the statewide propositions on the ballot, including Proposition 4—an initiative sponsored by Paul Gann of Proposition 13 fame—which puts a ceiling on government spending.

Proposition 4 will limit annual increases in state and local spending to the percentage rise in the cost of living, plus population growth. State surpluses must be returned to taxpayers every two years.

Obviously in these inflationary times, consumers are tired of cutting their own household budgets to fatten the wallet of government. They want to limit Sacramento spending by putting the pinch on politicians.

The public is putting a halt on blank check spending. The passage of Proposition 4 is not the only place taxpayers cinched up the government's belt in the Tuesday election. In San Luis Obispo County, two measures meant to expand programs by increasing spending were defeated.

A proposed $5-per-household tax to support the county's libraries was rejected by SLO voters by 62 percent. And another measure to increase the salaries of San Luis Obispo City Council members and the mayor was also dumped, by a 57-percent margin.

Voters seem to be unconcerned with the number of programs which will be cut by their thriftiness. They are simply tired of dishing out dollars to a greedy government. In essence, they want a hand in the fiscal policy-making.

And there is no evidence that the trend is waning.

At a victory party Tuesday night celebrating the passage of Proposition 4 Paul Gann promised to take his fat fighting policies to Washington.

"There's a westwind blowing out of California and, best we can tell, it's heading for Washington, D.C. . . . " said Gann.

He had his goal is to put a ceiling on the national debt. Whether or not the spending limits set by voters Tuesday will be successful without seriously injuring present government programs remains to be seen. No matter what the outcome, taxpayers will be assured of a better chance of keeping a little cash in their pockets. And with inflation decreasing the value of the dollar everyday, who can blame them for wanting it.

The passage of Proposition 4 is not the only place where voters are putting a pinch on politicians. The public is putting a halt on blank check spending. The passage of Proposition 4 is not the only place taxpayers will be assured of a better chance of keeping a little cash in their pockets. Author explains Rasputin truths

BY LISA PORCHE

Rasputin—historically regarded as being the spark of the Russian Revolution and as being a devil and a devourer of women—has been a victim of bad press. So says Patie Barnham, who wrote a book about Rasputin with the help of her revolutionary's daughter Maria. She says this book reveals the truth about Rasputin. It is entitled "Rasputin: The Man Behind the Myth" and was published by Prentice Hall in 1977. Barnham, speaking at the library during the discussion program "Books at High Noon," said that Rasputin was the most interesting man she had ever known. She said she lived intensively with his shadow through knowing his daughter Maria. Rasputin was a peasant living in Russia in the early 1900s. In his twenties he was regarded as being the spark of the Russian Revolution and the "ghost" died in 1916. Barnham said she brought the ghost of Maria with her. The "ghost" died in 1916. In the interview, Maria spoke of her childhood in Russia and of Rasputin and her sister suffered the day they discovered their father had been murdered at the age of 44. "History is turning around, and I am proud to be involved in the truth about Rasputin," said Barnham. "Sometimes history is written by the victor and sometimes by the victim. In Rasputin's case, he was the victim."

Student Bike Patrol watches out for the careless

BY JILL HENDRICKSON

The Cal Poly Affirmative Action Compliance Committee may be appointed by a more powerful advisory body.

Unlike the existing committee, President Warren Baker's proposal of an Equal Opportunity Advisory Council would cover students as well as employee affirmative action.

The new council would enjoy greater access to President Baker, since its elected chairperson would serve as a member of the President's Council. "The Kennedy era" is coming to an end, said Armando Pezo-Silva, acting director of the campus Equal Opportunity Program. "For all practical purposes, the Affirmative Action Committee was a rubber stamp. He (Kennedy) paid a lot of lip service, but not much was really accomplished."

The committee only met three times in the past year, Pezo-Silva said and it was not always consulted about campus affirmative action issues.

