 Finals change is against the rules

BY KAREN GRAVES

Final examination dates should be given only on the days they are scheduled for, but unfortunately violations of this do occur, said Hazel Jones, vice president of academic affairs.

"I don't think there is widespread violation, but there is some," said Jones.

In order for a final exam date change a request must be made by the concerned faculty member to the department head, according to the Campus Administrative Manual.

The manual says "The request will indicate the course and section to be changed, the reason for the request, the new time and place for the alternate examination, an indication that at least two-thirds of the class is in agreement with the change, and a statement that an examination will be held at the regular's scheduled time and place for those students who are unable or unwilling to attend the final examination at the rescheduled hour.

A resolution was recently brought before the Academic Senate concerning the problems of faculty members who give finals on the last day of class, said Max Roedlperger, chairman of the Academic Senate.

The resolution, tabled by the senate, states faculty have responsibility to maintain the integrity of final examinations and also that they have the right to expect that students' attention not be distracted from classes by final examinations given during the last days of a quarter.

The resolution also states that students have complained about pressure and that "students have the right to take examinations in an atmosphere free from the normal pace of the regular daily schedule.

The resolution was tabled because some senate members felt "it was inappropriate for the Academic Senate to urge faculty to do something they were already supposed to be doing," said Roedlperger.

Final exams should be held on the date they are scheduled unless exceptions have been made, said Roedlperger. He said finals held on the last class day distract from a student's ability to concentrate on other classes.

Other problems Roedlperger mentioned are that professors should use the last day of class as a concluding lecture and that a 50-minute class period does not reflect what a teacher will get out of a student in a final exam situation.

Roedlperger suggested the resolution was offered to the senate because some people had witnessed students telling professors they were not able to complete assignments in their classes because they had final exams during the last week of class.

If a student has problems with a faculty member scheduling an early final, the first thing the student should do is complain to the faculty member and then to the department head.

"It helps if students will put these things in writing and sign them," said Jones.

Gerard: building costs are to blame for gray concrete

BY TOM KISSOLVING

That colonial grey fortress-like structure called Clyde P. Fisher science building is a blatant contrast to the Spanish-style business building.

Who does Cal Poly, a college campus with one of the nation's renowned architecture schools, have this architectural hodgepodge of buildings?

Doug Gerard, executive dean of facilities planning, calls the campus "an architectural zoo." He recently explained how it got that way.

"There is no particular individual or group to blame for it," said Gerard, who attributes reasons for the conflicting structural design to high financial cost.

"The bottom line was dollars," he said, citing the tremendous cost of constructing more buildings in the Spanish-style of the business building, which would involve two to three times the cost of building reinforced concrete structures.

The Cal Poly campus plan of the 1950s centered on the idea of having a small campus of approximately 4,000 students, according to Gerard. Thus, the first buildings constructed—the library and business buildings—were done Spanish-style, which at the time was economically feasible. But Poly continued to expand as it gained more students.

The campus public safety department released this composite of a suspect in an attempted rape case.

Composite photo of attacker made

A female dorm resident was attacked Feb. 29 by a white, clean-shaven man between 20 and 25 years old who was described as being 6 feet tall and 200 pounds, but nothing more was known—until Tuesday.

This composite photo was released by San Luis Obispo identification technicians after the victim compiled these features out of a police ID kit.

Wayne Carmack of the campus public safety department said the victim was confident the photo resembled the man who said attacked her. This photo was compared to police mug books, but the victim did not match it to faces in the book.

Carmack said the search is continuing, but no new leads have surfaced. He said a poster is being distributed around campus because there are indications the man may be a student here. The victim said the man was young.

If this photo is recognized or any information is known about the man, call Carmack at 546-2281 or contact the San Luis Obispo City Police at 541-6151.
Where the buck stops

ASI officers worry constantly that Cal Poly student's don't seem interested in student government, which each student has to support with $20 a year in ASI fees.

Less than a fifth of all Cal Poly students vote in ASI elections. Student input to the ASI is rare. But the theory goes, if each student could vote which ASI club or group they wanted to support with $20 a year in student government, which each student has to support, with $20 a year.

