Lab demolition shocks arch. students

Dean gave the go-ahead

BY JAN MUNRO

Three architecture students were unpleasantly surprised when they discovered their prospective senior project literally bulldozed into oblivion Saturday morning, Sept. 26.

The Architecture "Z" Lab, left over from military buildings erected on the campus during World War II, served as an architecture lab for many years, and was at one time located on the site of the new Robert E. Kennedy Library.

The mysterious disappearance of the "Z" Lab, formerly located in Poly Grove, both puzzled and saddened Andy Door, Gus Joslin and Steve Kuklin, who had been working on a completed proposal for restoration of the lab during winter and spring quarters of last year.

It was also a surprise to George Hasslein, dean of the School of Architecture, who didn't learn about its demolition until the following Tuesday, Sept. 29.

Reasons for demolition

According to Executive Dean Douglas Gerard, who authorized the contract to demolish the building, the "Z" Lab stood in the way of the future construction of the Engineering South Building, as well as the planned extension of California Boulevard.

Gerard also cited the lab's dilapidated appearance in the semi-public area of Poly Grove as a reason for tearing it down.

"The way the building had been abused was, quite frankly, an embarrassment to the University," he said, adding that it had served as a shelter to transients and had become a "hobo haven," Gerard said.

Gerard also said that he had received complaints from some of the women who worked in Poly Grove about the lab denriolitioa shocks arch, students around the building.

According to Door, Joslin and Kuklin, however their plans for the senior project were done at the request of the Allocation Plan" that will take effect next fall.

The way the building had been abused was, quite frankly, an embarrassment to the University," he said, adding that it had served as a shelter to transients and had become a "hobo haven," Gerard said.

According to Door, Joslin and Kuklin, however their plans for the senior project were done at the request of the Allocation Plan" that will take effect next fall.

Plans for the Engineering South Building, it was no longer possible to designate the lab for use by the School of Architecture.

Hasslein said on Aug. 12 he sent a letter to Gerard, Jones and other administrative officials suggesting that the building be moved, and asked for ideas on how to get out-of-state funding for the project.

As a result, the Construction Department had made arrangements to move the building with outside help from firms in San Luis Obispo.

Hasslein also said that several thousand dollars worth of materials for the lab had been purchased and are presently being stored.

New admission plan starts in fall

BY NANCY LEWIS

Students applying to attend Cal Poly next fall will be required to provide more than just their grade point average under the new "Multi-Criteria Allocation Plan."

Under the plan, prepared by Admissions Officer Dave Snyder, students will be required to include personal qualifications along with the traditional grade point average and SAT scores in order to weigh student success.

"Basing the selection of students only on innate academic ability fails to recognize an important array of relevant personal characteristics," said Snyder.

With this allocation plan, Cal Poly will accept applicants from the students who meet the academic requirements, but who lack the other characteristics that are important to the university.

"The process of the multi-criteria selection plan at Cal Poly will begin with enrollment planning in November," said Snyder. This involves finding the number of students the university can enroll to utilize its limited space allocations, according to Snyder.

Variables to be considered in the allocations process are extracurricular activities such as part-time jobs, membership in school organizations and community and church groups, and athletics. Scholastic awards and honors are also considered in this process.

Other factors which will be used to determine whether not the student is admitted to Cal Poly include the student's high school program, class rank, grade point average and SAT score. The courses a high school student takes and his expected years of study at Cal Poly are also considered.

Information about the applicant will come from several sources depending on the applicant's class level as first-time freshman or transfer, said Snyder.

Under the traditional allocation plan, Snyder said, high school students taking harder courses and getting lower grade point averages were being discriminated against.

Ending discrimination

With the multi-criteria plan, this discrimination is deleted, he said.

The plan, he also said, will help Cal Poly progress toward redressing the underrepresentation of women and minorities in engineering and other programs, added Snyder.

The various schools will weigh the criteria in order to find out which students are enrolled. The different criteria will be weighed with a maximum of 25 percent of the total points going toward extracurricular activities, and 75 percent for academic ability.

Chairs from different academic departments met with Snyder Thursday to begin the process of assigning weights.

Cal Poly is the first campus in the California State University and Colleges system to begin a multi-criteria allocation plan, said Snyder.

He added that Cal Poly is the only campus in the OSUC system that turn away a significant number of applicants. The traditional idea of first come, first served, cannot apply to Cal Poly because it is impacted, he said.
Moslem rioters disbursed

CAIRO: In Asyut, anti-riot police broke up a group of Moslems gathered outside a mosque after dawn prayers, and shots were fired, police sources in Cairo said. The gathering was a violation of the one-year state of emergency announced by the new government.

Asyut is a hotbed of Moslem fundamentalism, and there have been several clashes between fundamentalist Moslems and police and Egypt's minority Coptic Christians in the city in the past months.

Egyptian officials, including the new leader, Vice President Hosni Mubarak, have said the attack on Sadat was mounted by a Moslem fanatic. Sadat rounded up more than 1,500 foes last month on suspicion of fomenting Moslem-Christian strife.

The newspaper Al-Ahbar quoted Defense Minister Abdel Halim Abu Ghasba as saying that Sadat assailants were civilians masquerading as soldiers, and a third was a retired reserve officer. The fourth was identified as a major and Moslem fundamentalist whose brother was executed by the government in connection with a Moslem attack on the Cairo military academy in 1974.

Egyptian officials have been quoted as saying that Sadat stood up Tuesday to salute the men charging the reviewing stand, thinking they wanted to present arms.

Military attackers and diplomats who attended the parade told the Associated Press that Sadat's security forces failed to react. They also questioned the government version that the murder team was limited to four men.

They also questioned the government version that the murder team was limited to four men.

Oil platform down in ocean

SANTA BARBARA (AP) — A Texaco oil drilling platform the size of a football field splashed into the Santa Barbara Channel from a barge Oct. 8 after protests by four environmentalists who had occupied it for the past two years.

