CSUC looks to future

BY TWYLA THOMAS

A committee formed to predict future trends has been formed by the California State Universities and College Board of Trustees at a cost of $60,000.

The committee, dubbed Direction 2000, is being headed by CSUC board member August Coppola, who originally suggested the idea of forming a group that would foresee future trends directly affecting the CSUC system.

The purpose of the committee is to look at the year 2000 and get a sense of the changes that will happen. We’ll look at the pressures, social trends and aspects of education of the future,” Coppola said.

According to Coppola, CSUC is the only university system doing this type of study. The committee will consist of two people each from the following groups: trustees, university presidents, faculty members, staff members and students.

“A kid born today will be in college in the year 2000. We want to know what he will have to face,” said Coppola.

According to Coppola, the committee will work with each other to get information. However, the group hasn’t decided how to present the material.

Coppola said the study will be an enriching and stimulating experience.

“We can plan now for the future because we’ve looked forward,” said Coppola.

The $65,000 committee budget will cover expenses such as travel. Each campus in the CSUC system will contribute $3,200 toward the committee.

Coppola did not specify from what funds the money would be taken.

Police, Greeks to cooperate

BY REENIE CASHMAN

Once police got to a party it can really put a damper on it. But, right now I don’t see any problems with fraternities and the department,” he said.

Several fraternities have delivered social calendars to their neighbors and continue to inform them before any major social events.

The police relationship between sororities and the police is somewhat different.

“As a sorority, we do not hold parties at our house, mostly because sororities here prohibit alcohol in their houses. But, we do stand behind the fraternities and try to work with them to build a strong rapport with not only the police, but the entire city,” said Lori Thomson, president of Alpha Phi Sorority.

“I’ve come from the new party program. Greeks are pulling together and also have the support of the ANI.”

Poly woman hurt

A Cal Poly student was seriously injured in an accident on California Boulevard on Sunday night.

Karen Carroll, a 19-year-old political science major, was riding a motorcycle out of the driveway of an apartment complex at 250 California Blvd. when she was struck by a car driven northbound on California Boulevard, said the San Luis Obispo Police Department.

According to witnesses, Carroll was not familiar with the operation of the motorcycle and was not in control as she entered the street.

Carroll was transported to Sierra Vista Hospital where she is listed in critical condition with head injuries. She was not wearing a helmet at the time of the accident.

Alpha Epsilon Pi could soon be out of a house

BY MAURA THURMAN

Members of Alpha Epsilon Pi may be ousted from their home at 1716 Osos Street if they lose the suit against them which begins today in San Luis Obispo County Superior Court.

In a resolution dated Dec. 14, 1979, the San Luis Obispo City Council stated that fraternity activities would be incompatible with lifestyles of residents in the Osos Street area.

Members of Alpha Epsilon Pi were denied a city use permit for the building and ordered to vacate the house within ten days.

Fraternity members say the building, owned by the San Luis Obispo Boarding House Corporation, Inc., has been operating since that time as a boarding house.

The city’s suit claims the house is a fraternity house operating without the permit required by city zoning regulations. For residents of the neighborhood, the legal distinction is apart from the main issue.

“The point is, they’ve ruined the neighborhood,” said Mrs. Thomas Lynn, who lives next door to fraternity members. "They’ve been here for three years and I’ve aged a hundred.”

Most residents of the house during the last three years have been Alpha Epsilon Pi residents, said fraternity president Dave Cortes.

The group has no official fraternity house, Cortes said, and 18 of the 34 members live at the Osos Street address.

Lynn, 66, has lived at 1716 Osos St. for 17 years. Since the fraternity members arrived, she said, parking and noise have been continual problems.

Three-foot tall Joe Cunha proved that strength is not correlated with height, as he shattered the squat lift record for the 114-pound weight division Saturday at Vets Hall. See sports, page 9.
1.1 million petition to oust Watt

WASHINGTON (AP) — The Sierra Club brought 1.1 million signatures demanding the ouster of Interior Secretary James Watt to the Capitol steps Monday in what the group claimed was the largest citizen petition ever presented to Congress.

