Judges blocks oil lease sales off Central Coast

LOS ANGELES (AP) - A federal judge on Wednesday blocked the sale of 34 oil leases off the Central California Coast after Gov. Edmund G. Brown Jr. and 19 city and county governments objected to the sale on environmental grounds. The decision was received with glee by local government officials.

"There can be no doubt that a brief delay in the sale of these leases is in the public interest," said U.S. District Judge Mariana Pfaelzer. "The delay will cause insignificant monetary injury to the U.S. government or to the potential lease holders."

The judge said U.S. Interior Secretary James Watt had used "too narrow an interpretation" of federal law in excluding California from participating in pre-lease dealings with the oil companies.

She said California's right to control development of the coast under the Coastal Zone Management Act "would be lost forever" if it was excluded from pre-lease arrangements, such as including developmental stipulations.

Sealed bids for the tracts were being accepted from oil companies Wednesday and Thursday by the Bureau of Land Management at the Anaheim Convention Center.

In seeking the injunction, Brown had contended that Watt acted illegally in opening for lease 34 of 115 tracts in the Santa Maria Basin near Santa Barbara.

Brown's suit sought to block only the most environmentally sensitive tracts of underwater land covering 600,000 acres ranging from three to 27 miles of the coast.

Animal, veterinary science departments will merge

BY KIM BOGARD

Staff Writer

A merger of the animal science and veterinary science departments will take effect July 1 to provide a "closer correlation between the departments," said Dr. Howard C. Brown, dean of the School of Agriculture and Natural Resources.

Cal Poly has no veterinary major, said Brown. Veterinary science is solely a support major which prepares students to enter veterinary school. The merger will incorporate veterinary science into the animal science department.

The merger will not phase out veterinary science, said Brown: "it will be no less important than before."

The possibility of a merger has been discussed over the years and it has been the philosophy to "keep the departments separate if possible," said Brown. Due to Proposition 13, however, the School of Agriculture and Natural Resources has received notice that there will be fewer department heads in the future. The school is already 5.7 positions down from last year and additional cuts will take place next year, said Brown.

The faculty within the two departments had been discussing the merger during fall and winter quarters and made a unanimous recommendation to merge. Brown then presented the recommendation to Vice President for Academic Affairs Hazel Jones, and President Warren Baker made the final decision.

Groups fight for UU vacancy

BY MICHAEL WINTERS

Staff Writer

At least seven campus organizations are struggling to conquer Room 112 of the University Union for their own. Available space, never abundant at Cal Poly, has drawn heated competition from the groups, each with a stronger need than the next, for the former tutorial center.

Disabled Student Services, Intermurals, ASI Outings, the Women's Center, the Placement Center, the Cultural Awareness Committee and the Association of Graduate Students in Architecture have all filed petitions against the current office, U.U. 103, is woefully inadequate at 12 by 17 feet. The committee's recommendation will not be binding on the board.

"The committee consists of one ASI senator, one staff member of the Activities Planning Center, the Union building manager, and two members of the Board of Governors."

Harriet Clendenen, acting coordinator of the Disabled Student Services, sees her quest for the space as a fight against a trend toward frivality and inhumanities in the Union. "Most things going on in the U.U. are optional," she said. "DSPS are essential to survival" for many.

While she admitted that her group serves only about 300 people, she noted, "Other is the only minority that anyone can join any time—you're only an accident.

Harriet Clendenen maintained that space in their present offices. U.U. 103, is woefully inadequate at 12 by 17 feet. A wheelchair need at least a five-foot radius to maneuver. "They've turned down our expansion into the adjacent pinball room twice.

Local officials hail oil lease decision

Brown claimed the danger of environmental damage from possible oil spills outweighed potential benefits of drilling and that Watt violated the federal Endangered Species Act by approving drilling that could harm the southern sea otter and the gray whale.

Both the otter and the whale are legally protected species.

The U.S. Justice Department and the Western Gas and Oil Association discounted possible environmental damage.

Jeff Jorgensen, a member of the county's board of supervisors and a vociferous opponent of the proposed sale of the 34 tracts, saw the judge's decision as an important victory for those who have taken a stand against offshore oil drilling.

"I was extremely pleased; it was a stunning victory for the people of the Central Coast. We won a stunning first-round victory.