The platform was erected by four men who called themselves Socialists and who said it would be a blockade in the face of oilfield legal penalties. 

But the union workers—said that Texaco, USA, contracted with a Swiss firm to build the 3,000-ton rig in Japan and have it installed by a Spanish company. 

The platform was sunk by four men who called themselves Socialists and who said it would be a blockade in the face of oilfield legal penalties.

Launch date set for shuttle

WASHINGTON (AP) — With repairs to the fuel- damaged Space Shuttle Columbia almost completed, the space agency on Oct. 8 set a new launch date of Nov. 4 for the ship's off-delayed second orbital flight.

Shuttle Columbia is the first spacecraft scheduled to make a return trip to orbit, and the flight will be a major test of its designed capability to make repeated journeys into space.

The new launch date was set after officials of the National Aeronautics and Space Administration reviewed repairs being made to the craft as a result of a damaging fuel spill Sept. 22.

Newsline

So. Calif. seismic activity

PARADISE, Calif. (AP) — High levels of radioactive
gas, venting of steam from the earth and water
flowing once again through long-dry springs—all signs
associated with pending earthquakes—are being noticed
again in Southern California, scientists said Thursday.

However, they emphasised they are still a long way
from predicting any earthquake.

"I think to describe it as ominous is certainly an ex-
aggeration," said James H. Dieterich, coordinator of
the U.S. Geological Survey's earthquake prediction
program at Menlo Park.

"We are apparently in a period of high seismic activi-
ty in Southern California and that's why we feel we
have to look at these observations carefully," he said.

"But beyond that we really don't have any basis for
predicting an earthquake or thinking that any kind of
serious hazard is imminent."

However, Dieterich did suggest Southern California
may be "closer to a repeat of the great 1857 quake,"
which changed the course of rivers and uprooted an-
cient oak trees. No Richter-scale rating was in use at
the time.

"More time has elapsed and more strain has accu-
ulated between great quakes," Dieterich said of the
current situation. "We're entering the window of
uncertainty for great quakes in Southern California."

The changes over the past few months were serious
even for Thomas H. Heaton and Carl E. Johnson,
USGS scientists working in Southern California, to
notify agency's Menlo Park, Va., headquarters and
urge further research.

AEWACS sale gains support

WASHINGTON (AP) — President Reagan picked up
more Senate support Oct. 8 for his sale of AEWACS
radar planes to Saudi Arabia but an Associated Press
count shows the line is still against him, 57 to 30.

Republican Nancy Kassebaum of Kansas met with
Reagan and then became the eighth senator in two
to days to speak in behalf of the $8.5 billion package.

"I think the assassination of President Sadat makes it
crucial that we reach out to all nodes of govern-
ments" in the region, the senator said.

But the AP count now shows 50 senators committed
against the sale and another seven others leaning
against it.

It shows 21 senators firmly in favor of the sale and
another nine leaning that way.

The remaining 13 senators say they've uncommitted.

Two separate compromise efforts are under way,
however, and Senate Democratic Leader Alan
Cranston, a leading opponent, conceded this week that
Reagan may be able to sway several opponents to his
side.

Cranston said he remains confident the sale will be
defeated.

Sculpture to honor Lennon

LOS ANGELES (AP) — John Lennon, who would
have been 41 years old Friday, will be remembered on
his birthday—the start of the Fourth Annual Los
Angeles Street Scene Festival at City Hall—by the
unveiling of a seven-foot, three-ton bronze statue of
the slain Beatle.

The likeness, depicting the denim-clad Lennon stan-
ding, his weight resting on one foot with his arms
crossed, holding a Mao cap, is the work of Australian-
born Brett Livingston-Stoneg, and took seven mon-
th to complete.

The sculpture has been in the living in the United States for
four years, and gained national exposure when he carried
a likeness of him from the Malibu Rocks— a large boulder that fell onto the Pacific Coast Highway
during landslides nearly three years ago.

"I knew the public would love to see something done
to honor John," the 27-year-old Livingston-Stoneg
said.

The Lennon statue cost $65,000, said the sculptor
and is expected to remain at city hall for one year.

After that, said Joe Terrel, the artistic director of
the Street Scene Festival, "a more visible site"—perhaps at the corner of Hollywood and Vine—will be for its permanent placement.
Two year escapee captured in Boston

S AN QUENTIN, Calif. (AP) — An inmate who dis­ appeared from San Quen­ tin Prison, in a dispute that became known as the dramatic "rub-a-dub-dub" kayaking escapade, has been captured in Boston, a prison spokesman said Thursday.

Spokesman Mike Madd­ing, said Forrest Tucker, 61, was imprisoned on a Sacramento County armed robbery conviction when he escaped Aug. 6 to 9, 1978. He was captured Tuesday in connection with a credit card fraud investigation. Tucker and two other

escapists secretly built the kayak while working in the prison's industry ware­ house, Madd­ing said, ad­ ding that the three had ac­ cess to necessary raw materials—sheet plastic, Masonite, glass bind­ing tape and wood.

"They painted one side of it blue and stenciled, 'rub-a-dub-dub. Martin Yacht Club on the side of it,'" Madd­ing said. "We were unaware of it, they were gone by the afternoon, just before it was time to come in, they launched the boat and rowed away," Madd­ing said.

ASl O.K.'s funds for fall rodeo

BY COREY SIMON

Staff Writer

The ASI Senate has approved a $6,000 budget exten­ sion to the Rodeo Team to finance a Fall rodeo at Cal Poly.

Additional funds for the rodeo will come from a line item transfer of $2,000 which was originally allocated for the team's travel expenses.

Travel expenses for the team have been reduced due to the removal of Ariz­ ona from the West Coast region. A Cal Poly Fall Rodeo will allow the Mustangs to start their season at home. Twenty schools will be invited to participate.

