Athletic budget proposal cuts seven minor sports

BY KIM BOGARD

Seven minor sports may not receive funding next year, if the recently submitted athletics' budget proposal is approved as it is by the Instructionally Related Activities Board.

About 30 concerned student athletes gathered in an open forum Tuesday to express their interest in continuing these sports, which include men's volleyball, tennis, swimming and water polo; and women's softball, tennis, swimming and diving.

Athletic Director Vic Burcusa told the athletes that his main priority in revising the next year's budget was to have "a quality rather than quantity program."

Burdiosa explained that the budget proposal funded major sports, such as the men's and women's basketball and the sports cut from the budget were the 'fringe' sports or what he called the 'soft' sports.

The purpose of the forum, said ASI President William Huff, who acted as mediator, was to try to arrive at an overall solution. Huff said he felt most of the student's questions were aimed at an administrative point of view and should be answered directly by the sports directors.

In addition to Burcusa, Associate Executive Vice President of Academic Affairs Howard West and Assistant Athletic Director Dick Heaton were also present at the forum.

Cal Poly to get new computer, but not right one

BY JEFF LEVY

Cal Poly will receive a new computer this summer, even though the new CDC Cyber computer is not exactly what's wanted or needed, according to the head of the computer advisory committee.

Jens Pohl, architecture professor and head of the computer advisory committee, said Tuesday, said Pohl wanted two separate computers—one for administration and one for instructional purposes.

The new computer will be a "batch with time share in-put and output," he said. Pohl sighted the rapid development of computers, which he called "a sort of hybrid," the size of a telephone directory, and one for financial data. Both of these systems which allow direct interaction, however have some capacity for interaction, however, have some capacity for interaction.

The Department of Information Systems, which handles both systems, will have to be plugged in at least 10-fold. Pohl is a "batch with time share input and output," he said. Pohl sighted the rapid development of computers, which he called "a sort of hybrid," the size of a telephone directory, and one for financial data. Both of these systems which allow direct interaction, however have some capacity for interaction.

Our cars also belie little energy we actually need, he said. While the average Detroit auto gets 16 mpg, some Volkswagons get 60 to 65 mpg; an advanced diesel, not yet on the market gets 60 mpg in the city, 100 mpg on the highway.

Pohl said that "Cyber is a major upgrade, at least 10-fold."

"We can't refuse it," he said. "We wouldn't anyway. Everything that the Chancellor's office develops for the CDC system will have to be plugged in to Cyber. There are certainly two new services being developed for the system—one to handle all student data, the other to handle all data sent over. Both of these new services will be accessible only through Cyber."

"We need Cyber," said Gerald. Pohl agreed, but thought Poly could have received something more suitable.

Speaker tells how to solve energy crisis by using less

BY ANDREW JOWERS

The Pied Piper of alternative energy played a simple tune Tuesday night, and in a press conference before the lecture, Amory Lovins, 33, is considered by many as the most cost-effective energy do we need?— he said we require four "deceptively simple" questions:

—how much energy do we need?
—what kind of energy and scale are best suited to the required tasks?
—where and for what should we get the energy?
—can such a policy be implemented?

In answer to the first—how much energy do we need?—he said we require much less than we're using now. For example, refrigerator manufacturers, in an attempt to make the inside bigger while keeping the exterior boundaries the same, have skimped on insulation, thus reducing efficiency 30 percent as compared to World War II models. Given time, he said, we'll have models with "bigger insides than outsides."

Other practices, such as putting the motor on the bottom instead of the top of the fridge, and installing the appliance near a stove, waste energy.

"We ought to have a contest, this be-

The Cal Poly Water polo team may not get a chance to defend its league title if funds are not soon made available for it.

President of Academic Affairs Howard West and Assistant Athletic Director Dick Heaton were also present at the forum.

Our cars also belie little energy we actually need, he said. While the average Detroit auto gets 16 mpg, some Volkswagons get 60 to 65 mpg; an advanced diesel, not yet on the market gets 60 mpg in the city, 100 mpg on the highway.