Jorgensen said he felt the judge's ruling was a strong indication the federal courts will overturn Watt's decision to open up 34 tracts between Shell Beach and Morro Bay when they make review of the suits against the sale in July.

Jorgensen cautioned offshore oil drilling opponents from celebrating the judge's decision as the defeat of the oil lease sales. He believes that even if the courts rule in July to block the sales the decision would be appealed to a higher court.

Rep. Leon Panetta (D-Carmel Valley) called the federal judge's decision: "a very encompassing first step." He said the ruling indicates there are substantial questions about whether the Interior Department is adhering to the Outer Continental Shelf amendment law.

That law, the congressman said, establishes a balance between energy production and environmental risks off the California Coast.

Panetta said the ruling was preliminary, meaning "they will hold things as they are while deciding what the issues are all about." If the Interior Department does not appeal the decision within the "next few days," he said, a trial on the merits on the department's position will take place in "late July or early August.

The congressman indicated the outcome of this decision could set a precedent that could affect oil lease sales other than the 34 blocked by Judge Pfaelzer.

Panetta said he had advised the California Coastal Commission during its preparation of the state's case against the 34 oil lease sales as outlined by the Interior Department.

ENJOY YOUR SUMMER!
Getting there is half the fun

For some students it does not matter how quickly they get from point A to point B, as long as they do it in style.

With the price of gasoline continuing to spiral, students are leaving their cars in the garage to gather dust and are using alternative means to get to campus.

Here is how three Cal Poly students have solved their transportation problems:

Clockwise from the top: Tony Cockrell cruises down the sidewalk on the way to class. David Bender pops a wheelie on his homemade cruiser bicycle. Tory Parry completes a pirouette as she hone her roller skating skills on the pavement behind the Main Gym. Not to be outdone, Cockrell, who hails from Hawaii, does a little showing off of his own by doing a 360.

Photos by Michael Wrisley
CASA meeting
The Chicano Architectural Students Association will have its last meeting of the year today at 6 p.m. in U.U. 218.

Anti-Watt petition
The Ecology Action Club and the Political Action Club will have a table set up in the U.U. plaza for signing a petition to fire Secretary of the Interior Watt. They will be there each day from 10 a.m. to 2 p.m.

Finance Committee
The ASI Finance Committee is now accepting applications for open positions for any students interested in representing their school on the committee. Applications are available in room 217A of the U.U.

SAM speaker
The Society for the Advancement of Management will have a guest speaker at its meeting today at 4:30 in Eng. 243. Dr. Louis Delk, professor of Business administration at Virginia Polytechnic Institute, will talk on the "Marketing Executive of the 90's.

Crops Club
The Crops Club will meet at 7:30 p.m. today in the Fruit Processing Room at the Crops Unit. The Crops Club has also announced its banquet. An Annual Spring Banquet will be held May 30, 7 p.m., at the San Luis Obispo Country Club. The cost is $12.50 and there will be cocktails at 6 p.m. and a dance afterwards.

Health Science Forum
Mu Delta Phi will have its annual Health Science Forum today at 7 p.m. in room 206 of Science North. The forum is to allow students accepted to professional schools to share their experiences with others.

Business banquet
The School of Business administration will sponsor a business banquet May 30 at 6 p.m. in Chumash Auditorium. The cost is $8 in advance and $10 at the door.

Society will have its annual spring picnic on Saturday. Students accepted to professional schools to share their experiences with.

Bike tour
The Ecology Action Club's meeting today at 6:30 p.m. in the Crops Unit will be a bike tour, Deschutes River-Olympic Peninsula Scenic Route. More information go to the ASI Outings office.

Fellowship will sponsor the first annual Jazz Night on Friday, May 30, at the Cal Poly theatre. The cost is $2 for students and $4 for general admission.

Alpha Kappa Dance
The Alpha Kappa Alpha Sorority is sponsoring a dance Saturday, May 30, at 9 p.m. in the Mustang Lounge. The cost is $1 before 10 p.m. and $1.50 after 10 p.m.

Speakers Forum
The ASI Speakers Forum will sponsor the first annual Cal Poly Speech Festival on May 30 from 9 a.m. to 6 p.m. Registration will take place in the English Foyer at 7 a.m. There will be workshops and free refreshments.

