The Zeta Tau Alpha sorority was successful in obtaining permission from the San Luis Obispo Planning Commission on Wednesday night to double their house’s living capacity. The sorority house at 969 Footehill Blvd. currently has four bedrooms and eight residents. The amendment to the use permit which the sorority needed for its 16 resident boarders was approved.

The commission granted that an additional 1,300 square feet could be added to the existing 1,900 sq. ft. house. All additional parking space required by the zoning ordinance must be added to the existing 8 parking spaces.

Commissioner Charles Annez, a Cal Poly accounting professor, did not feel this was adequate. Surprisingly, the 16 residents required by the zoning ordinance on the ground floor only. This action was a continuation from the Planning Commission meeting in which the zoning ordinance was revised to reduce the ground floor and provide more parking spaces.

In order to accommodate the extra residents, the sorority must provide additional parking. Bob Kitamura, an architect for the sorority, said after the meeting that this one additional parking space could be accommodated easily, and it would not be costly.

Another amendment added to the amended use permit requires that the house be supervised by a full-time resident manager before the planning commission can issue a permit for review. The two remaining commissioners approved the recommendation unanimously.

Poly admissions criteria revised for ’82 freshmen

BY MICHAEL WINTERS

BYSTAFF WRITER

Beginning in fall 1982 first-time freshmen applicants to Cal Poly will be admitted or rejected according to a new, multi-criterion standard that will place increased emphasis on the Student Descriptive Questionnaire that accompanies the Scholastic Aptitude Test. The American College Test will no longer be used, the Cal Poly Admissions officer announced last week.

The new, multi-criterion admissions standards are not related to affirmative action efforts, however.

The SDQ includes all of a student’s activities, said F. Jerald Holley, director of admissions, records and evaluations. He added, “There are things that should be included in admission decisions other than grades.”

The decision to delete the ACT, said Holley, was taken “because the SAT is more valid” with its accompanying SDQ.

The decision to eliminate the ACT as a requirement for admissions to Cal Poly is strictly a university decision and does not affect admissions policies at other colleges in California. Most universities in both the California State University and Colleges and University of California system require either the ACT or SAT he added.

In a press release issued last April 21, Holley had recommended requiringtransfer students to submit SAT scores and the SDQ, but Holley said Monday that any such considerations were “in the future.” It was not saying anything about them (transfer students).

Holley defended the new criterion as more equitable and advantageous to both students and the university.

“Take two applicants, one with a 3.4, GPA and one with a 3.5,” said Holley. “When you start gathering all the facts, the 3.4 student might out-do the 3.5.”

The high school student with the slightly higher grades, said Holley, may have taken fewer college-oriented courses, while the other one may have taken only solids. Other considerations cited from the SDQ that will be considered for admissions were the student’s involvement in outside activities such as sports, his or her work experience and other factors that tend to make him or her a rounded or qualified for a chosen major.

STEPHANIE NELSON

BY MARY McALISTER

A reorganization and realization of the ASI for what it is—a corporation—is one of Stephanie Nelson’s goals if she is elected as next year’s ASI president.

Nelson had pondered the decision for more than a year and finally realized she had support from fellow students and fellow ASI members and decided last quarter that she would run. “The decision meant reassessing my responsibilities and goals, and has made me realize how much I really want it,” said the senior accounting major from Santa Ynez.

Nelson said she has many goals for the ASI, many of them based on her experiences as Program Board chair this year.

“I want to bring to the rest of the ASI what I found successful in programming,” she explained. “In programming we are asked to be professional, accountable, and to follow through on what we initiate, and I want to bring this to the ASI.”

The attitude in programming is that we are supposed to do our best, she added. I think I did like to see this come into this office.”

“The ASI presidency better be close to your priority in life,” she added. “But if you believe you will relieve all of the ASI’s problems you are kidding yourself.”

She also sees the office as an opportunity to gain more leadership, and to strike a balance between devotion to school and devotion to bettering the ASI.”

She hopes to prove to others that she is capable of assuming the job on behalf of herself and not some sort of liberation movement.

“A woman can govern an organization without having to remind people that she is a woman,” she added. “It is important for people to see I want to do the job because I am a person, not a student and I want to be involved.”

Nelson also noted areas needing change in the ASI.

“Prez candidate sets goals

Israelis down Syrian copter

BEIRUT, Lebanon (AP) - Israeli jets shot down two Syrian helicopters Tuesday, for the first time joining directly in the fighting in eastern and central Lebanon between Syrian forces and Lebanese Christian militiamen.