Chicoan Coordinating Committee and the Concerned Black Community approached Baker when he came to Cal Poly and asked him to either dissolve the existing committee or appoint a campus Equal Opportunity Advisory Council. Members of the existing committee are appointed by schools. But members of the proposed council would be nominated by the vice president of Academic Affairs, the executive vice president, the dean of students, the Associated Students Inc. president and the chairperson of the Academic Senate. Baker has specified that nominations shall include women and minorities.

"They'll no longer send somebody who has nothing better to do than all at once on a committee," Pezo-Silva said. The proposed council would meet weekly and would meet with Baker three times a year, said Larry Voss, executive assistant to the president. The Academic Senate, Academic Council, Administrative Council, Student Affairs and the ASI will be reviewing Baker's proposal until Nov. 15.

Enrollment program can help students

BY SEANNA BROWDER
Daily Bulletin

Rick Dodd decided that he wanted to come back to Cal Poly too late.
Registration was finished and Dodd had taken two quarters off, so to take classes he would have to re-apply to the university. But Dodd wanted to take classes that spring quarter.

Luckily, Cal Poly has a program called Concurrent Enrollment that helped Rick with his predicament. Concurrent Enrollment allows people to enroll in Cal Poly classes without applying to the university.

Dodd was able to take the classes that he wanted—for a $325 fee. The program is set up much like a private university. For each unit that is taken, a set fee must be paid.

For fall quarters the fee for one lecture unit was $25. One laboratory unit costs $50.

Dodd was able to take any course which had room available. To be enrolled in a class, there must be space available and a concurrently enrolled student must have consent from the instructor and department head.

Concurrent enrollment is not intended for the full-time student seeking a degree. Dodd, who graduates this June, registered as a full-time student the following quarter after he had concurrently enrolled.

"It was expensive," said Dodd. "I couldn't afford to do that often, but the program helped me out that one quarter," he said.

According to Barbara Hawkins of the Extended Education office, most of the people who take advantage of the program just want to take a couple of classes.

"It opens the assets of the university to the rest of the community," said Hawkins.

"It is great for the forty-year-old housewife who just wants to see if she can handle school. We had one man who was an accountant for San Luis Obispo County; he just wanted to take some refresher business courses."

Other people, such as teachers or master's degree candidates, use the program to get some units out of the way, said Hawkins.

The concurrent enrollment program gives extension credit for the courses taken. This credit can be applied toward a bachelor and master degree program. But the maximum extension credit that can be applied toward a bachelor degree is 36 quarter units. For a master's degree the limit is 13 units.

Concurrent enrollment can help with senior projects. A student can graduate and then be concurrently enrolled in senior project, if he has not completed it. This option must have the approval of a student's advisor.

The program is available throughout the state university system. The rules and regulations are determined by the Chancellor's Office.

The fees, however, remain in the campus at which the student is concurrently enrolled. The money is used by the individual department giving classes with concurrently enrolled students.

The program at Cal Poly is run from the Extended Education office in Room 317 of the Administration building. Dr. Don Morris is head of the program.

Loggers look to the future

BY BOB BERGER
San Luis Obispo

The Cal Poly Logging Team is not just another bunch of cut-ups.

Last April the combined efforts of the mens team and women's team was good enough to place second in competition at a national conclave of forestry schools.

The two outstanding competitors were Bill Krips, a 28-year-old Natural Resources major, and Candy Spencer, 22 who is also an N.R.M major. Krips, who scored the highest cumulative number of points in the mens division was named "The Belle of the Woods" and Spencer, who scored the highest cumulative number of points in the womens division was named "The Babe of the Woods."

Krips led the mens' team to $5,000. You have to supply the logs, housing, meals and the permits to host the meeting but according to the team advisor, Dr. Walter Mark, Poly is an unlikely place.

"The conclave could cost $5,000. You have to supply the logs, housing, meals and field trips," said Mark. "We want to have the conclave here but the club just doesn't have the funds." The logging team doesn't expect to receive any A.S.I. funding and all money that the team uses comes from fund raising activities like stuffing envelopes and yard work. Said Mark, "There's a set fee of $30 per entrant, but that doesn't even come close to covering the costs."

Right now logging team members are working out on their own. The team should start practicing during winter quarter in preparation for the spring conclave.