The signatures were presented to House Speaker Thomas P. O'Neill and Sen. Alan Cranston, D-Calif.

O'Neill, D-Mass., said the petitions would have an impact and urged the volunteers "to keep it up."

However, President Reagan has expressed support for his controversial interior secretary on several occasions.

Cranston, the No. 2 Democrat in the Senate, called Watt a "puppet of the destroyers" and said the interior secretary in just nine months has grossly tipped the scales in favor of the big oil companies and other polluters who covet the West." "We might look for quarks."

He described the award, which he learned about in an early morning telephone call from a reporter, as a "great honor...a distinction. It shows the work we are doing is appreciated. I don't think it will change the way I live."

"I don't mind waking up for that."

Quarks, existing in theory, carry electrical charges that are only fractions of the charge of an electron. They are believed to be bits of matter. — Arthur L. Schawlow

Stanford prof. wins Nobel Prize

STANFORD, Calif. (AP) - Stanford University Professor Arthur L. Schawlow, one of three men awarded the Nobel Prize in physics Monday, says he may devote future research to looking for quarks, or atomic particles that so far exist only in theory.

"I would like to catch my breath," said the affable physicist when asked what his future holds. "We might look for quarks."

He described the award, which he learned about in an early morning telephone call from a reporter, as a "great honor...a distinction. It shows the work we are doing is appreciated. I don't think it will change the way I live."

The telephone call came "a little after 4 o'clock," Schawlow said.

"I don't mind waking up for that."

Quarks, existing in theory, carry electrical charges that are only fractions of the charge of an electron. They are believed to be bits of matter.

On Campus
Tuesday, Nov. 3rd

while many of our projects are devoted to the development of futuristic technologies to provide energy and materials for the next century, we haven't lost touch with the present needs of the people who have chosen to work with us.

If you're graduating with a basic or advanced degree in the physical sciences, engineering, math or a computational discipline we'd like to meet you. And if you'd like to put your talents to work in an environment that encourages initiative, innovation, responsibility and exploration, ask your Placement Office for details on our upcoming campus visit, or see our ad in this paper next Tuesday, Oct. 27th, for additional information.

SAN FRANCISCO (AP) — Tape recording television programs is costing copyright owners millions. The court that heard Sony's first argument in the matter found that video recording infringes copyrighted television programs. The appeals court supported that decision.

The court did not rule on Sony's contention that the law as it stands is an excessive suppression of freedom of speech. It ruled the video makers are liable for damages.

The appeals court also supported the 9th U.S. Circuit Court of Appeals' ruling that Copyright owners are entitled to full court in any case in which the appeal court holds that the use of a video recorder infringes any copyright.

If manufacturers were ordered by courts not to make and sell video recorders, "great public injury" could result, the appeals court ruling said.

The decision was "an important one for the motion picture industry," said Stephen Kroft, attorney for the plaintiffs.
ASI president charts CSUC budget cut impact

By COREY SIMON
Staff Writer

ASI president Dennis Hawk informed the ASI Senate Wednesday that Governor Edmund G. Brown Jr. had signed an executive order which cuts two percent from this year's budget for the California State University and Colleges System. Hawk also informed the Senate that more state and federal budget cuts are planned.

A two percent budget cut means a $20 million loss for the system and a $1.2 million loss at Cal Poly. The Senate Wednesday that Governor Edmund G. Brown Jr. had signed an executive order which cuts two percent from this year’s budget which could mean $175 to $200 in increased costs for Cal Poly students.

Other plans to reduce spending include departmental cuts, closing down departments, closing unpopular CSUC campuses and decreasing total enrollment by 25,000.

Hawk warned that future cuts in state and federal money will severely "affect the makeup" of Cal Poly’s enrollment by preventing many lower income students from attending. The Cal Poly Financial Aid Office has already turned away many needy students because of federal budget cuts. Hawk urged students to write letters to state and federal representatives so that a return to "elitist education" can be prevented.