Reagan may discuss oil leases

SAN FRANCISCO (AP) — President Reagan was urged Wednesday to meet with a delegation of California elected officials to discuss the impending decision on opening portions of the state's scenic coast to oil exploration.

Interior Secretary James Watt is expected to make a final decision this month on Lease Sale 53, which would open four major tracts off the northern and central coast to exploration.

The move is opposed by most elected officials in the coastal counties affected, and Gov. Edmund G. Brown Jr. has threatened to take Watt to court if he opens the tracts.

A letter to Reagan signed by 20 members of the California congressional delegation says it is "imperative" that there be an opportunity for a bipartisan group of state and local officials to "express their concerns about the impact of this proposed decision on their coastal jurisdictions..."

The letter says the delegation, through resolutions passed by several county boards of supervisors, has "developed a viable alternative to leasing for the northern four basins of Lease Sale 53."

Joe Cucchiara, a Santa Cruz County supervisor, said the alternative, approved by Santa Cruz, Humboldt, San Mateo and Marin counties involves matching the expected energy yield by conservation.

"Based on the 20-year life cycle of the basin, we can produce more energy through conservation than are available in net energy coming out of the basin," he said.

Cucchiara said the delegation is prepared to travel to Washington if necessary to meet with Reagan.

For counties like Santa Cruz which depend on the coast for its financial well being, "our concerns go far beyond what would happen at the time of an oil spill," he said. However, it's a sure compromise.

"They also said they saw women and bystanders beaten and chased into homes.

Rioters arrested in South Africa

JOHANNESBURG, South Africa (AP) — Riot police used tear gas, clubs and attack dogs on mixed-race high school students mobilizing for a demonstration Tuesday, and authorities said 60 pupils were arrested.

Witnesses reported widespread beatings by the riot police. They said at least two pupils were hospitalized, while others were treated for minor injuries and released.

They also said they saw women and bystanders beaten and chased into homes.

Democrats fail to back tax plan

WASHINGTON (AP) — House Democrats tried for more than two hours Tuesday to reach a consensus on a tax cut, but apparently agreed only to support whatever plan is drafted by the Ways and Means Committee.

"You can be sure it won't be three years," Speaker Thomas P. O'Neill told reporters, referring to the length of the tax reduction. That would rule out President Reagan's three-year plan, which Democrats have attacked as inflationary.

Democrats on the Ways and Means Committee are moving reluctantly toward a proposed two-year tax reduction, but there was no assurance that will be the final shape of their proposed compromise. Those committee members planned another session Wednesday afternoon in an effort to reach a consensus.

Whatever Danny Rep. Dan Rostenkowski, D-Ill., Ways and Means chairman comes out with, if he can forge a coalition in committee, the leadership will be supportive," O'Neill said.

After the caucus, O'Neill continued to criticize Reagan's program, which originally called for an across-the-board 10 percent cut in individual tax rates in each of three consecutive years. Reagan has indicated a willingness to compromise.

Pass such a plan, the speaker said, "and you'll have deficits like you've never seen in your life. It's a sure way to decimate the budget of the U.S. government."

Democrats on Ways and Means met for two hours Tuesday without agreeing on a tax cut plan. Rostenkowski said there were "no votes, no conclusions," but that the possibility of a multi-year tax bill was discussed.

He added that Democrats still want additional relief for low and middle-income families, weighting the benefits of a tax cut in favor of those with annual incomes between $20,000 and $50,000 a year.

Reagan's plan would provide tax cuts for rich and poor alike, regardless of income. Democrats have viewed a one-year tax reduction as holding less risk of warning inflation and have urged proportionately more relief for those with incomes under $50,000 a year.

Democrats fall to back tax plan

WASHINGTON (AP) — House Democrats failed to work out a final tax-cut package Tuesday endorsed special tax credits to help offset the cost of private education but urged Congress to delay such legislation until the president's tax-cut plan is enacted.

John E. Chappoton, assistant treasury secretary for tax policy, told the Senate Finance subcommittee on taxation that such credits are preferable to other types of federal aid to education, which involve cumbersome red tape for government and families alike.

