Speaker debunks U.S. is No. 1 myth

BY ROBIN LEWIS
Staff Writer
The United States must realize it no longer the preeminent nation on earth, but a "co-equal" in a world of interdependence, a former undersecretary of the Interior said Thursday night.

James Joseph - Interior Undersecretary during the Carter administration, former vice-president of a multi-national corporation, Cummins Engine Co. and an ordained minister -spoke on "Equity in an Age of Scarcity" in the third speech of the Speaker's Forum spring lecture series.

Joseph said the role and position of the United States in the world has changed, mostly because of its burgeoned need for foreign oil, but that the change is one for the better of the nation.

"We have come to the end of an era," Joseph said. "The days of unchallenged preeminence are over. We must learn to live as co-equals in the world."

The new wave sounds from this month's Split Enz concert proved a sour note for Poly's Concert Committee.

The concert dealt the committee a financial loss of $2,000, although a "mostly successful" year will probably dampen the effect of the concert, according to Acting Concert Committee Chairman Matt Cryer.

The reasons for the poor showing range from the nature of local tastes to lack of competence to weak advertising, Committee officials say. Cryer said the bottom line was "not enough ticket sales."

The Enz show started out as the project of ASI Special Events, with a pledge of manpower help from the Concert Committee. But as arrangements grew more complicated, said Cryer, more and more of the burden came to be shouldered by the Concert Committee, which has more experience in large-scale concerts.

"We ended up," said Cryer, "splitting the costs and losses 50-50 with Special Events."

Despite this setback, concerts should varying tastes, and not simply to make concerts taking up the slack.

"New wave still scares some people around here," she said. Big-name new wave 20/20-Twisters show of a year ago.

"We ended up," said Cryer, "splitting the costs and losses 50-50 with Special Events."

Still, Benson said the committee's financial problem accounts for the split Enz concert's $2,000 loss, then, leaves the committee with some catching up to do before they can balance the books with their $8,000 subsidy intact.

Before Cal Poly's men's track team left for Macomb, Ill. and the NCAA Division 1 National Track and Field Championships last weekend, its goals were to win the title and to become one of the best Div. 1 teams ever to compete for the championship.

After the Mustangs returned from Macomb early Monday morning, they were indeed the national champions in Division II and they one of the finest teams ever to assemble in a national meet.

Cal Poly's total of 92 points gave the school and head coach Steve Miller their third consecutive national title in track and matched the performance of the ladies track team two weeks earlier.

Litterally, the Mustangs simply ran all over the opposition. Following Poly's 92 points came Southern Connecticut State with a measer 39 points and con

If it seems like a long road to graduate from Cal Poly, a transfer to a University of California school could shorten the time spent in college.

Cal Poly requires a minimum of 186 units to graduate, according to a spokesman in the Admissions office. That minimum is for Bachelor of Arts majors, while Bachelor of Science majors must complete at least 198 units. This minimum is the same on most state universities' campuses, with the semester system schools requiring a minimum of 124 units to graduate.

All state quarter system schools in the University of California system require 140 units minimum to graduate, a spokesman for UC Irvine's Division of the Academic Senate said. The discrepancy of 6 to 18 units between systems does not seem to large until it is learned that UC schools have a majority of four-unit classes.

"That is traditional and is what each UC campus goes by," Executive Assistant to the Irvine Division of the Academic Senate Garland Parten said. "Each campus does have a certain amount of automatically in making regulations as long as they don't infringe on the other campus. For instance, we have our own grading system here at UCI.

All UC system schools are on the quarter system while CSUC system schools fluctuate between semester and quarter systems.
WASHINGTON (AP) — The Constitution protects commercial nude dancing against local attempts to ban all such performances, the Supreme Court ruled Monday.

By a 7-2 vote, the justices struck down a Mt. Ligonier, V.J., zoning ordinance that had prohibited all live nude dancing.

Here, the borough totally excludes all live entertainment, including non-obscene nude dancing that is otherwise protected by the First Amendment, Justice Byron R. White wrote for the court.

Among other rights, the First Amendment protects freedom of expression.

