The California Marijuana Initiative

The People of the State of California do enact as follows:

Section 11357.5
1. Adults, 18 years or older, shall not be punished criminally, or be denied any right or privilege, by reason of their private possession, transportation or cultivation of marijuana for personal use. 2. A state commission shall be established to study the potential agricultural, economic and tax benefits of a regulated marijuana market. The commission shall explore regulatory approaches which minimize promotion and misuse of marijuana. The economic analysis shall include consideration of a) the costs of marijuana, such as for regulation and compliance, and compare the costs between prohibition and regulation. The commission shall consist of thirteen members, who shall serve without compensation and be appointed as follows:

(1) The Governor shall appoint seven members, who must be persons not holding public office or government appointment.
(2) The Attorney General and the State Controller, together with their designated representatives, shall serve on the commission.
(3) Each house of the Legislature shall appoint two members to serve on the commission.

The commission shall submit a report spelling out proposals for operation of the commission within one year, commencing July 1, 1971. All hearings, meetings and commissions of the commission shall be public.

The People of the State of California do enact as follows:

1. Adults, 18 years or older, shall not be punished criminally, or be denied any right or privilege, by reason of their private possession, transportation or cultivation of marijuana for personal use. 2. A state commission shall be established to study the potential agricultural, economic and tax benefits of a regulated marijuana market. The commission shall explore regulatory approaches which minimize promotion and misuse of marijuana. The economic analysis shall include consideration of a) the costs of marijuana, such as for regulation and compliance, and compare the costs between prohibition and regulation. (1) The Governor shall appoint seven members, who must be persons not holding public office or government appointment.
(2) The Attorney General and the State Controller, together with their designated representatives, shall serve on the commission.
(3) Each house of the Legislature shall appoint two members to serve on the commission.

The commission shall submit a report spelling out proposals for operation of the commission within one year, commencing July 1, 1971. All hearings, meetings and commissions of the commission shall be public.

The entire educational system should be the whipping boy," said Mulder. According to the Nader report, California Polytechnic State University (Cal Poly) student, plans to contact other political groups on campus to study the drive. He will talk to Democrat and Republican groups, but interest from any group is welcomed. He believes partisan politicians become very partisan in the initiative drives. Nader report on SAT evokes mixed reactions at Cal Poly

Mostly clear with some fog up to Friday

The weather should be mostly clear through Thursday with warm and good nights, according to the National Weather Service. High temperatures will be in the upper 60s or low 70s, and lows will be in the upper 50s. There may be winds up to 15 mph. Some areas will have dense fog. There is a chance of snow showers over the Sierra Nevada by Friday morning. Mammoth has already registered fair to good conditions with powder snow. Mammoth has 10 inches of powder.
Marijuana law

A democratic society establishes laws based on the public will. Laws devised by the people in a society should reflect the public perception of right and wrong.

Fifty-eight percent of all California adults favor relaxation of current marijuana laws, according to a statewide poll conducted by the Field Research Corporation in April, 1979. The same poll showed that 42 percent desire full legalization.

Californians have a chance to exercise their fundamental freedom—to be governed as the majority wants. The majority is not the seven million Californians who have used marijuana. It is the taxpayers who will save $75 million each year if the 1980 California Marijuana Initiative is passed.

Marijuana laws annually cost millions of dollars with most funds wasted on cases involving possession or cultivation. According to state studies, possession penalties were reduced in 1975 and since then have saved an estimated $25 million a year in police and court costs alone.

Cutting costs through decriminalization could help reduce crime by broadening support of police departments. Murders in Los Angeles rose 24 percent in 1979 because of the lack of sufficient police officers, according to a recent article in the Los Angeles Times.