"Tuition tax credits offer a simpler means to fund private education they themselves select," he said.

Although President Reagan's economic program must take priority now, Chappoton said that "tuition tax credits will be at the top of our agenda at the appropriate time."

Tuition tax credits have been proposed in the past but always have run into trouble in Congress from those who fear they conflict with the Constitution's requirement for separation of church and state, and from those concerned that such aid would come only at the expense of public schools.

A bill sponsored by Sen. Bob Packwood, R-Ore., chairman of the subcommittee, and Sen. Daniel Patrick Moynihan, D-N.Y., eventually would allow a person to subtract up to $500 from his or her tax bill to help offset costs of education at a private elementary or secondary school or at a private or public college.

The tax credit would start at a maximum $250 during the 12 months beginning Aug. 1, 1982, and rise to a limit of $500 after that. The credit would become available Aug. 1, 1984, for graduate and part-time students.

For families whose incomes are so low that they owe no taxes, the bill would allow the government to provide a check of up to $500 for education expenses.

EPA cites plant for diesel spill

FRESNO (AP) — A federal complaint has been filed charging that the builder of the Helms hydroelectric project failed to submit an oil spill control plan, a violation of the Clean Water Act.

A complaint was issued by the Environmental Protection Agency Tuesday in response to a diesel spill in Wishon Reservoir at the high Sierra construction site 50 miles east of Fresno, said Shichin Ishioka.

Meanwhile, his report recommending criminal prosecution of the project's owner, Pacific Gas & Electric Co., and the contractor, Granite-Ball-Grove, will be submitted to the Fresno County district attorney Friday.
Athletic budget proposal cuts seven minor sports

From page 1

Buccola said he was given the same funds as last year to set up the 1981-82 athletic budget proposal and this money would not fund the entire program. Therefore, the seven minor sports were cut. However, Buccola said at the end of the proposal he asked for an additional $32,000 to fund these seven sports.

If the $32,000 is approved, then the sports will remain in next year's budget, said Buccola. If only some of the money is granted, the sports will be cut in a priority ranking order, he added.

The criteria considered in ranking the sports were the sport's ability to bring income, spectator interest, national recognition, the number of students involved and available staffing.

Buccola said the problem of staffing is constantly getting worse. At present, he said, most coaches only work part-time. If some coaches are let go, then others will go full-time before additional coaches are hired.

Heaton said there simply is not enough money to fund the present program. Two football coaches were cut so "you can't say we are just picking on minor sports," he said.

Buccola said that over the years some money has been taken from the profits in football and given to other sports, "but this just gets so thin." A 50-cent increase on football tickets was also included in the proposal to increase next year's revenue.

The athletic department has gone to alumni and booster groups to raise funds also, said Buccola. A jogathon included in next year's budget is expected to net more than $30,000.

West emphasized that any income must eventually should go to the athletic director. He added that the athletic director would do what is possible to help fund them and find staffing, but the fund raising must remain in perspective. For example, if only men's sports raise funds, the athletic director cannot solely help fund these sports and ignore women's sports.

Buccola said that he does not hold much hope for fund raisers, since last year each team was supposed to raise funds and tennis was the only one that came out with extra money. Since the money did not come through last year, he cannot put it into the budget proposal and expect it to be there next year.

The athletic department has gone to alumni and booster groups to raise funds also, said Buccola. A jogathon included in next year's budget is expected to net more than $30,000.

MASON & STILLIS ANNOUNCES GRADUATION GRAND BUFFET Lunch and Dinner

Menu Includes: Tender Baron of Beef; carved to your liking. Stuffed Morro Bay Salmon Baked Ham, Roasted Turkey, BBQ Chicken 7 Assortments of Salads. Countess exquisite Desserts. Beverage Included.

Large crowd is expected for Poly commencement

Over 10,000 persons are expected to be in attendance when Cal Poly holds its 75th annual Commencement Ceremony on Saturday, June 13. Scheduled for 10:30 a.m. in Mustang Stadium, the ceremony will include the traditional benediction, introduction of new members of Phi Kappa Phi national honor fraternity, and the presentation of 3,500 candidate diplomas and certificates by the university’s president, Dr. Warren J. Baker, on some 3,500 candidates.

