Poly staff members say war objectors can't wait

By Karen Graves

Students must take a stand against war now if they want to be considered conscientious objectors by the draft board, said two Cal Poly staff members.

"Students have to get going to build a case immediately and not wait for specific information," said Bruce Tjaden, Presbyterian Campus minister.

Webster's Dictionary defines a conscientious objector as "one who refuses or is exempted from service in the armed forces as contrary to his moral or religious principles."

To build a case as a conscientious objector, "It is incumbent to demonstrate where their beliefs have been put into effect over a period of time," said Bob Timone, assistant dean of students. This means making sure people you associate with do not absolve a person from two years' service in such locations as hospitals, convalescent homes without pay.

"There has to be based on belief in a divine being," he said.

Both Tjaden and Timone were involved in draft counseling during the Vietnam War. Timone said if the draft comes back, some type of draft counseling arrangements would be made.

However, Tjaden said, "I'm not convinced that the draft will be resurrected in its old form."

However, it is evident that some changes have to be made in draft registration, said Timone.

One problem with conscientious objection concerns registration, said Timone. People tend to take the registration process lightly, he said. It is best to state your position as a conscientious objector from the first day you register, said Timone. "It appears that the proposed law would only give a ten day period to appeal," said Tjaden.

"Conscientious objection does not absolve a person from two years of some kind of service," said Timone. A conscientious objector must offer an alternative two-year service in such locations as hospitals, convalescent homes and college campuses without pay.

"It is not a way of escaping responsibility altogether," said Tjaden.

Tjaden also pointed out conscientious objection doesn't have to be based on belief in a divine being.

"It can be based on moral and philosophical beliefs and not just religious values," he said.

On integration

Every student who comes to Cal Poly faces difficulties, including adjusting to life away from home. For ethnic minority students the problems may be intensified. They have the additional problem of adjusting to the majority-culture lifestyle, which may be different from their own. That mainstream culture can be unaware of and insensitive to the needs and cultures of minority groups. Victor Churchill, secretary of the United Black Student Awareness Council, said minority students at Cal Poly either get caught in the "wash" of Anglo culture, or they slip off to the side of isolation.

The wash is probably stronger at Cal Poly than at many other universities. Cal Poly, the town and much of the county are white in population and in orientation; there is not the cultural mix in San Luis Obispo that exists in Los Angeles and in Bay Area communities.

As pointed out, this makes it difficult for minority students. And there is another side to the issue. A non-integrated community gives students a poor introduction to life in the United States. The all-Anglo surroundings of Cal Poly do not prepare students for relating and working in an ethnically mixed society.

Besides, people who are not exposed to the subcultures of the United States lose a lot of the richness and the texture of American life. So it is the majority-culture student who loses most by the lack of subculture awareness at Cal Poly.

There are some small steps being taken toward intercultural awareness. After a sit-in by minority students in the University Union Galerie, ASI officers and Cal Poly administrators have become aware that something should be done to include ethnic minority students in every aspect of programming and student life.

One step is the formation of an ASI ethnic programming committee consisting of representatives from several campus ethnic organizations. The new committee is to advise the Films Committee, Speakers Forum, Concerts Committee and other ASI Program Board groups, helping them choose entertainment which is of interest and value to ethnic groups.

Representatives of ethnic organizations at Cal Poly have said their aim in seeking programs for minorities is largely to entertain which is of interest and value to ethnic groups. America, which seems to be so divided in groups which won't or can't understand each other, needs efforts of this kind.

There will be misunderstandings of minority students' motives, maybe; but they have had the courage to risk stirring hostility trying to bring understanding of minorities. We support their efforts to reach the goal of an undivided society.

Letters

Poor word choice

Editors: Where did Mitchell Lee get his ideas about religion? I hope he is joking when he says in his March 6 letter to the editor that: "Catholicism is the only true religion sanctioned by God."

Because if he is not kidding, I am sure many Protestants, Jews and Islams would easily disprove his notion that Catholicism is the only "true" religion. I hope that Mitchell Lee will eventually realize the different religious faiths i.e. (Protestantism, Judaism, Islam, and Catholicism) represent a common whole.

No Poly Royal beer

Editors: Beer at Poly Royal? Since when is 2,050 a majority of 15,000?