AP — When you're eating that sandwich, gelatin and cola lunch you probably don't think much about food and its nutritional content. More than likely, you take away the coloring, artificial sweeteners and artificial carbonation from the caloric load you consume. However, a problem as benign as food can be a reason, either to make it look or taste better, to keep you taking more and result in you eating more. I'm not saying that the bread is bad for you, or that you need to drink...
McCarthy asks for investigation

Sacramento (AP)—Assembly Speaker Leo McCarthy said Wednesday he wants to ask a legislative committee to investigate actions of the state Supreme Court.

Such a committee would "go over every aspect of what has occurred to see what we can do...to strengthen the role of the judiciary," said San Francisco Democrat told reporters.

He said the subject of the inquiry should include allegations that sensitive cases, including a ruling on the "use a gun, go to prison" law, were withheld last year until after the election in which Chief Justice Rose Bird narrowly won voter confirmation.

The state Commission on Judicial Performance investigated this year in unprecendented public hearings and reported this week that it had decided McCarthy should not serve on any judiciary with misconduct.

The commission's hearings have "implicated confidence in the judicial system," said McCarthy, the state's most powerful legislator, said at a news conference.

He said another possible subject of hearings would be the need to retain or change the 100-year-old state constitutional provision that says judges, to collect their salaries, must rule on all cases within 90 days of their submission.

Suit filed against MCA Records

Los Angeles (AP)—A class-action suit accusing MCA Inc. of race discrimination and civil rights violations has been filed by a black employee of MCA Records Inc.

A U.S. District Court suit by Bill Williams on himself and three other unnamed plaintiffs is a companion to a similar federal suit pending in Cleveland.

Williams alleges that MCA discriminated in hiring, job classifications, transfers and promotions. He also says the huge entertainment conglomerate denies equal opportunities to blacks in the areas of wages, job assignments and expense reimbursements and fails to recruit, hire and keep blacks at the company.

He also complained that MCA has failed to take corrective action with regard to these charges, which he first brought against the company last July 30 before the Equal Employment Opportunity Commission.

Named as co-defendants were MCA subsidiaries MCA Distribution Corp., MCA Records Inc. and MCA Television Ltd.

The suit seeks declaratory judgment against the company, along with an injunction and an order that MCA pay all wages, pensions, Social Security, training opportunities and other benefits in an amount to be determined in court.

Cable safe for nuclear plant

San Onofre (API—Spliced cable in use in San Onofre is no safety threat to the nuclear generating plant, a spokesman for the owner utility said Wednesday.

A special review committee of Southern California Edison Co. has reviewed all the data and come to that conclusion, Dwight Nunn said.

The utility said earlier it was concerned about spliced cable in use in unit 1 and being installed in the other two generating units now under construction.

General Electric, the manufacturer, insured the power cable had passed safety tests.

The committee met Tuesday and was told that technical tests indicate the "spliced cable will pass all tests and will have no impact on operations of unit 1 or the construction schedule of units 2 and 3," said Nunn, who is manager of quality assurance for Edison.

The cable is used in unit 1 inside the containment area to provide power to the residual heat removal pumps. There are alternative ways of operating the heat removal pumps which don't rely on the cable, Nunn said.

There was no immediate reaction to Nunn's statement from the Nuclear Regulatory Commission.

Americans to negotiate in Iran

Washington (AP)—Two American emissaries headed toward Iran Wednesday to try to negotiate the release of some 60 Americans held hostage in the U.S. Embassy in Tehran, but there was doubt that Iranian officials would speak to them.

President Carter on Tuesday sent Ramsey Clark, a former attorney general, and William Miller, a staff member of a Senate committee, to meet with government leaders in Tehran.

But as Clark and Miller undertook their mission, Ayatollah Ruhollah Khomeini, Iran's religious revolutionary leader, insisted that no Iranian official had been authorized to negotiate with them.

An Iranian government broadcast, monitored "in Kuwait, demanded that the deposed Shah Mohammad Raza Pahlavi, now in a New York hospital for cancer treatment, be returned for trial as a war criminal before any talks could be held.