"Israel again is making it clear that in Lebanese skies there will be no Syrian 'inactivity,'" Israeli Deputy Defense Minister Mordechai Zippori said in Tel Aviv.

The Israeli military command acknowledged shooting down the helicopters, but denied reports from Beirut that its American-made warplanes rocketed Syrian airgrounds behind Zahle. It also denied a radio report of a dogfight between Israeli and Syrian fighters.

The first Syrian helicopter was struck by an air-to-air missile from a F-16 fighter-bomber at midday and the second by a F-15 rocket about five hours later. Lebanese government sources said both were shot down near Zahle, where the Syrians and Christians have been battling since April 1 for control of the snow-blanketed Sannine Mountain range.

Christian spokesman in Beirut said Syrian artillery positions bombarded Christian militia strongholds in and around Zahle after the Israeli air assaults. The spokesman reported 12 people were killed and 46 wounded in the new shelling. No independent verification of the report was available.

The Syrians insist that the Christian militiamen should withdraw from Zahle and the surrounding heights, saying they pose a threat to the Syrian border 20 miles to the east.

Hallett appointed farm director

WOODLAND (AP) - James Hallett, husband of Assembly Republican Leader Carol Hallett, has been appointed state director of the Farmers Home Administration, the federal farm credit agency announced Tuesday.

Hallett, 44, of Atascadero, has been president of the University of California Physical Education Association in Sacramento since 1978. Before that he taught about farm pesticides at California Polytechnic State University in San Luis Obispo.

The agency said the job pays from $44,547 to $60,497 a year.

Sorority gets clearance to expand house

Vernon also objected to the members of the notice to the sorority house. According to sorority standards, 55 persons are allowed to live on one acre of land. At these standards, 14 people would be allowed to live in the ZTA house. Vernon said he felt the commission should stick to these standards in order to keep the neighborhood quiet.

The Alpha Upsilon (October. The commission decided to meet at another time to hear objections. He said state objections can be overruled by the governor. Watt said he has made no decision on the four northern tracts-known as the Santa Cruz, Point Arena,odega and Eel Point basins-and will not until late May or early June.

Former Secretary Cecil Andrus, agreeing with Brown's earlier protests, last year rejected drilling in the areas as too dangerous to the environment with too little potential payout in oil supplies. Watt announced Feb. 10 he was reviewing that decision.

Rep. Toby Moffett, D-Conn., the subcommittee chairman, said that federal law requires Watt to follow the governor's decision unless the state has failed to reasonably consider the national interest.

He noted that California already has opened most of its coast to drilling and said that showed a balanced concern for national energy needs.

Watt faces Congress skeptics

WASHINGTON (AP) - Secretary of State Alexander M. Haig Jr. running into a wall of bipartisanship skepticism in Congress, urged opponents of selling advanced military equipment to Saudi Arabia in a week for details before labeling the plan a danger to Israel.

Haig hinted to a House panel Tuesday that the Saudis will make concessions to U.S. interests in the Mideast in exchange for the sale and said he does not believe the Saudi kingdom will fall and allow secret equipment on sophisticated radar planes to fall into Soviet hands.

Haig's appearance before the House foreign operations subcommittee launched a summer-long campaign seeking Congress' support for the controversial sale.

He said the Reagan administration is still "flushing" details of the sale and urged the congressmen several times to wait for those details.

But Rep. Clarence Long, D-Md., told Haig it is "already clear that the sale is 'one of the most dangerous threats' facing Israel."

He accused the committee that Reagan's "firm commitment to maintain Israel's qualitative advantage over Arab military forces will be met."

The White House announced last week that the president has decided to sell the Saudis five AWACS radar command posts plus missiles and long-range fuel tanks to enhance 62 F-15 Saudi fighters already on order.

Congress can veto the sale if the Senate and House again await within 30 days of formal submission to Congress. Senate Republican Leader Howard Baker has said the Senate will not vote until next fall, giving the administration more time to win support.

Sierra Club loses waterway suit

WASHINGTON (AP) — The Supreme Court, addressing one of the "hottest political issues in California" — whether private parties and groups cannot force a state to obtain federal permits for projects that affect navigable waterways — said Tuesday its 9-0 ruling was only preliminary.

In a 9-0 ruling on the high court's 9-0 ruling on the high court, the court ordered the Sierra Club to abandon the court case and to allow the Corps of Engineers to construct the 42-mile Permahorn Water Allocation Project in the Northern part of the state.