"This will be a school event," Rodeo Coach Ralph Rian­ da told the senate. Rian­ da said the Poly Royal Rodeo has become "too big" for Poly students to participate in and that a Fall Rodeo will give Cal Poly students a chance to participate.

The only problem the Senate ran into was in the wor­ king of the Finance Committee's recommendation which loans $6,000 to the Rodeo Team (a coded group which receives ASI money) and requires the Rodeo Club to participate.

With all his responsibilities, Pickering still says, "It is actually a very small program for a full-time posi­ tion." He spends much of his time doing paperwork.

Coudn't be relocated
But Gerard said Haasdonk had asked if the lab could be moved next to the architecture building, and he had said no, that there was not enough space there nor could he see any other place on the academic portion of the campus to put the lab.

So, on Sept. 15 in a meeting with President Baker, the decision was made to leave the "E" Lab destroyed.

He also said the reason he didn't call Haasdonk to tell him of the decision was that he saw no need to since the building, as of Jones' letter of July 15, was no longer Haasdonk's responsibility.

Planning Committee not consulted

The Campus Planning Committee, which is responsible for the proposed campus plan, was never asked about a relocation site for the lab because it was considered a temporary structure, Gerard said.

The fact that the lab was torn down without anyone being told about it bothered Mike Mosk, a microbiology junior "interested student" who told members of the ASI Wednesday night about its destruction.

Mosk said many organizations on the campus had been interested in the lab as surplus property, and said that it would have served well as an auto hobby shop or crafts center.

Mosk said that an attempt to modify administration processes so that other agencies and organizations can find out about surplus properties should be made.

Meanwhile, Door, Jozlin, and Kiddilin grieved over the loss of the old building, which had once served as a mess hall to Navy pre-flight trainees in the 1940s.

Their initial reaction at finding out that the lab was really gone was one of "extreme depression," Kiddill said. When asked what they plan to do for a senior project, the three students just smiled wistfully and shrugged.

New zebra ID coding system to make library more efficient

BY SHARON REZAK Staff Writer

The Kennedy Library will be receiving an automatic book checkout system in the upcoming months, probably in the spring, according to Library Director David Walsh.

The new system is somewhat akin to current grocery store price read-outs—zebra-striped bar codes will be placed in each book in the library and every student will have a bar code sticker on his identification card.

Library workers will use a light wand to pass over the codes to record necessary information about the book and about the student.

The system's computer will store the student's current address, so if a book is overdue, the computer will know the address of where the book was last taken.

The computer can record data for library workers and researchers as to what books or what type of books are most heavily used, Walsh said.

"Automated Circulation Systems," as Walsh calls them, were purchased for the entire CSUC system. Sacramento State has had one in use for some time and San Francisco State will test the system this semester.

But despite the promising efficiency of the computerized check-out, technical problems have been encountered that have taken months and months to iron out, according to Walsh.

"We're still some distance away from having the system implemented," he said. "Apparent errors were

Get a $20 rebate on the TI-59 Programmable.

Even without the $20 rebate, the TI-59 is special—it's our most powerful programmable, and we've never offered it at a lower price.

The TI-59 gives you up to 560 program steps, or up to 100 memories, plus magnetic card read/write capability. You can also slip in one of TI's Solid State Software modules and successully attack complex engineering, business, statistical and scientific problems. And by adding the optional PC-100C printer, you can record your calculations.

So if you like the idea of having a real programmable power, take us up on our rebate offer. Buy a TI-59 now, and fill out the coupon below. The offer ends Dec. 31, 1981.

Action, romance in The Key to Rebecca

BY TWYLA THOMAS
Rolf Watter
The Key to Rebecca is a perfect blend of everything a suspense-lover could want: exotic romance, spine-chilling intrigue, and a nerve-shattering climax.

Set in Cairo, Egypt, during World War II, a German spy is sent by the Nazis to steal British Army war secrets and transmit them to his leaders. His mission is very dangerous, for his information could give the Nazis a decisive edge in the war.

Clever, imaginative, and daring, Alex Wolff is the epitome of the model Nazi spy. He also has a lot going for him; he was the step son of an Egyptian Bedouin. This helps him to blend in with the country's culture and evade the British.

Wolff makes some mistakes, and gets into more trouble then he bargains for. The British know he's there, but can't find him. However, William Vandam, an English army officer, is the only one who thinks he's a serious threat and makes it his mission to catch Wolff.

Wolff and Vandam become personal adversaries in a desperate race against time and the menace of war. Both have a stake in their eventual outcome: their countries, their futures, and the same woman.

Author Ken Follett goes beyond a basic character development in this novel. He chooses readers in on the backgrounds, personalities, and motivations that drive the actions of the main characters, adding depth and human reality to the story.

Follett duplicates the successful formula of "German spy outwitting the British" that he used in his previous bestseller, The. The Key to Rebecca builds hope for the British side, only to have the balance of power given to the Germans, and vice versa.

How does the spy manage to steal all the classified war information when a massive manhunt is out for him? How does Vandam cope when Wolff slips through his fingers, even under the tightest security, and Rommel is one day's journey from Cairo?

With situations like this posed to the reader, the suspense winds tighter and tighter.

Vandam uses Elene, a beautiful Egyptian Jew, as a bait for the spy and compiles the clues when he fails to locate Wolff. Between them, they are the only ones in Cairo capable of stopping Alex Wolff before he sends the information that would open the doors of Cairo to the Nazis.

This is only one scenario that spices up the novel. It is even more dangerous when sexy belly-dancers, double-crossing thieves and innocent schoolboys are thrown in to catch the readers attention. Follett strikes again.

The plot thickens when Wolff manages to radio British troop movements to his leaders in the desert. As a result, the Nazis advance to within 60 miles of Cairo.

At this point, Cairo is in an uproar, preparing for an imminent takeover by the Germans. For the Nazis need at this point are the set of defense plans the British will use.