In other news, three architecture majors, Andy Dorr, Gus Joslin and Steve Kokkin, came to the meeting to inform the Senate on the recent history of Z-lab. The restoration of Z-lab was to be the three students' senior project, with the work to start this fall.

Last spring, however, an enthusiastic faculty member, Larry Lob, gave the students work study money to start making plans. The students received pay for 240 hours.

The plan, submitted to the trustees this summer, was denied because it did not allow for the new Engineering South building to be built at Poly Grove. The Architecture Dept, made plans to move Z-lab and estimated a $10,000 cost for its relocation and restoration. An alternative was to demolish Z-lab, letting the architecture students salvage the estimated $5,000 in materials. Instead, Z-lab was demolished and hauled away.
CPRS Meeting
The California Parks and Recreation Society will be meeting at 11 a.m. Thursday, Oct. 22 in Science E-47. The meeting will welcome new members, review the Yosemite conference and announce upcoming events.

The Veterinary Science Club will be holding its second meeting of the year at Crest Plaza on Wednesday, Oct. 21 at 6:30 p.m. The meeting will be held in the back of the restaurant and members should bring $2.50.

I.D. Card Distribution
Students who had photos taken during WOW week may pick up their permanent I.D. cards in the UU Plaza from 8 a.m. to 3 p.m. Wednesday, Thursday, Friday and Monday of this week. Plan to turn in temporary I.D. cards at that time.

Pumpkin Sale
Pumpkins will be on sale Saturday and Sunday, Oct. 24-25 from noon to 5 p.m. at crop unit field 26. Come out and pick your own pumpkin. No commandos, please.

Disney Delight!
ASI Films Committee will be showing the Disney movie "101 Dalmations" at 7 and 9 p.m. in Chumash Auditorium Wednesday, Oct. 21.

Women’s Collective
The Women’s Collective will meet in Science E-27 at 7 p.m. Tuesday, Oct. 21. There will be announcements and the movie "Love It Like a Fool."

Birth Control Info.
The Student Health Center holds talks on methods of birth control from 11 a.m.-12:30 p.m. every Thursday. Different methods, their advantages, disadvantages and effectiveness are discussed. Talks are confidential and free of charge.

Space Shuttle Talk
Jack Robertson from Rockwell International will discuss the United States space shuttle project Wednesday, Oct. 21 at 7 p.m. in Science North 216. The lecture is sponsored by ASME.

SAF Meeting
The Society of American Foresters will meet at 7 p.m. Tuesday, Oct. 21 in Science B-05. Items for discussion will include the Mt. Fig project, mistletoe and Christmas trees, Farm City Day and the Halloween party.

Anchors Rally
The Central Coast Motorcycle Association will sponsor a poker run and high mileage contest at 9 a.m. Sunday, Oct. 30. Both events are open to motorcycles only and entry fees will be $2.60 for the poker run and $2.50 for the mileage run. Winners of the mileage contest will split $600 in prize money. For information on location, contact Paul Peterson at 453-6128.

EE Seminar
Peter Heinz of Brown and Root Inc. will give a seminar on engineering in a modern coal-fired power plant at 11 a.m. Thursday, Oct. 22 in Graphic Arts 106. The seminar is sponsored by the Electric Power Institute.

ESSEC Meeting
The Ski Club will meet at 7:30 p.m. Tuesday, Oct. 30 in Chumash Auditorium. Sign-ups and $550 for the Aspen trip will be taken. Final sign-ups and $20 deposits for the Chus Peak trip will also be taken. There will also be a guest speaker and a ski film.

SAF Meeting
Bob Carr, the assistant air pollution control officer for the San Luis Obispo County Air Pollution Control District will speak at 11 a.m. Thursday, Oct. 22 in room 110 of the Air Conditioning Engineering building. There will also be a general meeting of the Environmental Sciences and Engineering Club (ESSEC).

EVELYN WOOD READING DYNAMICS
San Luis woman knocks out a male stereotype

BY MARIE ARRABIT

Mention the words "black belt in karate" and most people conjure up visions of Bruce Lee or Chuck Norris knocking out adversaries with a flying kick.

