Computer registration trial run ready to roll...

BY GREG CORNING
Daily Student Assistant

A trial run for Assisted Registration began on Thursday, and will be testing the procedures that are required and used in regular registration. The practice run is intended to acquire input from department staffs with the procedures of CAR, said Leslie Labhard, CAR coordinator.

"We will learn if our directions are correct," Labhard said.

It is important that students learn how to fill out forms correctly for CAR, she said, and the trial run will help them become familiar with those forms.

"When it comes to the real thing, if students don't fill out the forms right they could end up with no classes," Labhard said.

Participation in the practice run will be voluntary, said Labhard. She said it is hoped most students will decide to take part so staff members working with CAR will get a realistic view of the process.

Labhard emphasized that the trial run will not actually register students for any classes. Students should not think that because they participated in the trial run they do not have to go through regular registration in January, she said.

For students who want to try out CAR the first step will be to pick up their prepared computer forms and instructions from their academic department office. Forms will be "pre-slugged" with the name of each student.

Once a schedule of 18 or fewer units is worked out, the information must be transferred to the course request form. As in gym registration, the course number includes a department code, course number and section number. In addition, CAR registration requires that the course's "schedule code", which is listed in the winter class schedule, be placed on the request form along with the other course information. If the schedule code on the right side of the form may be filled out if a student wants to omit days and hours not available for classes.

Labhard pointed out that if a student sets aside a lot of time on the reserve time request form, the probability of being scheduled for a full load is lessened.

The "registration fee payment form" also has to be filled out, although for the trial run no money should be sent in to the cashier's payment forms.

Labhard noted the transition from gym registration to CAR may present a financial hardship to some students. After paying registration fees for winter quarter on Jan. 3 and 4, students will have to pay spring registration fees in the last half of February. The two payments close together may, she said, be hard to scrape up for students who are self-supporting.

The advantages of CAR are worth the difficulties of transition, Labhard said. The greatest benefit from the computer assisted system is the information given to departments about the number of students requesting each class. Because in registration with computer assistance that information will be available in mid-quarter, departments will be able to work with class schedules to accommodate students.

Labhard said the student request information, or demand data, is gathered from class request forms when they are run through the computer the first time.

The request forms have to run through the computer a second time to schedule students in their classes, said Labhard. Forms are processed in the same order as groups going into the gym.

"The computer can go through up to 600 transactions to work out a schedule," she said.

If a section requested is filled, the computer will search for another section of the same class.

Picture this: You've just gotten out of a grueling economics exam and you are hungry. You decide to grab something quick from 24 hours of intense cramming. So you head across campus, through the University Union into a large, cozy room with comfortable chairs, lots of plants and rock-and-roll in the background. Someone takes your order and a few minutes later you're enjoying a delicious sandwich and of course a cold mug of foamy beer.

This scene may be a fantasy today, but ASI Vice President Jeff Land says, "I think we'll start getting alcohol on campus by the end of the year.

In anticipation of alcohol on campus, the ASI has begun plans to convert the Mustang Lounge into a pub.

Land said he is "concerned about the budget," and believes the pub will be "good for the student body."

Land said a telephone survey is currently underway to find out if students want alcohol and whether it should be allowed everywhere or just in restricted areas. Five hundred students will be selected at random, by a computer, to answer the survey. He said age will be disregarded because most students are 21 by the time they graduate.

There are some negative reactions to allowing alcohol on campus, Land noted.

"A fair number of students are concerned," he said. His main doubts are whether it should be allowed and how it will affect Poly's reputation.

Land said only three or four of the 19 schools in the university system are permitted to sell alcohol. He said "they don't seem to have any problems" and pointed out that it will increase faculty-student participation because you can go and have a beer with your teacher.

"Right now, a lot of people are being chased off campus." Campus clubs hold club dinners and special events at places where they can drink, he said.

Land described the project for the computer registration system as "relatively minimal." He said Mustang Lounge has all the necessary hook-ups and at present, "doesn't seem to be used to its full extent."

Plans for the conversion are being done as a senior project by architect major Jeff Graden. Land said he believes the University Union may pick up the cost of construction and facilities in return for a percentage of gross income.

"They seem very willing to look at a proposal," Land said. ASI will provide what Land calls "seed money." for beer, wine and food.

