Academic calendar revision considered

BY TERI BAUER

Now that gym registration is history, the academic calendar is up for debate. The academic senate has proposed a revision of last year's academic calendar so each quarter would begin on a Monday and end exactly 10 weeks later on a Friday. Final exams would start on the following Monday, thereby providing a two-day break between the last day of classes and the first day of finals.

In the past, quarters have started on various days of the week and ended in the middle of the week. Finals have started without any break for students or teachers. The senate proposal also stretches the finals schedule from four days to five days, said Hazel Jones, vice president of academic affairs. Jones praised the proposal as a "great idea." The senate proposal would give students a five-day break between the last day of class and the first day of finals.

The senate proposal also stretches the finals schedule from four days to five days, said Hazel Jones, vice president of academic affairs. Those suggestions include an extra day or "dead day," before finals for students and teachers to catch up: an extra day after finals to give teachers more time to grade exams before final exams. Jones said the school directors think the academic senate's calendar revision is the most practical solution.

"And I think their proposal is a pretty good proposal," he said.

Several other ideas have been suggested to make up the extra days, said Hazel Jones, vice president of academic affairs. Those suggestions include an extra day or "dead day," before finals for students and teachers to catch up: an extra day after finals to give teachers more time to grade exams before final exams. Jones said the school directors think the academic senate's calendar revision is the most practical solution.

They can't just mysteriously turn into holidays for everybody," Holley said.

"I can't chew gum and walk, but I can juggle and walk," says Tony Casano, who is a magician is looking for new stunts such as the one he performed above by the graphic arts building Friday.

Horror stories from the recent inmate uprising in the New Mexico State Penitentiary are still filtering in. During that incident, which occurred just over a week ago, 33 men were killed—many brutally murdered—when prison guards locked two guards in a cell and went on a bloodthirsty rampage through the prison.

The inmates, protesting abominable prison conditions, turned against each other, committing atrocities rivaling wartime brutality. Men were hung, decapitated, blow-torched and even castrated before the siege ended.

When stories of the uprising first came through, many looked upon the prisoners as animals—sub-humans perpetrating unmentionable brutality. But as reports of the incident continued to surface, new information came to light—the conditions in which the prisoners lived were not even deserving of animals.

The New Mexico prison was outfitted to house 800 men; at the time of the rioting over 1,200 men occupied the prison. Three men lived in many of the cells which were designed for only two occupants—the extra man slept on a mat on the concrete floor.

A Dallas newspaper report described other inhumane conditions:

—one prisoner, after enduring numerous rapes and a stabbing, asked prison officials repeatedly to be moved from his cell block. His continual requests were denied. During the riot, he was one of the first to be killed.

—several prisoners were sent to solitary confinement where they were stripped, locked in a cell with no windows and left for two weeks even in extreme heat.

After reading an account of such brutal treatment, we have to stop to question ourselves—are we really reading about prison conditions in the good ole' U.S. of A? Or are these reports from some "barbaric" middle eastern country? It is painful, if not almost impossible, to imagine such inhumanity in our country.

To say that our prison systems need revamping is an understatement.

The inmate riots in New Mexico will no doubt spark a nationwide investigation into our prisons. Obviously, when men are living almost one on top of the other, in constant terror that any move they make will either send them to solitary or put them in bad graces with their peers, something is going to break.

Placing men in conditions where they are constantly in fear of brutality and death is a denial of human rights.

Now that we know our prison system is not working, what will be done about it? Any improvements in the nation's penitentiaries will take a vast amount of funding. But after witnessing the savagery in New Mexico, it will be money well-spent.

Mustang Daily Wednesday, Feb. 13, 1980
Olympics will go on despite U.S. sanctions.

LAKE PLACID, N.Y. (AP) — The International Olympic Committee announced Saturday the 1980 Olympic Games will go on in Moscow as planned, following President Carter's call that they be canceled or postponed because of the Soviet invasion in Afghanistan.

The committee also ruled that members of the Olympic organizing committee in Moscow inform the highest authorities of their government of the circumstances which have created these difficulties for so many National Olympic Committees.

Lord Killanin, president of the IOC, said that all 73 members attending the IOC general session before the Winter Olympics had voted to keep the Summer Games in Moscow. According to the U.S. State Department, more than 30 governments — as opposed to Olympic committees — have called for movement, postponement or cancellation of the Games.

Killanin said the IOC recognized the difficulties the United States Olympic Committee faced but urged it to continue its efforts to make possible the participation of its athletes in the Games.

The U.S. committee had presented the IOC with Carter's demands.

U.S. accused of ruining detente

NEW DELHI, India (AP) — Foreign Minister Andrei A. Gromyko of the Soviet Union accused the United States on Tuesday of subverting detente and warned India it may risk its independence by backing America and China in the Afghan crisis.