Enter Nina Tilliet: woman, wife and black belt karate instructor.

At age 29, Tilliet has already acquired black belts in Sun Moo Kwon and Yong Do Won. She travels to Sun Francisco every two months to work on a third black belt.

She first became interested in karate nine years ago while living in Washington D.C.

"I knew absolutely nothing," said Tilliet. "The more I learned, though, the more my interest grew."

And grew it did. Last June Nina founded the Black Rose Karate School, located on Higuera Street in San Luis Obispo, the school gives Tilliet the distinction of being the only woman black belt instructor in the county.

"My Korean masters felt that since I was a woman I could never become a teacher. I guess I proved them wrong," she smiled coyly.

Tillet, also hopes to get more women involved in the male-dominated sport. Next spring she plans to offer a class, developed primarily for women, termed "Defensercise." Defensercise will consist of practicing different self-defense techniques and get a good workout without much of the physical contact men seem to enjoy more.

In terms of exercises, Tilliet feels that karate is also an excellent conditioner for women, as well as men. Not only does the sport develop quickness and body coordination, but it also requires a lot of physical stamina. Perhaps that is why the petite instructor also runs four days a week.

Tillet participates in jazz dancing and ballet too. And eventually her life-long ambition is to incorporate jazz dancing, ballet, and karate into a form of martial arts dance. Although still in the planning stages, Tilliet envisions the new type of dance will be a perfect balance between the masculine and the feminine.

"It will be defense with grace," she emphasizes. "Karate will provide the power and strength, while the ballet and jazz will supply the beauty and rhythm."

Presently, however, Tilliet says that she will continue to teach and develop new programs in karate through her school.
Residence hall officer training program under way

BY CARLA SIMI
Spent in the Daily

The school year officially began for students living in the Cal Poly residence halls. Officer elections last Tuesday and charter presentations last Saturday served as the official university recognition of each of the 18 hall organizations.

And the Third Annual Hall Officers Training program on Oct. 17 launched the Residence Hall Student Leadership Development Program, sponsored by the Housing Department's Program Coordinator's office.

The 1981 Leadership Development program began Monday, Oct. 5, with election campaigning throughout the residence halls, according to Program Coordinator Stephan Lamb.

Last Tuesday, residents voted for their hall officers, and the results were announced that evening during a free Coffee house sponsored by the ASI Special Events Committee in the Sierra Madro Hall lounge.

The four types of residence halls have unique governing formats, but they are all linked through a coordinating group known as the Interhall Council (IHC), Lamb said.

Presidents and vice presidents from each hall form the council and serve two primary functions. "In addition to representing the various area halls, they meet each other on other campus boards and committees," Lamb said.

Some of those groups include the ASI Senate, Poly Royal Executive Board, Foundation Food Services Committee, and the Intramural Advisory Council. The IHC chairperson sits on the ASI president's executive cabinet.

To get the new officers off to a "HOT" start, a day-long training session was held at the IHC on Oct. 17, immediately after elections were held.

Dean of Students Russell Brown congratulates Michele Grant on becoming president of Sequoia residence hall.

Approximately 110 of the nearly 170 newly elected officers participated in Hall Officers Training, where they attended workshops on time management, officers' skills development, and motivation.

The highlight of the day came at the HOT luncheon where hall presidents or their representatives accepted the charters on behalf of their fellow residents.

Guest speakers at the community luncheon included Dean of Students Russ Brown and ASI President Dennis Hawk.

Brown congratulated the new student leaders and stressed the value of involvement in the campus community.

You Can Catch The Wave...

Thursday, October 22

There are a lot of electronic companies you could work for, but only one is the nation's fastest growing integrated circuit manufacturer. If you think you're good enough, talk to AMD. And Catch The Wave.

With your MBA, BS, MS, PhD Degree in Electrical Engineering, Solid State Physics, Materials Science, or Computer Science, you can catch the wave with Advanced Micro Devices. AMD's wave carries the most exciting opportunities in the semiconductor industry with a company that just passed 300 million in sales, and has its sights set on being a Fortune 500 company.