Car Wash
Phi Kappa Psi little sisters are having a car wash from 9 a.m. to 4 p.m. May 30, at the Chevron Station on the corner of California Street and the 101 entrance. The cost is $1.25 for cars and $1.75 for trucks.

COG checks
Cal Grant B checks (C.O.G.) are in room 153 of the Administration Building. The deadline to pick up is June 1.

ASI Films
ASI Films will show "The Last Detail" Friday and Saturday, May 31, at 7 and 9:15 p.m. in Chumash Auditorium. The cost is $1.

San Francisco (AP) -- Many of the medical, psychological and social problems of the 20th Century are caused by petroleum-based chemicals used in things as ordinary as the telephone, a University of California professor contends.

"We are allergic to the 20th Century," said Berkeley Dr. Alan Levin, an allergist, immunologist and an adjunct professor of dermatology. The increased use of petrochemicals has created an allergic person in depression, lack of motivation, increased irritability and these factors would then lead to reduced productivity, financial stress and also crime," said Dr. Levin.

"We live in a so-called stress of the 20th Century," " said Berkeley Dr. Alan Levin, an allergist, immunologist and an adjunct professor of dermatology. The increased use of petrochemicals has created an allergic person.

GRADUATING! Excellent opportunities for mature men and women in the area of professional sales. If you are a self-motivated person, who likes the San Luis Obispo area, call Roger Bradley at ED SIMON INSURANCE. 544-9685.

Allergist attributes ailments to chemicals.

Poly pumpkin project prepares for bumper crop

BY SHAWN TURNER
Staff Writer

It is not yet the kind of place Linux would care to stand watch in—no Great Pumpkins is rising out of this pumpkin patch. There aren’t even any little pumpkins.

But this is only May. By October there should be a bumper crop of pumpkins in Cal Poly’s Field 26 if plans go right for Janell Shook-Chavez, a sophomore crop science major and president of the Crops Club.

Shook-Chavez, 19, also heads the Pumpkin Project, an 11-year-old crop science department program in which pumpkins are grown chiefly for sale to young children.

Pumpkins have been sold as well to the Graduate restaurant and the public, and donated to convalescent homes.

“We’re expecting a good year,” said Shook-Chavez of next year’s crop. “But we’re really going to have to get rolling.”

A tractor is expected to get rolling May 30 to seed Field 26. Last week the field was pre-irrigated to moisten the soil. From then on it will be weeded and fertilized with a rotating schedule of five students staying over the summer to tend the crop.

“Then in the beginning of October we bring in nursery school classes and first graders,” she said. “And we explain how pumpkins grow, what the field looks like before we plant them.”

Shook-Chavez estimates that as many as 120 children, including mentally retarded students, visit the field at any one time.

“When the teensy little kids are looking at the pumpkin patch and say, ‘What is that?’” she observed, “Then in the beginning of October we bring in nursery school classes and first graders, and we explain how pumpkins grow, what the field looks like before we planted them.”

Shook-Chavez estimates that as many as 120 children, including mentally retarded students, visit the field at any one time.

Federal retirement program ‘a ripoff for the public’

NEW YORK (AP) — George Snyder watched the administration try to cut Social Security early retirement benefits, and he wondered why so little was said about the number of federal retirement-pension programs.

Now he feels he should say it, and in so doing he knows he will offend many dedicated government workers and public servants who contribute their skills and have sacrificed.

Now he feels he should say it, and in so doing he knows he will offend many dedicated government workers and public servants who contribute their skills and have sacrificed.

Now he feels he should say it, and in so doing he knows he will offend many dedicated government workers and public servants who contribute their skills and have sacrificed.

“Still, says Snyder, president of the Washington Federation of National Taxpayers Union, the federal retirement system is as outrageously unfair as any ripoff of the public.

We seek government savings, he said, so we could cut $58 billion a year from federal pensions merely by lowering benefits to a level available in many private-sector pension plans.”

The average pension in the federal retirement system is $959.39 a month, triple that of Social Security, said Snyder, whose organization began 12 years ago. Federal workers seek curbs on government spending.

Greed, extravagance, downright unfairness,” he said. “If so, then in the beginning of October we bring in nursery school classes and first graders, and we explain how pumpkins grow, what the field looks like before we planted them.”

