SLO businesses claim profits as students return

BY DEBRA KAYE

Cash registers are ringing across town as Cal Poly enters another year. Businesses in San Luis Obispo report varying increases in sales as they feel the return of Cal Poly students.

Some are temporary increases, as students gather the materials to decorate and set up housekeeping. As the student demand for backpack security increases, according to Carmack, is the thieves not gone amoral. “There are honest people, so the entire problem could be halted completely if people would be careful with their packs,” said Carmack.

Cash registers are ringing across town as Cal Poly students return. “Sales are up 20 percent in our University Square store this month,” said Mark Blumberg, manager of Pacific Home Improvement Center on San Luis Obispo.

“It’s out of our hands and now is the best time to let the NRC lick their own wounds.”

Engineering review

Mistake delays loading of fuel at Diablo Canyon

BY NANCY LEWIS

While anti-nuclear forces were blocking Diablo Canyon during past weeks, a pro-nuclear group staged a counter-blockade. See page 5.

The loading of fuel at the Diablo Canyon nuclear power plant will be held up until the effects of an engineering mistake can be reviewed, the plant’s project information officer said Tuesday.

Greg Prueett, Diablo Canyon project information officer, said a design review Sunday found a discrepancy between a diagram used in the stress analysis of piping hanger systems and the system itself. The hangers support pipes in an auxiliary cooling system at the plant.

Prueett said he couldn’t get any more specific until the problem is reviewed.

Prueett speculated a possible explanation of the error was that a document meant for Unit 2 was mistakenly used for Unit 1.

“We’re not going to know how serious this problem is until our design engineers conduct a thorough review of the systems involved,” he said. “We expect to finish the review by the middle of next week and then we can determine what steps to take to rectify the situation.”

Prueett said no fuel will be loaded until the mistake is cleared up. "The facility won an interim fuel loading and low-power testing license from the Nuclear Regulatory Commission on Sept. 21. A full-power operating license will require additional public hearings and a separate NRC action.

Abalone Alliance reacts

According to Steve Leeds, Abalone Alliance spokesperson, the mistake is being looked upon as positive. “Anything that delays Diablo is good, and this is just the tip of the iceberg,” he said.

“Because of this mistake, the Nuclear Regulatory Commission is going to have to take more note of health and safety.”

Leeds also commented that PG and E has made a “real mistake by not only making this error but also claiming that nuclear power is safe among human and technological error.”

Abalone Alliance representatives estimated 400 protesters remained jailed Tuesday, and all should be out by the end of the week.

About 60 people still remain inside the power plant gates, said Alliance spokesperson, Edia Morris, but they are not affiliated with the Abalone Alliance.

“As far as we are concerned, we know nothing of it,” she said.

According to Leeds, no blockade attack will resume because of the mistake. “It’s out of our hands and now is the best time to let the NRC lick their own wounds.”

Public safety investigator Wayne Cormack cited backpack theft as Cal Poly’s major crime problem.

Those that benefit the most from Poly’s return are the grocery stores. They get both the temporary surge, in housewares, plants, and health and beauty aids, as students set up housekeeping, and a steady overall increase from an increased population that has to eat. However, students eat differently than the regular customer, according to Jack Daoust, manager of the Chorro Valley branch of Lucky’s. “Of course, sales are up in every department, about 30 percent at this store, but there is more movement in fresh vegetables and fruit and in the health food department after Poly students return.”

So the next time you spend a dollar, remember, you are big business in San Luis Obispo.

BY SAN DRA GARY

Backpack theft is the major campus crime problem so far this quarter, according to a Cal Poly public safety investigator.

Twenty-four new coin operated lockers have been installed by the Cal Poly Foundation on the north and south sides of the snack bar to help alleviate the problem, said Wayne Cormack.

“The problem could be halted completely if people would be careful with their packs,” said Carmack.

To operate the new lockers, a quarter is deposited, and then returned after use. Even though there are only 24 lockers Carmack noted that, “Every time I’ve been over there, there have been available lockers.

Yet, the new lockers cannot meet the student demand for backpack security during peak hours of service in the snack bar; said Carmack.

To remedy the situation, the safety investigator sent a memo to Al Amaral, director of the Cal Poly Foundation, recommending the installation of more lockers or a check stand where students could check in their backpacks and valuables while they go into the food service area (where packs are not allow- ed).

Statistics on backpack theft are not compiled by the Cal Poly public safety office. However, statistics for thefts under $200 were up from 173 to 242 last year, according to the Department of Public Safety’s 1981 Annual Report. The report, covered the period July 1, 1980, to June 30, 1981.

“We had four backpack thefts reported in one day,” Carmack stated, speaking of recent thefts in the snack bar.

Yet the entire student population has not gone amoral. “There are honest people who do return packs,” Carmack said.