The Sierra Club, an environmental group, had sued in 1971 to stop the project on grounds they would harm the quality of the water in the Sacramento-San Joaquin Delta and because the state had not received permission from the corps.

California plans to build the canal as part of an overall program to divert water from the rainier sections of northern California to the drier central and southern parts. The canal, expected to cost about $600 million, would divert water from the Sacramento River.

Heart disease or stroke can cheat you out of the best years of your life.
Canyon offers serenity

BY ROSEANN WENTZ

Nature lovers, joggers, and seekers of solitude can share the peace and grandeur of this quiet valley. It’s calm, stunning beauty belies its location—adjacent to the Cal Poly campus.

Poly Canyon thrives with natural artistry. A stream supplies the soothing sound of water running down the valley. The creek is home for small fish, frogs, and many aquatic plants. In the saturated soil near the stream grow horsetails, a primitive reminder of another time.

Coast live oaks and California bay trees line the busy creek. They are indicators of an oak woodland community, which is characteristic of the canyon. Also sprouting are Arroyo willows and sycamores, indicators of a riparian, or stream-side community.

Pains have been taken to keep Poly Canyon’s natural settings; even this canyon contains one of the few remaining populations of Sierra club San Luis Obispo chapter. A high concentration of native plants and flowers can be observed in the Botanical Garden, located at the end of canyon. Maintained by Cal Poly’s Botany Club, the garden contains one of the few remaining stands of purple needle grass, according to member Carol Souza.

Animals of many species live in the diverse canyon as well. On the small side is the slender salamander found under damp wood or rocks. The Western fence lizard or “blue-bellies” as they are often called, can be seen running themselves near the road. Larger animals are common shy and thus harder to spot, but close observers can see numerous ground squirrels and brush rabbits. Occasionally spotted skunks, black-tailed deer, raccoons, and even bobcat can be seen by scrutinizing eyes.

Bird watchers can get their fill in the canyon observing California quail, scrub jays, turkey vultures, American kestrels, and many other native birds. Watch overhead for the beautiful but elusive tail of the red-tailed hawk.

The creek offers a great range of beauty in a delightfully natural setting, and a paradoxical alternative to concrete walls and structured planters.

Outdoor editor’s note: Visitors to Poly Canyon should refrain from disturbing habitats unnecessarily. Overturned rocks should be replaced, paths should be used, and care should be taken when picking wildflowers, as some are rare or endangered.

Sierra membership grows

BY ROSEANN WENTZ

Greater concern over environmental issues has been attributed to the recent increase in Sierra Club membership, club officials said in a recent news release.

Evert Chandlcr, executive committee member of the Santa Lucia chapter, reports the local club has had a ten percent rise in members since the beginning or 1981. This is a response to the proposed off-shore oil drilling and threats to the Nipomo Dunes area from vehicles, he said. Local membership is now over 600, Chandler added.

"Of vital concern is preservation of the unique scenic resources along the Central Coast," said Chandler.

Nationally there has been a 4,000 per month jump in new member application. Sierra Club officials say the increase began just after the November 4th elections. Prior to that time the group had remained at 180,000 for several years. The conservation is the largest in the nation with 200,000 members.

In addition to sponsoring a variety of hikes and outings in the San Luis Obispo area, the Santa Lucia chapter also organizes efforts to protect sensitive plant and animal environments through legislative action.

On the national level, the Sierra Club publishes an annual bulletin describing a wide variety of trips and excursions available to members each summer. Included are scenic and wilderness adventures conducted throughout the United States and in many foreign countries.

Now is the traditional time for the club's new member drive, said Chandler. He suggests anyone interested in joining call 544-1677 or write: Sierra Club, 985 Palm St., San Luis Obispo, for more information or applications.

Co m pilé Engine Tune Up on aü Matter of People (430)

Interview. County third district supervisor, in a recant in see sr>lar energy developed goal of recently appointed Küpper, San Luis Obispo member Kurt P. Küpper. "My main objective is to include the expansion of solar energy practices. In addition to the support of the state committee, Kupper hopes to get the entire board of supervisors more involved in solar energy awareness. "Solar energy can be used today, cutting energy costs drastically," according to Kupper, who has a degree in architecture. He said that he sees nuclear power as a limited resource, and solar power as a more practical, lasting resource. Having served on numerous committee dealing with land use and solar energy expansion, Kupper firmly supports passive solar heating. "The biggest hurdle in solar is getting the message across to the people that solar energy is not a futuristic, exotic form of energy. It's very current technology," he stated. "There's a need for public knowledge in this area," said Kupper, citing the abuses by builders and contractors as the reason solar has "gotten a bad name." "Solar panels have been installed in homes at incorrect angles as a sales gimmick, and people are left with the impression that solar energy is totally inefficient," Kupper continued.