It will probably pass. Anything that can work together, I will have to get the backing it yearns for.

Don't abuse your editorial privilege as a member of the Mustang Daily by taking cheap shots at this community. My great-grandparents moved to this country in the 1800's and, like many others, made a living, not by "parasitizing tourists" but as ranchers, farmers, teachers and police officers. We have worked for this community as a whole. Cal Poly included. But, I remind you, this little town was there before Cal Poly and has even on the drawing board and shall continue even after you leave.

This is a night to burst your bubble of superiority. Mr. Berger, but no amount of bell ringing, spoon-fed answers, or conditioning can destroy a person's freedom unless that person wishes to acquiesce. Instead of bombarding us with psychological cliches, why not exercise your brain thinking of ways we can work together.

Author Melissa Hilton is a senior journalism major and Mustang Daily staff writer.

So the theory goes. But should students be required to pay ASI fees?

This vote-on-dollar idea, called general revenue sharing, was part of Vice President Jeft Land's campaign platform last year. Now it has finally reached the student senate and will come up for a vote right after spring break.

As it stands, students who appear to be joining the ASI just because they're enrolled at Cal Poly. If they don't want the benefit of the ASI programs, they should be allowed to exclude themselves.

Free-paying members could have special stickers on their student body cards entitling them to student rates at ASI films, concerts and other activities. Non-members could pay the same rates as the general public.

If ASI officers really want student interest and backing, they should make ASI membership a free choice, not an insurmountable requirement sugar-coated with $1 revenue sharing.

Spoon-fed reply

EDITORS

There have been often occasions when I feel prompted to write letters to various publications. But I never have until now. I can only respect Mike Truchschel and Ted Jonas for taking the time and effort to work with the university administration and Cal Poly administra tors for their "conditioning" of students, he suggests student control because "We have the power." Somehow, it brings to mind Orwell's Animal Farm.

Really, Mr. Berger? Please make an attempt to face reality! There will always be problems like these, but we must work to solve them as a community, with all people, differing constituents. And therein lies our first chance as adults to help change the system for the better, by working together. If this sounds trite, consider the alternatives.

Don't abuse your editorial privilege as a member of the Mustang Daily by taking cheap shots at this community. Dining Hall or Vista Grande. I've heard some people say, "Hey, why do we have to pay for the people who eat like football players?"

Por many dorms, mealtime is the only break in the day to relax and think with friends. They're getting less and less enjoyable with frequent cafeteria appearances and string of limitations.

I almost hate to burst your bubble of superiority. Mr. Berger, but no amount of bell ringing, spoon-fed answers, or conditioning can destroy a person's freedom unless that person wishes to acquiesce. Instead of bombarding us with psychological cliches, why not exercise your brain thinking of ways we can work together.

Cities tighten land-use strings

Student support Foundation, should have vote on Board

It is essential that students and nonstudents alike gain greater awareness of the environment in which municipal governments like that of San Luis Obispo operate. There are 380 cities in California and all of them, including the city of San Luis Obispo, are affected by the proliferation of government regulations, the scramble for new revenues to replace what the Jarvis-Gann initiatives have taken away and the demand for new services and housing.

The regulatory explosion is greater than most people realize. In the area of land-use, for example, all local governments are required by the state to have nine element general plans which include elements on land use zoning, housing, circulation, conservation, seismic safety, noise, scenic highways, safety, and open space. Further, zoning ordinances must be consistent with what is designated on the general plan land-use map.

Author Allan Sattio is a political science professor and former San Luis Obispo city councilman.

Recently students at Cal Poly who live in the city observed how zoning ordinances are a factor in housing with the ordinance that limited the number of unrelated people living together in the R1 single family zone. While general plans serve an important purpose in cities they are often the basis for other state and federal regulations that are making it far more expensive for city governments to operate such as new laws on labor, state grain inspection, transportation, housing and air quality maintenance. New legislation and court decisions are creating fees for what one government entity will charge another to collect.

Probably the largest impact city government is having upon Cal Poly students is in the area of housing and housing costs. Because of limited city service capacity involving the provision of water, sewer, fire, police and the cumulative impact of Proposition 13, it is possible that Jarvis-Gann initiative, limitations on plans for city services, the following actions will be taken: City government will continue to reduce the number and density of dwelling units and take greater care in growth management so as development doesn't expand beyond the city's ability to provide essential services.