Stating that past decisions established that "nudity alone does not make such otherwise protected material outside the mantle of the First Amendment," White added that the Constitution protects "entertainment as well as political and ideological speech."

The decision apparently does not mean that any community now must allow commercial nude dancing. A narrowly written zoning ordinance conceivably could be ruled valid.

In other matters, the justices took these actions:

Ruled by a 5-4 vote that poor people have no right to free legal help when the state tries to take their children away. The court said the right to free legal representation is almost entirely restricted to cases in which a person's "personal liberty" is at stake.

Backed out of deciding what could have been an important decision on the use of racial quotas in affirmative action programs.

Sailor attempts Pacific crossing

LONG BEACH, Calif. (AP) — Gerry Spiess sailed out of Long Beach harbor Monday in his homemade boat, 10-foot sailboat to begin a solo trip across the Pacific Ocean — a trip he says is twice as far as his record-setting 54-day journey across the Atlantic.

The 41-year-old schoolteacher from Minnesota left the Alamitos Bay Yacht Club at 10 a.m. but planned to set off on Catalina Island, the Alamitos Bay Yacht Club at 10 a.m. but planned to setting 54-day journey across the Atlantic.

Lecturer: Mexican architecture has potential

BY KIM BOGDARD

"Mexico has the potential, the means and the craftsmanship" to make "enormous advancements in architecture," said architect Ana Rojas Thursday night in her lecture on Mexican architecture.

As a speaker for the minority architects lecture series, Rojas defined architecture as the "application of advanced techniques in science."

Rojas has also applied herself and made personal advancements in her pursuit of architecture. Lecture series coordinator Alice Loh described Rojas as a woman who has learned to adapt to both the Mexican and American cultures.

Rojas said she studied 10 years in Mexico and worked there as an architect in her own company with her father. Today she is a registered architect in the Los Angeles area working in her own company.

Rojas said she studied 10 years in Mexico and worked there as an architect in her own company with her father. Today she is a registered architect in the Los Angeles area working in her own company with her father.

The first period of architecture involved simplified forms of military posts, missions and churches brought over from Europe, said Rojas. The second period contained a great deal of influence from Italy primarily in the construction of churches.

The final period, she said, is extremely decorative and involves lots of craftsmanship. The warmth of the buildings is seen in the texture. Carvings in rock and interior engravings maintain an important role in modern Mexican architecture.

Early architects worked extensively with precious jewels and left masterpieces in gold, silver, rock, shell and bone, she said. Rojas spoke of the contrast between the importance of open spaces in commercial buildings, compared to the need for high walls and enclosed areas in residential architecture.

In a slide presentation, Rojas showed the extensive role that open space plays in cereminoals, cathedrals, restaurants and theaters. Large commercial buildings all had the wide, open spaces in the front.

On the opposite end of the continuum, private homes oftentimes are surrounded by 7-foot walls. The walls were not built for safety, but rather to maintain the family's privacy, said Rojas. "People don't like to be on exhibition; they don't want people interfering in their private lives," she said. Rojas added that her own home in Mexico contained no windows.

"Art is constantly tied into architecture," said Rojas. "Art is used to draw attention to the beauty of the building." This enables people to "feel the warmth despite the fact that there are so many cultures surrounding it.

Many large commercial buildings are totally covered by artwork, said Rojas. "When you see something so massive, you don't know whether to say, 'Oh my god, how beautiful' or 'oh my God, what a disaster!'"

Mexico received much influence from France in the use of steel and this is still in practice today. Rojas explained how the structures in Mexico City need to be very heavy because of the content of the soil. The soil will push light structures right out of the ground. Due to this there is extensive use of reinforced concrete, she said.

Mexico City is constantly sinking, said Rojas, and some of the buildings are so heavy that the soil will sink and the structure will remain standing. Recently floating foundations and hydroics which allows a building to be realigned to fit the ground after an earthquake have been utilized.

There is a large number of people concentrated in Mexico City, yet much development is stilled here because there are land marks everywhere that can not be destroyed. The government also has no control over architecture; there is nothing that says a building must be constructed by a professional. This results in some very poorly built and lopsided structures.