Wolff, of course, has the plans. If he sends them to the Nazis, they will defeat the British Army and take over Egypt. Vandam and Elene are in for stopping him, but it's a matter of minutes...

Telling any more of the story would probably give it away.

Rebecca such excellent reading. There will always be something new on the next page that builds hope for the British side, only to have the balance of power given to the Germans, and vice versa.

How does the spy manage to steal all the classified war information when a massive manhunt is out for him? How does Vandam cope when Wolff slips through his fingers, even under the tightest security, and Rommel is one day's journey from Cairo?

With situations like this posed to the reader, the suspense winds tighter and tighter.

Vandam uses Elene, a beautiful Egyptian Jew, as a bait for the spy and compiles the clues when he fails to locate Wolff. Between them, they are the only ones in Cairo capable of stopping Alex Wolff before he sends the information that would open the doors of Cairo to the Nazis.

This is only one scenario that spices up the novel. It is even more dangerous when sexy belly-dancers, double-crossing thieves and innocent schoolboys are thrown in to catch the readers attention. Follett strikes again.

The plot thickens when Wolff manages to radio British troop movements to his leaders in the desert. As a result, the Nazis advance to within 60 miles of Cairo.

At this point, Cairo is in an uproar, preparing for an imminent takeover by the Germans. For the Nazis need at this point are the set of defense plans the British will use.

Wolff, of course, has the plans. If he sends them to the Nazis, they will defeat the British Army and take over Egypt. Vandam and Elene are in for stopping him, but it's a matter of minutes...

Telling any more of the story would probably give it away, and spy novels were written to intrigue and mystify the reader.

A sign of a good novel is making the reader feel a part of the action, and The Key to Rebecca does just that. Whether the action is in the blistering desert or a crowded nightclub, final details lead readers right into the story.

Follett weaves such a web that not the last 50 pages grip the reader with the intensity and fear. Take the phone off the hook; this book commands complete immersion.
Prince of the City: Corruption of the men in blue

BY LORI ANDERSON

Out of the law of justice developed a steady stream of corruption. The law enforcer became a part of the very evil he fought to suppress. And as the corruption of law and order, repeated time and again, is presented once more in Robert Dailv's "Prince of the City," the story of a cop who knew too much.

Unfortunately, we must admit that this time the story is true.

Prince of the City is a story about the unspoken bonds and laws that exist between policemen and how one man went undercover and defined them all.

Daily, who served as New York City Deputy Police Commissioner from 1971-72 and wrote Target Blue, created a list of people. The people and the names are real. Nothing was changed to protect the innocent. Dialogue in the book was taken from censored tape recordings or from interviews reconstructed with the participants.

Daily tells the story of Detective Robert Leuci, a member of the New York Police Department, who has worked his way up through the ranks into the prestigious Special Investigating Unit. The S IU is a collection of the New York Police Department elite. They are men who have taken advantage of whatever means they found available and proven themselves to be the best.

One of the reasons for Leuci's success as an undercover detective is the trust he has generated within his district. In his new position, Leuci realizes the power he has over everyone else. The book begins by equating the guilt Leuci feels, and proving himself as a winner in this fight against corruption. The guilt and alienation Leuci experiences come at a high price.

Leuci's strong sense of responsibility comes into play as Daily tries to explain the relationship between cops and other cops. The job is one of risk, fear and loneliness, where the life of one policeman is often dependent on the reactions and actions of another.

Leuci describes the relationship between partners as closer than brothers, closer than husband and wife. "...the love of cop for cop exists everywhere, transcending all jurisdictional boundaries, is only an extension of the strongest love most cops have ever experienced, the love of partner for partner."

One of the reasons for Leuci's success as an undercover detective is the trust he has generated within his district and his department. The detective feels guilty in betraying these people, but he also feels that they are getting only what they deserve.

Daily leaves the reader wondering who is the winner in this fight against corruption. The guilt and alienation Leuci experiences come at a high price.

The book starts out at a fast pace, full of suspense and excitement, but slows down as the investigation gets underway. Daily dwells on the pressure Leuci is under throughout the book and in the end, one can almost begin to feel stressed.

The conclusion of the book is weak. We find the former star detective and key witness picking up his life and starting over.

In one of his concluding lines, Daily arrives at the essence of the book and an effective conclusion, "Deep down he wanted to believe, he wanted the world to believe, that he had done what he had done because he was a policeman, because he had seen evil growing before his eyes, evil that he himself was part of, and he had moved to end it by the only means open to him. He had come forward not as a rat, but as a cop."

"...of all those he had destroyed, he had destroyed the old Bob Leuci most of all." Robert Leuci was one cop who looked at the price of justice and decided that it was not too high. After he had paid his dues, then came the time to wonder.

Prince of the City is a book possessing many strong points, not the least of which is found in its truth.

Daily leaves the reader wondering who is the winner in this fight against corruption. The guilt and alienation Leuci experiences come at a high price.
Best Evidence: 15-year study of JFK’s assassination

By Mike Carbolli
Managing Editor

Truth is never pure, and rarely simple
— Oscar Wilde

The most politically explosive crime of the 20th century—the assassination of President John F. Kennedy—has finally been solved.

No, we don’t know the name of the person or persons who pulled the trigger or the number of the persons involved. But thanks to David Lifton’s recent best seller, *Best Evidence*, we now understand the basis of the politically motivated conspiracy that took the life of the 35th President of the United States.

*Best Evidence* is the product of Lifton’s 15-year investigation into the inconsistencies surrounding the “official” version of the assassination. Concentrating primarily on medical evidence, Lifton has produced the most controversial book ever written about the Kennedy murder. The work unmask’s a terrifying reality that neither the Warren Commission nor the House Select Committee on Assassinations could uncover.

While past books on the subject have tended to raise a reasonable doubt in the assassination theory, *Best Evidence* goes one step further. The 700-page document details, for the first time, a theory that is consistent with all the medical and physical evidence and eyewitness testimony.