Make an interview appointment at your Career Planning and Placement Center. Or, if you can't make it on the above date, send your resume to Sally Hazard, Manager of College Relations, Advanced Micro Devices, 901 Thompson Place, Sunnyvale, California 94086.

"Heretic' feminist to give speech

BY JUDY LUTZ
Staff Writer

Sonia Johnson, the Mormon woman who was excommunicated in 1979 from her church for her pro-ERA politics, will speak at the Veterans Memorial Building, 801 Grand Ave, on Thursday.

The co-founder of Mormons for ERA, she will speak on the ERA and women's rights at a 7:30 meeting sponsored by the San Luis Obispo chapter of the National Organization for Women. The 85 tickets are available at the door or at the Women's Resource Center, 1041 Chorro St., Suite E.

The fifth generation Mormon, who has a doctorate in education, transformed "From housewife to Heretic" when she campaigned for the ERA and opposed church politics. She was excommunicated in December, 1979 after siding in a three-hour trial found her guilty of defaming the church.

Johnson was charged with causing people not to take the church hierarchy seriously, hurting the missionary effort and preaching false doctrine. She said she told women to tell Mormon missionaries they weren't interested in a church that opposes equal rights for women.

"The unforgivable offense was that I went out into the uninitiated States and the protestants of the Equal Rights Amendment what the Mormons were doing in those States," she said. The Virginia native of four and a half years on the Phil Donahue show shortly after her trial. "They got

members of the church down in the legislatures to lobby. And they organized them to the teeth against ERA."

Anti-ERA Mormons lobbied as private citizens unaffiliated with any group, according to Johnson. Legislators assumed the women were part of a grassroots effort and did not realize church administrators had organized the lobbying, she said.

"The church has chosen politics," Johnson told a Salt Lake Northridge audience last year. "It has chosen to be a political body. It now cannot expect to hide behind ecclesiastical skirts and say 'don't touch us, we're a church.'"

The Utah-based church has long provided that state with judges, governors and legislators. Church President Spencer W. Kimball, who determines church policy, opposes ratification of the ERA, which the church considers a threat to the family.

In her newly released autobiographical book, From Housewife to Heretic, Johnson refers to the suffragist Mormon woman of the nineteenth century.

"That early magazine, the Women's Exponent, is full of rhetoric about women's rights that today's Mormon women would find shockingly radical, and for which, if they were to utter or write it, they would be looked upon with grave suspicion," writes Johnson, who was arrested last August in a pro-ERA demonstration at the White House.

The periodical, first published in 1872, was approved of by the church in its support for women's rights, according to Michael Parrish in a Rocky Mountain magazine article about Mormon society. He said the 1896 Utah State Constitution included an equal rights clause inserted upon by the church.

It reads, "The rights of citizens of the State of Utah to vote and hold office shall not be denied or abridged on account of sex. Both male and female citizens of this state shall enjoy equally all civil, political and religious rights and privileges."

The clause, similar to the modern version of the ERA, guaranteed that Utah women could continue to vote when their territory became a state.

For more information about Johnson's speech, call 544-7579.

Sonia Johnson, whose book From Housewife to Heretic describes how she was excommunicated from the Mormon Church for her pro-ERA stance, will speak at the San Luis Obispo Veterans Hall on Thursday night.
Film on Guatemalan violence to be shown in UU

BY MICHAEL WINTERS

That the world of Central America today is one of political violence is news to no one. Few, however, grasp the depth or magnitude of the violence that has engulfed Guatemala, a nation long known as a country without respect for human life.

This year Canadian National Television produced an investigative program based on the interviews and observations of a woman correspondent in Guatemala titled "We Shoot Commies." It looks at the bloodshed from the point of view of many of the principals from both sides of Guatemala's political violence. On Thursday at 11 a.m., the Central American Study and Solidarity Association of San Luis Obispo will sponsor a showing of the film in UU 220.

The filmmakers try to be complete, but they never claim to be dispassionate. Guatemala is the kind of land that raises passions.