Combating the use of marijuana is about as enforceable as cutting costs through decriminalization. The federal Drug Enforcement Administration estimates that marijuana cultivation in California grosses $1 billion annually. It is the number one cash crop in the state—more than grapes, cotton, lettuce, citrus and every other agricultural commodity grown in this soil-rich state. The implications of how much marijuana will contribute if commercially grown will be investigated if the initiative is passed. A commission will study potential agricultural, economic and tax benefits should the majority want the initiative passed.

How long must voters feel themselves with this prohibition? Percentages indicate how ridiculous marijuana laws are now. Marijuana smoking will not end if the initiative does not pass or even fails to get on the ballot.

Laws should reflect the will of the people. Marijuana laws do not.

Soviets

Editors:
The invasion of Afghanistan by Soviet troops could prove to be a turning point in modern history. The Soviet push toward the coveted oil fields of the Persian Gulf is a direct threat to the Free World, and we have stood up en masse to say “We’re much than hell, and we’re not going to take it anymore.”

For many people, this lesson is a review. Among those for whom it is a review are my parents, who fled their country of Latvia as Soviet troops “liberated” the Baltic countries from Germany and proceeded to relocate thousands to Siberia.

The Soviets never left. They never do.

For these people who have been victimized by Soviet aggression it is sickening to witness the stupidity, naivete and greed with which the Free World’s leaders continue to deal with the Soviet governments while under their very noses the Soviets continue to close in at the Free World.

Grain embargoes, Olympic boycotts and withholding technology are merely a bag of shells.

Peter R. Steinblums

Facts on bill

Editors:
Much has been written recently, often erroneously and out of context, regarding priority registration for Computer Assisted Registration (CAR). As one who has worked extensively in formulating the new guidelines under Student Senate Bill 79-01, I wish to present the following facts.

1. Bill 79-01 cuts the number of students receiving priority registration to a maximum of about 600 per quarter, as opposed to the 1,747 who received priority this winter. With 1,200 fewer students getting priority each quarter, the average student stands a much greater chance of getting all of his/her classes.

2. Bill 79-01 limits the number of students receiving priority registration to 3.33 percent of the average full-time enrollment at Cal Poly last year. This number works out to be about 500 per quarter maximum.

3. Bill 79-01 is in effect for the spring quarter. Though the University-wide Registration and Scheduling Committee (R&S) is also looking into the situation, associate Dean of Students Bob Timone has stated “Until such time as the R&S recommendations are received and a resolution of differences between recommendations of Student Senate and the R&S are determined, I shall abide as closely as possible to the recommendations made by Student Senate in Bill 79-01.”

4. Though a number of articles have recently been written about the effects of Bill 79-01, the author made no attempt to check with the author of the bill regarding its purpose, scope and intent. As a result, many misleading statements have appeared as fact in the Mustang Daily. For those students who really care about priority registration and the purpose, scope, and intent of Bill 79-01, I refer you to the excellent article by Tert Bauer in the Nov. 7, 1979 Mustang Daily.

Southern Andean atudanta will fly directly to Cal Poly atudanta to the University Union chairman. Suddenly the exercises.

own as field training leadership training target practice and early Saturday morning to trekked to Camp San Luis through the frigid nippy was shattered by the roar of the solitude of the countryside parched plains of超越 the immediate high school blast reverberating through the stratosphere.

The above scenario did not take place on the parched plains of Afghanistan, but on the lonely outskirts of Camp San Luis Obispo area, where the Cal Poly ROTC was conducting part of its Field Training Exercise Program.

Nearly 130 junior and senior ROTC members trekked to the area early Saturday morning to participate in a mandatory training program — leadership training exercises as well.

The exercise was held to familiarize the junior ROTC cadets with the workings of the M-16 rifle and other weapons. This trip which will rarely take the students beneath 10,000 feet. Lake Titicaca is the home of the enormous markings cut into the ground in the region of the marking resemble birds, spomen and pyramids. Since they are so large, De Luca plans to take an airplane to view them.

If time permits, the group willewing northwest from Lake Titicaca to the plain area of Peru.