It is the return of the shah that is being demanded by the students who seized the U.S. Embassy and its staff on Sunday. The students have threatened to kill the American Hostages if the United States makes any military attempts to free them.

Cornerback Gallagher sees ‘wild’ future for Mustangs

BY DON FAUL
Special to the Daily

Mustang football could become a “wild” thing with more winning season and continued fan support, says one team member who wants to contribute to that goal. Defensive backstop Ralph Gallagher thinks that with a couple championships, Cal Poly’s football program could expand considerably. Crediting the fans for encouraging such growth, Gallagher said, “We love our fans. When we’re playing at home we say, hey, we’re not going to lose. When something good happens they react, you can really feel they’re behind us.” It’s that enthusiastic support that Gallagher would like to incorporate to help expand Cal Poly’s football program.

The key to doing something in Cal Poly is to get the students behind you,” he explained.

With growing fan support and successful teams, Gallagher thinks a larger stadium could also become a reality.

With one more year of eligibility, Gallagher hopes to help the Mustangs get to the playoffs this year and next. “I want to be a contributing factor to the expansion of Cal Poly football,” the social science major said.

Gallagher readily adds that he is the slowest of the four defensive backs, but his coach, Jim Sisterson said that the cornerback does not make foolish mistakes. - Although injured for Cal Poly’s loss last week to Pacific Sound, Gallagher previously intercepted three passes for 60 yards, all of which he returned for touchdowns. One, however, was nullified by a Mustang penalty.

Gallagher has also made 23 tackles for the season.

Describing himself as quiet and shy, Gallagher gives credit to God for giving him confidence on and off the field.

“He’s my motivating factor. Whenever I do something good, it is Him who I thank,” Gallagher said.

Playing with a full scholarship, Gallagher feels that the team is somewhat united by Christianity. “When we need to, we get drawn together,” he said.

Gallagher is part of a defensive backfield that is responsible for 19 interceptions. With a short cut of a Cal Poly record with two games left to play, the Mustangs’ now 6-2 need only one more to win their remaining games and capture their chance for a playoff berth.

The six foot, 170 pound cornerback played in Santa Barbara’s Channel league for Dos Pueblos High School, where he earned first team all-league honors.

With two years of school left, Gallagher admitted, “I’m amazed I’ve come this far.” Platinum to improve next season, Gallagher thoughtfully said, “Every year you put in more and more of the total concept of the game.”

Ejections end pole team year

BY KAREN THOMAS
Daily Staff Writer

The water polo team ended its season with a loss in a physical game against Fresno State Saturday in the rain. Fresno State outscored Cal Poly 21-14, in a game that had a total of 23 ejections.

Sophomore Bill Cadwallader was the high scorer for the Mustangs with 7 goals. Cadwallader also led the team in total goals for the season with 32. Senior Skip Neville scored 4 goals in his last collegiate game. Mike Peterseim scored twice and Steve Farrell once to finish the scoring and the season for the Mustangs. Coach Jim Love’s team ended with 3-10 record.

Junior Mike Peterseim was one of the three Poly players to be kicked out of the game. Peterseim was not allowed to continue playing when a fight broke out with a Fresno player in the water. According to Peterseim the game, the whistle and the referees were contributing factors to the amount of ejections.

“There is always an underdog rivalry when we play Fresno. But the main reason why there were so many ejections is because of the referee. Only one worked the game, and he can’t see everything that goes on. But he will see something and call it an ejection,” Peterseim said.

Peterseim said that Cal Poly does not have enough money to pay for good refereeing. He said that when a team is used to playing for two refs, it can hurt when only one is doing the job.