The second annual May Day in the Plaza will be held Saturday, May 2 from 11 a.m. to 3 p.m. in the downtown Mission Plaza. The event, sponsored by Plaza Special Events and students in a Cal Poly recreation class, will include puppet shows, Frisbee games, wildlife clubs and a Maypole. May Day is an American version of the celebration to welcome spring. The tradition of dancing around a ribbon-covered Maypole began in medieval England and continued in the American colonies.

The celebration in San Luis Obispo is planned to entertain the town children especially. For further information on the event, contact Jo Ann Ponzio at 544-9733 between noon and 4 p.m. Mondays, Wednesdays and Fridays.

Poly Killies

In 1922, Cal Poly's budget was not as good as was earlier forecast by the governor of California, and so the next year all courses were dropped except for printing, mechanics and agriculture. This was a great disappointment to the girls who had been attending the then- vocational high school, because they had been enrolled in the home economy program, which was cut.

But nine of the girls didn't give up their quest for graduation. They managed to get into the printing program, and there they practiced the predictions that the loss of the home economy courses would hurt Poly an all-male school.
Candidate wants to boost senate responsibility

BY MARY McALISTER

Open communication and increased senate responsibility dominate Mike Carr's campaign for ASI vice-president.

The senior political science student from Burbank said he decided to run for the ASI's second highest office last spring because he believed he could do a better job than his predecessors and possessed the need for a new responsibility in the student senate.

"I have been in ASI for two years as a senator," he said, "and I got to like it a lot. There is a lot of potential for change for students to get their ideas across."

"In these two years," he added, "I have come to think I could do a better job than my predecessors and try a different way of getting student voices across."

If he is elected, Carr wants to open communication channels, increase senate responsibility, and study alternative revenue sources.

He perceives three ways of increasing senate responsibility through existing channels, opinion polls and a task force.

He believes the existing channels can be strengthened in several ways, including a better relationship with the campus media.

He would also like to investigate periodic student opinion surveys on needs and suggestions.

"Most importantly," he said, "I would like to establish a task force within the senate whose sole responsibility is to touch bases with student groups weekly and tell them what the senate is doing, what is coming up and then bring back ideas from the group in a weekly report. I really think it would be the key to getting lines open and making the senate more responsive.

Carr also wants to do some reorganization in the senate to make it more responsible to students and its members more accountable in attendance at meetings, workshops, and subcommittee meetings.

He wants to consider the future of the ASI by considering alternative means of acquiring general revenue so they do not need a fee increase every five years.

Carr had some other suggestions for changes within the ASI.

"I would like to see forums where the executive branch sells ideas and more open debates and question forums where students can ask questions of officers," he said. "This would be a more responsive way of giving information because I don't see students electing officers for the officers' ideas but rather for students' ideas."

Candidate sets ASI goals

From page 1

She noted that the whole structure of the ASI's relationship to the business office, Program Board and student groups is not understood and needs to be clarified.

"I want to use teams of business and economics seniors and do an analysis of how the corporation is being run," she said, "and use their suggestions in a plan to reorganize the ASI into an efficient corporation.

She also wants to turn the executive cabinet into a more efficient organization that can take care of the president's administrative functions and leave the officer free to take care of political matters.

Nelson added that the ASI has an opportunity to appoint students to university-wide committees but has not been "picky enough" in choosing the members.
Collegiate track mark falls, five more men qualify for nationals

The Cal Poly men's track team qualified five more for the NCAA Division II national meet and the women's team added a new collegiate record set last weekend at the Mt. SAC Relays.

The men picked up national qualifying performances from Pete Godines, Doug Lalicker, Tom Silva, Doug Avrit and Karin Smith set a new collegiate javelin record for the women.

Godines finished third in the Azusa-Pacific Invitational decathlon but he racked up 6904 points to qualify for the national meet. He jumped 6-3 in the high jump and threw 131-0 in the discus for two personal bests.