“I heard about one pack containing $400 which was returned to the book store and to the owner.

Advice from Carmack to students who carry backpacks is to keep them with you since the recovery rate is very low.

“We have made only two arrests for theft of backpacks in the past two years,” Carmack said.

The reason for the low recovery rate, according to Carmack, is the thieves keeping any cash or redeemable books but dumping identifying items far from the scene of the crime.

Pack thefts worry police

U.S., Soviets agree to disagree

UNITED NATIONS—Secretary of State Alexander M. Haig Jr. said Tuesday his talks with Soviet Foreign Minister Andrei A. Gromyko failed to resolve "areas of intense disagreement" between the two superpowers. But he said the fact they talked at all was a good sign.

I suppose there is progress in any such communication," Haig said of the meetings Monday and last Wednesday. "We had a whole host of areas of intense disagreement between the two powers and we had an opportunity to explore the basis of all those issues." However, asked on NBC-TV "Today" show whether the talks had reduced tensions between Washington and Moscow, Haig said, "No, I don't think so. I think the period ahead will have made a substantial contribution."

Haig said he and Gromyko agreed between them to say little about the meetings. They also agreed to continue the discussions early next year, probably in Geneva. But Haig said he did come away with the feeling that the Soviets are as muddled as the United States over the situation in Poland.

"The anguish is probably comparable on their side," he said. "There are a number of disadvantages if they contemplate any more drastic action."

Haig said prior to the meeting he would warn Gromyko against Soviet military intervention in Poland. He said Tuesday, "We have made it very clear, together with our allies, the consequences of Soviet intervention would be profound and long-lasting."

Girl's Laetrile treatment allowed

LOS ANGELES (AP)—An agreement on the next three years of legislation last month for 2-year-old Amanda Accardi was approved in Los Angeles Juvenile Court on Tuesday, 11 weeks after her father forcibly removed her from Children's Hospital and took her to Mexico for cancer treatments that included Laetrile.

The new medical program includes cranial radiation, bone marrow injections of chemotherapy drugs, testing of the child's blood every week, and testing of samples of her spinal fluid and bone marrow every three months.曼." The Savannah River Plant, owned by the Department of Energy and operated by the Du Pont Co., manufactures raw material for nuclear weapons.

Reagan says he wants to cut energy policies

WASHINGTON (AP)—President Reagan ordered the Coast Guard Tuesday to halt the flow of illegal aliens from Haiti and other Caribbean countries into the United States. "The entry of undocumented aliens from the high seas is hereby suspended and shall be prevented by the interdiction of certain vessels carrying such aliens," Reagan said in a proclamation.

He said Monday, "Those are the continuing illegal migration from sea of a large number of undocumented aliens into the southeastern United States."

In the past three years, nearly 50,000 Haitian refugees have arrived in south Florida. The state has filed suit against the federal government to reduce the population of a crowded Haitian refugee camp in south Florida at the edge of the Everglades and to prohibit them from opening others.

In his proclamation, Reagan said the flow of aliens has severely strained the law enforcement section of the Immigration and Naturalization Service and has "threatened the welfare and safety of communities in the southeastern United States."

In an executive order accompanying his proclamation, Reagan ordered the Coast Guard to enforce his order, blocking illegal aliens from reaching U.S. shores. He told the Coast Guard to stop and board ships outside U.S. territorial waters in the southeastern United States. The order also provides for interdiction of vessels at sea outside U.S. territorial waters. The new ceiling of $1,079 trillion, already approved by the House, would amount to $6,942,400 for every American man, woman and child. At 61 per second, it would take 31,688 years just to count a trillion—or $1,000,000,000,000,000...

Hi Mountain's lone resident shares solitude

BY RALPH THOMAS  
Outdoors Editor

I find it wholesome to be alone the greater part of the time. To be in company, even with the best, is soon wearying and dissatisfying. I love to be alone...A man thinking or working is always alone, let him be where he will. Solitude is not measured by the miles of space that intervene between a man and his fellows.

An excerpt from Walden by Henry David Thoreau

Let seven miles to the nearest town and about 20 yards to the modest outhouse in back.

The Hi Mountain Lookout station, with its self-proclaimed "lone" occupant Audrey Sims, stands more than 3,000 feet above the ocean's level, which is visible on the distant horizon.

From atop Hi Mountain there is a clear view of Lopez lake, Arroyo Grande and, on the clearest of days, Mount Whitney.

Sims, an employee of the United States Forest Service, spends five days and nights each week on Hi Mountain. She spends most of her daylight hours in the lookout's 14 foot by 14 foot room, which she calls "home." Her four walls are bird's eye views of the surrounding mountains and meadows.