Shook-Chavez estimates that as many as 120 children, including mentally retarded students, visit the field at any one time.

“Throughout the summer to tend the crop,” she said. “And we explain how pumpkins grow, what the field looks like before we planted them.”

Local ministers explain beliefs, doctrines at forum

BY RUSS SPENCER

Four local ministers spoke and answered questions on the beliefs and doctrines held by each of their religions in an interfaith forum held on campus Friday.

The ministers were invited by the Newman Catholic Fellowship, a campus club of about 60 Christian students. According to the club's program director, Laurie Nolet, the program was designed to "make people aware of the different religions available to them."

"Christianity is a body with many different parts," she said, "and the different parts are like the different parts of the body; they're all needed. We're trying to illuminate the different parts."

The forum included the following local ministers: Larr Soderholm, from the San Luis Obispo Grace Church; Rev. Michael McCue, from the San Luis Obispo Episcopal Church; Rev. Jack Wyne, from the local First Baptist Church; and Father Jim Nisbit, from the Catholic Old Mission Parish.

After giving a five-minute summary of the basic beliefs of their faiths, the ministers answered questions from the audience of about 40 people.

An idea which recurred throughout the 1/2 hour questioning period was the similarity and "common goal" between the different Christian faiths.

The idea seemed to be summed up at one point by Nisbit when he said, "True believers in different faiths have more in common than non-believers in the same faith." Nolet predicted that in "200 or 300 years" there will be only one uniform Christian church.

"There's coming a day in heaven when there will be no denominational labels," he said.

Animal, veterinary science to merge

In 1977 Brown split the two departments and he said this improved student moral and added prestige to the poultry department.

Brown said the merger of animal science and veterinary science will not have the same effect as the previous merger since there are no veterinary science majors. The new department will maintain a close identification with veterinary science, and the Veterinary Science Club will remain active, said Brown.

Cal Poly is unable to offer a veterinary science major due to the high cost of maintaining it. A veterinary science will not have the same effect as the veterinary science equivalent to that of a medical school, said Brown.

Campus groups vie for vacant room

From page 1

Before she said, "because of the $20,000-a-year income the games generate. That says something about the priorities.

Chuck Brainard, Escape Route assistant manager, sees Outings' space needs as just as crucial, or perhaps more so considering the larger number of students it serves.

"We provide a needed service to a great number of students," said Brainard. "We feel an increased number of people are using it and it's time to expand."

Brainard,91, gesturing to the tightly-packed rows of sleeping bags and other recreation equipment, complained that their cramped quarters, right next door to DSS, are discouraging greater use of Outings by students. Among all potential use proposals, Gee said he sees a desirability continuum, extending from most desirable broad-based student groups—to least—unrelated off-campus organizations.

"The other contenders for the coveted room are the Cal Poly Women's Center and the Cultural Awareness Committee. "We need a place in order to exist," said women's center staffer Marie Hansen, noting that they will soon lose their trailer home to faculty office needs.

Hansen called the center a service to all Poly students, not just feminists or women. Their staff carries on numerous educational seminars and workshops, as well as providing counseling services and a library, she said.

"Cal Poly is one of the few universities in the state without a cultural center," said Sam Cortez, chairman of the campus Cultural Awareness Committee. He envisioned U.U. 112 as the vehicle for giving birth to such a facility here for his group. A cultural center at Poly, said Cortez, could serve to raise the social consciousness of all students, not just minority ones.

Property for Lease

From page 1

"We feel an increased number of people are using it and it's time to expand."

The ministers spent a good deal of time answering questions about their beliefs on baptism.

Soderholm said that in the Grace Church, the way that the baptismal water is placed on a person is "not important" as the awareness that baptism is a "sign of identification with Christ." Of Wyne said that baptism "symbolizes the death and burial of Christ and the resurrection." In his Baptist Church, he said, a person must be totally immersed in water to be properly baptized.

All ministers agreed that having faith and true belief in Christ is essential before baptism can be meaningful. Nisbit predicted that in "200 or 300 years" there will be only one uniform Christian church.

"We provide a needed service to a great number of students," said Brainard. "We feel an increased number of people are using it and it's time to expand."