I'm the Poly Royal Chairman for Alpha Omega Christian Fellowship. I attend Poly Royal meetings every Thursday. The main push at these meetings has been: "Poly Royal is a great chance for university and club recruiting and a chance to show off our beautiful campus."

The sale of beer is in direct conflict with what the Poly Royal board has been preaching. It's also against normal university policy.

Frasil by Mark Lawler

THIS CLASS IS DRIVING ME UP THE WALL!!!

I'VE SPENT 9 LONG, BORING WEEKS LISTENING TO THIS TEACHER CARLE ABOUT THEISM.

I CAN'T TAKE THIS ANYMORE!

I GONNA GIT OUTTA HERE!!!!

PEACH ME UP, SCOTTIE

OPINION

DO BIG CORPORATIONS HAVE A RESPONSIBILITY?

TO PEOPLE LIKE THIS BIKER...

OR THIS DRIVER?

DO YOU HAVE A RESPONSIBILITY?

...THE STUPID THING IS ELOEON OUTA THE DRIVE PROPERLY OR NOT?

Letters

Christians know to be effective at presenting the gospel one must practice what one preaches.

The same rules hold true at Poly Royal. To preach "no beer" effectively one must practice it always.

Will the sale of beer help present the University, the clubs, the administration, the ASI, and student life at Cal Poly in a fair, straight forward, and honest manner?

Resolution 80-11 reads, "sale of limited quantities of beer would enhance the campus environment. I ask HOW?"

Will beer make the flowers grow better? Maybe the grass will become greener or does it appear greener because you are living down face in your own beer?

Does the friendly spirit of Cal Poly become better? If we have to rely on beer, a mind affecting drink, to project a friendly campus; I suggest we all roll over and play dead. Because if they then follows that without beer we are no of real value.

What is our excuse for using beer as a crutch? Is it because you can't have fun without beer?

Are President Baker, Miss Kranz, and the Poly Royal board prepared to deal with all the consequences due to the sale of beer at Poly Royal?

Many of the students at Cal Poly are mature enough to have fun without beer.

What is your excuse?

Krejsa resigns supervisor post

This week, San Luis Obispo County Supervisor Richard Krejsa resigned from the Board of Supervisors on Monday and will be replaced by a replacement

San Luis Obispo County Supervisor Richard Krejsa resigned from the Board of Supervisors on Monday and will be replaced by a replacement.

Krejsa, 45, cited "undiagnosed health reasons" for his resignation, which comes near the end of his second term on the board.

Krejsa represents the 5th District, announced his intention to resign in January, saying he would step down as soon as a replacement is named. A replacement has been endorsed by Nimmo, R. Atascadero, and Assembly Minority Leader Carol Haynes. Atascadero, said they were

Park queries sent out

This week, San Luis Obispo residents will have the chance to tell city officials what they think of the parks and what they want to see.

A questionnaire on parks and recreation will be sent to all San Luis Obispo residents beginning today, the first step in the developing of a master plan for city parks.

If your household does not receive a questionnaire, you can get one by going to the Community Development Department on the lower level of City Hall, 990 Palm St., between 8 a.m. and 3 p.m. on weekdays.

The city is asking residents to return questionnaires through the mail or in person by March 31.

Model computer used to evaluate solar energy use

BY PIPER PARRY
Daily Seat Voice

It takes more than sun for effective solar energy utilization, according to students Patricia Pogliara and Jackie Buratovich.

The two Cal Poly environmental engineering students have been collecting temperature readings for about six months from a passive solar energy model as part of their senior project.

The purpose of "their test" is to evaluate the performance of the model. Located in the patio of the Air Conditioning and Engineering building, the model will be compared to a computer predicted performance determined on campus by Philippe Niles, an environmental engineering professor.

"When Buratovich and I began completing their testing..." the computer predicted the results to the computer foreman Jeff Jorgensen. The computerized model utilizes the concept of a Trombe Wall Program. This program ensures the optimal passive solar heating.

"My model is computerized because there are so many variables. And you can't tell if a computer program will work until you complete the testing..." said Buratovich. The Trombe wall is named for the French solar energy pioneer. Felix Trombe. In 1967, he built a house in France using his wall design as the main source of heat. His wall plan utilizes double glass or transparent covering—on the outside.