One question that hasn't been resolved yet is who will hold the liquor license. Land explained ASI cannot hold a liquor license. He said the trustees have "singled out" Cal Poly and Fresno for holding their own licenses.

"If we can lease the area and an outside vendor could hold the license," Land said.

The "reserve time request" space will be used as a "restricted area."

"There are some negative reactions to the computer registration system," said Labhard.

For most students, she said, the computer system is not as simple as a recipe.

"Some students that have been doing it have been driven insane by the computer," she said. "The computer will only accommodate students.

"The computer can go through up to 600 transactions to work out a schedule," she said.

If a section requested is filled, the computer will search for another section of the same class.

Computer takeover

When the mass confusion of gym registration is replaced with Computer Assisted Registration at the end of the winter quarter, few will be sorry to see it go.

The experience of standing outside the gym waiting to be herded into registration like cattle heading for market will become a memory. Gone will be the cussing, swearing and foot stamping of students unable (once again) to get the classes they need. The thrill of victory or the agony of defeat felt during arena registration will be swept away like the sawdust on the gym floor.

Replacing the blood, sweat and tears of the gym will be the automatic, push-button magic of a computer. Students simply need to fill in a form, write out a check and mail off their registration cards. The rest will be done by computer.

The plan seems almost too good to be true.

In the meantime students are being asked to participate in a trial run of CAR to help administrators smooth out any bugs in the system.

We strongly urge every student to pick up their computer registration form in their departmental office and take part in the new process.

The more students who take part in the trial run of CAR, the more accurate the representation of the actual computer program will be. Students will have a better idea of just how CAR runs.

Thus, by taking time to fill out CAR forms now, students will be prepared when the system is implemented at the end of next quarter.

Also it is important for students, who have complained and screamed for years about the inconvenience of gym registration, to show their support for easier, more fluid computer registration.

After suffering through one more quarter of gym registration the advantages will be abundantly clear—and in this case students will be glad a computer is taking over.

IN VIEW OF THAT HOSTAGE RELEASE IN TEHRAN, I MOVE THAT WE SHOULD HATE IRANIANS MORE THAN WE HATE BLACKS.

Shouldn't Someone Make the Klan?

Stimulating work

Editor:

Concerning the rebuttals to the article, "Drugs Help Archie," we find the authors of the rebuttals to be totally unfamiliar with existing working conditions. Anybody who has ever worked third year environmental design labs can testify to the fact that someone pulling a 16-hour day regularly without some form of stimulating and/or hallucinogenic substance(s)

The people who deny their usage are obviously either pseudo-Pat Boones or naive freshman. I blame the name of the usage of drugs mustn't be placed on the victims themselves, but rather on the heavy workload which is demanded in the School of Architecture and Environmental Design.

We have found that to compensate for the lack of sleep which results, many stimulants must be used. These range from your basic "coffee-Do-Nos," to other, more extreme, narcotics. Yet, our position is not to encourage such practices, but rather to communicate to the Cal Poly population that the usage of drugs in the design field is widespread. We are not asking for your support, just your understanding.

"Zoned" 3rd Year Planning Students Name withheld due to nature of letter

Iranian hostages

Editor:

I feel a second viewpoint should be given in response to Tom Fulk's Nov. 16 article on "the Iranian motive." I agree that the Shah of Iran was a despot, and can sympathize with the Iranian's desire to bring him to justice. But, if the Iranians put themselves in the American's place, I am sure they will realize that holding of U.S. hostages will only create ill will and harden American resistance to hand over the Shah. If the Iranians feel that the only way to get the Shah back is through blackmail, I suggest positive blackmail (increased oil shipments), instead of negative blackmail (the holding of American hostages).

Greg Marchew

Free speech

Editor:

Those who know me will verify that I have always staunchly defended our constitutional right to free speech. However I would like to point out to the writer of "Justice for All" that nowhere in our constitution is there a guarantee for the free speech of non-U.S. citizens—particularly for those coming from a country which has flagrantly violated the sanctity of an embassy, which is a physical attack on American soil.

I would further like to point out that there is no country on earth, has there been, where foreigners are guaranteed the same rights as its citizens—especially in actions against that country.