The group will also witness great celebrations when the military junta currently in power heads over the country's leadership to elected officials.

If you would like to have the opportunity to stay with Peruvian Indians in their huts and share their food and customs, go to the ASI Outings meeting or inquire at the University Union. Many of the details have yet to be worked out for this slightly-out-of-the-ordinary summer vacation.

ROTC exercise
Poly cadets learn how to utilize weapons

BY TOM JOHNSON

"Commence fire!" shouted the lower watchman. Suddenly the solitude of the countryside was shattered by the roar of rifles thundering through the frigid nippy January air. Machine guns blasted away at the exposed ground, splintering the ground as they were blasted reverberating through the stratosphere.

The above scenario did not take place on the parched plains of Afghanistan, but on the lonely outskirts of Camp San Luis Obispo area, where the Cal Poly ROTC was conducting part of its Field Training Exercise Program.

Nearly 130 junior and senior ROTC members trekked to the area early Saturday morning to participate in a mandatory training program — leadership training exercises as well.

ASl senate agenda

Items set for discussion at this week's student senate meeting include:

— Bill 80-03, which if passed will revitalize Bill 99-01 which deals with priority registration. Bill 80-03 would do away with priority registration for everyone except those who must have it, such as disabled students.

— Bill 80-04, which if passed would require that all bylaws and codes include an Equal Opportunity clause.

The administration's request to borrow $5,000 from ASI and from the Foundation in order to comply with fire regulations in Heron and Johnson residence halls was voted down at the meeting. The administration has asked for an interest-free loan.

Carter didn't keep vows, says GOP

WASHINGTON (AP) — The Republican Party on Tuesday released its latest catalogue on how well President Carter has done in keeping his 1976 campaign promises. It is priced at $9.95, up from $7.50 in 1977 "due to Mr. Carter's failure to keep Promises No. 29." Promises 28 came from an economic position paper that Carter had put out in April 1977. It said that if elected president, he would strive for an inflation rate of 4 percent or less by the end of his first term.

"Achieving a 4 percent rate of inflation by the end of 1980 is viewed by almost all economists as economically impossible," the GOP book says.

"Indeed, the most sane estimate made by the administration projects an increase of 8.3 percent for 1980," it added.

When President Carter took office, inflation had been brought from a then-decade high of 13.5 percent, as measured by the Consumer Price Index, to a manageable level of 4.6 percent for 1979," the Republican study said.

"As a result of those successes, the GOP says, Carter has 'not even seen yet.' The Republican book, "Promises, Promises," said that Carter made 667 promises as a candidate, had kept 139 and kept 13 percent in 1979. The report said.

White House deputy press secretary Reu Graum Brown declined comment on the report, saying, "(I) haven't even seen it yet.

"As a result of those successes, the GOP says, Carter has 'not even seen yet.' The Republican book, "Promises, Promises," said that Carter made 667 promises as a candidate, had kept 139 and kept 13 percent in 1979. The report said.
Trouble with autos can be due to rain

Because of the recent rainy conditions, some students have had difficulty starting their automobiles. The high amount of moisture hanging in the atmosphere has found its way into the fuel and ignition systems of many cars and motorcycles.

Suggestion guide
by Guillermo Brock

By far the most common malady is the age-old water under the distributor cap. The distributor is the area where the electric spark needed for ignition is rationed to the various cylinders. High humidity can cause water in the distributor and snuff out the spark for the entire system. One effective solution to the problem is to dry out the distributor cap. Nature can take care of it, but if rainfall and high humidity conditions persist, the motorist may have to dry it manually. A hair dryer with a long extension cord, a lint-free absorbent towel and a handy can of WD-40 will suffice.

The idea is to dry out and clean the distributor area. Spray and wipe the points, rotors and sparkplug wire leads. Dry them off, replace the distributor cap, and fire up your automobile.