A few inches of space is left between the glass and a glass-children's concrete wall to allow for air circulation. The concrete stores heat, which is then automatically released into the house when direct warmth from the sun is not available.

Pogliara and Buratovich's model utilizes this design on a small scale. It stands approximately 20 feet high and 4 feet wide, according to Buratovich. Its root slants down toward the north, leaving a maximum amount of the south wall unshaded and able to absorb the sun's rays for the longest time possible.

The model was built and instruments installed by two senior projects done before Buratovich and Pogliara. When the two inherited the structure last fall, they painted it white on the outside so it would not generate extra heat, and prepared it for experimentation, according to Buratovich.

The two experimenters have taken weather readings for about a month this quarter. Then they finish with that phase of the testing, they plan to take two weeks of "U-factor" readings. U-factor measures how fast heat leaves a space, or how fast it seeps out through the walls. According to Buratovich, a small U-factor is desirable.

Data from the model is collected by a chart recorder provided by the environmental engineering department.

"A chart recorder is an automatic way of measuring the temperature in a model..." said Buratovich.

"The recorder runs on a fifteen minute cycle. It is off for thirteen minutes and then automatically goes on and takes readings for two minutes.

Buratovich said she and Pogliara will have the testing completed this quarter and the results written up by June.

"We will see how closely the computer model is to the real thing, according to the data from the model, and how much heating a Trombe Wall will do," said Buratovich.

"There are many fears in the park. We have the chance to tell city officials..." the area of the city, and what they want to see in the parks. A questionnaire on parks and recreation will be sent to all San Luis Obispo residents beginning today, the first step in the developing of a master plan for city parks.

Khomeini sets terms for meeting

From The Associated Press
Ayatollah Ruhollah Khomeini vowed Monday that Iran "will fight against the U.S. government until death," and the official Pesa news agency said the governing Revolutionary Council backed off its earlier demand to take custody of approximately 10 American hostages held by militant Moalem.

In his broadcast speech, Khomeini set tough new conditions for a meeting between a U.S. investigating commission and the American hostages, who on Monday spent their 128th day as captives. He then met with members of the Revolutionary Council.

In Washington, President Carter summoned Democratic and Republican congressional leaders to a hurriedly arranged conference on the developments.

With a timely boost from John B. Connally, the president of the National Convention this July and 208 Democratic convention delegates, George Bush, seemingly more concerned about keeping former President Gerald R. Ford out of the GOP race, announced Monday that he would consider running for a "respectable" showing against Reagan "Everybody assumes that"

WASHINGTON (AP) - The Carter administration blamed internal Iranian rivalry rather than a failure of U.S. efforts Monday for the apparent set-back in a plan to transfer the hostages from the American Embassy in Tehran.

The administration also rejected a call by a spiritual leader Ayatollah Ruhollah Khomeini for interrogation of at least some of the estimated 50 Americans by the United Nations commission that has failed to gain access to them.

While saying the United States was "unalterably opposed" to the proposal, State Department spokesman Hadding Food Carrier stated that no steps had been taken to see whether the hostages, whom he called "American citizens," had been questioned by Khomeini agents.

A spokesman for the National Commission that has failed to gain access to the hostages said: "They have been questioned, but we don't know what kind of questions have been asked.

On Monday afternoon the van that has been used in past negotiating sessions between the government and hostages drove to the usual site and talks were expected to begin. A Foreign Ministry source had said the fourth round was set for no later than Tuesday.

Leaves that had been open near the embassy were closed off over the weekend. Two American television networks and The Associated Press, who had rented temporary abandoned apartments in the area, were closed by police to be out by Monday morning.

Troop movement and security measures were noticeably increased.

There were persistent but unconfirmed reports here that anti-terrorist units from the United States, Israel, West Germany and the Netherlands are in Bogota. U.S. Ambassador Diego Asencio and Israel's Ambassador Eliehu Barak are among the approximately two dozen hostages at the embassy.

WASHINGTON (AP) - A Hampstead, England, newspaper has called for a new nickname for the American hostages held in Iran, saying the upward spiral of events as "very serious."