Peterseim said, in his situation he had only one ejection on him before he was called for a major ejection. In water polo over the third ejection a player is out for the rest of the game. Peterseim said that Cal Poly player was holding him by the neck, and he was being seen by the referee, so Peterseim swung at his opponent. Peterseim was kicked out while the Fresno player was able to continue playing.
Sports

Runners highly favored to repeat championship on foot

BY GREGOR ROBIN

Riverside is almost certain to win the NCAA Division II cross country championship, but coach Miller said it doesn’t make a difference to him what course they run. "We have great hill runners and great track runners," he said. "I think this will be a great opportunity to watch a national championship. National championships don't come to California that often because the state isn't centrally located." The meet will be held off Highway 60, sity-corner to UC Riverside on Canyon Crest Road at the Agricultural Experimental Land site. It will be the last Division II meet to cross country for Jim Schanuel, Dave Aldridge, Eric Huff, and Maxey Avison, Cal Poly's top four runners. Miller is excited about the meet and when he gets there he will be ecstatic. "To be repeat national champions is an exciting prospect, and when you walk out there and see all the colors of all the teams there to compete ... it just has to be witnessed."

Mustang Corral

Cal Poly wrestlers will tangle among themselves tonight in the Main Gym at eight p.m. in the annual Green vs Gold match, Coach Vaughn Hitchcock will put his top two wrestlers in each of the 10 weight classes against each other. The winner of each match will represent Cal Poly at the upcoming varsity meet.

Mustang Football remains in the top ten in the NCAA Division II poll with a number 7 ranking. Five of the top ten Division II schools suffered defense last weekend so Mustang the Los Angeles to Pac-8 Sound did not have the sting it could have had.

Lewis Jackson played a hero role in the Pac-8 Sound game and he said he "fought to win a 'healthy and ready to go to the home final against Cal Poly.'" The Mustangs are trying to make it to the NCAA Division II crown.

Drunk Raider busted

STOCKTON, Calif.—John Matuszak, the Oakland Raider's high defensive lineman, was arrested for driving charges according to the California Highway Patrol.

CHP officers said Matuszak was arrested late Tuesday on an off-ramp of state Highway 99. They said he failed two breath tests, registering .14 and .16 percent alcohol in his blood. State law classifies a .10 reading as being legally drunk.

Matuszak, 6-foot-8, 275 pounds, spent four hours in the San Joaquin County Jail before being posted by a local bail bond agency, the CHP said.

He is scheduled to appear in Stockton Municipal Court on Thursday on charges of driving under the influence. Matuszak's next home game, with Kansas City, Matuszak had been in Stockton, along with teammates Mickey Marvin and Clarence Hawkins, for a Raiders Boosters night at the local United Airlines Club.

"He was pretty wet," said club president Vince Tafuri of Matuszak's condition when he left the gathering. Tafuri said he tried to have one of the other players drive, "but you don't tell Matuszak anything."

Arresting officers Ken Franchini and Bill Fox told the raiders they that they first say Matuszak's car was involved in the crossing between Highway 99 and Highway 80. They asked him if he needed help, but he said he didn't and drove off.

The officers who saw the car weaving down the road then come to a stop in the middle of an off-ramp.
COORS asks the question:

**WHAT IF?**

What if our first explorers and pioneers had been subjected to an earlier version of today's sensational weekly tabloids? Imagine the effect on history if would-be settlers back east had been treated to headlines like these:

"Killer Moths Savage Sheep Ranch."

"See it All! Intimate Sketches of Reckless Abandon in Dodge City."

"Psychic with Custer's Army Predicts Fame for All at Little Big Horn!"

Reputations would live and die on the front page every week:

"I Kissed a Man with Wooden Teeth." — Martha Washington

"General Sherman: Pyromaniac or Poor Sport?"

"Sitting Bull says, 'No More Mr. Nice Guy'!"

"500 Conestoga Wagons Recalled by Factory."

"The Shocking Story of Why They Call Roy Bean the Hanging Judge."

With reporting like that, there might have been no gold rush. No homesteaders. No civilization west of the Rockies. No Coors Beer. After all, it took a lot of dedication for Adolph Coors to locate up in the Colorado high country just to build the future of his product on pure spring water and mountain-grown barley. Or, as one of those papers might have put it:

"Man Climbs 5,000 Feet for a Beer."

Taste the High Country.