During the mid-1960s while attending classes at UCLA, Lifton pondered the evidence that pointed to the existence of 4 gunmen on the grassy knoll in Dealey Plaza who fired on the presidential limousine from the front. (The Warren Commission in 1964 concluded Kennedy was struck by two bullets fired from behind.)

Lifton notes the preponderance of eyewitness testimony in Dallas indicates the shots came from the knoll. Indeed, pictures of the assassination scene taken after the shooting show spectators and police running toward the knoll area. Among them was Police Officer Joe Marshall, who testified that as he approached the knoll with his gun drawn, he was met by a civilian who produced Secret Service identification.

(According to Warren Commission records, no Secret Service agents were on foot in Dealey Plaza that day.)

Then there is the infamous Zapruder film of the assassination. This graphic historical record of the killing of the president clearly shows Kennedy being thrust backward and to the left with the impact of the fatal bullet. As Lifton notes, the leaves of physics suggest the shot came from the front, the location of the grassy knoll.

Finally, there are the observations of the doctors and staff at Parkland Hospital in Dallas, where Kennedy was taken following the shooting. Hospital personnel who viewed Kennedy while performing emergency procedures to save his life saw only two wounds: a gaping wound in the right occipital bone in back of the head and a small bullet wound in the neck. Doctors viewed the neck injury as a wound of entrance and the head injury as a wound of exit. Clearly, the Dallas doctors’ descriptions of Kennedy’s injuries indicated the shots came from the front.

Yet then did the Warren Commission reject this evidence in favor of placing the blame on Lee Harvey Oswald? As Lifton discovered from talking with former Warren Commission Assistant Counsel Wesley Liebold, it was due to the legal approach used by the Commission.

Under the legal approach, when conflicting evidence is present in a criminal case, every lawyer must decide which evidence is credible—i.e., which is the “best evidence.” For the Warren Commission, the evidence was the official autopsy report, which states all the shots that hit the president came from behind.

At this point, Lifton breaks ranks with many Warren Commission critics. He finds it impossible to believe all the commissioners and the autopsy report were deliberately lied to cover up the fact that there were shots fired from the front. At the same time, however, Lifton could not dismiss the indications that the shots came from the front of the limousine.

How does Lifton resolve this conflict? He proposes a new theory, which Lifton says occurred at the time of the assassination (12:30 p.m., Nov. 22, 1963) and the time of the autopsy (8 p.m., Nov. 22, 1963, according to the FBI). Kennedy’s body was altered. That’s right, there was a “pre-autopsy autopsy.” The real bullet that struck the president were surgically removed and the bullet paths were reversed to make it appear the shots came from the front.

The theory at first may appear ghoulish, even outlandish. Lifton’s research, however, is persuasive. He quotes from a report made by two FBI agents concerning what happened in the autopsy room:

…”Following the removal of the wrapping, it was ascertained that the President’s clothing had been removed and it was also apparent that a tracheotomy had been performed, as well as surgery of the head area, namely, in the top of the skull (emphasis added).

A tracheotomy had been performed in Dallas, but at no time did the Parkland Hospital doctors perform surgery on the president’s head. Thus the surgery had to be done at some time before the official “Beltzhoover autopsy began.

Indeed, between Dallas and Washington, D.C., the Kennedy wound changed. When the official autopsy began, the ocipital bone wound had been enlarged to five times the original size—and no longer was the injury confined to the right rear of the head. The autopsy doctors found a hole in the skull that reached from the back of the head down to the forehead. The wound was occurring as far as the forehead. They also found entry wounds in the back of the head and in the back of the neck.

One of the most surprising revelations made by the House Select Committee on Assassinations was that Kennedy’s brain was missing from the National Museum of Health and Science. All of the photos taken during the official autopsy have not been released to the general public.

Lifton’s account of how the body arrived at the Bethesda Naval Hospital is complex yet compelling. By interviewing those present at the official autopsy, we discover the president’s body was delivered to the hospital by the Secret Service Custody...we have no other choice...to believe ghoulishly altered body involved in the altering of the body—and consequently the assassination itself.

Because the president’s body was in Secret Service custody while en route to Washington, we have no other choice but to believe ghoulishly altered body involved in the altering of the body—and consequently the assassination itself.

The Warren Commission had alienated several powerful groups during his short term in office. Following the Bay of Pigs debacle, Kennedy threatened to “splitter the CIA into a thousand pieces and scatter it to the winds.” Together, he and Attorney General Bobby Kennedy conducted the first serious effort to halt the encroachment of organized crime in American society.

These three elements, indeed, had the power to recruit government officials who were involved in the transportation of the president’s body from Dallas to Washington, D.C.

As Lifton states...”it is unlikely that the architects of this plot can be identified or brought to justice. But that is not the point. The direction they were forced to turn down, and it must be done officially. That would be the most important outcome of a new investigation. If we can’t have justice, perhaps we can at least have the truth.”

Warren Commission critics have long contended that Earl Warren knew the dark secret behind the JFK assassination. By discussing the official autopsy report in the interests of “political stability”—to preserve the social fabric of American society, Kennedy knew he must face a political threat. This threat was the right-wing fringes of the anti-Castro Cuban movement. The Bay of Pigs fiasco, Kennedy knew, was leading to an inevitable showdown with the CIA, organized crime, and the anti-Castro movement—designated by British journalist Anthony Summers in his recent book *Conspiracy*, as those who set up Oswald in his role as patsy in the Kennedy murder.

These three elements, indeed, had the power to recruit government officials who were involved in the transportation of the president’s body from Dallas to Washington, D.C.
The story is complete \with the bureaucratic stall- 
with methods of 
environmental groups, 
governmental red tape.

The hero of the story, 
Nora Goldman, is a highly-
sexed top executive in GSP. 
He, struggling both to 
keep the company 
operating and to warn an 
believing public of an in- 
vitable and severe energy 
shortage.