Brainard, gesturing to the tightly-packed rows of sleeping bags and other recreation equipment, complained that their cramped quarters, right next door to DSS, are discouraging greater use of Outings by students. Accountants blame check bounces on 'hard times'

BY SHAWN TURNER
Staff Writer

Two Cal Poly accountants blame national economic problems and 'hard times for everybody' for a current increase in the number of bad checks cashed at the university.

"I think it's a reflection of the economy," said ASI accountant Harvey Blatter about the increase. Blatter estimated that 12 out of nearly 670 checks made out each month to the ASI lack supporting bank funds. That figure, he said, is twice last year's monthly mark.

John Barker, accounting manager for the Cal Poly Foundation, agreed with Blatter's view. "The bad check writing has to do with today's tightness of money," he said. "Students are just trying to float their money a little further."

Students are victims of economic problems nationwide, Barker said; they don't bounce checks on purpose. "These are hard times for everybody, but I want you to understand, it's just not hard times. It's a combination of things," he said.

Among the combination Barker mentioned, new students have the biggest problem with bad checks. "Maybe they haven't even set up a checking account. They get their money from home, said Barker. "Say they get $20 from home or two $25 checks, and their parents don't have enough funds in the bank to back up money."

Barker said bookkeeping carelessness that has caused the increase in bad checks.

His figures, however, show no such increase at Cal Poly. From July to December 1980, a monthly average of 102 checks bounced out of $7,259 checks cashed, meaning 1.40 percent of the checks were bad.

From January to May 1981, the results were the same: 1.40 percent of the checks bounced each month, on average, an average of 163 bad checks out of 11,131 checks cashed.

Additional data show that the increase has been recent. The number of bad checks increased 33 percent from fall quarter to spring quarter. "And that's a little alarming," Barker said.

It is also costly. The increase forced the Cal Poly Foundation to the charge to five dollars to cash a bad check. And until the bounced checks are paid—usually by the end of each quarter—the Foundation cannot adjust its books, thus losing time.

The ASI and the Foundation try not to let checks go unpaid until the end of each quarter. "We write letters to the people who have written bad checks," said Harvey Blatter, "and basically what we say is that if they don't pay their bounced checks, their checks aren't good here anymore."

"We also write letters," said Barker, "especially to parents, because sometimes the problems come directly from parents."

Barker recalled a time when a student was reported to have 12 checks for large amounts from his parents. The checks bounced, and the parents had left for France. "What does the student do?" Barker said. "They have to understand, their checking account is good for the money."

Many times it wasn't. Barker mentioned, new students have the biggest problem with bad checks. "It's taking most of the parents' money," said Barker.

"Maybe they haven't even set up a checking account," Barker said. "So his credit can be checked."

There is another problem. "It's taking most of the money," Barker said. "We have a good number of kids here."

"His bank didn't restrict his checking privileges and his friends didn't have any money, but Ted was upset at himself," said Barker. "We have a good number of kids here."

Many times it wasn't.

"It's taking most of the money."

"His bank didn't restrict his checking privileges and his friends didn't have any money, but Ted was upset at himself," said Barker. "We have a good number of kids here."

cash and 1 wasn't always count made Jeremy a risky customer at this credit union. His still owned a check guarantee card.
The upcoming Athletic Talent Show will give those who live in the athletic dorms a chance to show they can do more than "play ball."

It will also give anyone interested the chance to see their favorite athletes show their non-athletic talents.

The possibilities are endless.

Now in its third consecutive year, the talent show provides a showcase for undiscovered talent, as well as a means for generating much-needed funds to improve the jock dorms.

Dwight Crump, organizer for the event, hopes to raise as much as $400 at this year's event. Profits for the last two years never exceeded $260. Crump is hoping for a larger turnout this year. "I am predicting we have 400 people," said Crump.

Crump said not all participants in the talent show will be athletes, but said all proceeds would go to repairs and improvements for Heron and Jespersen halls.

The talent show will be held at Crandall Gym on Friday, May 29. Tickets are $1, and the fun begins at 7:30 p.m.

Trumpet player to blow horn in Poly 'Jazz Nite'

One of the West Coast's most outstanding trumpet and bugle horn soloists will be the headliner at Cal Poly's "Jazz Nite" concert on Friday.