Music for the campus graduation ceremony will be provided by the 65-member Cal Poly Symphonic Band under the direction of William V. Johnson of the university’s music faculty.

Also scheduled on commencement day at Cal Poly are the Senior Breakfast and an initiation ceremony for new members of Phi Kappa Phi national honor society. Both will begin at 8 a.m. — the initiation in the morning and the breakfast at noon.

The new academic year will open with the first day of classes for the Summer Quarter on Monday, June 22. Students completed computer-assisted registration for Summer Quarter courses several weeks ago.

Off everyday prices on all:

- Athletic shoes
- Dolfm shorts
- Sweat clothing
- Baseball undershirts
- Athletic apparel
- Frame packs
- Day packs
- Tents

LOS ANGELES (AP) — As a neighbor shouted
"You're Wonder Woman!" — 70-year-old Wanda Capek
chased two burglars down the street with a cudgel,
shouting them so badly they left the loot behind.
"I was looking for a hatchet. I would have cut their heads off...
If you let those punks know you're afraid, they'll hurt you."

She said she chased them off with a cudgel,
leaving the TV set and taking off for the gate.

Brian Corcoran of La Canada, a junior political
science student, has been
elected to head the student
board that will stage the
university's 1982 Poly
Royal festival.

One of the largest and
best-attended annual cam-
pus open house programs
in the Western United
States, Poly Royal will
have its 1982 renewal on
Friday and Saturday,
April 23 and 24.

As general superintendent
of the event, Corcoran
will lead a group of 10 com-
mittee chairs who will
compose the Poly Royal activities, educational exhibits, fine
arts activities, athletic con-
tests, and special activities
that make up the campus festival.

AMERICAN CANCER SOCIETY
Alternative energy Pied Piper urges ‘soft paths’...

From page 1

Estimates of our energy use and need vary according to the source, he said. Quoting Aldous Huxley, "...all knowledge is fatal to start as heresy and ends as superstition." Lovins divided predications of how much energy the United States will need by 2000 AD into four categories; "Beyond the Pale" (Lovins figures), "Herey" (Sierra Club), "Conventional Wisdom" (executive agencies) and "Superstition" (Department of Energy and power companies). In 1972, Lovins predicted we would need 125 quads and the power companies predicted 160. By 1975, Lovins predicted 70 quads, and power companies and the DOE predicted 124. So Lovins 1972 estimates became the 1976 conventional estimates. Lovins also cited a study by Robert Sant in the Harvard Business Review that posed the question: How much energy would Americans have used in 1978 if, for the past 10 years previous, we had followed a "least-cost strategy" of using the cheapest form of energy available? The answer: 29 percent less oil, 34 percent less coal, 43 percent less electricity, and we would have spent 17 percent less money for the same amount of energy.

The same study predicted that if this least-cost strategy, emphasizing soft rather than hard technologies, were followed for the next 20 years, our total energy use would barely rise despite rapid economic growth, our oil imports would dwindle to zero, and the fraction of our GNP devoted to energy would actually go down. So, rather than driving inflation, the energy sector would become a net exporter of capital to the rest of the economy.

To answer his second question—what types of energy and scale are best suited to the task?—Lovins said we must realize there are many different kinds of energy, with different costs, prices, and qualities suitable to different applications.

Traditionally, energy policy makers have ignored this, he said, "and have treated all kinds of energy as alike, as if it were the same. All kinds of food are alike—some are running short on bread and cheese and turnips and potatoes, but that’s OK, we’ll substitute sirloin steak.‘ We can’t afford to do this with food or energy, Lovins said, and by relying on electricity-producing power plants and their costly product, we are operating for the sirloin steak of energy.

Since when does logic have anything to do with the NRC’s licensing decisions?

Amory Lovins

We should, he said, choose the form of energy which will do the required task in the cheapest way, and is most appropriate for the end-use of that energy. In this country, for example, all the energy needed at the point where it’s finally used, about 58 percent, is necessary for heating—a high figure, considering the amount of energy burned to get the heat needed to produce the heat energy in the first place, when soft technologies can supply ample heat.