Aside from Davey Bird- 
song, a self-serving dem- 
gagogue who is misrepresenting a highly 
respected environmentalist 
group called the Requies 
Church, GSP & L is hindered 
by Georges Window Ar- 
chambault, a frustrated 
revolutionary and il- 
legitimate son of a Greek 
esquire.

To make matters worse, 
the power company and 
Goldman are under the 
constant and critical 
scrutiny of an ambitious 
young investigative 
reporter, Nancy Mal- 
ness.

Among Goldman's many 
women is Karen Sloan, a 
bright and intelligent 
woman who is paralyzed 
from the neck down. Her 
ability to survive depends 
upon an electrically 
powered breathing 
machine which does her breathing 
for her.

A series of events, in- 
ccluding ruthless attacks 
with dynamite by Archam- 
bault's Friends of 
Freedom, disables GSP & 
L enough to cause a 
widely broadcast blackout which 
threatens, among other 
things, Karen Sloan's life. 

There are some problems 
with the book. More than 
anything else in the story, 
the sex scenes are hard to 
take. Goldman's sensuality 
knows no bounds, and 
women of all types are 
helplessly drawn to him.

There is no doubt that 
some of the problems fac- 
ing GSP & L are exagger- 
ated, and the story 
smells slightly of pro-big- 
business propaganda.

However, there is also 
no doubt that this book has 
its validity in giving a side of 
the energy issue often igno- 
ned. In any case, it is an ex- 
citing, well-written, and 
truly engaging adventure 
story. One word of warn- 
ing though, don't begin 
reading it until the quarter 
break, unless you plan (m 
reading it until the quarter 
break, unless you plan (m

B.J. sings under the sky

BY SHERRY HEATH

It was cold and windy 
outside the Central 
Coast Christian Academy 
and the clouds threatened 
with rain. It was a warm 
night, the sky began to 
cloud and soon the band 
played the music as if it 
was their heart-warming 
music.

How do you feel?" they 
said. The audience 
responded with a 
cheer for more. The crowd 
was ready to hear 
more songs with an uplif- 
ting message and the 
orchestra performed 
their show.

There is no doubt that 
B.J. is a talented 
performer and the crowd 
responded with a 
cheer for more. The 
band was ready to hear 
more songs with an uplif- 
ting message and the 
orchestra performed 
their show.

But then the Christian 
Academy's student body 
responded with a 
cheer for more. The 
band was ready to hear 
more songs with an uplif- 
ting message and the 
orchestra performed 
their show.

But then the Christian 
Academy's student body 
responded with a 
cheer for more. The 
band was ready to hear

A new entertainment production and promotion team will bring the first of what they promise will be a flood of entertainment to the San Luis Obispo area Sunday at 7 p.m. in the San Luis Obispo Vets Hall.

The opening concert for the recently formed Rich/Dana Productions will feature the local band Chester and the headline group Small Talk.

Chester, formerly Fat and Sassy, is a five-member band which bills its music as "pretty straight forward" rock 'n roll. Chester should not be a new name for local rock enthusiasts as they have played at Shamandsah and Old Port Inn.

Small Talk is a Los Angeles-based group which used to be called Rock Rose. The four-member band plays rock "with a new wave flavor."

The Small Talk-Chester doublebill will be the first of what Rich/Dana Productions hope to be a long line of concerts. Dana Holt and Richard Freeman, partners in Rich/Dana Productions, want to bring entertainment which appeals to a wide audience, including ballets, musicals and Hollywood and Los Vegas acts.

Midnight Show

Tanya Tucker’s father arrested
SPARKS, Nev. (AP) — The father of country singer Tanya Tucker has been arrested after he allegedly threatened Miss Tucker’s road manager with a pocket knife.

Police said they booked Jesse M. Tucker, 64, of McEwen, Tenn., on misdemeanor charges of brandishing a deadly weapon and assault and battery.

He allegedly pulled the knife on Steven M. Wallach, 28, of Nashville, Tenn., after Wallach took an advance of $6,500 to pay salaries and petty cash expenses to the cast of Miss Tucker’s show, which was appearing at a local casino.

Police said Tucker apparently believed Wallach was taking the money for himself. They said he later admitted he had been wrong about the money, but denied having threatened Wallach with the knife.

Five backpack thefts reported
Backpack thefts continue to plague Cal Poly students. Last week five thefts were reported to the campus police, said Wayne Carmack, public safety investigator.

The five packs were reported missing from three locations: a classroom in the former library, the book store and the snack bar.

Two of the missing packs were recovered, Carmack said. In one case the suspect dropped off the pack at the owner’s house, minus several books and a calculator, he said.

“We are going to make a serious attempt to catch the thieves,” Carmack said.

Los Angeles-based Small Talk will play Sunday at 7 p.m. at the San Luis Obispo Veterans Hall. From left to right they are: Chris Barr, Frank Demma, Lou Demma and Carl Johnson.

Review
We invite you to explore the many professional opportunities offered by Ingersoll-Rand, a Fortune 500, multi-national manufacturer, with sales close to the $3 billion mark. Recognized as one of the most prestigious companies in the world’s marketplace, with superior and innovative diverse product lines, we still remain a people-oriented organization. Ingersoll-Rand offers excellent benefits and salary advancement, which will always remain commensurate with demonstrated contribution.

We have exciting career paths for individuals with the following majors:

- Mechanical Engineering
- Electrical Engineering
- Business Administration
- Accounting/Finance
- Personnel
- Sales Engineering

We also have summer intern opportunities for MEs and IEs.

Join our representatives from the SCHLAGE LOCK COMPANY at a reception Monday, October 12th at 8 PM in Science E46

We will be accepting resumes for summer positions for those not able to sign up on our recruiting schedules.

INGERSOLL-RAND
An Equal Opportunity Employer

INGERSOLL-RAND. We will be interviewing on Campus TUESDAY, OCTOBER 13th
"Modernize," they said.
"Compromise," I said. "And I'll have none of that."