Lalicker met the national standard in the 400-meter intermediate hurdles with a timing of 53.25. Lalicker won the college division race and set a personal best at the same time.

Silva heaved the javelin 209-9 for a second overall in the meet and a berth to the national meet. Avrit added a ninth in the 5,000.

CHAMPS strengthen secondary

OAKLAND (AP) - The world champion Oakland Raiders, already deep in the secondary, chose Texas Tech safety Ted Watts as their first round draft choice Tuesday in the National Football League college player selection.

Watts, the 21st player taken in the draft, "filled a mold," said Raider head coach Tom Flores.

"We've always had quality cornerbacks over the years and there is no reason to stop here," Flores said of the reputedly hard-hitting Texas Tech star.

Watts primarily played safety in college, but the Raiders plan to use him as a cornerback. "He was the first cornerback on the board that we wanted, said Flores.

Watts was the third defensive back taken in the draft, following UCLA's Kenny Easley and USC's Ronnie Lott.

The Raiders made a trade with Buffalo before taking their second first round choice, University of Washington offensive tackle Curtis Marsh. The Raiders traded their first-round pick and their third round pick to claim Marsh, a 6-foot-5, 275 pound lineman who can play either tackle or guard.

Marsh was only a one-year starter for the Huskies, but during that time earned a reputation as "a destroyer," according to NFL scouting reports.

"Marsh was one of the lineman we valued extremely highly," said Flores, explaining the reason Oakland made the trade to move up in the drafting order. "With both Watts and Marsh, we have filled a Raider mold, both of them being our type of player.

Lacrosse club blanks Occidental

The Cal Poly lacrosse club upped its record to 3-0 with a shut out victory over Occidental College.

Cal Poly will be on the road this weekend in search of its fourth and fifth wins of the season in rematches with Occidental and Cal State Long Beach.

Pete Eric Naslund opened the Cal Poly scoring against Occidental five minutes into the game as he picked up a loose ball in front of the goal and rammed it home.

In the next two quarters, attackman Bill Ramsey and middle Eric Neilsen each scored two goals to extend Poly's lead to 5-0. Willy Dorr was credited with an assist on each of the goals.

Intramural tourney set

Tonight is the deadline for entering the Cal Poly intramural volleyball tournament.

The A.S.I. intramural volleyball committee will sponsor a formal preliminary meeting for the tournament, which is co-sponsored by the intramural department and the American-Honda Corporation, has been planned for a 6 p.m. start in Science North Room 201.

Each team must have a representative at the meeting.

The deadline for the intramural sea fishing trip has been set for Saturday at noon.

The trip has been scheduled for the boat to leave on Sunday at 7 a.m. The cost of the trip is $15 plus $6 for pole rental.

If you have a $10,000 job waiting for you, you could have an American Express Card right now.

Trade the card you've been using every day for this card and start earning American Express Rewards.

You're about to leave school and enter a whole new world. You've got great expectations. So don't leave school without it.

Phoenix rises, challenges field

From the ashes of disappointment, the "Phoenix" has risen as Cal Poly's representative at this year's International Human Powered Vehicle Championships. Testing the bike's frame are Jim Harris (front) and Tom Becker.

VERN AHRENDES  
Sports Editor

Phoenix—A bird which lived for 500 years and then consumed itself in fire, rising renewed from the ashes.

Cal Poly has its own version of the phoenix but it is on three wheels.

After a disappointing showing at the International Human Powered Vehicle Championships last year, a resurrection of sorts has been underway in the mechanical engineering building.

All that a small band of engineers want this year is the chance to race. Mechanical difficulties plagued last year's bike, dubbed "Ripley" by its builders, and the best speed that could be recorded was a dismal 48 mph and a sixth place finish.

Out of the ashes of "Ripley" has risen a better, faster and stronger bike called "Phoenix." It which will race this weekend in Los Angeles.

"Phoenix" had begun.

This is the first of a three-part series on Cal Poly's human powered vehicle, the "Phoenix," which will race this weekend in Los Angeles.

"Instead of being concerned with racing a bike for just two days, the bike has developed into a multi-talented instrument. From the beginning, it was obvious that the bike had the potential to be used for two or three years on the competitive level and as a good test bed for other projects and ideas."

The "Phoenix," like the name implies, has the same basic concept of last year's bike but with some significant differences.

"The real difference this year has been experience," said Blair. "We have been able to prepare for any of the problems that have cropped up and we have been more serious this year. We don't have any great illusions of grandeur this year because we know there will be competitive bikes from all over the country and from some foreign countries as well. We do guarantee that this bike will be competitive."