Lecturer: Mexican architecture has potential
**Soft energy advocate to speak tonight**

Amory R. Lovins, author and advocate of soft energy and alternative energy systems, will speak at Cal Poly tonight at 8 p.m.

"His speech in the Cal Poly Theatre will be titled "Soft Energy Paths: How to Enjoy the Inevitable."" The public is invited, with tickets priced at $2 in advance for students, $3 in advance for the public, and $1 more at the door. Tickets are available at Boo Boo Records in San Luis Obispo and all Cheap Thrills locations. Student tickets are on sale in the Julian A. McPhie University Union on campus.

The subject of a New Times magazine cover story in 1976, Lovins is considered one of the most articulate advocates of alternative energy. President Carter was advised by Lovins in the negotiation of international energy policies.

He will be joined on stage by his wife, Hunter, who is a naturalist and attorney.

Lovins, a professor "Jeffersonian" who sees a connection between our choice of a technological path and democracy. He suggests that "a soft path simultaneously offers jobs for the unemployed, capital for business, environmental protection, enhanced national security, opportunities for small business innovation, and recycling for big business."

Lovins is an admitted fiscal conservative who believes that free market economics in the pricing of energy, and accounts for costs over the life of energy products, can commercialize various conservation technologies and renewable energy sources, such as sun, wind, and biomass.

His initial article in the October 1976 issue of Foreign Affairs Journal catapulted him into the public eye with a standing room only appearance before the U.S. Senate, during which he expounded on his software energy theories.

A physicist, Lovins has consulted on energy policy before the leaders of 15 nations throughout the globe.

His appearance at Cal Poly is sponsored by Speakers Forum, a committee of the university's Associated Students Inc. Program Board.

**Speaker attacks 'New Conservatism'**

Joseph accused leaders of the New Conservatism with leading the country in an opposite direction from this philosophy, and deepening the inequity already existing between the American economically advantaged and disadvantaged.

He said that conservative leaders:
- seek to establish a new kind of patriotism at home and form new forces of American orthodoxy abroad.
- refuse to accept forecasts of shortages and limits on growth, calling them "mocks of the misinformed and misguided."
- refuse to acknowledge the complexity of a global economy, "preferring the simpler answers of a time when the economic unit was a village."

Joseph accused the New Conservatism of being "a peculiar position of being caught between two worlds, an order that is dying, but not yet dead, and a new order that is conceived, but not yet born." He added that the present generation, although not the first to be in such a position, seems to be the first that has "lost the will to choose" its future choice.

Joseph encouraged students to become active in the marketplace of political ideals, instead of simply "standing on the sidelines, using your college years to prepare for a living."

Joseph warned that if the younger generation simply "stands by watching an older generation romanticizing life as they knew it in a former time, we will lose our momentum as a people and cease to be a part of the revolutionary force which gives moral purpose to the world," he said all types of input were needed because in order for a society to be safe for democracy, "it must first be safe for creativity." A working doctrine by which to measure moves ostensibly made by government and business in the public interest, said Joseph, can be found in the preamble to the Constitution. He said the right to an equal "distribution of the benefits of society," including

**Class schedule cost boosted to 94 cents**

**BY CYNTHIA BARAKATT**

The El Corral Bookstore has boosted the price of class schedules by 94 cents due to increased printing costs and the additional costs of sending schedules to first-time students at no charge.

The schedules, which cost 60 cents for spring quarter this year, will cost 94 cents for summer through spring quarters of the 1981-82 school year, according to Ivan Sanderson, general manager of El Corral Bookstore.

The price hike stems from a 28.5 percent increase over last year in the cost of printing the schedules, said Sanderson.

Each quarter this year it will cost, 511,800 for the schedules to be printed, he said.

Printing costs run $332.34 to set each page and the full schedule, available beginning June 4, contains 84 pages, said Sanderson.

The special envelopes used for Computer Assisted Registration forms included in the schedule also added to the total cost, said Sanderson.

Each envelope costs about seven cents to manufacture, he said.