Within the elevated room is a very condensed version of a home. She sleeps, cooks, eats and works in the same room. Her luxuries are limited—no shower and she must be very conservative with her limited supply of water, which is all pumped by hand.

The only companionship Sims has are her three pets—two dogs and a cat—and the constant hum of the wind. "You get so used to hearing the wind, if it stops you get real nervous." As she speaks her head turns habitually, her eyes scanning the countryside.

Sims says she is used to and enjoys being alone. Visitors to the lookout are rare, except the frequent visits by wildlife.

Evenings at the lookout bring many deer out of the brush and occasionally a bear or two. All wildlife sightings are logged by Sims and used for research and survey purposes.

Sims has a small ranch near Pomo—seven bumpy miles from the lookout. There she spends her two days a week away from the remoteness with her 15-year-old granddaughter and her horses.

During the winter, when there is little threat of fire, Sims stays at her ranch. "I spend all winter making up for being up here all summer," Sims says.

Her away-from-the-lookout hobby is square dancing. She is an active member of three square dancing clubs. At the lookout she spends her hours alone reading, knitting and enjoying her pets—"Smoky," an intimidating German Shepard; "Trouble," a spunky lap dog; and "Bojangles," Trouble's feline friend.

Sims has been with the Forest Service for 16 years. In that time she says she has spotted many fires. She says this year has been an unusually calm fire season, despite a higher than normal potential for fires.

When Sims spots a fire she first locates it on her "firefinder." By doing this she is able to pinpoint where the fire is and inform the Forest Service's central dispatch in Goleta. After reporting a sighting, her duty in the process is finished.

Sims says the Forest Service has closed down many lookouts similar to Hi Mountain's. But with the nearby protection area for the Peregrine Falcons she says the chances are good the Hi Mountain Lookout will remain in service.

Sims says it's likely she will spend several more years on Hi Mountain. She would like to get involved with the Forest Service's archaeological division eventually. She boasts of her impressive accumulation of Indian artifacts.

NRM head strives to boost image

Cal Poly's Natural Resource Management department will be trying to boost its visibility nationwide, according to that department's new head, Robert Wambach.

Wambach, a well known veteran in the natural resource field, said in a recent interview he has a lot of plans for the NRM department.

"The Natural resource department here is small, but in my mind has great potential," said Wambach.

Wambach came to Cal Poly after serving four years as the director of the Montana Fish, Wildlife and Parks department. Prior to that he was the Dean of Forestry for 10 years at the University of Montana.

As director of the Montana Fish, Wildlife and Parks department Wambach was a key member of the governor's cabinet there. He has also served as the president of the Western Association of Fish and Wildlife Agencies, which includes agencies from 14 states and two Canadian provinces.

The new department head said it would be among his goals at Cal Poly to make the NRM department better known in the field. One way he said he will go about this is by expanding curriculum in areas of resource management which other California universities have neglected.

A few such areas of study include urban forestry and biomas energy conversion.

Wambach said he has a great deal of interest in research—a topic of considerable controversy over the past few years here. Wambach spent 10 years as a researcher for the United States Forest Service and said he will encourage it here.

Wambach said he must first build an off campus constituency in his quest to give Cal Poly NRM a "national image." He stressed the primary way of doing this would be through the NRM students.

"This university (NRM department) can serve a great series of needs in Southern California," said Wambach.

Cal Poly is one of three state funded colleges and universities with an NRM program—the others being Humboldt and Berkeley.

Wambach is waiting no time in hiking his department's visibility, as he spent the last several days in Florida at the national meeting of the Society of American Foresters. Among his plans for this trip was to push for the accreditation of his department's forestry concentration.

NHA sets wildlife film festival

The Natural History Association of San Luis Obispo County has once again scheduled its yearly Blue Haven Film Festival.

This year's festival will be held on Saturday, October 17, and Sunday, October 18, at the Museum of Natural History in Morro Bay State Park.

When the only thing you can squeeze between English and German is a Danish...

Sometimes eating can be a real struggle between classes. So when you do grab a snack... grab a milk.

Milk fits any food. Any schedule.

From instant pudding to 3 minute eggs. Twenty-four hours a day. There's nothing like something with milk.

This seal is your assurance of a real dairy food.

Solidarity repudiates Walesa

GDANSK, Poland (AP)—Solidarity's national congress repudiated Lech Walesa and the rest of the independent union's ruling presidency Tuesday for compromising with the Polish government on the new worker self-management law.

The delegates approved the president's overall performance, but by a vote of 245-189 said the "controversial way of making the decision about workers' self-management...was improper and shouldn't happen again."

"Agreeing that making the decision was a result of the need to assume an attitude before the Sejm Parliament session, we have to state that a violation of the principles of union democracy took place," they said.