Most of the killing in Guatemala is done by the army and allied paramilitary groups today, according to a new Urbana report to back her contention. "The Indians want to live according to the Gospel is labeled a 'communist.'" "Officially a democracy," says the correspondent. "Any Christian," says one of the organizers, "who wants to live according to the Gospel is labeled a communist."

"Officially a democracy," says the correspondent. "Any Christian," says one of the organizers, "who wants to live according to the Gospel is labeled a communist.

October is 2 for 1 Month
at Padre Plaza Hair Fashions

Diane Metz, the new owner of Padre Plaza Hair Fashions would like to introduce to you her friendly professional staff of three hair specialists Helen Hilden, Diana Munoz and Sherrie Learmonth.

We would like to get to know you and in order to do so we would like to offer to you a hair cut and style for the price of one cut and style.

The offer is good through Oct. 31. We have flexible hours. Give us a call at 541-1124 3250 S. Higuera Suite D.

Weight lifting record shattered

Barbara Yorba prepares for a squat lift in the Central Coast Power Lifting Championships in the Vets Hall.

Weightlifting fans fortunate enough to be at the Veterans Hall Saturday morning were witness to the kind of stuff television shows are made of.

Three-foot tall Joe Cunha of San Jose turned in an incredible performance in the Central Coast Power Lifting Championship, breaking the squat record in the 114-pound weight class.

Cunha's lift of 518 pounds easily beat the previous record of 502 pounds.

Relatively new to the rigorous sport, Cunha has been lifting for a year-and-a-half and has been involved in competition for only six months.

Cunha's club, the International Power Lifting Club, won the team competition in the event.

His height, or lack thereof, has been somewhat of a hindrance in his struggle to the top, Cunha is so short that the racks used to hold the weight bar while the lifters get under the bar and center it above their shoulders will not go down to his level.

Cunha has to bring his own custom-built racks whenever he competes.

The power lifting championship featured many Cal Poly alumni, including former Mustang All-American shotputter, Paul Toma.

Toma captured fourth place in the 242-pound class, "It was a very disappointing day for me. I should of won it," he said.

One-time Mustang football player, Wayne Robinson, finished second in the 275-pound class. Robinson now resides in Fresno.

A Place To Achieve

A semiconductor company recognizes much of its search by the technological accomplishments of its workers. At Signetics, our Good People Projects have an exalted record of advances. It would take literally pages to list all of them.

Measure us by our achievements, and you'll see why a career with Signetics is head and shoulders above many other places.

We offer challenging careers in all phases of engineering product design, test, process, reliability, applications.

If you have a Bachelor's or advanced degree in electronic, chemical or mechanical engineering, material science, computer science, physics, metallurgy, and if you are interested in the challenge of developing semiconductor technology, we want to get to know you.

We'll Be On Campus

Monday, October 20.

Take a look at the Signetics Recruitment Binder at your Placement Center. It will tell you about opportunities with us in California, Utah and New Mexico. Or write Signetics College Relations, Opportunity Center, 611 East Apline Avenue, Sunnyvale, CA 94086. We are an equal opportunity employer.

Mustangs save their best for Davis

BY TOM CONLON

Until the fourth of the Mustangs came-from-behind win over Santa Clara a week ago, Cal Poly's performance on the football field was becoming a fairly predictable matter. A young and inexperienced team, the Mustangs would play a tough and enthusiastic first half only to blow the game later on with a variety of mental errors. Things are starting to change for Head Coach Joe Harper and company though, and the Mustangs are beginning to surprise a few people—including Joe Harper.

Their latest shocker: a complete display of solid, consistent football in a 20-17 victory over Santa Clara last Saturday night in Mustang Stadium.

"I didn't know we had a game like that in us," an elated Harper told Aggie mentor Jim Sochor after the game.

Not only was the margin of victory a surprise, but the apparent ease in which the Mustangs scored their third win of the season was also unexpected. Ranked fifth in the nation in defense among Division II schools, Davis figured to frustrate a Poly team that had only gained 509 yards passing in five games and had experienced some difficulty holding on to the ball in critical situations. "We decided to run at them and see what happened," said Harper.