Jazz Nite will feature Stu Blumberg as soloist, now the lead trumpet player at the Schubert Theatre in Los Angeles, and featured trumpet soloist with the Toshiko Akioshi Lew Tabackin Big Band.

Also playing on the program are the University Jazz Band, led by music department instructor Graydon Williams, the Cal Poly Dixieland Bands, the new Vintage Jazz combo, and the San Luis Jazz Dancers, led by choreographer Lori Lee Silvaggio.

Blumberg, who attended Cal State Northridge, has recorded on many movie soundtracks, radio and television commercials and television shows. He has also recorded with such notables as Chick Corea, Leon Russell, Lou Rawls, Johnny Mathis and Blood, Sweat and Tears.

The music of the evening will be big band, vintage, Dixieland and modern jazz. The San Luis Jazz Dancers will perform several dance selections with the JAZZ bands.

Reserved-seat tickets for Jazz Nite are now on sale at the UU box office and at Castle Music, Premier Music Co., and Cheap Thrills. Cost is $4 for the public and $2 for students. Tickets will also be sold in the Cal Poly Theatre box office before the show. For information and tickets, call 546-1421.

Funny one-acts to play together

Two one-act plays—one by modern playwright Neil Simon and the other by the venerable William Shakespeare—will be presented in the next two weeks by the Cal Poly dramatics society and the speech communications department.

Both one-acts have been taken from full-length plays. From Simon's "Plaza Suite," the section "Visitor From Forest Hills" will be performed Thursday and Friday. The play, directed by English major Karen Peterson, tells of the travails of a bride who gets cold feet.

"Pyramus and Thisby," is the play within the larger Shakespeare comedy, "A Midsummer Night's Dream." The production will go on Thursday and Friday, June 4 and 5, and is directed by former Cal Poly journalism major Diana Bunnell.

Both plays will be held in Room 212 of the H.P. Davidson Music Building. Seating is limited, so those attending are advised to arrive early. The doors open at 7:30 p.m. and the show will start at 8.

Admission is $1 for both shows, and no one will be seated after the plays have begun.

Who's divorcing hard rock—

Both have more than 15 years experience in the rock business. Both groups have survived the deaths of founding members and the tragic killings of fans at their concerts.

The gloomy historical parallels between the Rolling Stones and the Who are many. But recently released albums by both bands show a great divergence by both from their former styles.

The Stones' "Emotional Rescue" has a sound that is more disco than their traditional R&B roots. The Who's new "Face Dances" does all it can to unnil the marriage between The Who and hard rock.

instead of the driving music that has been compared to a boot in the groin, this album passes off a sugar-coated pop sound that is closer in style to Styx or the latest Genesis than The Who.

"Face Dances" is the first album with new material since the death of drummer Keith Moon in 1978. Kenny Jones, Moon's replacement, is not an unknown face to rock himself. He is the former drummer for Rod Stewart's old group Small Faces, and has toured with The Who for two years.

"Face Dances" is an album that has been waited for with some apprehension. Most of the fear was sparked with the death of Moon, at which time Pete Townshend, the group's chief composer, revealed a more subdued and less argumentative side. Many people felt this attitude might be carried over to The Who's next album.

Much of this fear was reduced with the release of Townshend's exceptional solo album "Empty Glass" late last year. Although the album couldn't be considered the Who style, it showed that Pete had not lost his flair for writing pointed social comment with biting imaginative lyrics. Two of "Empty Glass's" best songs, "Rough Boys" and "Jules and Jim," focus on society's effects on today's youth. In the first song it is the effect of the street kids, and the latter describes the social consequences of the punk philosophy. But "Empty Glass" only raised expectations for what turned out to be the most uninspiring Who album to date.

"Face Dances" shows an ever widening gap between Pete Townshend and The Who image. The genius of Townshend has always found a channel of expression through The Who. From the days of "My Generation" to the present, the rest of the group has lent its own special touches, but the ideas have been basically Townshend's.

Many of these projects, such as "Tommy," the rest of the band did not fully understand until the venture was finished, but steered by Townshend anyway. In the albums since "Quadrophenia" the Townshend ideas have stagnated. The songs have developed little meaning beyond their own words.