The resolution also called on the union's 11-man presidency to "define the functions and competence of the experts," or advisers to the union.

Jacek Kuron, head of the disbanded dissident group KOR, was said to have been instrumental in convincing the need to assume an attitude before the Sejm Parliament session, escalating the criticism that domination of the congress for the past two days.

Walesa, who still is expected to be re-elected, responded to the criticism by telling the delegates he had not to be identified.

He said editorial writers and cartoonists had a "saddening" day with the union. When the AMA tried to persuade newspapers and magazines to drop cigarette advertising, the efforts were ignored by many of the same publications that criticized the investment, he said.

The managers of the AMA's stock portfolio bought 25,000 shares of Reynolds and 7,000 shares of Philip Morris "a number of years ago," said the spokesman. The recent sale brought a $900,000 gain, he added.

The stock had been part of $113 million pension fund in the AMA member's retirement plan. Of the AMA's 282,000 members, only 3,200 pay into the pension fund.

Walker Merryman, spokesman for the tobacco institute in Washington, said the industry "has no comment."

AMA sells off tobacco stocks

CHICAGO (AP)—The American Medical Association, long a fervent crusader against smoking, has rid itself of $1.4 million of "embarrassing" tobacco stock, a spokesman said Tuesday.

The sale of R.J. Reynolds Industries and Philip Morris stock was completed recently by the New York investment firm and bank that handle the AMA's stock portfolio, the spokesman said. He said the move stems from publicity the AMA received after it voted against such a move at the June convention.

"The publicity hurt...We've been trying to get people to stop smoking," said the spokesman, who asked not to be identified.

He said editorial writers and cartoonists had a "saddening day" with the issue. When the AMA tried to persuade newspapers and magazines to drop cigarette advertising, the efforts were ignored by many of the same publications that criticized the investment, he said.

The managers of the AMA's stock portfolio bought 25,000 shares of Reynolds and 7,000 shares of Philip Morris "a number of years ago," said the spokesman.

The recent sale brought a $900,000 gain, he added.

The stock had been part of a $113 million pension fund in the AMA member's retirement plan. Of the AMA's 282,000 members, only 3,200 pay into the pension fund.

Walker Merryman, spokesman for the tobacco institute in Washington, said the industry "has no comment."

Controllers eligible for benefits

Striking air traffic controllers in at least seven states are now or soon will be eligible for unemployment benefits after being fired for misconduct. In some states, even fired workers are eligible for benefits after a six- to eight-week waiting period.

But most states are denying unemployment compensation checks to the controllers, either on grounds that their strikes are illegal or that they have been fired for misconduct. In some states though, even fired workers are eligible for benefits after a six- to eight-week waiting period.

President Reagan fired about 12,000 air traffic controllers nationwide shortly after they struck on Aug. 3, violating both an oath they had taken and a federal law.

P. Joseph Perros, Connecticut's labor commissioner, said this week that 75 fired controllers in his state are eligible for unemployment compensation of at least $110 per week.

Some of the 28 striking controllers in Vermont have been collecting unemployment benefits from the state, and the rest have gotten other jobs, according to Donald Kemen, spokesman for the controllers' union.

Within several weeks, striking controllers in New Jersey, Oregon, Alaska, Arkansas and Missouri will be eligible for benefits, officials in those states said.

Controller applications for unemployment benefits still are under review in Delaware, Maryland, Indiana, Georgia, Ohio and Hawaii. In Wisconsin, about 30 controllers had been receiving benefits of up to $175 a week. But the Federal Aviation Administration and Tuesday it had taken steps to halt further payments.

Controllers denied unemployment compensation in California, Florida, New York and several other states have appealed, but so far have not won the right to draw benefits.

Unemployment benefits are paid through a payroll tax on employers. In the case of the controllers, the employer is the federal government.

Texas Instruments

AVAILABLE AT EL CORRAL BOOKSTORE

Get a new slant on math.

"The Texas Instruments new TI-40 and TI-55-II calculators have angled displays for easy-to-see-answers."

The slanted display makes these calculators easier to use in your hand—and that's just the beginning. The economical TI-40, with built-in functions like trig, stat, logs, roots, reciprocals and more, will help you through math and science courses—especially since it comes with the informative book, Understanding Calculator Math.

• The book explains how to use the TI-40 to work through, and understand, common problems.

If you're an advanced math or science major, you'll be more interested in the TI-55-II, which comes with the Calculator Decision-Making Sourcebook. The TI-55-II features 66-step programmability, multiple memories, scientific and statistical operations, conversion factors and much more—a total of 112 functions.

An extremely powerful calculator, at an excellent price. Both calculators have LCD displays that show every life and fit right in your pocket. TI-40 and TI-55-II calculators are sold.