Khomeini's statement followed two weeks of maneuvering by the council and the United Nations to determine whether the U.S. panel could question the hostages, and a weekend dispute over custody of the Americans.

"It's a 180-degree turnaround that few oil company executives foresee."

The New York Times reported Sunday that some of the estimated 60 Americans by the United States, Israel. West Germany and the Netherlands have been promoted to first class, which is a survey of trends in the United States, Israel. Refugee tales of Soviet attack, journey to Pakistan

KHAR, Pakistan (AP) — Wahid Rehman, who left the Soviet tanks and planes pounding his native Afghanistan, said no foreign village "everything was burning. Nobody was left to bury the dead." The terrible journey came next.

The farmer was among hundreds of shivering, hungry refugees, most of them women and children in poor condition, who refused food and water on Monday after a five-day trek through the snow-covered mountains of eastern Afghanistan.

Many of the children wept as icy rain fell on the tent camp that will serve as their new home.

Wahid said the refugees fled to this tribal area, 100 miles north of Peshawar, after Soviet occupation troops, backed by planes, helicopters and guns, launched a massive anti-guerrilla offensive in Afghanistan's adjoining Kashmir Province.

Guerrilla leaders last week said some forces suffered heavy losses in Kashmir, and the latest group of refugees reaching Pakistan told of villages besieged by Soviet guerrillas.

These reports and other reports of mass killings could not be independently confirmed, but some of those who arrived here Monday were wounded.

"We have just come down from the mountains," he said. "It was a terrible journey."

He said his native village, Chiah, had long been controlled by the Mujahedeen rebels who have been fought a successful war against the Soviet occupation forces for nearly two years and Soviet occupation troops for the past 21/2 months.

When a dawn on March 1, he said, "hundreds of Soviet tanks suddenly appeared on the ridge on all sides and started to fire."

Villagers fled and buried most of the village was destroyed, they dropped parachute trunks from big helicopters and other helicopters landed troops.

Still, he said, the rebels continued to resist, killing "many of the Russians" until the Soviets called in planes which "dropped bombs and napalm. Some of the Mujahedeen holy warriors were burned to death."

"Two of my cousins were killed. Many, many others were killed. All the people who who still walk fled into the mountains. The last time I saw the village, everything was burning. Nobody was left to bury the dead."

He said seeing refugees hid out during the day, moving only at night to avoid Soviet troops.

Once they reached the border, he said small Pakistani trucks operated an impromptu taxi service to the refugee camps 15 miles away. They charged the refugees an average of $212 per family even though as many as 10,000 refugees were crowded into each truck.

The new refugees join thousands of other Afghans living in tent camps in the Bejar tribal district of Pakistan. International relief officials say nearly 700,000 Afghan refugees are now living in Pakistan.
Demonstrating a Jekyll and Hyde consistency with fundamentals, the Cal Poly men's volleyball team split its two home contests over the weekend. Friday evening the Mustangs swept past UC Berkeley 16-12, 16-8 and 15-11. Saturday afternoon the Stanford Cardinals ended Cal Poly's one game streak with a 15-6, 15-12, 15-9 trouncing.

Against the Cal Bears, the Mustangs played a solid game with few mistakes, and coach Mike Wilson said his team turned in their best performance of the year. Some of the individuals who contributed to the win were Warren Strand, Todd Decker, Chuck Haynes and John Hanley. Strand came off the bench in the first game to spark a Mustang comeback, and Decker played a solid all-around match, particularly in the second game to keep the Mustangs' momentum alive. Team captain Hanley complimented his teammates performances with his deft passing, which set up some strong hitting by Cal Poly.

The Mustangs were able to keep their composure in the Berkeley match when they fell behind early in the first and third games. They were unable to do it in loss against Stanford. The contest with the Cardinals turned out to be a lesson in how to lose against Stanford. The Mustangs made enough mental errors to allow the Cardinals to go into a strategy of, as Wilson's assistant coach John Jenkins put it, "keeping the ball in play and let Cal Poly make the mistakes." The strategy worked, as Wilson's squad made numerous fundamental blunders throughout the match, which included poor hitting, poor passing and most importantly, poor communication. On several occasions the Mustangs were victims of indecisiveness on who would receive the serve or make the pass to set the hit. This indecision eventually cost them a rally in the second game, when they had fought back from a 12-6 deficit to pull within 12-10.