The gripping adolescent frustrations which trademarked many of Townshend's early works were epitomized in the "hope I die before I get old" philosophy of "My Generation." But, with "Face Dances," the 35-year-old Townshend seems to have forgotten his past. In 1966 Pete wrote "Pictures of Lily" which related the adolescent awakening to sexual frustrations and masturbation, but on "How Can You Do It Alone" from "Face Dances" he shrugs a cold shoulder to these same feelings.

By coincidence, the album's next song, "Daily Records," tries to explain Townshend's newfound inability to relate to the working-class world:

"I just don't quite know how to wear my hair no more
No sooner cut it than they cut it even more
Got to admit that I trusted private worlds
Cold sex and booze don't impress my little girls"

This inability to relate flaws more than just the lyrics of the album. Flaws the album's whole delivery. Roger Daltry, the group's lead singer, has never been able to escape his tough mod image, and finds particular problems in sounding sincere with the material on this album.

What has to be said is that the teenage wasteland still exists, whether its leading spokesmen want to admit it or not. This latest album is an almost criminal hypotactical view of life. It may just be time for Townshend to refocus his direction toward the frustrations of decreased virility and handover the under-30 set to someone like Tom Petty or the Clash.

If there really is strength in numbers, then the Cal Poly men's track team certainly demonstrated it recently when they qualified into the 19th NCAA Divi-
sion II National Track and Field Championships in Mammoth, III.

The Mustangs will be chasing their third con-
secutive national meet in the second time—they won the national meet in 1966 and won it again in 1970. No other team has accomplish-
ed that even once.

Cal Poly is the only school in the nation that treats the national meet as a dual meet in terms of participants. The Mustangs will send 26 athletes to Mammoth, some of which will compete in dual meets. Cal State Northridge will have the second largest contingent in the slaugtherhouse state, ending their season on the track. On paper, the Mustangs are threatening favorite.

"I've heard that Kent's been a whirling favorite. I've heard he's the best in the past," said Mustang head coach Steve Miller. "You don't win a national meet on paper."

Poly athletes, according to Miller, have excellent shots in winning individual titles in nine events, and have a good chance in nine events. Only in last year's NCAA meet did a Mustang take a title in an individual event. The senior sprinter. At no point has Miller, have excellent chances in the national meet. Jim Schneckel, who was worth the 3,000, 10,000, 5,000 and 10,000, 200 meter events even before the main event started, is long gone. But junior Brian Paul might be the one. The defending champion in the shot put and the national leader by almost two feet, Paul is virtually a shoe-in to repeat as national cham-

Other Mustangs favored to make a mark are Kent, 10,000, 5,000 meter. Kent tops the na-
tional list in both races.

"Miller is in a tight race for the 10,000 with 
three main contenders," said Miller. "I don't think any of them are going to be dominant, but one of them will win the race."

And there's Mark Kent, Poly's middle distance ace, leads the nation with a 1:48.43 showing earlier in the season. Kent has taken the franchise in the last few meets. Miller says that Kent is the key to the Mustangs' success in the national meet. "Every man on the team is important. Everyone is the key, but Kent is more so because he's involved in 30 events," Miller said.

"Kent will have his hands full in both events. In the 100. Rick Reynolds' (10.3) of Southeast Missouri State and Mike Lawson (10.3) of St. Augustine's College look to be the top contenders to defeat Kent (10.28). Paul White (20.6) of Northford and Craft (20.6) will give Kent (20.7) a run for the money in the 200."

"Then there's Mark Kent, Poly's middle distance ace. Kent tops the national list in both races of Miller. "Miller is in a tight race for the 10,000 with three main contenders," said Miller. "I don't think any of them are going to be dominant, but one of them will win the race."

Mustangs chase third straight title

Brian Paul is seeking his second straight national shot put championship in Illinois. The junior has reset the school record to 60-31/2. Faul hopes to defend national shot put crown

BY VALERIE BRICKMAN

Getting into coach Steve Miller's office to talk about one of his athletes one must go through half the track team, a multitude of phone calls, a wife and his four-year-old son.

With his feet up on the desk and little boy sitting in his lap, Miller began to discuss the man of the hour—shot putter, Brian Paul.

In an educated guess, Miller placed the 6-4, 240-pounder among the top 15 throwers in the nation.

"Brian is much stronger and faster this year. We should see him throw over 62 feet within the next week," said Miller. "His ability is unlimited and I see him throwing 66-67 feet next year."