Local radio has something for all

By Jan Munro

The discriminating Cal Poly student would have little difficulty satisfying his audio appetite, be it for that good of country feelin', rock 'n roll you can scream to, sophisticated jazz and classical, or middle-of-the-road hum-along soft rock.

There are at least a dozen radio stations on AM, FM, and from which to choose in San Luis Obispo County. The most logical station for students to listen to is our own KCPR FM 91, which serves as a working lab, for the journalism department. "We have tons of stuff," the station's general manager Brad Lousy said Monday. Along with a format of top-40, oldies, and current non-top-hit songs, KCPR has special programs like Starstruck, the Rolling Stone Magazine Rock Review, Christian Rock, and jazz.

KVEC AM 920 is the oldest radio station in San Luis Obispo county, established in 1938. It's an adult-contemporary station, with more news than the competition. He said that KVEC is very progressive middle-of-the-road music is a cross between sweeps.

KZOZ FM 93 one of the most-listened-to stations around, is a 24-hour station that plays top-40 contemporary hit rock 'n roll by day and "800 blocks" or "kick-ass rock 'n roll" by night. Top-40 adult contemporary rock 'n roll can also be heard 24 hours on KSLY AM 1400, San Luis Obispo's 25-year-old station that is praised for the younger audience.

There are three country stations: KAYT AM 1340; KKAL-FM 1290; and KPPA FM 92.5. KAYT, 56 years old, has a modern country format mixed with golden oldies, while KKAL rotates the top-40 country western hits and KPPA spins adult-contemporary country discs from six in the morning until midnight.

KIGQ FM 104 is a relatively new station; three years old, that plays middle-of-the-road selections of "everything but punk and hard rock 'n roll" 24 hours; according to an employee there, KPPA AM 1250 plays more adult-contemporary from 6 a.m. to midnight.

"The hits of today, tomorrow, and yesterday are featured on KKAL AM 1150, said one woman who works there, with all the top-40 hits as well as oldies that go back as far as 23 years."

Public radio KCBX-FM 90 is an affiliate of National Public Radio, broadcasting many of its radio news-magazine programs, as well as a primary music format of classical and jazz. KPGA FM 96 also plays classical and jazz by night, soft rock by day.

Finally, easy listening fans can tune in to the KCPR FM 91, public radio station.

---

Dairy farmers facing tough times

DOANESBURG, N.Y. (AP) — Richard Hoffman, a dairy farmer, is fed up with the picture he's seeing of his operations: a 4-year-old brick ranch home and an acre farm in rural upstate New York all year around.

And his herd of 100 Holstein—about half of them milkers—is producing a lot more milk than a decade ago.

The improvements have come largely at borrowed money, Hoffman says. The hits of today, tomorrow, and yesterday are featured on KAYT AM 1340, San Luis Obispo's 25-year-old station that is praised for the younger audience.

Judge releases pregnant woman to give birth

SOUTH GATE, Calif. — A judge who sent a pregnant woman to jail for shortchanging a gas station customer by $10 said Tuesday he was only trying to "shock" her. He set her free because she is almost ready to deliver her baby.

Municipal Judge John R. Hopoone asked defendant Mira Delia Galian if she was sure about the petty theft incident four months ago. She speaks no English, so his questions were translated into Spanish by an interpreter.

"Ill," she replied.

"And you don't believe we're ever going to have a recurrence?" he said.

The 35-year-old mother of two, wearing a blue maternity blouse over maroon slacks, gave a loud sigh. - "Where" - after Hopoone ordered her released, with the stipulation she be placed on two years' summary probation and reimburse the victim, Melvin K. Slaun, the $10 by the end of the year.

Slaun, who was not seen in court Tuesday, contended he had given her two $10 bills last May at the self-service station in South Los Angeles where she worked. Ms. Galian had claimed he only gave her one $10 bill. She insisted she was innocent and had refused to enter a plea bargain for a reduced sentence. When Hopoone tried the case last Wednesday, the only witnesses present were Ms. Galian, Slaun and a co-worker of Slaun's who corroborated his testimony.

"The evidence was overwhelming as to her guilt," Hopoone said Monday. "I felt it was premeditation of stealing whether she was pregnant or not.

"If she's not concerned about taking other people's money, why should I have compassion," he had said Monday.

In releasing her Tuesday, he said "victims in this country are entitled" to consideration. He said it's a common practice to give a heavy sentence to "shock" a defendant, then lighten the sentence later.

"We all use the same practice - we try to shock the defendant into realizing that he has been wrong," he said.

Hopoone, a former Los Angeles police officer, said he is convinced Ms. Galian realized she was wrong. He noted that her attorney, Daniel Lopez of South Gate, had said Ms. Galian became "emotionally troubled at the thought her child might be born in jail."