For five generations, George Killian's family brewed the Red in Ireland. And for five generations, they were holdin' true to the taste.

But times were changing. And there were some who said George Killian should change, too.

"Before I change the taste," he said, "I'll shut the doors."

And shut they stayed. Then, way out in Colorado, Coors asked if they could bring back the Red.

"Aye, 'tis a grand idea," George Killian answered, "if you be brewin' it my way."

Killian's Red. One sip and you'll know they're brewin' it George's way.

As he says, "I stopped brewin' it once.
And I can stop again."

Killian's Red
For the first time in America.
Students responding to CIA ads

BY JUDY LUTZ
Staff Writer

CIA advertising in college newspapers is generating "a good response," according to the Southern California recruiter who placed an ad in Mustang Daily Oct. 6. Isaac William Walker of the CIA's Lawndale office said the agency has advertised nationwide in college newspapers for several years. UCLA, USC and Loyola Marymount University are among the Los Angeles area colleges where the CIA has placed ads in student papers each semester.

"We prefer to do it through a representative of a major university," Walker said, referring to an academic institution. Walker said the agency actually prefers ads in such papers and that they are "very cost effective." Walker said response from students has been "very enthusiastic," Wentworth and Loyola students have "resolved to state specifically that they are from an academic institution." The ad is aimed at seniors and graduate students in any engineering major, as well as those in computer science, mathematics, physics and electrical engineering.

Walker said there are no minimum GPA requirements for applicants, but declined to state specific requirements for the foreign language and international affairs majors. "The individual ads are tailored to the school, but only those with GPAs above 3.0 are considered," he said. "They are only ads for Russian language, but we employ professionals in all of our foreign language programs, and extend this same approach to the international affairs agency." The ad states that the CIA has a variety of positions for all GPAs and that "no phone number" will be accepted for anyone who writes rather than phone in. Walker added that the lack of a phone number is "necessary in order to see the CIA's advertising in college newspapers." Walker said, adding that the agency does not provide specific requirements for foreign language majors, as well as those in computer science, mathematics, physics and electrical engineering.

Mustang water poloist take on seven teams in Poly tournament

The second annual Cal Poly Invitational Water Polo Tournament opens Saturday, 5 a.m., with the Mustangs taking on Cal Maritime.

Eight teams will be competing for the tournament championship won by the UC Santa Barbara junior varsity team last year. UCBI will not be sending a team to the tournament this year but the field has not diminished in competitiveness although it has doubled in size.

"It's the best matched tournament I've seen," Mustang head coach Russ Hafferkamp said.

In the A-bracket Cal Poly will be up against Whittier College, Pomona-Pitzer and Cal Maritime, while UC San Diego, Fresno State, San Francisco State and Loyola Marymount will be competing in the B-bracket. The winners of the two brackets will face off in the final game on Sunday, 4:45 p.m.

Said Hafferkamp, "We're probably the third or fourth seed, San Francisco might be a little better than us—they're more experienced." The coach predicted Fresno State and UC San Diego would be the two top contenders for the title. The two teams meet at 11:45 a.m. on Sunday.

While Cal Poly might be the fourth best team in an eight-man race, Hafferkamp believes the small dimensions of the outdoor pool (25 yards long) will be "a great equalizer."

"A slower more physical team will be able to keep up with a quicker more skilled team," he said. "The team with the strongest defense and the greatest ability in the cage—a good goalie—will win."

The Mustangs will need an equalizing factor this weekend since five of their regular players will not be operating at full capacity or will not be available for the tournament.

Cal Poly will take on Pomona-Pitzer at 1 p.m. on Saturday and Whittier College on Sunday, 10:30 a.m. Tournament playoffs will begin at 1 p.m. on Sunday. All games will be played in the outdoor pool behind the gym.

Kickers win 4th beat Cal, 2-1

The Mustang soccer team has taken on a new habit in the last week while they have failed to discard an old one. They're still falling behind early but in their last three games the Mustangs have come out winners.

Their latest come from behind victory was a 2-1 stunner against Cal Wednesday afternoon in the first half. Early in the second half Doug Sherrill handed the ball to center forward Michael Moore who then scored his first goal of the season, first of the game.

"I think we're a shoe-in for at least a tie for the league title," Gartner said. Forward Brett Rosenzweig scored the winning goal with an amazing 3-yard, left-footed kick to the upper right-hand corner of the Bears' goal. The score came with 10 minutes left on the clock and was Rosenzweig's second of the season.

"It was the best win this season," said Gartner. These games were the first for the Mustangs on astroturf.

Gartner singled out the return of goalie Randy Smith after a four-week absence as the biggest factor in the Mustang's turnaround. "Smith really looks good...he's a stabilizing influence on defense," he said.

The Mustangs are now 4-4 after a disappointing 1-3 start. Their previous three wins came against Pomona-Pitzer, Chapman College and the University of Massachusetts-Amherst.

Cal is one of the toughest teams on the Mustang schedule. Earlier in the season the Bears played a highly ranked University of Colorado team to a 0-0 tie and dropped a 1-0 decision to a highly ranked University of Connecticut.

Cal Poly travels south this weekend to resume California Collegiate Athletic Association league play against Cal State Northridge on Saturday and Cal State Dominguez Hills on Sunday.

"If we win both games I think we're in a tie for at least a tie for the league title," Gartner said.

Booster BBQ

The Mustang Booster Club will hold its second "Bowl Cruncher" barbecue of the year this Saturday from 5 to 7 p.m. in Poly Grove at the end of California Street.

Tickets are $6 for adults and $3.50 for kids under 12.

SAVE THE WHALE

Mr. Whiskers is in desperate need of a home. Please rescue him from the dock and keep him in his box.