If that doesn’t work, determine if the problem is spark or not. This is done by holding the distributor-coil wire up against a metal ground, such as a radiator. Hold the metal end which plugs onto the distributor very close to the metal ground. Then turn the key as if to start the engine. Wear a pair of ski gloves or an oven mitt when doing this because an electric shock could occur.

If the spark between the wire and the metal ground is blue and appears regularly at close intervals, the spark is probably not your problem. If it comes at irregular intervals or not at all, it could be the problem.

When a car refuses to start in wet weather, often it is because there is moisture in the electrical system. The problem can usually be taken care of easily, using items available in most households.

On the Chicago Board of Trade, wheat futures climbed 4 to 6 cents on bullish sentiment on the strength of export interest. Live cattle futures closed the 1.5-cent limit down in the nearby February contract but made price gains of up to 7.7 cents a pound in back months.

Cotton futures, which have steadily gained in price since the end of October, continued the trend rising between 1.9 and 1.58 cents to close at 79.35 cents per pound for March delivery on the New York Cotton Exchange. An analyst for a major brokerage firm said demand for cotton has remained steady in the face of dwindling stocks.

"The statistical position is extremely bullish, and we've almost used the whole crop," he said.

failed to make good on campaign pledges on the economy, unemployment, energy and a host of other key issues. And even those "broken" are Carter's campaign goal of reaching a balanced budget by the end of his first term. The Republicans say even his new projection of a $15 billion deficit for fiscal 1981 is "unrealistically low."

Other major promises cited by the GOP judgment include:

-to bring unemployment to 4 percent or less by the end of a first term; 
-broken. The inflationary surge has set the stage for a recession, which according to the Office of Management and Budget will result in an unemployment rate of 6.9 percent for the calendar year 1980.

To American foreign policy: "Broken. Mr. Carter has repeatedly promised to consult with even the majority in Congress on major foreign policy decisions, and has con­

continued to do so even with Republicans."
Cal Poly Children's Center grows with new gift

BY TOM KINZLWING
Daily Bulletin Writer

Babies will be allowed to stay at the Cal Poly Children's Center, thanks to a recent gift of $18,600 from the California Department of Education.

Missy Dannesberg, coordinator of the Children's Center said the center will be expanding special sections that will offer day care to infants. She has been planning the addition for more than a year.

Seven infants of underprivileged students will be cared for with diapers, crib, high chairs and the supervision of a full-time teacher and six assistants.

Dannesberg originally requested $25,000 from the state because she wanted to take care of at least 12 babies.

The Children's Center was among the 600 child care centers which applied to the state for a total of $63 million this year. Only 72 applicants received financial rewards.

The majority of the $18,600 will be allocated for teacher and assistant salaries. Of that, $4,000 will be used to pay insurance, and the remaining for a new building for the babies and such baby toys as "Busy Blocks."

Some of the money will also be used to purchase equipment such as "how to" books for the parents. Parents are obligated to contribute a minimum of 10 hours of work a year with the Children's Center on things such as building improvements.

The center has in the past been operating on a $31,000 yearly budget. Located at Thomas Hall in Poly Grove, the philosophy of coordinator Dannesberg and her staff is "to provide a comfortable, loving environment for children and their families."

Children ages 2 to 6 at the Center are encouraged "to make their own choices and to be responsible for their own problems."

No film price hike, say ASI officers

BY MSQ McCONAHEY

ASI officers denied rumors that a 50 percent hike in ASI film ticket prices will be implemented in the near future.

Although the Program Board discussed increasing admission prices to ASI-sponsored films, the idea was dropped in the last quarter, according to Chairman Jeff Gee.

"We just didn't think it was a viable solution to the inflation problem," Gee said.

Despite ASI Vice President Jeff Land's assertion that the student organization will not be able to supply film entertainment to students for $1 much longer, Film Committee Treasurer Roger Mann denied his group was in any financial trouble.