A portion of the additional cost of the schedule also makes up for those schedules, sent out to new students at no charge, said the general manager.

Over the course of the year, about 16,300 schedules will be sent to new students, according to Sanderson.

Donald Coats, associate dean of educational services, said all first-time students receive complimentary schedules along with their CAR forms so students can choose class when they register.

"Sending new students complimentary schedules is in the easiest way to accommodate the students' need to register," said Coats.

Other methods such as billing the students for the schedule or having the students send in their money before receiving schedules, would be too expensive and time-consuming, Coats said.

As students move on through the university, they will make up the cost for new students through the charges they pay in later quarters, said Coats.

However, this policy applies only for students who began attending Cal Poly after the implementation of CAR. Students who participated in open registration prior to spring of 1980 and the implementation of CAR may not receive a complimentary schedule while attending Cal Poly, said Coats.

Craft Center
The UU Craft Center is offering a variety of craft classes for the current quarter. Sign-ups will take place June 24, from 6 to 9 p.m.

One-week play
The Cal Poly Studio Theatre will present the play "Pyramus and Thisby" from William Shakespeare's "A Summer Night's Dream" this Thursday and Friday at 8 p.m. in room 212 of the Music Building. Cost is $1.

Women's Programming
Women's Programming is sponsoring a car service workshop on June 6 from 9 to 11 a.m. at Spring Toyota-BMW, 1144 Higuera St.

A&I Films
A&I Films will present "Coal Miner's Daughter" in Chumash Auditorium on Wednesday, June 3, at 7 and 9:45 p.m. Cost is $1.

River rafting
A&I Outings will sponsor a river camping and exploring trip up the Deschutes River in Oregon over quarter break, from June 14-21. Cost, which includes transportation, food and equipment, is $115. Sign-ups occur today at 12:30 p.m.

Ag meeting
The Association of Graduate Students in Agriculture will have its final meeting of the quarter on June 4 at 11 a.m. in Ag 228. An advisor and officers will be selected.
Students wear the wigs in dorm violation reviews

BY KIM BOGARD
Staff Writer

One campus residence hall has let its students take the law into their own hands. Yosemite Residence Hall's newly formed Student Review board gives seven students, one resident advisor and Resident Director Ed Lunn the responsibility of resolving such dorm problems as alcohol violations, vandalism, rowdiness, pranks, hanging out, the wind of residential buildings, and climbing on roofs, according to Review Board Chairman Steve Ronchelli.

Prior to spring quarter, any judicial matters were handled by Director of Judicial Affairs Dave Ciano. At the beginning of the quarter, his authority was given to the resident directors. Lunn, said Lunn, and five weeks ago, the authority was transferred to the board.

Lunn started the board, he said, because the residents are the community's 'commissaries.' If the residents should resolve the problems that arise then. He said he felt the board would encourage responsible behavior, since the problems were being dealt with by peers and the residents on the board would benefit by developing leadership skills. He said he hoped the board would result in education for all involved.

Ronchelli said students in question are called to discuss the matter with the board and are asked to explain in their own words what happened. Students are then asked what actions they think should be taken as a disciplinary procedure. The board then renders a decision that evening. The board can decide either to give residents a warning, move them to another hall, refer them to Ciano or take some course of action they feel will be effective, said Ronchelli.

A typical disciplinary procedure is to have the student write a letter, and compare the alcohol policies of Santa Clara University to those at Cal Poly, said Lunn. Other students have had to write reports comparing the alcohol policies of Santa Clara University to those at Cal Poly, said Lunn. Other students have had to write reports that showed they had been brought to the board for breaking furniture policies and it was decided that they would pay for the furniture they broke and write a paper on vandalizing furniture.

The remaining 20 percent of the board agreed that the residents of the tower would pay approximately $50 for furniture that had been vandalized during the year, said Lunn. The students do not like to kick anyone out if they can avoid it. He said that is like breaking up the community. Of the 20 incidents they have handled so far, said Lunn, only one resident has been asked to move to another hall.