Löwenbräu. Here's to good friends.
The Mustangs will attempt to end a three-game losing streak with this type of aggressive defense when they meet the Santa Clara Broncos Saturday, 7:30 p.m., in Mustang Stadium.

Runners take on No.1 Stanford

The women's cross country team will get a second chance to knock off top-ranked Stanford Saturday, but they will have to do it on the Cardinal's home course.

The Mustangs finished third in the Cal-Nike Invitational last weekend behind Stanford and the Oregon Ducks. Both the men's and women's team will travel to Palo Alto today to compete in the Stanford Invitational.

"Stanford has the greatest mass of talent ever assembled under one jersey color," Mustang coach Lance Harter said. But will this be the Mustangs' national last weekend behind Stanford and the Oregon Ducks. Both the men's and women's team will travel to Palo Alto today to compete in the Stanford Invitational.

"It's a paradox, you want to do the best you can at the invitational but at the same time you want to save your workouts during the week, he said.

"Eileen (Kraemer) is running awesome, Liz (Strangio) is totally peaking right now," Harter explained. The Mustangs were running "leg heavy" last weekend due to some strenuous workouts during the week.

"The men's competition will probably be even keener than women's," Harter added. Stanford's men's team is the leading contender for the Cal Poly. Washington and UCLA fighting it out for second. Stanford's men's team is the leading contender for the NCAA regional, and finals."

The coach predicted Stanford will win the meet with Stanford's men's team is the leading contender for the NCAA regional, and finals."

"If we play our game we will win, they are tough, they want to beat us on our floor," Wilson said.
A domestic CIA

During the summer of 1972, the Watergate story was beginning to surface in the American press. President Richard Nixon, not wanting a political scandal on his hands, attempted a coverup; the president's plan was to politicize the CIA—to use the CIA to deflect the FBI investigation of the Watergate affair away from the White House. It was an obvious abuse of executive power.

During the 1960s and 70s the CIA attempted to assassinate numerous foreign leaders, including Fidel Castro—on many occasions working hand in glove with the Mafia. The agency also experimented with mind control techniques by using unwrapping Americans as guinea pigs. The CIA's involvement in the election of a democratically elected government in Chile in 1971. At the agency this time infiltrated various labor, student and cultural organizations in the United States—none of which had any relation to the CIA's role as an overseas intelligence gatherer, according to Ramparts magazine.

Following the revelations of CIA and presidential abuse, Congress attempted to tame the intelligence monster by placing the agency under strict Congressional oversight. Under the Reagan and Carter administrations, however, the CIA has been unleashed once again.

The president this week formulated an anti-CIA draft order that would allow the CIA to infiltrate and influence domestic organizations as well as to conduct covert operations in the United States. Ironically, this proposal follows an earlier, more restrictive executive draft that Reagan withdrew after a storm of Congressional protest.

If the present proposal will meet the same fate. If we have learned nothing else during the last two decades, we know federal agencies with too much independence have a tendency to abuse their power. And clearly, when it comes to abuses of power, the CIA ranks at the top of the list.

Not only is Reagan's proposal repugnant on moral grounds, it is a blatant violation of the National Security Act of 1947, which forbids the CIA from being involved in domestic operations. Further, Reagan's move will erode 'Americans' Fourth Amendment protections against unreasonable searches.

Propositions of a more independent CIA contend that if citizens have nothing to hide, they shouldn't mind being investigated by U.S. intelligence agencies. Those who hold such opinions, however, fail to understand that the Constitution gives us the right to be secure in our homes without being harassed by Big Brother.

The CIA recently has attempted to change its badly tarnished image by golding off so far as to advertise job opportunities in college newspapers, including Mustang Daily. But a public relations campaign does little to address a bureaucratic system that in the past has allowed the CIA to overstep the legal and moral bounds of traditional American values.

It is conceivable that if Reagan's proposal were in effect in 1972, Nixon could have portrayed the entire Plumbers' affair as a domestic CIA operation and successfully blocked the Watergate investigation under the guise of "national security." That possibility alone should cause all Americans to think twice about this executive order.

Letters

Solar protectionist

My roommate got a job the other day—her first full-time job as a full-jogged college grad. Poor thing came home last night pretty thrashed from the pressure of it all—yes, pressure.

Right here in SLO town.

She looked at me and said, "This is a strange thing. I never had any time when I was in school and now there's supposed to be plenty of it, right?" Wrong. All she wanted to do was crash on the floor—she almost did crash at the dinner table—first face into a plate of chicken chow mein. Poor thing.

Well, I had to stop and think for a minute after that. Here I am taking 18 units, starting to get out of school. I've decided I'm going to be the first kid on my block to get out of college in just four years—novel idea, isn't it?

Rush, rush, rush. Gotta keep up. Get ahead. Don't look now, there's some mystical monster right on your tail and if you slow down for just a second—Crunch. He got you. One measly bite. Bummer.

Time is a funny thing. Never enough of it on the weekends, always way too much of it during that three-hour night class. On Mondays, we can't emit till 10:00. On Fridays, we dread Monday.

Friday. On Friday we dread Monday.

W h o ' s to say? We'll take time to enjoy life. My fantasy tomorrow? Walking, movies. Memories. My fantasy tomorrow? Waking up to see the sun—waking up to see the sun.

Sounds like a cruel destiny to me. I'm not saying "eat, drink and be merry for tomorrow you may die." I am saying that every morning we are each given a new day and it's a drag if we let ourselves get cheated out of it. Little things, however, can add up. I think little thanks to all of us "have to do." We make such grand plans at the beginning of each quarter—how we want to spend so much time with certain people. Then at the end of finals, we look back at the 10-week blur and say: "Where did the time go?" Through a Xerox machine.

You've got time right now; use it wisely. Slow down, relax, stop and smell the pine trees. Don't throw today away, and don't be anxious for tomorrow—tomorrow will care for itself. Just live—live a day at a time.

Author Sherry Heath is a senior journalism major and Mustang Daily staff writer.