While in America, any American has the right to demonstrate for or against their government's policy to Iran, but the Iranian students in this country, are guests, and have no such right. Our constitution guarantees the right to free speech to its citizens.

Philip B. Bean
College credit given for state capitol work

By Deborah Tucker
Daily Democrat

Instead of confining their schooling to classrooms, two Cal Poly political science majors are learning firsthand about the workings of government through a unique internship program. The Sacramento Semester Program is sponsored by California State University at Sacramento and its political science department.

Students will receive six semester units of credit for working approximately 25 hours per week as interns at the capital. Participants must also enroll in a seminar program and another three-unit class at California State University, Sacramento, before enrolling in the three-unit class as it is advised that a person contact the Cal Poly evaluations department to make sure exactly which classes are transferable back to Cal Poly.

To apply for the program, a student should be upper division. According to the program brochure, "Good writing and research skills are essential." It also recommended that the student have a 3.0 grade point minimum and be a political science major or from a related social science. However, all majors are eligible.

Persons interested in the Sacramento Semester program should contact George Clucas, political science professor and campus representative, for the program. The program will have openings for the spring semester 1980, and the deadline for application is Wednesday, Nov. 28, 1979.

Generally two students per university are chosen for the program. Two Cal Poly students are currently working at the state capital. Linda Jeffries works as an assistant to Assemblyman John Thurmon. Her job duties include, as she says, "taking care of constituent's problems." She does research into possible legislation, follow-up studies on legislation that the Assemblyman Thurmon has authored, and represents the assemblyman at public gatherings, such as at the Highway Patrol academy conference about foul play in the water department. They left it all up to me. I had to get letters signed that were confidential. They were depending on me," she said.

"You meet assemblymen and it is really fascinating. It takes my breath away," Linda said.

Jeffries said that among the benefits of the program, is being able to sit in on legislative sessions. She also said that meeting those in government is a bonus. "You meet assemblymen and it is really fascinating. It takes my breath away," Linda said.

Jeffries said that the has yet to meet Governor Jerry Brown. "I opened two doors down from the governor, I never see him but his light is on," she said.

Jeffries said she feels that one of the most important factors of her internship is the feeling of responsibility. "Once there was a press conference about foul play in the water department. They left it all up to me. I had to get letters signed that were confidential. They were depending on me," she said.

"People learn who you are and they call and ask for Linda. It makes you feel important," she said.

Career Opportunity in Electronics

If you are graduating with a degree in Engineering Technology with emphasis on electronics, WILTRON may have just the career opportunity you are looking for.

We seek hands-on problem solvers with strong electronics background to be dynamically involved in the manufacture of state-of-the-art microprocessor-based electronic test instrumentation for the microwave and telecommunications industries. Our proprietary products have an international reputation for excellence that has helped provide a history of steady growth.

You will enjoy challenging work in a modern facility with an outstanding benefit package that includes Cash Profit Sharing and Flexible Work Hours.

A WILTRON technical representative will be on campus Friday, November 30, to conduct pre-employment interviews. Contact your Placement Office today to arrange a convenient time.
said to help outlook on life

said to help outlook on life, according to psychology Professor Donald Stanley, who is teaching a class in death and dying next quarter.

"Death has relevance to everyone," said Stanley. "We are all going to die someday. If we accept this fact now, it might change the way we live.

Stanley said he gets upset when people say a class on death is morbid. *

"I jump up and down, get all excited and tell people about funerals and afterlife. Stanley said. We are fascination with youth and ignore the elderly.

Stanley feels that one of the effects of denying death is to use violence in movies, books and newspapers.

"We have a fascination with the bloody," said Stanley. "The denial of death creates a market for a perceived view. But our society is slowly taking death out of the closet. Stanley said. There is a rise in "death and dying" classes in universities around the country. Dying at home is becoming more permissible. Hospice organizations—groups that deal with the terminally ill and their families—are growing in numbers.

"If people become aware of death, they will be less frightened of dying," said Stanley.

"It is actually uplifting to become aware of one's mortality," he said. "Mortality has some boring consequences."

Stanley's class will deal in all aspects of death: how to deal with grief, different cultures' views of death, suicide and afterlife. Stanley is currently teaching the class through a mortuary. He said that the class learned a lot about funerals and alternative to funerals.