What happened was the Mustangs picked up 316 yards on the ground—while totally dominating the line of scrimmage; both offensively and defensively.

The Aggies went into the game allowing their opponents a measur 64-yard rushing average, but sophomore tailback Brian Burrell quickly changed that statistic by gaining 99 yards in the first half and at Cal Poly individual career-high of 107 yards in the game.

Poly got their initial score late in the first quarter on a 49-yard field goal by Tom Vassella that narrowly cleared the crossbar.

Picking with the game plan Harper started reserve quarterback Tracy Biller in the second quarter and the sophomore responded with a perfectly arched pass to an open Rick Jones for a 22-yard touchdown.

"They were challenging us on the line of scrimmage and playing for the run, which opened up the passing game," Harper explained.

Biller went three-for-three, picking up 52 yards in the air, while starter Lloyd Nelson hit on four of nine attempts for 41 yards.

The second Mustang touchdown also came in the second quarter when fullback Dan Craig dove into the end zone from the one-yard line. Burrell had gained 66 yards on three carries leading up to the score.

"A one-time shot" paid off for the Mustangs in the third quarter as Santana wide receiver Chan Smith took a Nelson hand off, burst through a large hole in the line, spun off a hit in the secondary, and raced 52 yards for a touchdown. Harper said it was the first time the Mustangs had used the play and that it is unlikely future Poly opponents will see it again.

Nelson took things into his own hands in the fourth quarter, gaining 38 yards passing and running (including a one-yard keeper for six in the Mustangs final scoring drive which started on Cal Poly's own 16-yard line.

On defense the Mustangs made some line up changes that apparently proved to be the difference.
"The key was moving (Shawn) Perrettardi to the inside," said defensive line coach Gordon Shaw. The junior defensive end was moved to a tackle position while sophomore Paul Sverchek started his first game as a Mustang in the left end position.
"We were also rushing the linebackers a lot more," Shaw added. "On passing plays there were five or six guys rushing."
Davis quarterback Ken O'Brien was held to 109 yards on 22 attempts—the Aggies were limited to only 204 total yards, the lowest of any Mustang opponent this year.

Kickers win slowly
BY VALERIE BRICKMAN
Staff Writer
On a lazy Sunday afternoon the Cal Poly soccer team played a rather low key game against St. Mary's. The Mustangs won the game 1-0 as Curtis Apsey kicked in the only goal at about 14 minutes into the first half.
"This was a disappointing game, even though we won, this was not a fired-up game," said Coach Wolfgang Gartner.
"We should have had more goals than we did, maybe the weather had an effect, maybe it was the refs, they were very slow and they talked too much to the players," Gartner said.
"The Mustangs are now 6-6 overall and will be facing Cal State Long Beach this Friday night at 7:30 at Mustang Stadium. "This game against CSLA will be the biggest game for us this season," said Gartner. "If we beat them we should win the league," he added.

Proper perspective

Rep. Leon Panetta (D-Monterey) did the county and the country a big favor last week. He convinced the House of Representatives Interior and Environment Subcommittee on Energy and Environment to review the licensing processes of the Nuclear Regulatory Commission.

Panetta specifically asked the congressional subcommittee to look into how the NRC managed to give the Diablo Canyon Nuclear Plant the go-ahead for low power testing, overlooking a major design flaw the Pacific Gas and Electric Co. noticed six days later.

Although the NRC and PG and E claim the Diablo design flaw was an “isolated” incident, one has to wonder how good of a job the NRC has been doing in reviewing nuclear power plants before allowing them to go on line. The oversight at Diablo Canyon combined with shutdowns of the Rancho Seco and San Onofre plants suggests the NRC is not being as thorough in its task as it should be.

It would appear that the pro-nuclear policy of the Reagan administration coupled with the economic advantages the power companies receive when a nuclear power plant is licensed, exert a major influence on NRC actions. The NRC is set up to review the safety of nuclear power plants to protect the people. In neglecting proper review of safety requirements for political and economic pressures, the NRC is endangering the lives of hundreds of people while protecting the interests of government and the utilities.