Gov. Edmund Brown Jr. signed bills aimed at cracking down on drunken driving. Brown, legislators and law enforcement officials took turns paying tribute to the Caritas of Sacramento as the major force behind a package of bills that passed. The Caritas, toughest in the state, has passed on the subject.

One bill, AB 41 by Assemblywoman Jean Moorhead, D-Sacramento, will require either two days in jail or a 90-day license restriction for a first conviction of drunken driving, and sharply increase sentences for subsequent convictions.

Other measures are intended to discourage plea-bargaining in drunken driving cases and stop defendants from messing that their blood test exaggerated their drunken state.

Brown also signed a bill to put mothers against drunk driving on the ballot. He signed a bill that raised the blood alcohol limit from .10 to .08 percent. He signed a bill that made it illegal to drive with a child in the car if the driver had a .08 percent or higher. He signed a bill that made it harder to get a restricted license if you have a .08 percent or higher.

Following the arrest of the driver - who was sent to prison but released this month - Mrs. Lightner and other parents formed Mothers Against Drunk Drivers to work for tougher laws.
Pro-nuke student group faces Diablo protesters

BY MICHAEL WINTERS
Staff Writer

While thousands laid their freedom on the line in a blockade of the Diablo Canyon Nuclear Power Plant, one group of Cal Poly students did what they could to decry the demonstrators and sing the praises of nuclear power.

Steve Marquis, chairman of Students for Adequate Energy, said his group picnicked the plant gate "almost daily" to counter the efforts of the blockaders. About 10 members of the group picnicked at the peak of their strength, said Marquis.

"We went out to get the support of the workers who would have been out of work if the blockade had been successful," he said. They also tried to talk to blockaders, but found them "faky," said Marquis. Auxiliary support workers for the blockaders, on the other hand, were reasonable and engaged in "low key, one-on-one discussions" with the protesters, he said.

While debating, the Adequate Energy group handed out literature favorable to their cause. Much of it came from research and industry-related interests involved in nuclear power, such as General Electric and Westinghouse. Other publications included one by Roderick Nash, UC Santa Barbara professor of history and environmental affairs, and H. Arnold Miller, Pennsylvania's Secretary of Health.

"I have connections with people in the industry," said Marquis, and he specifically named PG and E and General Electric. Marquis is active in the on-campus branch of the Electric Power Research Institute, a professional association supportive of nuclear power.

Yet he denied any direct connection with Citizens for Adequate Energy, a California lobbying group that received $300,000 in PG and E support in 1980. Aside from picketing, Marquis has been spreading the nuclear gospel over the airwaves this summer on talk shows on radio stations KLOV in Lompoc and KGO in San Francisco.

This fall he hopes to expand his group's membership beyond its present 50 to 60 membership. He hopes also to attract students from majors other than engineering.

Adequate Energy students are planning a wind power seminar this fall, said Marquis, emphasizing his group does not view nuclear power as the only energy choice.

Wind, geothermal, solar and others are all power sources which need to be explored, he said; we cannot afford to neglect any of them.

"I just installed an active solar unit in my home," he said. None of the blockaders he talked to had solar energy facilities in their homes, he added.

"People Generating Energy is a great misnomer—I haven't seen them generate one lousy watt."

SCHLUMBERGER ENGINEERS
DOWN TO EARTH

EE's, ME's
Physics & Geophysics
We don't fly into the earth, but we do explore it. Just as the crew aboard a shuttle orbiter combines the latest technology and engineering training to explore space, a Schlumberger engineer uses the latest technology to evaluate subsurface formations. Special devices are lowered into wells drilled miles into the earth's crust. These earth probes operate under extreme environmental conditions to provide answers to the petroleum industry. Shuttle Orbiter? No. We use a half million dollar computerized mobile laboratory.

To investigate the possibility of you taking command over the airwaves some day, and weathighouee.

Water polo budget cut despite record season

BY TOM CONLON
Sports Editor

The 1980 Mustang water polo team was one of many athletic success stories at Cal Poly last year.

Capturing three national championships, placing third in two other sports and taking home six league titles are a few of the credits accumulated by the 1980-81 Cal Poly sports program. A remarkable year when you consider the size of Poly compared to some of the schools they competed against, and the limited financial resources available to many of the teams.

In fact, while good years athletically tend to run in cycles on the small college level, in those times of double-digit inflation one factor is quickly becoming constant in the world of Mustang sports—success cannot be measured financially.

First-year head coach, Russ Haffercamp led his team to the finest season in Mustang water polo history last fall, winning the California Collegiate Athletic Association league title for the first time in 18 years while compiling a 16-4 win-loss record, the best in the school’s history.