The service capacity of San Luis Obispo is about 43,000 people and the current population is about 59,000. The limiting of new housing along with inflation and record high interest rates approaching 20 percent will continue to force housing prices to move city services. In short, new residential development does not pay its way. In some cases new residential development costs more than the city's ability to provide essential services. As rents go up more demands for rent control develop. As the threat of rent control increases, more apartment owners tend to move for conversion of apartments into condominiums, which if successful, results in less apartments with even higher rents. Also, with higher interest and housing prices fewer people qualify for mortgage loans. Further, less are willing to sell because under Proposition 13, all newly built properties are reassessed by the county assessor at a 1980 market value rather than at a 1975 market value with a 5 percent per year per year increase.

Inflation is increasing at more than the Proposition 13 assessment increase limit of two percent, unless the property is sold, and cannot be offset by the property tax exemption that Proposition 13 provides. Another result of a reduced property inventory is that students will have to compete with other unrelated people living together in the multifamily zone to permit increased parking, and go along with uses. This board is responsible for making all significant financial decisions.

Unlike the "outside world" the Cal Poly student investors have no Foundation voting power. We do not get to vote for the board of directors, and, more importantly, we do not even have a student member on the board. The Foundation Board of Directors has seven voting members— all administrators or faculty.

It is indeed ironic student investors are not given a single vote on a board that so directly affects Cal Poly student life.

Author Theresa Bauer is an administrative council member and Mustang Daily staff writer.

For example, last year El Corral's book sales exceeded $2.5 million. Who do you think bought those books? Administrators and faculty didn't contribute to that sum—it is $2.5 million of students' money.

In addition, Food Services' income is almost completely generated by students through the Snack Bar, Dining Hall, Sandwich Plant, Burger Bar, and Vista Grande.

Considering these facts, it doesn't seem so unreasonable to request that a voting student be included on the Foundation Board of Directors.

An ASI officer presently attends Foundation meetings as a non-voting advisor. This student input carries little authority when it come time to vote on an issue.

The board of directors is the mastermind behind all financial policies, from capital outlays for Snavi Hall carpeting, to student membership pricing at El Corral. Student input on issues such as these should be expanded to voting authority.

After all, students have proven themselves capable of making responsible decisions on 30 university-wide committees. We even have a student member on the President's Science Selection Committee and a student CSUC Director.

Maybe Cal Poly can learn from the experience of the other universities in the state system. An ASI survey of the other 15 campuses showed students are included as voting board members on their auxiliary organizations. These campuses gave very positive responses about the effectiveness of their student members, commenting that they add a necessary dimension to the decision making process. Students have a better understanding of their peers needs, they said. One campus responded that they have three voting student members, while another said the vice-president of their foundation board of directors is a student.

However, members of Cal Poly's Foundation board have voiced several concerns about including a student. One of these is the Title 5 requirement that a community member be added if a student is extended voting privilege. But other campuses have said their community member is helpful because they are very aware of higher education's needs. Wouldn't a citizen from San Luis Obispo give the same dimension to our Foundation?

It is necessary that students as current or potential voters become informed on municipal affairs and participate actively in government. Municipal regulations that affect housing costs, jobs, and sound land use policy. Cities will understand seek environmental preservation and protection of adequate service capacity by overwhelming important community realities with students unless there is a greater understanding of city affairs and policies as well as participation in policy making.

Students support Foundation, should have vote on Board

Did you know that Cal Poly students sold an average of 600 books annually at the El Corral Bookstore?

That is a student generated additional $275 annually consuming campus services.

That means students spend at least $600 each year to support Cal Poly Foundation. We are not only investors in this campus corporation but primary consumers as well.

Typically, investors in a corporation vote for the corporate board of directors. This board is responsible for making all significant financial decisions.

However, members of Cal Poly's Foundation board have voiced several concerns about including a student. One of these is the Title 5 requirement that a community member be added if a student is extended voting privilege. But other campuses have said their community member is helpful because they are very aware of higher education's needs. Wouldn't a citizen from San Luis Obispo give the same dimension to our Foundation?