Thirty-four percent of our end-use energy needs require portable liquid fuels, and percent need power plants that can be 8 percent, he said, is already supplied by renewable energy resources. In other words, we already have more than enough renewable energy sources to provide electricity for those things that require it over other forms of energy.

Using expensive electricity for tasks that can be completed with cheaper alternatives is like "cutting butter with a chainsaw" or starting "a forest fire to fry an egg," he said.

We are, therefore, asking the wrong question, he said. Instead of debating which is the "best kind of energy" to burn in our cars," or how much a new power plant will cost, we should look at electricity’s real competitors, such as weatherstripping and solar.

The alternative cost of electricity is 0.4 cents per kilowatt hour. The running cost alone of Diablo Canyon nuclear power plant, if it were to be 2 cents per kilowatt hour, please see page 2.
... in solving the energy demand-supply problem

Amory and Hunter Lovins in UU 219 during a press conference before their lecture. From page 6 hour, Lovins said. Since the alternatives are cheaper, "we’re better off not running it." The alternatives are cheaper, "we’re better off not running it." Then asked at the press conference if the fate of the Diablo plant will determine "how long it keeps twitching," Lovins replied the industry keeps twitching. "People are smart," he said; they will buy what’s cheapest. Many new solar plants are being constructed. 15 percent of tract home contractors give as an option to home buyers. "People are smart," he said; they will buy what’s cheapest. Many new solar plants are being constructed. 15 percent of tract home contractors give as an option to home buyers.

GRADUATION CAKES SUMMA CUM LAUDE IN DESIGN, TASTE AND NUTRITION!

"and we’ll deliver ‘em, too!
At The Upper Crust, your graduation cake will be made from scratch, the way you’d make it if you only had the time. Because ALL our products are made that way... with the finest ingredients available... unbekleached flours and El Molino stone-ground whole wheat flour; pure butter, cream and yogurt; rich brown sugar, molasses and local honey; imported vanilla, rum and other flavorings; fresh, carrots, bananas and other fresh fruit. And we add no chemical preservatives, starchers or enhancers. Of course, a cake that earns a 4-point average in flavor and nutrition HAS to get honors in design. And the best way to impress a soft energy policy? Lovins said it is implementing itself: "People are smart," he said; they will buy what’s cheapest. Many new solar plants are being constructed. 15 percent of tract home contractors give as an option to home buyers. "People are smart," he said; they will buy what’s cheapest. Many new solar plants are being constructed. 15 percent of tract home contractors give as an option to home buyers."

"But the best part is... WE WILL DELIVER: the Cal Poly Graduation cake on June 13th. And you can order by phone! For more information, call 927-8227, and ask for Kathie."

Now that you’ve made the grade, make sure your graduation cake will, too!

NOW OPEN SUNDAYS 9 am to 3 pm!
Hafferkamp pinned best coach

BY VERN AHRENDSE
Sports Editor

The banquet circuit is finally over and most of the teams have staged their annual awards ceremonies. Well it is now my turn to start my own set of awards.

Most of these honors are decided with a cross-section balloting from four sportswriters across the nation then on the horse hand some are in.jest.

First off, the coach of the year goes to Russell Hafferkamp followed in the balloting by Andy Proctor, Lance Harter, Joe Harper and Steve Miller.

Anyone who can take no name programs of two dozen misfits and make them into conference champions in one year, well that person has done one heck of a coaching job.

It was the first California Collegiate Athletic Association conference water polo championship that Cal Poly has won in the last 18 years. Poly's 15-1 record under Hafferkamp set a new school record for most wins in one season.

Miller, of course, captured his third straight Southern California Athletic Association Region 8 championship and to an 11th place finish at the nationals.

Harter's track team brought Cal Poly its first AIAW women's national championship with an 18-point win over South Carolina State last month. He also coached the women's cross country team to a 16th place finish at the Division I nationals. Harper came home with Poly's first national championship in the 65-year history of Mustang football.