Cal Poly's win loss record in CIVA play after this past weekend is now 2-6.
Women's tennis blanked by UC Irvine

BY LORI CAUDILL

Cal Poly's women's tennis team was overpowered by UC Irvine's netters Saturday, when they failed to win a single match with a final score of 6-0. Poly's coach Sonja Murray said "The girls played better Saturday than they have all season. Even though we are losing, it is not indicative of the way the girls are playing. They are playing exceptionally well." The Mustangs season record is 2-4 in overall competition and 1-4 in the SCAA. Coach Murray said she doesn't worry about the standings.

"What's important is that the girls are having fun, they're getting experience and they are improving their skills," said Murray.

Despite the record, Murray said for the first time in three years the Poly netters are winning games from other conference teams. In singles competition on Saturday, Sue Ormet of Irvine beat Poly's Reese Wyegandt, 6-3, 6-1, and Cindy Keeling defeated Mustang Dana Anderson, 6-2, 6-0. Poly's Lisa Cohler lost to Irvine's Kelly Smith, 6-4, 6-2, while teammate Paz Wilkens was defeated by Anteater Chris Anthony, 6-1, 6-3.

Lynda Morrow beat Mustang Kelley Merwirth, 6-2, 6-3 and teammate Karen Nixon was victorious over Alexa Chappéalet, 6-0, 6-1.

Murray said the team is weak in doubles competition because "we've not been able to establish consistent double teams." In doubles competition on Saturday, Ormet and Smith defeated Mustangs Wyegandt and Anderson, 6-2, 6-3 and Anteaters Keeling and Nixon beat Poly.

Fuel expected to top $1.50

WASHINGTON (AP) — The Energy Department predicts there will be plenty of gasoline this summer but says American motorists, driving more fuel-efficient cars and faced with prices topping $1.50 a gallon by year's end, will cut their consumption for the first time in seven years.

The findings in a quarterly report due out next week, closely follow similar assessments by private sources, including the American Petroleum Institute and the highly-regarded Lundberg Letter.

Moreover, the prediction for lowered consumption was being made in the Wake of the Arab oil embargo of 1973-74, when deficits reached $18 billion and the nation had to cut back oil imports. It was feared that would represent the first of a series of deliberate oil cuts by the Arabs. The embargo was followed by a four-day-a-week gasoline rationing program.

But the energy crunch that year was not a repeat of this summer's hammering. Oil consumption, which had been averaging 9.7 million barrels a day during the Arab embargo, was down during the rest of last year and was forecast to average 8.7 million this year.

The Energy Department report predicts overall petroleum consumption in 1980 will be 17.6 million barrels a day compared to 18.3 million barrels last year—if the winter of 1980 is not exceptionally cold.

That would enable imports of foreign oil to drop from 7.2 million barrels a day in 1979 to 7 million barrels a day this year.

Such a development would represent the first drop in U.S. oil consumption since the Arab oil embargo of 1973-74.

WASHINGTON (AP) — The same month a year earlier.

Home heating oil usage also is reported down, partly because of rising prices and partly because of a relatively mild winter. The government report says heating oil is likely to be selling for $1.15 a gallon by next winter.

President Carter nominated the former federal judge on Oct. 30, the Senate confirmed her on Nov. 30 and she was sworn in Dec. 8.

E-Day—180 days from the swearing-in—is June 3.

The labor also is going on at Buzzards Point in a remote building along the Potomac River, considered Washington's answer to Siberia.

There, consultants and low-scope workers on ten to a dozen task forces are scrambling to flesh out recommendations on how to organize the program.

The work will be armed with a $14 billion budget, about 150 programs and 17,000 employees, all gathered from a half-dozen other departments.

The Energy Department moved to the Watergate complex from the Pentagon.

The Big Top is being pitched in with ideas for a logo and other trappings to distinguish the 13th Cabinet post.

The Energy experience was a sobering one for federal reorganization specialists. Energy was pitched together from a hodgepodge of disparate agencies, and its rules and gas allocation formulas have been controversial.

"It weighs very heavily on us," said Howard Mosser, OMB's assistant director for management improvement.