Mann said the committee is supposed to have assets at the end of the academic year, and after two quarters, it has already collected $5,000.

Although ASI may have some trouble subsidizing certain programs in the future, Mann said Film and Concert committees are not among those who will suffer.

"Film Committee is probably on the one with the least amount of worries because we're not subsidized by ASI," he said.

Mann did admit that if money to Program board is cut, Film and Concert committees may have to augment the loss.

"This thing can't be before next year, if it happens at all," he said.

Rainier Mack, corresponding secretary of the Film Committee, said his group discussed raising ticket prices, early last quarter.

Because all film proceeds go back to Program board for redistribution to other ASI programs, Faucet said his group thought the extra 60 cents collected from each ticket would benefit students.

Yet Faucet discovered Film Committee pays the film companies on a percentage basis, rather than by a flat fee--between 50 and 60 percent of its gross profits for film rental. He discovered that students would only benefit by 25 cents per ticket if prices were jacked up 60 cents.

"Since our committee is continually successful, we saw no reason to raise prices," Faucet said.

"We're totally separate from theatrical business. We have no overhead as we can afford to run our movies at cheaper prices than ASI does in the near future. But he added that the student senate has no plans to consider the film price hike at this time.

"I talked to Film Committee-Chairman Bob Laton and he said there's no problem," Land said. "When those people are sure the experts say there's no problem, then we take their word for it."

Bill might change state park fees

SACRAMENTO (AP) - Out-of-state visitors camping in California parks would pay extra under a bill sent to the Assembly floor Tuesday.

The Assembly Ways and Means Committee approved AB114 by a 12-0 vote.

The author, Assemblywoman Jean Moorhead, R-Lucerne, said it wasn't fair to California taxpayers that state revenue had to pay part of the state park system's costs.

Therefore, she wants out-of-state cars using the parks' overnight facilities to pay $2 extra.

The state of Oregon has a similar system and the committee staff said that state experienced a cut in revenue. The staff and the legislative analyst estimated the state could collect from $180,000 to $200,000 extra a year.

Architects add society chapter to raise interest

Architects add society chapter to raise interest

KIM NELSON
Special to the Daily

More communication with the professional world and less student isolation are the goals of a new student chapter formed by the landscape architecture department.

The student chapter of the American Society of Landscape Architects hopes to generate greater interest and knowledge about landscape architecture.

"The profession is evolving and changing each day," said president of the student chapter, Brad Lewis. According to Lewis, a landscape architecture senior, students have a tendency to become isolated from the professional world.

"ASLA helps students keep up with the changes," he said.

One of the chapter's tasks is to compile a student survival handbook to be sent to other ASLA chapters across the country. The handbook will include background on the instructors, students' views of the curriculum, how students can prepare themselves for landscape architecture classes and how to maintain good health through the quarter.

Lewis explained some books and materials needed for landscape architecture classes are not offered in San Luis Obispo bookstores but are through ASLA. Publishing houses also offer books, and some, such as MIT Press, have up to 75 percent discounts. The ASLA meetings will be the first time landscape architecture students will buy books in bulk, according to Lewis, the student chapter hasn't worked out details yet.

"We need to research the quantities needed for the discount, find out what books people need and then placed the order," said Lewis.

Jim Chanatry, a recently hired landscape architecture professor from Florida, has had experience with bulk ordering and will assist the students.

Lewis encouraged interested students of all majors and skill levels to attend ASLA meetings, held every other Thursday in Computer Science 235. A common interest in landscape architecture is all that's needed.

"You belong no matter what your skill level," Lewis stressed.

The president of the student organization especially encouraged underclassmen to attend the meetings. He said a lot of underclassmen are too inhibited to come to meetings because they aren't taking design classes.

"We're working on that," he said. "We want them to start thinking landscape architecture early." He said the purpose of the organization is to enrich students. Becoming familiar with the field and getting to know upperclassmen can be of great help.
Cracks appear in U.U. floor

BY BOB BERGER
Daily Mail Writer

A small earthquake fault may be the cause of a series of cracks running through the Mustang Lounge in the University Union.