Miller, of course, captured his third straight national track championship last weekend and his cross country team added a third at the nationals last fall.

There are several outstanding individual feats deserving notice.

The outstanding play of the year goes to Robbie Martin for his game-winning catch at the Zia Bowl, followed by Mike Burris' 56-foot bomb in the consolation game of the national basketball tournament. Pete Neumann's game-winning tip in the national track championship with an 18-point win over South Carolina State last month.

The comeback of the year goes to steeplechaser Ivan Huff. Huff was hit with mononucleosis and strep throat a month ago and coach Miller didn't even think it would be a good time but we want to be able to play some good basketball.

The Cal Poly women's team will be leaving for New Zealand on June 18 for a 15-day, 11-game tour of the country. The overseas athletic excursion is being sponsored by the New Zealand Basketball Federation, Inc.

Each year it allows one women's team from the states to tour its country. Cal Poly, which just missed making the regional tournament last winter, will take on nine different university teams and play the national team twice.

Please see page 10.
Athletes, coaches honored at annual awards evening

Several athletes and coaches were honored Tuesday night at the annual women's athletic banquet. The Cal Poly staff dining room was packed as each one of the women's coaches presented their own coaches trophy for outstanding achievement, leadership and sportsmanship. Official recognition was also given to Poly's athletes and coaches of the year.

Coaches Award winners included Diana Deutschman for volleyball, Laura Buehning in basketball, Lorie Fiertle for softball, Maggie Keyes for cross country, Chris Dubois for track and field, Tammi Whitemore in gymnastics, Lori Lottin in swimming and diving and Page Wilkins for tennis.

The introduction of each athlete was as diverse as the coaches themselves.

"I am giving this award to the player who had the most determination on our team," Kim Graham said of Fiertle. "She would do anything for an out and she saved our skin several times. She was also our only all-league player."

"Definitely, there is only one girl who fits the bill of this award," Proctor said of Whitemore.

"She is the first All-American in basketball that Cal Poly has ever had. She certainly is the greatest skilled athlete that I have ever coached," Marilyn McNeal said of Buehning.

"I am giving this award to the player who had the most determination on our team," Kim Graham said of Fiertle. "She would do anything for an out and she saved our skin several times. She was also our only all-league player."

Player of the year awards in the Southern California Athletic Association were officially given to Keyes for her efforts in cross country last fall, to Marie Lundie in volleyball, to Buehning for her All-American season this winter, to Susan King, Pam Dickie and Donna Haas in gymnastics and to Eileen Kreemer following her conference and national track championship wins in the 1,500 meters.

Conference coach of the year honors were given to Wilton, Harter (for both cross country and track) and Proctor.
Hafferkamp pinned coach of year

From page 8
pect to see Huff in a uniform for the rest of the season. But Huff somehow recovered enough to finish with a tough second place in the national stakepale finals.

Runners-up to Huff was Craig Johnson. Sidelined last year with a knee injury, Johnson came back this year and quarterbacked Poly to the national title.

Backpack theft
A dark brown Caribeo backpack was taken out of the El Corrillo Bookstore Tuesday, June 2 at 12:45 p.m.

Anyone finding the backpack is asked to call Elisa Stevens at 543-1943.

Outstanding achievement after just one year at the helm of the men's water polo team qualified Russ Hafferkamp for the Mustang Daily's First Annual coach of the year award.

Geoscience Programme

We are seeking a Geoscience Programmer with a working knowledge of DEC PDP 11/23 using REX, REX-18, FORTRAN IV. Familiarity with MARS II and MARS IV programming experience desirable for Data Interface Management Programmer. Expertise in oral and written communications skills. Experience with men computer assisted drafting and design system desirable. Relocation assistance.

Fruit and vegetable prices have been on the rise in recent months, according to the latest report from the U.S. Department of Agriculture. The prices of various fruits and vegetables have increased, with some experiencing double-digit price hikes. The report highlights the significant impact that these price increases have on consumer spending, as well as potential implications for food security and nutrition. The rise in prices is attributed to factors such as weather conditions, supply chain disruptions, and increased demand due to population growth. As prices continue to rise, it is important for consumers to consider their options for managing their grocery budgets, such as buying in bulk, utilizing coupons, or exploring alternative sources of food. Additionally, policymakers and agricultural experts are closely monitoring these trends to address potential challenges and develop strategies for ensuring long-term food affordability.