"People think that funeral homes are a financial racket, that they take advantage of grief," said Stanley.

"If one knows about funeral homes, they won't be a rip-off, he said. Stanley's interest in death and its consequences sprung from the experiences he had working in a suicide prevention clinic.

"In questioning death, you must contemplate life," said Stanley. "That's why I am so excited about teaching this course. It is concerned about today and how you are living your life."

Survey shows California's health need

SACRAMENTO (AP)— Fewer than one-third of Californians believe their health-care survey rated themselves in top physical and emotional health, and more than one reported emotional problems, state officials reported Monday.

One of the highlights of Mental Health released a billboard to support its campaign that more needs to be done to prevent mental illness and that one of the simplest ways is for people to talk to other people.

A goal of the department's planned education program is to encourage people to "talk to people who have had problems with whom they can communicate in times of trouble," Director Dale Barton told reporters.

He said he was aware of one of those surveyed thought that such communication was a good idea, but only 9 percent said they had done it themselves.

Finding included:

—Forty-two percent said they suffered from one or more specific medical conditions, including back trouble— the most prevalent—arthritis, asthma, heart, lung or kidney problems, ulcers and diabetes.

—Another 21 percent reported "non-specific" medical problems, such as high blood pressure, frequent headaches or dizzy spells.

Stanley's class will deal in all aspects of death: how to deal with grief, different cultures' views of death, suicide and afterlife. Stanley is currently teaching the class through a mortuary. He said that the class learned a lot about funerals and alternative to funerals.

About 450 tickets have been sold so far for the Leo Kottke concert set for this Sunday evening in Chumash Auditorium. About 1,000 tickets are available to see the guitarist during two shows at 7 and 10. Tickets are on sale at the University Union Ticket Office and other local outlets.

Internship

From page 6

Another Poly student who has taken an internship in Sacramento is Laurel Barton. She works for the California Pharmacists Association. This association serves pharmacists in legislative matters.

Barton often researches potential bills for pharmacists that have met with opposition. Many times she is responsible for re-writing legislation. As of now she is preparing a manual which teaches pharmacists how to become involved in politics.

"Your have to have the sense that you're important to make things happen," she said. "You have to have the complaints heard. She also deals with Medi-Cal and the Department of Health services.

Barton said she thinks one of the smartest things about her internship is the people that she meets.

"It's good to meet important people around town. It is important to make connections," she said.

"People tend to ignore interns. You have to push hard enough so that they know you're alive," she said.

Barton worked for the first three weeks of her internship withlobby groups at the state Senate. Barton witnessed a smear override after Governor Brown vetoed the state budget.

"This gave me a close up view as to why politically things don't happen," she said.

"First I was excited about teaching this course. It is concerned about today and how you are living your life."

American society ignores death by showing the elderly into cold, sterile institutions, Stanley said. We are fascination with youth and ignore the elderly.

No surprises

Mustangs pin LA

UCLA did not surprise anyone in wrestling circles when the Bruins lost to Cal Poly last week 22-15.

Although UCLA was the last collegiate wrestling team in California to beat Cal Poly in a dual meet, it happened in the 1961-1962 season. Since Coach Vaughan Hitchcock came to Cal Poly in 1962, the Mustangs have logged a phenomenal 156-0-1 record against California foes. That winning percentage is 99.7.

So the only surprise wrestling fans had when the Mustangs wrestled in Pauley Pavilion Thanksgiving Eve, was that the team did not win by a greater margin.

Gary Fisher of Cal Poly decisioned Gary Bohay in the 126-pound class. Bohay was second in the Pac-Ten last season. Mustang Jeff Barksdale decisioned Pat O’Donnell in the 142-pound class while in the 150-pound class Craig Trulson of Poly decisioned Steve Cesavero. At 167 pounds Mustang Robert Kiddly decisioned Jeff Newman and at 177 pounds Rich Word of Cal Poly pinned Eric White in 3:01. The heavyweight class had David Jack of Cal Poly decision Mike Haschke.

Cal Poly loses came at 113 pounds, 134 pounds, 158 pounds and 190 pounds where Mitch Dolson, Tom Mount, Randy Penney, and Curt Wiedenhofer came up short to David Durray, Harland Kistler, Jackson Kistler and John Henderson.