Lunn said the board serves more than a disciplinary purpose; it is a problem-solving group to accept all seven residents—three are active at each meeting and the remaining four are standby.

The board is made up of three residents and two staff members, and if any further decisions are required, Lunn said, the students have the edge. So far everyone on the board has agreed and voted the same way, not been necessary, he added.

Lunn said the board said the board decided to implement it in the fall. Lunn said the board had every reason to believe that the student knew of the appearance date and he is simply not planning to be home. The board did agree to reconsider it if the student decided to appear at the next meeting.

Ronchelli said that he has board only positive feedback about the board. Lunn said one student who came before the board gave them direct feedback, saying, 'It is to be a non-alcoholic party and the students were required to talk to a health educator in the Health Center to find non-alcoholic drinks that could be served, he added. With this, some students also pro-

vided supervisors to make sure that no one came into the party drunk. Ronchelli said that it was the most successful party all year.

Lunn said that this experience had made the board realize that the board is the way it will stay. The board will call at the end of the year to decide what changes should be made. Lunn said he feels the board is working. It is not afraid to make mistakes, he added, although many have been so far.

Lunn said the board directors, Lunn said, like the idea and may implement it in the fall. Where people come together using a collaborative effort to solve problems.

"We have to guarantee the "good news," said Lunn. The students are therefore notified ahead of time, given a description of the problem and advised of their rights.

The meetings are held in the resident director's office on Tuesday nights. Ronchelli said it is a casual atmosphere that is not intimidating to the students. Each student is allotted one half hour, and four to five individuals are heard a night.

The review board is experimental at this point, but Lunn said that as long as he is resident director this is the way it will stay. The board will call at the end of the year to decide what changes should be made. Lunn said he feels the board is working. It is not afraid to make mistakes, he added, although many have been so far.

Lunn said the board directors, Lunn said, like the idea and may implement it in the fall.

The meetings are held in the resident director's office on Tuesday nights. Ronchelli said it is a casual atmosphere that is not intimidating to the students. Each student is allotted one half hour, and four to five individuals are heard a night.

The review board is experimental at this point, but Lunn said that as long as he is resident director this is the way it will stay. The board will call at the end of the year to decide what changes should be made. Lunn said he feels the board is working. It is not afraid to make mistakes, he added, although many have been so far.

Lunn said the board directors, Lunn said, like the idea and may implement it in the fall.

Yosemite Residence Hall's newly formed Student Review board gives seven students, one resident advisor and Resident Director Ed Lunn the responsibility of resolving such dorm problems as alcohol violations, vandalism, rowdiness, pranks, hanging out, the wind of residential buildings, and climbing on roofs, according to Review Board Chairman Steve Ronchelli.

The meetings are held in the resident director's office on Tuesday nights. Ronchelli said it is a casual atmosphere that is not intimidating to the students. Each student is allotted one half hour, and four to five individuals are heard a night.

The review board is experimental at this point, but Lunn said that as long as he is resident director this is the way it will stay. Speaker condemns ‘new selfishness’ philosophy

From page 4

economic, to all its members, whatever their skin color or social status, is a necessary principle that must be upheld by decisions made for the public good.

Too long, said Joseph, society has been simply taking care of minorities through the social services, and “leaving the economy to the rest of society.” It is not enough, Joseph added, to focus on the marginal institution of public service rather than some of the more fundamental opportunities for economic power. “Some people now seek to eliminate poverty by transforming their private wants into a political definition of the public good,” Joseph said. Joseph called the “Sagebrush Rebellion”—a campaign by several western states not including California to regain control of federal land being held under the Bureau of Land Management—as an example of the “new-sectarianism.” He claimed the “Rebellion, which is supported in principle by both Secretary of the Interior James Watt and President Ronald Reagan, is nothing more than private individuals protecting and augmenting their own financial interests.”

Joseph also made remarks, as former Undersecretary of the Interior, concerning the leasing of offshore oil tracts in the Santa Maria basin taking place that day in Anaheim. Joseph said if his administration had made the decision, some but all of the 34 tracts the state asked to be deleted from the sale for environmental and economic reasons would have been dropped. He said the department would have allowed drilling “with the commitment to exercise authority and the will to stipulate drilling procedures which would protect both environmental and biological resources.”