The human spirit—it has been kicked around, battered, bruised and distorted this year. And yet somehow it continues to endure.

We witnessed the shock and agony of once again seeing the attempted assimilations of world leaders. The events, especially the shootings of the pope, shook the very foundations of civilization, and once again we wondered just what kind of a world we were living in. We were reassured by their rapid recoveries.

We saw some good things, to be sure. The Polish labor movement a rebirth of nonviolent activism in the world and a victory for individual freedoms. The Poles proved we can make a difference simply by standing together and saying “No.” They are, truly, the hope of the world.

As students, we also persevered. It often meant forcing ourselves to make a 100 percent effort—and sometimes finding that 100 percent was not good enough. We pressed on.

The human spirit—we wonder if it exists, if it’s a common denominator that ties all of us together. Certainly there are differences in the cultures, races and nations, in the ideas and religions and environments that envelop our world. All people wish to see a better world for their children, to live in peace, to have a little control in their lives and, ultimately, to be able to be themselves.

It’s a fragile spirit. When those who believe in die needlessly and sensibly when they are so young, we wonder why. But after a while we press on.

Turn-of-the-century labor leader Eugene Debs once summed it up rather nicely: “While there is a lower class in am I am. While there is a soul in prison I am not free.”

So we press on.

Editor:
I am writing in response to Mark Kelly’s letter on May 29. The letter that he wrote was a rebuttal to an earlier letter of mine.

In the letter, Mr. Kelly said that nuclear power is dangerous to the environment. He said that we should not spend money on nuclear power, but rather invest in the development of energy. This sounds nice, doesn’t it? Wouldn’t it be wonderful if we could sit around for forty or thirty years and wait for the resources to develop that is clean, not dangerous and practical? It would be nice, but we can’t wait.

Mr. Kelly seemed to have missed the main point of my letter. It was that a war is inevitable if we don’t find a new energy source very soon. The citizens of the U.S. and the world cannot and will not conserve enough fossil fuels to make our supply last any significant amount of time longer. What will happen is that the U.S. will keep trying to get enough oil out of the Persian Gulf to supply our needs. But, other countries, such as the Soviet Union, will want enough oil to supply their own countries. A war is almost inevitable.

With the destructive power which major countries possess, there is a bleak outlook for the future of the world if we don’t implement a new, viable energy source. There are no other alternative sources of energy that are ready now.

Let’s say that we don’t use nuclear power, and the load of being the world’s energy supply remains on fossil fuels. What does the future of our environment look like? First, we will have to do more offshore oil drilling, because oil is just not as plentiful as it used to be on the mainland. This means more drilling like Levent 53, and oil spills don’t help the environment. Also, you ever seen what coal mining does to a countryside. It is a very ugly way. We could sit back and watch the environment go to hell and have our natural resources totally depleted, or we could start to implement nuclear power.

It would be nice if our energy could be supplied in the same way that it was for the past fifty years, it would be nice, but we can’t wait.

Joe Busch

Remove the Bent

Editor:
Cal Poly has had a long standing policy against placing organizational monuments on campus. For example, consider a classic. The Bent is the first of its kind on this campus, and in my opinion a mistake, egotistical, self-centered, and self-gratifying. What kind of culture do we live in? What kind of precedent does this set?

Robert Martin

Senate Bill 246, which is now in front of the state Assembly, proposes to relinquish upon request the names and addresses of all present and former university students and their parents from the state. The Greek row committees consist of: Planning and Construction, Highland Drive. The land will be divided into 14 plots with one acre parcels.

The Greeks are organizing to become a corporation to buy the land from the state. The Greek row committees consist of: Planning and Construction, Photographers Rights, and Lambda Chi Alpha. Public Relations. Paul Green from Lambda Chi Alpha. Each committee will have a faculty adviser to insure departmental input.