A crafty way
to ease finals pressure

Mental anguish before finals may reach unbearable heights and for some students the Crafts Center in the University Union may be the right recess from homework.

At left, Doren Rosenthal saws wood for a boat he is building for his 8-year-old nephew, Marie Kraemer and Mark Werich, bottom right, repair a bike and at bottom left, Melanie Manlauyer works on a stained glass project. Potters wheels are available for craftsmen too as Craig and Kristi Fordahl apply finishing touches to pots they spun on the wheel.

Photos by Julie Archer
Senate kills sex ed. bill

SACRAMENTO (AP) — Fundamentalist groups warning of pornography and perversion buried legislation Wednesday that would have allowed televised sex education in Los Angeles schools.

After hearing from a parade of sex education opponents, the Senate Education Committee voted 10-1 to kill a bill, AB542 by Assemblyman Herschel Rosenthal, D-Los Angeles, that the Assembly had passed without controversy.

Rosenthal said the measure would allow Los Angeles schools to show sex education programs offered by a local instructional television station.

He said the programs covered such areas as pregnancy, childbirth, parenthood and rape prevention.

Current law allows parents to see all books, films and other materials to be offered in sex education classes and then keep their children out of the classes. Several opponents said many parents keep their children out of class and then never review the materials.

Rosenthal's bill would have provided parents in advance a written description of each program so they could decide whether their children could see it.

That proposal emerged into a torrent of criticism that often spilled over into sex and perversion, said John Biehler, a former Ray area group called LiveIn.

Margaret Scott of a group called United Parents of LA said the bill would provide little protection for taxpayers' strike and denounced "these ranchy 'x'. programs.

The bill's only supporter on the committee, Sen. Diane Watson, D-Los Angeles, a former Los Angeles School Board member, said sex education classes are "in good taste... so lively and wholesome" and that without them, youngsters "will learn their sex in other ways.

Natural History

A Cal Poly Extension course titled Introduction to the Natural History of California, is offered beginning in April. Lectures are April 10 to May 1. Thursday from 7 p.m. to 9:30 p.m.; there will be five more field trip dates. Cost is $54 and preregistration is recommended. The class, an introduction to California's flora, fauna and geology, is taught by Gregory Forbes. Call 564-0053 for more information.

No Coffee House

There will be no ASI Special Events Coffee House on Thursday night. The music and get-together session will start again in spring quarter.

Minority enrollment on rise

SACRAMENTO (AP) — Last year, 12 months after Allan Bakke, arose to the historic entrance to University of California at Davis campus, 101 of 100 included exactly one black.

That lonely statistic would seem to bear out predictions by university officials that minority enrollment would plummet if the U.S. Supreme Court ruled against racial quotas at professional schools.

But other statistics tell a different story— that applications from blacks to Davis's medical school surged in 1979, and that overall minority enrollment has increased at Davis and at UC medical schools as a whole.

"Last year 1978 we really felt the Bakke decision in admission," said Victor Salazar, admissions director for the Davis medical school.

"I talk to students all the time" said Gary Perkins, head of the information office. Excess Opportunity Program on the Davis campus, and it's the Bakke decision meant, some real hesistances. It's created much more of a pessimistic attitude.

"On the other hand, it's probably a created other things more positive. Students really want to go to be 200 percent better for the benefit of the added barriers."

Bakke, a white engineer entered the medical school 15 miles east of Sacramento in September 1978, under a Supreme Court ruling outlawing a Davis program that reserved 16 of the 100 places in each class for low-income minorities.

The court also ruled, however, that a school could use an admissions program that gave preference to race as one of several factors to promote diversity.

Such a program has since been adopted by Davis, and was already in effect in varying degrees at the other four UC medical schools: UCLA, Irvine, San Diego and San Francisco.

In fact, according to John M. Ender, dean of student affairs at Stanford University, a nationwide study last summer found that schools with white minorities showed that UC Irvine has the highest proportion of black- Hispanic and American Indian minorities, 22.5 percent, while Davis was also among the top 10 with 16.5 percent.