Haffercamp, a full-time sportswriter, salesman and volunteer coach, accomplished the feat on a $8,000-budget—a sum that barely covered traveling expenses. But if a large budget were the sole criteria for establishing a good team, the Mustangs would have been blown out of the water by almost everyone they played.

For example, the yearly water polo budget at UC Berkeley is $18,000 and at Stanford it’s $28,000.

Despite last season’s success, and in keeping with the budgetary policy toward most “minor sports” at Cal Poly, the polo team’s budget was cut to $600 this year.

“If we really were to make a commitment to water polo we could make a strong run at the NCAA championship,” Haffercamp said. The Mustangs finished last season the no. 16 team in the nation.

The main problem with a small budget is Poly can’t offer scholarships to high school standouts. Haffercamp explained, “If an athlete is a blue chip athlete he is ready to go to a school that offers financial assistance. A national contender could be built around four or five quality players, he said.

Asphalt what he thought about the possibility of the administration eliminating financial assistance, to his team, Haffercamp replied, “It would be a devastating blow to water polo in general. Aquatics is a lifetime sport.”

Naturally, the coach believes any investment in water polo is money well spent, and when a team can finish among the top 20 in the nation on a $8,000 budget few could argue with his claim.

Haffercamp said for the cost of equipping about eight football players the water polo budget could be doubled. “There has to be a commitment by the administration one way or another,” he said, the present uncertainty about the future of some minor sports at Poly is leading to instability.

The polo coaches are not sitting back and waiting for the administration to determine their future, however. Assistant coach Paul Cutino has compiled a list of 860 Poly water polo alumni—“If we could get each person to donate $10 that would mean an additional 8,600 bucks,” Haffercamp said.

Only four starters are back from the 1980 squad—goalie Steve Rigler, Bryan Buck and Al-CCAA All-Americans, Bernie Birnbaum and Bill Cudliller.

“One goal this season is to defend the CCAA championship,” Haffercamp added, “but realistically we’re the third best team in the league. In our first season we have our work cut out for us.”

Deposit required. Master/Charge or Visa accepted © 1981 ArtCarved Class Rings.

SILADIUM rings produce the brilliant lustre of a fine jeweler’s stainless.

Men’s and women’s Siladium rings are on sale this week only through your ArtCarved representative. A visit to the ArtCarved College Ring table will give you the chance to see the full collection of rings for the fall. But hurry on over...this sale runs for a limited time only.

The price of style has just come down!

Save $20 or more on SILADIUM® College Rings ...now only $79.95.

Kickers face Chapman Friday

BY KIRK NOLTE
Special to Daily

The 1981 Mustang soccer team will try to shake their early-season woes this Friday at 7:30 p.m. as they open league play by hosting the unbeaten Chapman Panthers at Mustang Stadium.

Westmont College provided the booters with their first road test of the season Saturday and dealt the Mustangs their worst loss in Coach Wolfgang Gartner’s three years at Cal Poly. 5-1. The loss bright spot in the game was the return of starting halfback and team captain, Rich ten-Beach who played well while wearing a protective cast on a dislocated elbow.

Now 1-4, the Mustangs face the unenviable task of trying to regroup this Friday in their league opener with Chapman (6-0-2). Chapman is off to their best start in history (which includes 1978 and ’79 post season appearances). Three of the Panther wins have come against Div. 1 schools, and another was a 3-0 blanking of Westmont.

Mustang Terri Purling (13) dives to save her team a point in a recent home game. The Mustangs will take on Stanford in Palo Alto on Thursday night.

With Varian, You Have A Choice

Varian Associates is a broadly diversified high technology company that offers you a choice of career paths. If you’re about to receive your degree in EE, EL or ME, you can choose our Varian Alfa Microwave Tube Division, the world’s leading producer of microwave tube products. With an EE or EL Degree, you could work with our solid state amplifiers, microwave oscillators, microwave semiconductors or VIG devices in our Solid State Tube Division in Santa Clara.

Your major is in EE, ME, EL or Computer Science, you could get involved with the leading technology in gas and liquid chromatography products in our Chromatography Division across San Francisco Bay in Walnut Creek, Wulf, there’s more. Our Co-op Program in Palo Alto offers you opportunities in our Co-op Program for its core EL grads to help us advance our leading technology in linear accelerators, the most widely accepted method for cancer therapy and research in the medical profession.

Prohibition spirit

Internal Revenue agents drove sledgehammers into barrels of whiskey smuggled illegally into the United States, sending the barrels' contents spouting into the air like a fountain on the Fourth of July. Policemen raided speakeasies and hauled away patrons who were drinking liquor. In those times when drinking is a socially acceptable custom, it is hard to believe that only 62 years ago moralist groups such as the Women's Christian Temperance Union and the Anti-Saloon League had successfully campaigned the states to pass the 18th Amendment banning the manufacture, sale and transportation of alcoholic beverages.