Poor soil conditions may be the cause of a series of cracks running through the Mustang Lounge in the University Union.

A rise in the water table could be the cause of cracks in the floor of the Mustang Lounge in the University Union.

Or it could be all of the above.

Building Operations Manager Martha Blood said the cracks have been evident and getting wider during her five years as manager of the University Union.

"I tend to think it's settling," said Blood. "But I don't know too much about faults and earthquakes. I'm from New York."

The main crack running through Mustang Lounge measures one inch at its widest point and extends from the wall along South Perimeter Drive and disappears under the Burger Bar.

"There should be no problems," said Doug Gerard, Executive Dean of Facilities Planning. "There's no lack of structural integrity at all."

Gerard said there will be no move to repair the cracked floor until further observations are made.

There are three natural springs and several underground streams flowing beneath the U.U., but none are beneath the Lounge. Flowing ground water can push up against the floors.

"The ground water acts against the building like it does a boat," said Blood. During a year when we have a lot of rain, the music building across the street from the U.U. cracks. We even get streams of water spouting through cracks in the walls."

The U.U. runs pumps that suck up excess water to relieve pressure, according to Blood. She said there are no springs beneath the Mustang Lounge.

Poor soil conditions have also been blamed for the cracks.

"If we could pick the worst site to put the Union building, we did," said Blood. "But we didn't know that at the time."

According to Gerard, the soil was a "slimy bluish-gray clay." The entire level of clay was removed and replaced with a slurry mix of sand and gravel.

"It was like trying to build on a bowl of jello," said Gerard.

The firm that originally contracted to build the U.U. eventually went bankrupt over the project. According to Gerard, the contractor spent $100,000 on cement alone.

"About 16 to 20 percent of the pilings had to be set deeper than expected, which was expensive," said Gerard. "It was the poor soil."

According to Gerard, the cracks could be caused by "differential settling." Common in big buildings, differential settling is uneven shifting in a building due to poor soil conditions. According to the original architects, the Joe Esherick firm in San Francisco, differential settling shouldn't happen if proper preparations are taken before the concrete foundation is poured.

Gerard said that the design is not structurally capable of preventing cracks.

Bateman tests have been made to determine whether any earthquake faults lie beneath the Union but none were ever positive.

"We found some areas which could be defined as fault zones," said Hal Davis, one of the engineers for Rutherford and Chalmers who did the seismic testing. He said the presence of a "fault zone" doesn't imply there could also be an earthquake fault.

The closest known earthquake fault is the Cambria fault, only three-tenths of a mile away. The closest active earthquake fault is the Rinconada, five miles east of the Union. Scientists have speculated the Rinconada could produce an earthquake of at least 7.5 on the Richter Scale.

Welcome Back Cal Poly Students, Faculty and Staff!

Can you lose weight & eat a hot fudge sundae (95 calories) or a banana split (179 calories)? You bet you can! At the Sugarless Shack! We specialize in sugarfree, portion controlled desserts low in calories and carbohydrates:

Women's basketball share first

BY BOB BERGER
Daily Sports Editor

Cal Poly Woman's basketball team extended their winning streak to seven games as the ladies lashed Cal State L.A. 76-77, and swept over Azusa Pacific 67-65. The Mustangs are now 11-5 on the season and are tied with Cal Poly Pomona for first place. This is the best 16-game record for the women ever. The win on Friday puts the Mustangs at 2-0 in the Southern California Athletic Association Conference. The game-sever against Cal State L.A. was Mustang forward Kristen Bryan. She hit two free throws in the last 30 seconds to give Poly a one point victory. Bryan's free throws gave Poly a three point cushion that was quickly cut when Diablo center Ruth Smith (6'4") hit from outside for two. L.A.'s Marcia Murata missed a layup at the buzzer to preserve the Poly win.