Pakistan will “undermine its position as an independent state” if it “allows the United States and its allies to convert it into a springboard for further escalation of aggression against pro-Moscow Afghanistan,” Gromyko said in a speech delivered at a banquet given in his honor by India’s Foreign Minister, P.V.N. Rao.

Gromyko's strong words came after a first round of talks with Indian leaders on the Afghan situation during an official (two-day) visit. Prime Minister Indira Gandhi, a long-time friend of Moscow, is making low-key efforts to defuse the Afghanistan crisis that have estimated 90,000 Soviet troops withdrawn "from the neighboring country."

If the Soviet foreign minister was persuaded by the cautious and friendly statements of Mrs. Gandhi and Rao during their three hours of meetings, he gave no indication.

Gromyko defended the Soviet intervention, attacked the United States and China and delivered the warning to Pakistan.

History today

Today is Wednesday, Feb. 13, the 44th day of the year. There are 322 days left in the year.

Today's highlight in history: On Feb. 13, 1689, the English Parliament adopted the Bill of Rights, a document that established the supremacy of Parliament over the British monarch. This document was a key step in the development of modern democratic institutions.

Today in history: In 1633, the Roman Catholic Church condemned Galileo, arrived in Rome and was subsequently tried by the Roman Catholic Inquisition.

Education... On this date in 1969, the Texas Latin School — the Boston Latin School — adopted a bill of rights.

Elections... On this date in 1920, the League of Nations admitted Switzerland and renewed its perpetual neutrality.

Government... In 1974, dissident Soviet author Alexander Solzhenitsyn was stripped of his Soviet citizenship and sent into exile.

Ten years ago, the Chicago 7 trial drew to a close after five months of chaotic courtroom arguments. The defendants were charged in connection with the violence surrounding the 1968 Democratic National Convention.

Five years ago, Turkish Cypriots proclaimed a separate administration in the Turkish-occupied northern part of the island.

Last year: Energy Secretary James Schlesinger said it might take months for Iran to resume flowing to the United States.

Today's Birthdays: Singer Eileen Farrell is 60. Actor George Segal is 44. Former first lady Bess Truman is 95.

Thought For Today: "There is no such thing as a half-hearted stroke of the dynamite, nor in the nature of the matter, a halfway revolution." —毛主席, as quoted by the AP in 1969.

ALCOA CAN'T WAIT

THAT'S RIGHT, the nations leading supplier of aluminum can't wait to see you for your graduate! ALCOA is a stronger enterprise today than at any point in its recent history. Our continued strength and success requires a knowledgeable, well-trained, highly motivated workforce, capable of solving the complex problems of today and tackling the challenges of tomorrow.

For that reason, ALCOA is providing a wide variety of management and development programs designed to foster a work environment in which employees are encouraged and assisted in performing, creating, and growing to their fullest potential.

Over the years, we have attracted men and women whose highly professional standards set them apart — people whose energy and enthusiasm are unusual, people who believe in their work and their company.

ALCOA can't wait...to see you about your career!

EQUAL OPPORTUNITY EMPLOYER
Dave Ciano is the Director of Judicial Affairs at Cal Poly.

However, Ciano said, since 1978, the athletic department has taken great strides toward achieving proportional equality.

An important but largely ignored aspect of Ciano's work is investigating alleged rule violations by Cal Poly faculty. The most common infraction broken, said Ciano, is misuse of state vehicles, but occasionally more important rule infractions are reported.

"About three times in the last year, rule violations were reported. One involved a person using state time for nonstate activities, another involved allegations of alcohol impropriety, and another was for unprofessional conduct, whatever that means," Ciano said.

Though Ciano exercises numerous duties for the judicial affairs department, only one places him in the limelight. Ciano is the disciplinarian, the high court judge who presides over the dorms and passes sentence over the residents. At least that is how Ciano is viewed by several dorm residents questioned.

But Ciano's disciplinarian power is actually much more limited. His verdict on any case is not necessarily the final word, as residents can appeal the decision and ask for a hearing. The hearing is usually before Bob Timoni, associate dean of students. Dean of Students Russ Brown then acts as a supreme court, ruling if the decision was just.

Though some might view the disciplinary factor a negative aspect of his job, Ciano sees it as a positive one in which he can talk to the student and educate him so the dorm resident will not break the regulation again.

"I don't think of my job as negative at all. It is an opportunity to talk to the students in a positive way. Assuming a rule was violated, I explain the rational of the rule to educate them. I also explain how the disciplinary process works," Ciano said.

"Our purpose is not to boot people out. We have to make them aware that there are certain expectations the university expects them to meet. My goal is to show them these expectations and make them aware that they will have to follow certain expectations when they leave Cal Poly and enter society," Ciano concluded.