At the championships last year, the bike crew learned a hard lesson—be prepared for anything. Individually, the fairing the bike's outside shell and the fairing worked well but when the two were put together, just before the race, problems cropped up.

The crew lost all of the first day of competition because of repairs. When the bike finally took the track, a skateboard wheel peeled the crew's efforts.

The troubles arose on one of the banked turns of Ontario Motor Speedway. While the bike was coming through the turn, the two balancing skateboard wheels shifted and rubbed against the fairing. The fairing melted and rendered one of the wheels inoperable. The crew tried to repair the damage but too much had been done.

The crew regrouped the next day to start work on this year's bike and a common consensus was met—to start all over and build a new bike from the ground up. "Ripley" was tossed out of the window as the frame designers opted to go with a three-wheeled base. The polyurethane fairing was scrubbed for a heavier but much sturdier fiberglass construction.

The birth of the "Phoenix" had begun.

Opinion

Research perils

While the moguls from Stanford and USC were beating their chests two decades ago, loudly claiming that they were the top universities on the West Coast, Cal Poly quietly began to gain a reputation among employers for turning out highly-skilled individuals.

Cal Poly established that reputation by following the well-worn phrase "learn by doing." Students did not learn by simply reading a textbook or by listening to a professor explain research, especially if it helped them learn—through laboratories which allowed them to gain "hands-on" experience.

But Poly's reputation as a university whose overriding concern is to produce marketable students may be endangered if the academic senate passes a resolution next Tuesday which concerns the role of research at Cal Poly.

The resolution, developed by the university research committee chaired by professor Delmar Dingus, seeks to increase the amount of research professors do in their individual fields. The proposal recommends that the quality of faculty professional development be considered as a criterion for promotion with research being an integral part of achieving that promotion.

Opponents of the resolution have expressed fear that those who do not choose to conduct research might be passed over when the school deans are considering faculty members for promotion—a charge which can never be proven or disproven.

But the more viable arguments are more severe dangers which demand the proposal be voted down.

Cal Poly is not a Stanford or a USC. It is not endowed with the money to buy all the facilities it needs to adequately conduct research. Much of the equipment in the School of Engineering and Technology, for instance, is outdated. What facilities are available usually serve as learning tools for students and are thus unavailable for research. Therefore Poly doesn't have the facilities that most research cares for.

Research often costs a large sum of money and the state budget—averaging more than 12 weighted teaching units (measured similarly to student units)—and have very little means to gain promotion, time usually spent preparing for classes and helping students might be diverted to research. A faculty member with a sponsored research grant can receive "assigned time"—a lighter teaching burden and time specifically delegated to research—but part-time replacements are difficult to find and often not nearly as qualified as the original instructor.

Certainly, professors should not be restrained from doing research, especially if it helps them teach their courses better. But research should not become a sport in which faculty feel obligated to compete against each other for promotions. The big loser in a research battle would be the students who might receive a less extensive education. And isn't the paramount purpose of a university to educate?

Gun control no answer to crime

Editor: Your editorial of 23 April asks the question, "Are guns safe for America?"

The answer to this question is yes, as long as the people who own guns are responsible, grown-up adults. As a gun owner I would like to see a mandatory class in gun safety as a prerequisite for the purchase of any gun. I feel that this could eliminate as much as 95 percent of all gun-related accidents by teaching such basic rules as never point a gun at anything you don't intend to shoot and keep and store ammunition separate from the firearm. Showing a child how potentially dangerous a firearm is and storing it high in a locked place will prevent the child from experimenting with gun.

I'm putting on my shoulder holster!

Keith Sanftoff

Architecture fish 'a red herring'

Editor: While most people were walled by the proposals, I was on top of the Architecture building at Cal Poly this weekend, some old hares apparently waned still in mind. These architectural cockroaches claimed that the scale of the event was not in tune with the rest of Poly Royal. Sounds like a red herring to me. It appears that such pinks just don't understand the purposes of the Lashey-by-Dogel philosophy at Cal Poly. If I were Professor Haggar or Randell, I wouldn't even set one tear over it. Some people just like to carp about everything.

As for me, the imagery of the design was perfect. I think the third year architecture students didn't find a bit in demonstrating that the only safe place for any fish these days is anywhere but in S.L.O. Creek or near Watt's off-shore lawn.

Richard J. Krejca