Question and Answer Period

BY KIM BOGARD

Special Olympics

Large numbers of Special Olympics athletes will be able to travel to Los Angeles in June due to $650 donated to them by the Society for the Advancement of Management.

Pete Simmons, special services coordinator for Special Olympics, said the check he received from SAM on Thursday, “will help us immensely.” He said it may not seem like a lot of money, but it will get the athletes to the competition in Los Angeles.

The $650 is the full profit that SAM received from selling concessions at the Special Olympics barbecue at Arroyo High School on May 1, said Kothi Mosher, President of SAM. The gross profit was $860 and SAM had $150 in expenses, she said. SAM received food donations from various corporations in town and the $150 was spent mainly on condiments.

Special Olympics has asked SAM for their help at the barbecue. Members volunteered their time at the concession stand and the executive board later decided to donate the entire profit. This is a tradition SAM has followed for a few years, said Mosher.

fence for UC Riverside with 32 points, both scores barely a scratch on the surface. Because of the Mustangs’ dominance, the general consensus buzzing around the Macomb stands was to rename the meet “The Cal Poly Relays.”

That name wouldn’t be a great misnomer. The Mustangs had a barrage of All-Americans, 19 to be precise, three individual national champions and another two second-place finishers, and scored in 13, count ‘em, thirteen of the 21 events. Awesome is the word. Simply awesome.

Sprinter Mark Kent, half-miler Vernon Sallaz, and steeplechase runner Carmelo Rios all won their respective events, although in his ninth race in three days, Kent couldn’t quite reach his goal of both the 100 and 200 victories as he finished fifth in the longer event. He breezed to a win in the 100 after enduring a two-hour delay due to a localized hail storm that pounded Illinois just before his race started. He fought his way through a nine mph wind and finished in 10.3 seconds, leaving the other runners far behind.

While a dog-tired Kent was struggling for his fifth-place finish in the 200, teammate and senior Joe Siai Siai was busy capturing third place with a time of 21.11. Kent was clocked in 21.35.

Kent, Siai Siai & Co. joined forces in the 440-yard relay, and the two, along with junior Pat Craft, and senior Kevin Bush, breezed through the first two heats with times of 39.96, a school record, in the qualifying round and 40.38 in the semifinals. They didn’t count on defending champion St. Augustine’s to be there, and when Kent sprinted for home in the final, he was a step ahead.

Please see page 10

The Cal Poly men’s track team won its third straight NCAA Division II track title over the weekend. The Mustangs were led by 800-meter national champion Vernon Sallaz (right) and steeplechase runner-up Ivan Huff.
Blues sweep Bakersfield

BY VERN ARENDENS
Sports Editor

There are dilemmas and then there are dilemmas. Team Treasurer has a dilemma whether to be happy or big to write. Treasurer, coach of the Mustangs semi-professional baseball team, watched his troops rally twice in the last innings Saturday night to sweep a doubleheader and win a three-game series from the visiting Bakersfield Diamond Rangers.

The series evaded the Blues' season mark by 3-2 but more importantly it gave Treasurer another good look at every on the squad as he made wholesale substitutions throughout the series. Quite simply, Treasurer's problem is an overabundance of talent and only two weeks in which to trim the roster down to 30.

After claiming the series opener (5-4) behind the strong pitching of Duval, the Blues rallied for five runs in the fifth and sixth innings to grab a 5-3 lead in the second game and rode a seven-run fifth in the nightcap for an 8-3 triumph.

In both ends of the twin-bill, superb spot relief pitching timed it just right with smiles as wide as the empty dugout across Treasurer's face.

"I supposed, to sweep this series. Well, we have some talent out here and it might be surprising to others that we won but not to me," Treasurer said as he looked out from the dugout on an empty SLO Stadium. "A lot of these guys did not get the chance for much playing time this year but have come out with confidence and that is what this team is all about. There are only bad things about the weekend sweep is that only small gaggle of players were on hand to witness the come-from-behind.