**Moonshine use legal for gas**

(AP) — The backwoods science of moonshining is coming into its own in a grassroots, legal effort to beat the rising costs of common gasoline.

Farmers throughout the country are using or trying to use corn, wheat, potatoes, sugar beets, barley, oats and even waternelons to brew alcohol.

The modern moonshiner says that with little modification, any gasoline engine can run on alcohol. And they're not talking about the much-touted gasoline, which is usually a mixture of 90 percent gasoline and 10 percent high-proof alcohol.

They're talking about ethyl alcohol, as low as 150 proof, or about 35 percent water.

The Bureau of Alcohol, Tobacco and Firearms, which used to chase moonshiners through southern swamps, is now apologizing for the government tape necessary to set up private stills.

Federal regulations permit backyard distillers to post a $100 bond to make up to 2,500 gallons a year, but they cannot add or give away the alcohol and must add other liquid gases to it to render it undrinkable. Any brew that leaves the still is in drinkable form is taxed at $10.50 a gallon.

ATF spokesman Howard Cresswell said no fuel distillers who have been arrested so far for failing to destilize their brew: "People who are getting permits for different reasons about producing fuel. By the end of February, the government had issued 2,200 special permits to distill fuel, nearly all of them to individual farmers.

A national alcohol fuels hotline in Colorado reports it is taking 300 calls a day with requests for information. Each caller gets a book called "Fuel From Farms."

Several companies are selling stills or equipment to them.

A North Carolina-based national magazine, Mother Earth News, says its alcohol fuel seminars in the Midwest and South have attracted up to 1,500 people per session. The magazine has sold thousands of alcohol fuel kits at $45 each, including "a motor fuels cookbook, chemicals and plans for a wood-burning still."

Richard Friedenburger, associate editor of the 400,000-circulation magazine, said one of alcohol's prime benefits is its lack of pollution, with hydrocarbons emissions 87 percent lower, and carbon monoxide 98 percent lower than gasoline.

Jerry Wilkerson of Provo, Utah, a 44-year-old former moonshiner turned non-drinking Mormon, has logged 33,000 miles in his mostly gasoline-powered pickup truck for 2,200 special permits to distill fuel, directly competing with fuel-

With cost estimates for moonshine gas ranging around 50 cents a gallon when the leftovers are sold for high-protein animal feed—Wilkerson predicts law-proof alcohol will be competing directly with gasoline in a few years.

"There's no way the oil industry can compete," says Wilkerson, who demonstrates a solar still he says anyone can build for about $30. Last year's model cost only $22, but Wilkerson says the new design—a door of wood, glass, metal pipe and black Astrotherm—is better.

"If I have my way, in five years this country will not need to import one drop of OPEC oil," says Wilkerson, a father of eight who lives off farmers' disability retirement.

Wilkerson, who studied engineering technology in college, says it took a lot of "trial and error" to develop the right formula for the fuel.

He says such problems as alcohol's lower vapor pressure, which makes it tricky to start engines in cold weather, and its corrosive effect on engines because of its water content can be lessened with "further experimentation."

Grant Kohler, a Shelley, Idaho, farmer, says he has been burning homemade alcohol in four pickup trucks, an Opel passenger car and some farm equipment.

Kohler's trucks are equipped with two gas tanks, one for alcohol and one for regular gasoline to start up the engine.

Sierra Club hike

Experienced hikers are invited to join a strenuous, 5-mile overnight hike to Pine and Mackenas Mountains on March 22 and 23. The hike is sponsored by the Santa Lucia Chapter of the Sierra Club.

Most of the slopes are covered with a dense growth of chaparral, oaks, manzanita, manzanita and other evergreen-resistant shrubs. Clover and other wild flowers are plentiful.

The Sierra Club supports designation of the Santa Lucia frying area as a preserve to protect its rare animals and plants.

Until recently, this area was a wild and uninhabited region.

Today, the area is still the habitat of many animals, including deer, mountain lions and bears. The cliffs are popular nesting places for hawks, eagles and many other birds.

Hikers will carry their own camping equipment and food for two days. For more information call The Gaskin at 541-1273.