Mustangs chase third straight title

From page 10 of the nation's discuss Ron Waysun, one of the top triple jumpers in the field; Manny Bustistas and Terry Gibson in the 10,000 meter run; Paul Medvin in the 1,500; Doug Lalicker, whose 52.06 in the triple jumpars in the field;

Franz Miller, a senior Pete in the hurdles 1,500; Doug Lalicker, who is the nation's strongest putter.

Paul was recruited to Cal Poly and is intense at the Division II level during the first week of June. "This is what the season boils down to," said Faul. "We're the best we've ever been, at the height of where we need to be. We're going to try to do the best job we can, and if we do, we're going to be very hard to handle."

Powderpuff tilt planned

Mustang Stadium

The annual spring Powderpuff football game has been scheduled for Saturday at 7 p.m. in Godwin finished fifth in the event a year ago. According to Miller, the Mustangs have a pair of goals that are just waiting in Macomb to be fulfilled. "Our expectations are fairly high," said Miller. "First and foremost is to win the national championship. Second is to be one of the best teams ever in Division II."

Miller also mentioned that Cal Poly could be the first track school ever to win the national championship in both the men's and women's circles. The ladies won the AIAW title two weeks ago in Pennsylvania.

"We're right at the top of our game now," Miller said. "We're the best we've ever been, at the height of where we need to be. We're going to try to do the best job we can, and if we do, we're going to be very hard to handle."

**Letters**

**A sense of triumph**

Editor:

To all of the engineering students who signed the petition, to the students who coordinated the petition, to our student chapters of IEEE, ISHM, and Tau Beta Pi, to the EL&EE Poly Phase Club, and to all who supported my contributions as a faculty member, thank you. I compliment you for having properly and professionally made a simple statement of support and for avoiding uninformed conjectures.

I understand that your principle motive was to assist the EL&EE (earned faculty in their deliberations regarding your common wish of enhancing an already fine engineering program.

---

**Humans will always err**

Editor:

In response to Joe Buch’s letter on May 20, I would like to disagree with his viewpoint.

Nuclear energy is one of the available alternatives to alleviate the energy problem, but I feel it is a far cry from the answer. The U.S., in keeping with its humanitarian stance, should realize that in the long run the risks of nuclear fission outweigh any short term benefits.

Another big concern is that except for providing energy, there are no other uses. Thus I propose that instead of continuing to spend billions of dollars on the building of more nuclear fission plants that the nation more seriously investigate the many other alternative sources of energy available to us. The money saved from the construction of new nuclear plants could fund the research of nuclear fission, which does not produce the large quantities of radioactive waste, passive solar, which is ultimately for heating and cooling splitting water, and harnessing wind and wave power. Any combination of these above could prove indeed some have to be economically sound. It makes more sense to investigate all the possible solutions, then to put all our marbles into one bag.

I think of the long-term effects of our actions and how it will effect our descendants. I agree that we need another energy source besides fossil fuels, because they are rapidly running out. Thus I propose that instead of continuing to spend billions of dollars on the building of more nuclear fission plants that the nation more seriously investigate the many other alternative sources of energy available to us. The money saved from the construction of new nuclear plants could fund the research of nuclear fission, which does not produce the large quantities of radioactive waste, passive solar, which is ultimately for heating and cooling splitting water, and harnessing wind and wave power. Any combination of these above could prove indeed some have to be economically sound. It makes more sense to investigate all the possible solutions, then to put all our marbles into one bag.

I think of the long-term effects of our actions and how it will effect our descendants. I believe that is the reason for the警s of nuclear fission, which does not produce the large quantities of radioactive waste, passive solar, which is ultimately for heating and cooling splitting water, and harnessing wind and wave power. Any combination of these above could prove indeed some have to be economically sound. It makes more sense to investigate all the possible solutions, then to put all our marbles into one bag.

I think of the long-term effects of our actions and how it will effect our descendants. I believe that is the reason for the alarm of nuclear fission, which does not produce the large quantities of radioactive waste, passive solar, which is ultimately for heating and cooling splitting water, and harnessing wind and wave power. Any combination of these above could prove indeed some have to be economically sound. It makes more sense to investigate all the possible solutions, then to put all our marbles into one bag.