In the opener, Duval was the man of the Hour. Duval fanned 10 in six innings and gave up only three bases before giving way to Molina in the seventh. Molina promptly scored two runs off of Molina and had the tying run on third when Chris Pence came in and froze the output.

The Blues jumped out to a 4-0 lead after three with a 4-0 lead after three with a three-run first and a sacrifice fly after the rally.

"I knew he would be a home run threat and that is why I started him with a runner on third," Treasurer said as he went back to the dugout. "I knew that if he was going to hit, he was going to hit big and I was right."}

Said undefeated pitcher, "I feel sorry for Molina and Pence for being treated like this. I would have put them in the dugout myself and it might be surprising not to me," Treanor said as he walked into the dugout across Treanor's smile as wide as the empty dugout in the heads of Mustang fans. Unfortu­nately this was his bad day.

The Blues jumped out to a 4-0 lead after three with a three-run first and a sacrifice fly after the rally.

"I knew he would be a home run threat and that is why I started him with a runner on third," Treasurer said as he went back to the dugout. "I knew that if he was going to hit, he was going to hit big and I was right."

Making a sacrifice fly after the rally. He was disqualified because of his two fouls, and it might be surprising not to me," Treanor said as he walked into the dugout across Treanor's smile as wide as the empty dugout in the heads of Mustang fans. Unfortunately this was his bad day.

single run in the second and a three-run third.

John Silacci was 2-3 and drove in a run and Bryon Darling went 2-4.

In Saturday's first game, Bakersfield was riding a 3-0 lead heading into the bottom of the fifth when the Blues erupted. After being limited to an infield hit and a single in four innings, Sam Silacci drilled a solo shot over the left field wall to start a three-run fifth. Kevin Taylor followed with a double down the right field line. He moved to third on a passed ball and scored on a wild pitch.

Matt Taylor walked and advanced to third on another set of wild pitches before Dave Rodas drove him in with a sacrifice.

The Blues scored the winning two runs in the fifth on a run-scoring single and a fielder's choice.

The Blues were up to their eyeballs in trouble in the sixth inning as Bakersfield loaded the bases with walks with none out. Treanor went to the pen and brought out first-year Cuesta player Dale Osborne.

The blonde right-hander calmly induced Mike Elliott to ground into a force at the place and struck out Tim Hughes on a 2-2 pitch and Kevin Dunn on a 3-2 count leaving the bases jammed.

In the final game, Bakersfield had the Blues down by five runs after two innings but solid relief help and pesky hitting fueled the win. The Blues got on the board in the second as Tim Traynham tripled and scored on John Silacci's double.

In the fifth frame, a harmless single and an error opened the door to a seven-run outburst. Gary Rollins doubled in two runs as Darling, Jeff Montgomery and Traynham all singled in one run apiece.

Bakersfield bounced right back in the last inning to pull within one run with a two-run double and had the tying and go ahead runs on second and third when ice-veined Scott Steele tossed up sinkers and got the final two outs on a soft line drive to short and a ground out to third.

"Some of these guys, like Dale (Osborne) and Scotty (Steele) got more work in one outing here than they did all last season," said Treanor. "But they both looked sharp tonight."

The Blues will host Cupertino in a three-game series this weekend at SLO stadium. The series begins with a single game on Friday at 8:15 p.m. with a double header the following day beginning at 1 p.m.

An important note about Saturday's upcoming double header is that it will be nickel beer day at the ballpark.

Get professionals

Light ballasts seem to be such innocent things. They are generally ignored unless they don’t work.

But it is time for Cal Poly administrators to start looking at the ballasts carefully, because of the hidden threat of PCBs contained within them.

It has been known since the early ’70s that PCBs—polychlorinated biphenyls—are poisonous and cause adverse reactions in animals and humans. People who have been exposed to PCBs suffer from nausea, dermatitis, bronchitis, abnormal fatigue, abnormalities of blood lipids and anemia, to name a few of the symptoms.