For more information call John Ashleigh at 469-4682 or 549-7027. Or call Betty Schuster at 541-9710.
The desert offers many people a chance to see unusual rock forms and fauna. These people are exploring the Joshua Tree National Monument and area ground.

Joshua Tree is escape

BY BOB BERGER
Daily Mirror Editor

We pulled over into a gas station just south of Pt. Tiyo on a Sunday afternoon, with the navel melted into the snow-capped San Jacinto mountains.

Mt. Baldy was sporting a white winter coat. It was nice to know we were headed east into the non-rushing evening, away from LA. There would be no American Gigolo's in Twenty-Nine Palms; just Joshua trees, cactus and climbers.

The Joshua Tree National Monument is the winter mecca for climbers training for extended summer ascents. For me it was an indoctrination into the "J-Tee" ethics. For my climbing partner, John Larrick, it was like going home.

In Pt. Tiyo, it was feeling like a long road trip abroad. Our only traveling companions were Adolph Coors and the hum of 16-wheelers rapping by us, enjoying the open road.

We pulled over somewhere north of Benning to relieve ourselves of the gills wrought by Adolph. Of the four gas stations occupying the corners, only one was open. The other three stations were a part of a modern day ghost town. The curtains waved through broken windows, the pumps were stripped of everything valuable and the huge revolving signs had been dismantled or destroyed...beyond recognition. They were the remains of an era.

It all seemed so strange...abandoned gas stations and a few cows on the freeway as a possible tourist attraction. As we drove away the cows became more distant, more like skyscrapers.

The open roads, with the tests, were sparse. The characteristic California smog pad fly-trap restaurants had been replaced by shiny, antiseptic McDonald's, selling computer food. It was like a huge vending machine with people trapped inside. The only smile was the one in the mirror.

When we arrived, there was no moon, but the desert sky was wiggling with stars. The air was crisp and cold. It was a desert night out of a Marshall Tucker song. We were told to turn down the car stereo. The Rangers were everywhere. Yogi and Boo-boo would have to be careful with goodies and picnic baskets.

The Saturday sky was bright blue with dollops of white fluffy clouds that looked like they had been made on cookie sheets.

The climbing was as intense as the rays from the warm spring sun. In the Monument there are miles of hiking trails and hundreds of climbing routes. There was no running water at the monument so water jugs were a necessity.

The best time to visit Joshua Tree will be late this month or early April when the wild flowers carpet the desert floor.
Khomeini urges Iranians to vote

Ayatollah Ruhollah Khomeini on Wednesday urged his countrymen to "dash the hopes of Iran's enemies, especially the oppressive U.S. government," by voting in parliamentary elections Friday. Khomeini and other top Iranian leaders have said the parliament will decide the American hostages fate.

Khomeini urged the election of those "who are faithful to Islam and the constitution, are free of tendencies toward left or right, and are renowned for their good record and commitment to Islam. The nation should know that to stray from this important Islamic task would be treason to Islam and the country." His message was broadcast on the domestic radio.

Men's volleyball plays USC

The men's volleyball team calls on Pepperdine and USC for a pair of California Intercollegiate Volleyball Association (CIVA) matches Friday and Saturday in Cal Poly's Main Gym.

Pepperdine will visit San Luis Obispo Friday night while USC meets the Mustangs Saturday night. Both matches begin at 7:30 p.m.

Pepperdine has been struggling this season, but USC is another story. While the Waves own a 3-4 CIVA mark and 5-9 overall record, USC is 6-1 in CIVA play and knocked off No. 1 ranked UCLA in the Golden Dome Classic last week.

The loss snapped UCLA's 48-match winning streak over a three-year period, but UCLA is still atop the CIVA standings with a perfect 7-0 record. Cal Poly split two CIVA matches last week, defeating U.C. Berkeley in three straight games and losing to Stanford in three straight. Last week USC defeated Pepperdine in its lone league match, after Pepperdine upended wireless Loyola Marymount earlier in the week.

The Mustangs are 2-5 in CIVA action and 4-9 overall. After this weekend's matches, Cal Poly is idle for 10 days, and travels to Brigham Young University on March 25 before resuming CIVA play against UCLA on Saturday, March 29 at 7:30 p.m. in the Mustangs gym.