---

Man sentenced to death, in Florida murder case

ORLANDO, Fla. (AP) —

A circuit judge today sentenced Theodore Robert Bundy to death in Florida's electric chair for the murder of a 12-year-old girl — the third death sentence imposed on Bundy since July.

Judge Wallace Jopling rejected a defense motion that sentencing be delayed to conduct a psychiatric evaluation of the defendant, who was convicted by a 12-member jury on Saturday of the first.

degree murder of Kimberly Diane Leach, a Lake City, Fla., ninth-grade student.

Defense attorney Victor Africano argued that Bundy does not kill. He said he was presenting two psychiatric reports to counter the prosecution's presentation of certain factors which resulted in the death sentence.

Bundy himself argued before sentencing that pre-trial contamination "tainted and contaminated this case."

One way is Valentine's day, Thursday February 14.

Don't forget to remember your valentine (or valentine's); we'll never tell!
CHICAGO (AP) - If you get annoyed by people carrying loud-playing tape decks and radios in public, you can always recommend the "Bone Fone," a sound system that's more like a scarf than a radio.

"It's like wearing a concert hall around your neck," says Bill Hass, the 32-year-old inventor who was inspired by a skier wearing headphones. With the Bone Fone, Hass, president of Bone Fone Corp., said Tuesday he expects it to be on the store shelves by April.

"Three factors make it better than anyone expected," Hass explained. "The first is close placement of the speaker to the ear, so that a low level volume creates a sound pressure. The second factor - where the name comes from - is that the unit actually pulsates because of the way the speaker is mounted and the vibrations are transmitted through your body."

Because bone acts as an amplifier, he said, "the sound resonates in the inner ear.

Thirdly, the unit delivers quality stereo separation because of the proximity of the right ear to the right channel and conversely, left to left. Further, the proximity of the unit to both ears takes advantage of an acoustic effect called cross-feed - the right channel being picked up by the left ear and vice versa - creating a spatial effect similar to how the music was originally recorded."

"You can understand the idea by relating it to headphones, which seem to center the music inside your head," Hass said. "With the Bone Fone, music tends to surround you."

Hass, an avid skier, designed the unit with the musically inclined sportsman in mind.

The genesis for the "Bone Fone" came to Hass about five years ago when he watched another skier wearing headphones. "I tried it myself, with a $16 dollar tape player on my back and headphones," he said. "It sounded really neat, if you can imagine a Strauss waltz playing while you sail down the mountain. But it looked funny and the headphones kept falling off. I figured there must be an easier way."

Hass, then a director of planning with the accounting firm of Pest, Marwick, Mitchell & Co., developed some prototypes, patented the unit and developed a strategy to market it. But he found several large companies unwilling to promote a product not developed from within their ranks.

"I was faced with the decision every inventor faces trying to realize his idea," Hass said. "Eventually, I decided to leave my job and form my own company, have it made and market it."

Speaker: Conserving vital to future

BY MEG McCONAHEY
Daily Bulletin

Conservation is the best path to America's energy future, a Department of Energy spokesman told a small gathering of Cal Poly students and instructors Monday.

Edward H. Blum, director of advanced technology for the DOE, said efforts by individuals to conserve energy are even more important in easing the energy crunch than the development of alternative energy sources.

Speaking at a business seminar in Chumash Auditorium, sponsored by the Society for Advancement of Management, Blum did not discount the importance of energy technology, yet he focused most of his discussion on cutting back fuel consumption as a means for the United States to attain energy self-sufficiency.

Citing European gas pump prices that top $3 a gallon, Blum said American drivers have it easy, and suggested higher gasoline taxes may not be a bad way to curb consumption.

Referring to the Carter administration's energy policy as only "stopgap measures" to curb the crisis, Blum said he hopes a "fair number of definitive measures" will be implemented once the election pressure is over.

"At the same time that people are preaching energy conservation, they're not willing to do themselves what that conservation entails," he said.

Maintaining that people aren't willing yet to take responsibility for energy conservation, he quoted an old saying of Senator Russell Long's: "Don't tax you, don't tax me. Tax that fellow behind the tree."

Blum also stressed the importance of a voluntary switchover to small cars by American drivers. By raising the minimum fuel efficiency requirement to 30 miles per gallon by the end of the century, Americans could save 2.4 million barrels of oil a day, he said.

"I hope our love affair with the gas guzzler is over," he said, explaining that the supply and demand of the market place is a better regulator of automobile energy standards than government regulations.

Blum also said the construction of more energy-efficient buildings could reduce the average home heating bill by 70 percent.

Citing an instance in Washington, D.C., of a control neighborhood with some energy efficient homes scattered unobtrusively among the regularly constructed dwellings, Blum said the homes with extra insulation, windows on the south side of the house and a simple heat exchange ventilation system, used only 30 percent of the energy used by the other homes.