It is not entirely known what the long-term effects are. But is a fact that the substance is stable, and which does not break down easily, and can be recycled over and over again in the food chain, and can build up within the human system. According to the May 27 issue of the L.A. Times, 91 percent of the people in the United States have some PCB in their bodies.

This substance is present in Cal Poly light ballasts and has been there for years, even though it was known to be toxic and dangerous to handle. So, we may ask: why wasn’t anything done earlier about the potential hazard which is literally hanging over heads?

Granted, the risk to Poly students and staff is small. But the fact that it exists at all is not right.

Now that administrators know there are ballasts that contain PCBs, there does not seem to be a coherent policy regarding their removal. From the articles in the Daily over the past few weeks, it’s apparent that electricians may be removing ballasts without adequate knowledge or safety precautions. They don’t even know which ballasts contain PCB and which don’t. So they remove them haphazardly around campus, and could conceivably be exposing themselves to unknown risks.

It is the opinion of the Mustang Daily editorial board that experts be called in to determine the best policy for removal and disposal of such ballasts, and to determine which ballasts are PCB containing and which aren’t. There is no use in changing all the ballasts—it means more work and extra expense.

Environmental Health and Safety Officer Donald Van Acker needs to get in touch with those who handle PCB waste on a regular basis, and to formulate a plan of action for removing toxic ballasts. The time is now, considering that the ballasts are old and are continuing to drip in various places around campus, increasing the possibility of someone again being exposed to the substance.

It is the need to have the policy outline places of priority where ballasts should be changed—bathrooms, places where people eat and locker rooms. Of course, all places containing people are important to check, but the places where they could come into more direct contact with PCB should be done first.

It is the kind of issue that must be taken care of now. It has been ignored too long. And now that everyone agrees that something should be done, it is important that it will be done in the right way—by professionals who know what they are doing and what they’re dealing with.

Letters

Letters and press releases may be submitted to the Mustang Daily by bringing them to the Mustang office in Room 226 of the Graphic Arts Building, or sending them to Mustang Daily, GRC 226, Cal Poly, San Luis Obispo, CA 93407. Letters must be typed, include your name and address, sign your name, include writers’ signatures and telephone numbers.

Press releases must be submitted at least a week before they should be run. All releases must include phone numbers and names of the people or organizations involved, in case further information is needed. Editors reserve the right to limit, condense, rewrite and edit press releases they receive.

Muted accomplishments

As AIS officers and senators bask in the glory of a successful fee increase referendum and prepare to close the books on another school year, they need to reflect on their session with only a muted sense of accomplishment, for while they succeeded in securing adequate funding for upcoming years, they failed to be as effective as they should have been.

The fee increase is seen as the major accomplishment of the year by both officers and senators. While it was a milestone success, it also pointed out that the AIS did not do its job of educating its stockholders, the students, on how their funds were spent. As polls conducted before the April 8 and referendum revealed that over half the student body did not know how much their AIS fee was or how it was spent. This statistic demonstrates the need for open and thorough communication between officers and their constituents.

Internal communication was also a problem, as was apparent during the selection process for the student representative on the foundation board when President Willie Huff thought the senate was handling the matter while the senate believed Huff’s staff was handling it and the senate lost its input in the meantime.

Huff was only partially effective in his effort as student body president, for he successfully made himself visible and available to individual students and student groups, but did not effectively communicate to the senate who often were put on the defensive when Huff told them they were ineffective and un

Keep the bent

Editor:

I would like to comment on the in.stigators of the "Bend the Bent" campaign, even though I am in no way connected with Tau Beta Pi or any other Greek organization. The best representatives of the National Engineering Honor Society is tastefully displayed in the letters to the editor on Engineering West and the Computer Science buildings. Tau Beta Pi is as much a part of this university as any other club or organization.

So why don’t you leave the Bent alone? As with most destructive acts, the grafitti says more about the vandal than it does about Tau Beta Pi. Why does this individual feel so threatened as to vandalize the surrounding buildings as well? If this person opposes the National Engineering Society, don’t begin it and insist on it, and avoid all contact with its members if you like. But my vote is "Keep the Bent."