"Pepperdine is rated down this season, but has a lot of potential," noted Cal Poly coach Mike Wilson. "They have a center blocker (Craig Burk) who is 6'-9" and two other players in their line-up who are 6'-5" Gary Cunitz and Brian Ehlers, a CIVA honorable mention selection a year ago.

USC is rated No. 2 in the nation, behind the Bruins of UCLA.

AVIATION INTELLIGENCE MANAGEMENT

The Navy has openings for Aviation Intelligence Officers. No experience necessary. Entries now -4 month training includes photo interpretation, analysis of foreign capabilities, recognition of foreign equipment, monitoring information, analysis plots, and technical briefings.

College grades up to C? 151 Graduate, also to obtain Top Secret clearance. Competitive starting salary, excellent benefits package, extensive paid travel, 30 days paid vacation.

For more information, contact: LT Chuck Butler PO Box 33063 Los Angeles, CA 90036 or call (213) 465-5321

THE BOOKSTORE IS OPEN UNTIL 7:00 PM TONIGHT
Mustangs end best cage season

Basketball at Cal Poly is a team sport, and Coach Ernie Wheeler really put the emphasis on the word "team." That was the prime ingredient in the Mustangs' 22-7 season in 1979-80.

"The team effort on the part of the players is what I'm really proud of," began the eight-year head mentor. "The kids battled hard all year long. They played well together and made great sacrifices."

The result was Cal Poly's winningest season in 28 years, and the 22 victories tied a school record matched during the 1950-51 campaign by Coach Ed Jorgenson's Mustangs.

Wheeler listed numerous positive aspects of the season, overshadowed only by a loss to U.C. Riverside in the final of the NCCA Division II West Regionals at Tacoma, Washington.

--Cal Poly captured its fourth California Collegiate Athletic Association (CCAA) title in the last nine years, "which is 47 points per game average."

--The Mustangs end best cage season with a 10.6 points-per-game average. Mark Robinson led the team, 119 field goals for 221 attempted.

Wheeler's son, Ernie, are redshirts. Rich Alvari and Mike Burris back. Wheeler will have six of his top eight players returning next year, losing only Tos and Robinson to graduation. He will also lose seniors Andy Gust, a reserve center, and Earl Muse, a reserve guard.

"We will have to bring in one or two centers, including one big guy," said Wheeler. "We would also like to bring in one strong forward, but we do have Rob Sishkhamer and Mike Burris back."

"The guard position looks very good," added Wheeler. Schulz is back, along with a pair of redshirts, Rich Alvari and another Wheeler son, Keith, who will join much-used reserves Kent Keyser and Alex Lambertson in the backcourt.

"We are not recruiting any guards," said Wheeler flatly. "We are basically going to recruit a power forward and two centers, one freshman and one junior college transfer or both jaycee transfers.

Rob McKone, shown in regular season action, was the Mustang's second highest scorer with a 10.6 points-per-game average. Mark Robinson led the team, 119 field goals for 221 attempted.
Women cagers in slump at end

The 1979-80 season was the best ever for Cal Poly SLO women's basketball but it's "difficult for first-year coach Marilyn McNeil to celebrate because of the way the season ended.

The Mustangs started the year shaky at a 500 pace, then won a school record 12 straight games, swept the first half of conference play, then lost six of their last eight contests, finishing both games in the AIAW Western Regional at Pomona last weekend.

Eleven of Cal Poly's last 15 games were decided by eight points or less and none of those were settled by five points or less. The Mustangs won seven of the 11 and five of the nine.

"We had a whole bunch of close games," McNeil said, "and in the first part of the season we won them and in the second part of the season we lost them. And we lost when it counted.

Pony finished with an 18-11 total record and tied for second place in the Southern California Athletic Association with Cal State Los Angeles at 8-4. Cal Poly Pomona won Ponoona's lone loss came at the hands of close games, "McNeil said, "and in the first part of the season we won them and in the second part of the season we lost them. And we lost when it counted.