Colleen Finney led the Mustangs with 19 points, while Bryan dominated the boards with eight rebounds. In a non-conference win over Azusa Pacific, Finney led the Mustangs in scoring again with 20 points.

The game scheduled for this Friday night has been changed to the new gym at San Luis High School at 9:30 p.m. The Mustangs will be battling U.C. Irvine. The plot thickens for the Mustangs this weekend. They will be going against Cal Poly Pomona at 9:15 p.m. Saturday in the main gym. Poly Pomona hasn't lost a game in three years and are now 22-0.

Who's Hughes?

First to develop a synchronous optical cell and sensor, Bouchon, initiating the whole era of space communications.

First in high technology electronics.

Your first employer after graduation, perhaps before graduation, all your placement office when Hughes Aircraft Company's recruiters will be on campus.

BUSINESS MANAGEMENT TRAINING PROGRAM FOR GRADUATES IN ALL MAJORS

Bullocks/Bullocks Wilshire, Southern California's leading fashion and specialty store, is seeking graduates interested in a business management career. Trainee positions include: accounting, audit, accounts payable, data processing, operations, security, distribution, restaurant and beauty salon management personnel and organization development.

If you are an aggressive, organized self-starter willing to accept challenging responsibilities and able to move at a fast pace under pressure, we would like to meet with you.

For further information contact your placement office or call (213) 480-5349.

Equal opportunity employer M/F.

Interviews on campus—February 14, 1980.

Register at the Placement Center.

Are you ready for one of the fastest growing semiconductor manufacturers?

Synertek will be on campus, ready for you, on Monday, February 11. Contact Donna Brown, Recruiting Coordinator, at 546-0111 to set up your interview. If you can't arrange for an on campus interview, send your resume to Nancy McMillan, Employment Manager, P.O. Box 652, Santa Clara, California 95052.

Synertek is a state-of-the-art MOS microprocessor and memory semiconductor manufacturer headquartered in Santa Clara, California with immediate expansion planned in beautiful Santa Cruz along the Pacific Coast.

If you're about to earn a degree in Electronics Engineering, Chemical Engineering or Physics, we're interested in your possible future here at Synertek. Get to know the company with a future. For you.

Fischer has desire and berth to NCCA Nationals

BY BILL BROCK
Daily Hustler

The wrestling of Gary Fischer has almost set the school state champion for 103 pounds. As a collegian he is ranked no. 3 in NCAA Division I.

After coming to Cal Poly, Fischer moved to the 118 pound weight class successfully. His collegiate record stands at 89 wins, 2 ties and 28 losses. His greatest achievement to date was a fifth place in the NCAA Div. I National Championships as a sophomore. He came from behind in the final 10 seconds to win by one point.

Coach Hitchcock cites Fischer's "tremendous desire to win", as perhaps his greatest asset. His competitiveness is infectious and often sparks his mat colleagues. Coach Hitchcock claims he is "without a doubt, the most mentally tough wrestler on the team."

Fischer has been the top man in the 118 pound category for four years. He has practiced in the 133 and 123 pound categories, but prefers the lighter weight.

Fischer has developed several heart-felt rivalries. Perhaps his strongest opponent is Joe Gonzales of Bakersfield, the NCAA Division I champion. Fischer has faced him during the season and in the National Championships. Fischer did not walk away from the last match. He tore a muscle in his lower leg.

Now in his last year of eligibility, Fischer is hoping to take the National Championship. A strong showing could boost him towards his ultimate hope of making the U.S. Olympic team.

The wrestling season is well into its second half and will continue until Feb. 28, when the Mustangs close out their season against University of Iowa.

Fischer will have to be in top form tonight. In the match against Bakersfield, Fischer will be pitted against his old foe Gonzales.

Get yours before you need it.