"The only trouble is, we can't convince builders to make all their homes like that," he said.

Blum pointed out if people were to put a little extra money into energy saving home improvements, they would end up saving enough money to invest in a little bigger, or a little fancier, dwelling.

"Instead of paying all that money to your friendly local utility, you could trot it down to your friendly local bank," he said, adding that it is no more difficult to build a "leaky" one.

"To an audience suggestion that conservation may just be "borrowing time," Blum maintained it was still paramount to the development of synthetic fuels and an increase in the use of renewable resources.

He did say President Carter's announced goal for increased use of renewable resources would be 20 percent by the turn of the century, up from the current 6 percent to 7 percent contribution of such energy sources as hydroelectric power and biomass.

Blum acknowledged the United States must, nevertheless, beef up its energy production as well as cut down its energy consumption.

"The threat of being cut-off from Middle East oil imports is real and must be faced," Blum said.

"Even though we obtain less than one-half our oil from the Middle East, many of our allies do," he said. "Japan imports 90 percent of its fuel from the Middle East and the Brazilians are going bankrupt slowly from heavy foreign oil imports."

Blum said the United States might be in the position of someday having to even export energy to save frowning allies from collapse.

"Events have recently shown that we don't control that part of the world (Middle East) any more," he said. "I might have sounded overly dramatic a year ago, but not any more."

EXPERIENCE
THE WORLD AS YOUR CAMPUS

DIAL 2-2-2-2 FOR CAMPUS EMERGENCIES

The recent enclosure in the Pacific Telephone Company bills detailing the use of the 9-1-1 emergency system should not have included the Cal Poly campus.

2-2-2-2 is the correct number to use when placing emergency telephone calls from campus telephones. Dispatchers are on duty around the clock to answer the 2-2-2-2 calls.

The Anaheim Rams don’t want Raiders in LA

SAN DIEGO (AP) – In a swipe at the Oakland Raiders’ possible move to Los Angeles, San Diego Chargers’ owner Gene Klein said Tuesday he wouldn’t be surprised if tax payers’ suits arise from the transfer.

Klein, who said the Chargers were approached “at different times” and invited to move to Los Angeles, had harsh words for the Memorial Coliseum Commissioners of that city. He contends the Los Angeles Rams never would have left the city had the commissioners agreed to the demands of Carroll Rosenbloom, late owner of the National Football League club.

“Somebody should check the record on what they had done with Carroll’s request,” said Klein. “They just laughed, and he wasn’t asking for that much. He wanted the atrocious public toilet facilities upgraded and better concession arrangements and the press box moved closer to the field.”

Klein said the $17 million being offered to the Raiders by the commission includes $2 million to build a home in Beverly Hills for Raiders’ executive Al Davis.

“When this all comes out, I wouldn’t be surprised if there were taxpayers’ suits,” he said.

Me, take another exam? Are you crazy?!

Q. The Navy Officer Qualification Test (NOQT) is a
A. Not necessarily.

If you’re majoring in engineering or another technical area, we would expect you to do better on the test than a Mongolian Cultural Arts major, but you won’t hear us telling anyone that the test is easy. The NOQT is an aptitude exam dealing with number and letter comparison, instrument interpretation, word analogy, practical judgement, mathematical reasoning, and mechanical comprehension involving gears, pulleys, fluids, etc. For those interested in an aviation program, there is an extra section dealing with aircraft orientation.

Tests will be scored immediately and an Officer will be available to discuss your results and the various programs you may want to consider.

Taking the exam in no way obligates you to the Navy, but it just might tell you something about yourself. Come in and give it a shot – you might even pass.

SAN DIEGO (AP) – Is a swipe at the Oakland Raiders’ possible move to Los Angeles, San Diego Chargers’ owner Gene Klein said Tuesday he wouldn’t be surprised if tax payers’ suits arise from the transfer.

Almbach recalls the emotions she felt while trying to revive Richansrud: "I felt cold and calm. I wasn't going to let the man die. Every time I pressed down on his chest, I thought 'I gotta make him live.'"

Soon after, Richansrud began making gurgling sounds and both women knew he was saved. Ten minutes later the fire department arrived with an oxygen unit, followed by an ambulance that took Richansrud to the hospital.

Today, Richansrud is in excellent condition and doctors predict he will remain so for another 10 to 20 years. "The former Poly instructor, who taught for more than 25 years, happily appreciates the life-saving efforts of Almbach and Smith," Van Acker has notified the San Luis Obispo chapter of the American Red Cross, which is making arrangements to give Almbach the Red Cross Award of Merit, which carries President Carter's signature. Unfortunately, Cindy Smith cannot be located.