Coach Hitchcock juggled his lineup since his wrestlers had some trouble making weight in the UCLA match. The team was allowed a six-pound allowance in the Boise State Invitational but the Mustangs were only allowed a three-pound allowance in the UCLA match.

Coach Marilyn McReil was introduced to California women's basketball in the Cal Poly Classic tournament Nov. 16th and 17th, and she was probably impressed.

The Mustangs placed seventh out of the eight teams in the tournament after suffering losses to Oregon (76-70) and Fresno State (82-65) on Friday. Saturday the Cal Poly team turned it around beating UCSB (64-73).

San Jose State beat San Francisco for the championship Saturday night (69-58). The Spartans took the lead on a field goal by Wanda Thompson with 2:54 remaining in the game.

Stanford beat Wyoming to take third place honors, (71-27), and San Diego State's Gayle Suttles sank the game winning basket with 21 seconds left to give the Aztecs the consolation title in a (61-59) win over Fresno State.

In the game the Mustangs played against the Wyoming Cowgirls the two teams were tied (33-33) at halftime, and (55-55) with eight minutes to play.

Cowgirl forward Rich Madovaski sank a shot with 3:05 remaining to knot the contest once more at (66-66). A basket and two free throws by Alhambra's Killic Car- dona put Wyoming ahead by (70-66) with 2:25 left.

WASHINGTON, (AP) — The Supreme Court said Monday it may decide whether Congress can refuse to pay for most abortions wanted by women on welfare.

Once again taking up one of the nation's most divisive legal and social topics, the court agreed to hear arguments over the constitutionality of the abortion-spending restriction.

But the justices left themselves an escape route. First they will have to decide they have the proper jurisdiction before ruling on the constitutional question.

Arguments likely will be heard this winter and a decision announced sometime before the end of the court term in June.

Attached to the budget for the Department of Health, Education and Welfare, the so-called Hyde amendment was first passed by Congress in 1976. Various versions of it have been enacted for each fiscal year since then.

The court will study the Hyde amendment passed for fiscal year 1978, which bars Medicaid spending for abortions unless a woman's life would be endangered by childbirth, in cases of a prompted reported rape or incest, or when two doctors say childbirth would cause "severe and long-lasting physical health damages to the mother."

The Supreme Court legalized abortions in 1973, basing its ruling on a woman's constitutional right to privacy.

Nearly one-third of the more than one million legal abortions performed in the United States each year since that landmark ruling have been for welfare recipients.

Brown wants import regulation

BERLIN, N.H. (AP) — California Gov. Edmund G. Brown suggested Monday the establishment of a federal import authority that would buy foreign oil and control prices, but without an import regulation that would be "too bureaucratic in degree than they are now."

Brown said a gathering of about 30 senior citizens and other residents of Berlin, Brown, a candidate for the Democratic presidential nomination, made his brief appearance in this northern New Hampshire community for a three-day tour of New Hampshire and Port­land, Maine, on Sunday and Monday. He was scheduled to travel later Monday to Montpelier, Vt., then return to New Hampshire on Tuesday.

Co-Founder of SLA emerges

SAN FRANCISCO (AP)—Robyn Sue Steiner says she was already into drugs and rebellion when she met Russell Little. Together they organized the Symbionese Liberation Army.

Steiner, daughter of a middle-class Miami couple, fled to England in 1974 under a SLA death sentence for helping her terrorist comrades. Now she has emerged, hiding to provide details of life inside the group that made headlines around the world with the kidnapping of newspaper heiress Patricia Hearst.

 Authorities say Ms. Steiner's reappearance may be connected with Little's arrest in March for murder of Oakland school superintendent. Marcus Foster, Little and Joseph Remiro were convicted of first-degree murder in 1975 for the 1973 slaying of Foster, who was gunned down with cyanide tipped bullets.

They said Iranian Charge d'Affaires Jamal Shemirani asked that the meeting be put off until after Saturday.

Brown, a candidate for the Democratic presidential nomination, made his brief appearance in this northern New Hampshire community for a three-day tour of New Hampshire and Portland, Maine, on Sunday and Monday. He was scheduled to travel later Monday to Montpelier, Vt., then return to New Hampshire on Tuesday.