"Our No. 1 recruiting priority," claimed McNeil, "is height, because that's where we're getting killed." The Mustangs averaged only 36.3 rebounds per game in 1979-80, dead last in the SCAA, while the Mustangs lost both games to Cal State Los Angeles, 85-80, and to Cal State Dominguez Hills, 77-77.

"The weekend was disappointing," McNeil admitted.

Our problem was our lack of bench which caused us to have a little bit of lack of pace. Joe (Esvi) and Erin (Esvi) Hagel had a good year of experience behind them after their freshman year, and they'll be strong next year." Poly will also look forward to having top reserve Carolyn Crandall last weekend, after missing the Mustangs' last eight games due to a stress fracture in her right leg.

"Heart and soul of the team," insisted. "If we could do something, I feel Laura could increase her average to 25 or maybe 30 points a game. With one good shooting player away from really becoming a top team.

McNeil will have to find replacements for guards seniors Jeannie Caniff and Joyce Bergner, Pomona's fourth and third leading scorers, respectively.

Another improvement the Mustangs will have to make is the psychological problem of having to play on the road. Overall, Cal Poly was 12-3 at home but only 6-8 away. The Mustangs were 4-1 in home SCAA games and 2-3 away from San Luis Obispo.

But still Cal Poly was able to participate in its first-ever playoff appearance last weekend in the Western Regionals at Cal Poly Pomona, even though the Mustangs lost both games to Cal State Los Angeles, 85-80, and to Cal State Dominguez Hills, 77-77.

New library to open fall 1980

BY BEV BRINTNALL

Daily South Writer

If all goes well, the Robert E. Kennedy Library will be complete and fully operational by fall quarter 1980.

"If the library equipment arrives and is installed on time, the library will be finished in August," said acting Library Director Angelina Martinez.

"However, we don't want to jeopardize library services for summer quarter students, so the transfer into the new library will take place after the summer quarter."

The main improvement in the Kennedy Library is space, said Martinez. The old library, built in 1962, was designed for a student body of 6,000. Its seating capacity is 1,510, and holds 150,000 books.

The Kennedy Library will accommodate 2,500 students and 625,000 volumes.

The five-story building will be served by a grand stairway. The ground floor will have a central courtyard with reading terraces on each of the upper floors overlooking the courtyard.

The Kennedy Library will have 13 group study rooms, five photoduplication rooms, three typing rooms, one faculty reading room, and one microform room containing both microfilm and microfiche.

"It will be the largest building on campus," said Martinez.

The gross footage of the concrete building is 203,605 square feet, with a total cost estimate of $11,549,000. Planning for the new library began in 1970. In 1977, it was fully approved by the California Public Works Board. On March 17, 1978, the groundbreaking ceremony took place.

"The library is actually ahead of schedule," Martinez said. With more than 86 percent of the construction completed, facility planner Peter K. Phillips said the library is 6 percent, or one month ahead of schedule. This means the library may be finished in the beginning or middle of July.

Construction on the Robert K. Kennedy Library is ahead of schedule.

Style

From page 1

trustees established the campus planning commission, and architect Bob Grant was appointed campus planning architect.

Gerard said Grant had hoped for a "cohesive" campus structural design, but was discouraged by the inflated costs required to duplicate such styles as that of the business building.

"The cost constraint made this totally impossible," explained Gerard, who said state trustees would not furnish the extra funds required.

There was little architectural control exercised when the campus added new buildings, many of which were built of financially practical concrete.

Yosemite Hall was one of the first gray concrete structures to be built. Painting the multi-tower dorm, which, if anything, would have given it a unique aesthetic appearance, would have cost $80,000, and would have required repainting every five years, according to Gerard. He said gray concrete structures are "cheapest in the long run" to maintain.

Cal Poly is not the only campus in the state system with a motley assortment of class buildings and dormitories.

"Most other larger campuses, such as Santa Cruz, San Jose State, and San Francisco State, have some degree of hodgepodge makeup," said Gerard, who attributed the diverse design as being "controlled more by the dollar than anything else."

Some students have complained about the unsightly appearance of fortress-like Fisher Science Hall.

"It looks like a giant cement battleship," said natural resource management major John Mason.

Construction on the Robert K. Kennedy Library is ahead of schedule.