At Northern Telecom, what makes us today's leader in tomorrow's technologies?

It's our people. They're ambitious, aspiring and enterprising. They're ready to take risks and undertake new projects in order to succeed. Their determination has produced such industry trend-setting products as PULSE and the SL-1 stored-program-controlled electronic switching system.

WE'LL BE ON CAMPUS:
Friday, January 25th

If you have a soon-to-be degree in electronics, mechanical engineering or computer science, be sure to schedule an interview appointment with us. We may have just what you're looking for, an environment that is strictly advanced technology and a working atmosphere that's informal and friendly.

If you're unable to see us on campus, please send your resume, including your preferred career area to: College Recruitment Department, 2005 Mission College Blvd., Santa Clara, CA 95050. Northern Telecom...

Today's leader in tomorrow's technologies.
Mustangs rout Pioneers

BY TOM JOHNSON
Daily Cal Poly

Cal Poly Poly's offensive machine could not penetrate a stiff Pioneer defense for most of the first half, but was able to pierce Hayward's defensive armor in the second half to transform a tied game into a rout.

In the early minutes, the Mustang defense had sprung numerous leaks as Hayward took a 20-16 lead. The Pioneers relied on the expert shooting of Charles guard Earl Musse and the Mustang defense as the team started off 12 straight points.

Bill Tous, Cal Poly's 6-10 center, proved the big man in the second drive by lifting in two baskets from inside the key and adding a pair of free throws.

The offense sparked the defense as two fine defensive plays resulted in Cal Poly baskets. Senior guard Mark Robinson led down a Pioneer pass and sunk an easy two-pointer. Ernie Wheeler made a fine steal and streaked un molested toward the basket for another two points.

The Mustangs completed their lead to 57-42 on the strength of Dave McCreach and Robinson's two baskets when coach Wheeler gave his starters a break. Wheeler's decision became a costly mistake as the Pioneers closed within 10. Andy Gust halted Hayward's momentum by grabbing a rebound and putting it in for a basket and by adding a free throw a few seconds later. Bob Skophammer iced the game by tipping in a Gust free throw and by hitting one from the baseline.

Three men hit double figures for the Mustangs. Wheeler scored high scoring laurels with 12 points, while Tous and Robinson who sank 10 each. Musse came off the bench to hit for seven points. Rob Macke, who left the game early with a slight injury, scored six.

The Mustangs will have a three-day rest before tangling with Chapman on Friday and Dominguez Hills this Saturday.
Rendezvous in Spain.
You’re a software applications specialist.
When you picked this career, you never dreamed that one day you’d rendezvous in Barcelona, Spain with two Navy destroyers.
But when your company is Texas Instruments and one of your customers is the U. S. Sixth Fleet, you learn to expect the unexpected.
The destroyers are equipped with TI computers and they need new software fast. You come aboard and sail with the Fleet until your job is completed.
Not a bad assignment for a software specialist named Susie. You’re glad you got into technology.

The Incredible Talking Chip.
You’re an integrated circuit designer at TI.
You’ve helped find a way to make a chip talk, something no integrated circuit has ever done before.
First application: an electronic aid that helps children learn to spell.
The world’s first talking textbook.

The Joy of Complication.
You’re in semiconductor design at TI.
You love it when people at parties ask you what you do. You say, “I make things complicated.” (Pause.) “In fact, I got promoted recently for creating some major complications.”
What you mean (but seldom explain) is this: the more active element groups (AEGs) you can put on a single chip of silicon, the more the average AEG cost goes down.
In short, you make things cheaper by making them more complicated.
Your work made it possible for a TI consumer product that sold three years ago for about $70 to sell today for $14.95.
Your future looks wonderfully complicated. You’re at about 100,000 AEBS per chip now and 1,000,000 is in sight.
You’re glad you got into technology.

If you’re not in technology yet, think it over.
If you are in technology, talk to Texas Instruments.

Campus Interviews