But in 1933 the 18th Amendment had gone the way of the Charleston and the flipper. It was repealed because of a sufficient percentage of the society opposed the amendment and making a movement impossible.

Prohibition died in 1933, but its spirit lives on. Last Tuesday the spirit returned to haunt the Mustang Daily, as the newspaper's Publisher's Board refused to overturn a lifelong ban against accepting hard liquor advertisements and barred tequila manufacturer Jose Cuervo from advertising in the Daily.

The act of prohibiting a tequila manufacturer from advertising in a college newspaper may seem trivial, especially when set aside such issues as how to curb the high interest and high crime rates, but this seemingly trivial act designers an important constitutional question: Does denying a consumer from placing an ad in a publication infringe upon his or her right to free speech?

While a newspaper cannot be forced to run every ad requested, for a paper to close an its freedom of the press and then deny an individual or company the right to exercise its right to advertise is that paper strikes of hypocrisy. The First Amendment was not written just to protect the New York Times and the Mustang Daily, but to guarantee a community the right to condemn the "imperialist piggie." The right of an atheist to denounce Christianity and the right of a company to promote its product even if a portion of the population does not consider that product morally acceptable.

In short, the First Amendment does not simply apply to an elite country club of journalists, but to all Americans.

It was argued by one member of the Publisher's Board that allowing a Jose Cuervo ad to run in the Mustang Daily might entice undergraduates to buy a bottle, thereby unwittingly contributing to a violation of the law. But the Mustang Daily's Publisher's Board refused to overturn the newspaper of such troubles which states ad material is for informational purposes and not to be considered an endorsement by the Journalism Department or the university.

Similarly, it has been advanced that hard liquor should not be advertised on a supposedly dry campus. Yet former Cal Poly President Robert Kennedy approved beer and wine ads in the mid 70's when the Publishers Board Board was under the auspices of ASI. The Daily has long violated its hard liquor policy by accepting restaurant advertisements which mention cocktails and mixed drinks. What is the difference between running a Jose Cuervo ad and a restaurant ad which promotes "gold margaritas buck a glass nightly"?

Lastly, the Publisher's Board is denying the newspaper a good source of income at a time when the paper is struggling financially.

In 1933 the United States repealed prohibition. The Mustang Daily Publisher's Board should send that spirit back to the grave by repealing its own morally antiquated prohibition law.

Opinion

Editor

With the death of John Lennon, and the attempt on the life of the president, there's no favor to gun control are once again trying to win us over, using arguments based on emotion instead of fact. Japan is always held up as a shining example of gun control works.

because Japan has very low crime rate, and very restrictive gun laws: Do they ever mention that the crime rate of Japanese immigrants in America, where guns are available, is lower? No. That is because you can't get very many votes telling people that is that the society that sets the crime rates, not the laws. One interesting sidelight to Japan's restrictive laws in the highest suicide rates in the world.

According to the 1979 FBI Uniform Crime Reports, no gun control law has ever reduced crime in any area, nor any reduction in crime growth rates compared to other neighboring jurisdictions without such laws.

New York and London have almost identical gun laws. New York has a crime rate five times higher. Why? Because New York doesn't prosecute criminals. Only 1 in 180 people arrested on felony charges in New York is convicted. London has a 90 percent conviction rate. So it would seem that our justice system was a long time ago abandoned.

That is the law of destiny. It's not the answer to our needs. Through the bitter months of struggle, the people never gave up hope. They tried to warn the others who would listen, But many were entrapped by fear. How would they survive without their order k.v.?

"No", they said, "Some things just weren't worth missing".

Well, the power plant was built in a "very spot" it was needed.取 a questioning look around. And pull your head up out of the ground. You must do before you are defeated.

Letters

Overhaul the justice system

Editor

In its fifth year of use some unexpected problems came. The plant was shut down for further observation. Nothing can get something for free. That is the law of destiny. So what are you going to do with your pollution?

The taxes began to rise despite the people's cries. And the power companies sat there smirking. They said: "It will not be us who would lose. It will come out of the pockets of the fools". And in this they were not lying.

So let this be a song to help people think. And set at a time when it is needed. It's a questionning look around And pull your head up out of the ground.

Mustang Daily

We must do before we are defeated

Editor

In the past, people never gave up hope. They tried to warn the others who would listen, But many were entrapped by fear. How would they survive without their order k.v.?

"No", they said, "Some things just weren't worth missing".

Well, the power plant was built in a "very spot" it was needed. "We predict that nothing will happen". "We predict that nothing will happen". "Very me spot" it was said, listen.

I hope to warn the others who would listen. But many were entrapped by fear. How would they survive without their order k.v.?

"No", they said, "Some things just weren't worth missing".