We hope the failure of the NRC to notice the design flaw at Diablo Canyon was an “isolated” incident. Whatever the subcommittee determines, we urge the NRC to put their job in the proper perspective and think about people before economics in reviewing plants for licensing.

Beyond windmills

Editor:

Let me add to (or detract from) Bill Weinberg’s thoughtful piece on Direct Action appearing in the Thursday, October 16, Mustang Daily.

I take it that “direct action” means taking the law into your own hands as in the Diablo “blockade” episode. If that incident was illegal, the blame is simply and easily not merely factual, substantive or even conducting. The bulldozers tactics and ridiculous disruptive theatrics at hearings and meetings were each separate isolated episodes turned people against the anti-nuclear argument. Certainly those who knew, and the county has not been shown to support the Diablo Blockade. Less than 200 of the nearly 2000 who were on hand at that trespass were from the local area. That is less than 0.005% of the county residents. Clearly there is minimal support for the anti-nukes.

It does not puzzle me that anti-nuclear actions are made in America. West Germany and Great Britain, but none in Russia. I’m sure that the Russian judicial system would give the anti-nukes a more vigorous reception as opposed to something than in America. I believe they would be more persuasive and difficult in their response to anti-nuclear overtures—maybe a term at hard labor in Siberia. Certainly the blockading tactics would not have his fines forgiven for standing in jail.

The Peace Village idea is just as ridiculous as the Diablo Blockade and certain of non-success. The world has long since gone beyond windmills and sails. The current experiments in energy self-sufficiency are a disaster. If it were not for the fossil and nuclear fuels they need for the production of copper, steel, silicon and plastics, they would not even exist. We would be back to square one: picking nuts and berries for our very survival with no time at all for the arts, literature or whatever else if we had to depend on “energy self-sufficiency.”

Deep six that “Peace Village” idea.

Stanley A. Pruyse

The Last Word:

Don’t fear love

An incredible thing happened to me last week. I was just kind of going along, minding my own business when a friend of mine stopped me. He looked square in the eye and said, “I want to know you— I mean really know you.”

I laughed nervously, then saw she was still staring at me, so I came back with something silly like “Yeah, I want to know you too.”

She just stood there smiling at me and I saw she wasn’t kidding around.

Within a few seconds a debate took place inside of me as the enormity of that statement grasped me. I wondered why she had said that—we weren’t just casual acquaintances, we’d been good friends (according to my standards) for three years. Was she intimating that somehow I had kept my distance? Worse yet, was she threatening to try and open those doors that I’d kept locked inside?

Yes, she was. My first reaction was anger that she had somehow caught me and had the nerve to let me know it. Then the little fear mechanism inside me went off and started saying “Oh my god—you can’t let her see who you really are, with all those weaknesses and insecurities and strange quirks you have. What if she doesn’t like you?”

What if you stick your neck out half an inch and then she says, “Oh, uh, I thought you were different—sorry, and awkwardly gives a little wave of the hand as she walks away. That’d be the pits. Better safe than sorry, you know. Just keep things the way they are.”

But wait a minute here! I turned off that paranoid little voice and started thinking rationally. I don’t think anyone has ever said that to me before.

Matter of fact, I didn’t think anyone ever wanted to know me just for me and not for what they could get from me. Was this an offer of someone really caring? Love without rules to live up to? Maybe somebody could know me and still think I’m OK. But could I take the chance and find out? Let somebody past the mask and see deep into the place in my heart where live?

I asked her—In the eye and, in my state of semi-shock, heard myself say, “I don’t believe this. You want to know me, but I’m not sure I even know you!”

She nodded her head, “Yeah, I know what you mean—it’s a scary feeling, huh?”

No joke, friend. But how ridiculous! Have I was afraid of someone who cared about me, like somehow she wanted to hurt me. It hit me that the strong suit of armor I wore to protect myself was trapping me instead. Wow—I should be thankful for the chance to climb out of the miserable thing. Silly to fear love, the only thing that conquers fear.

I laughed, “Thank you, friend. Thanks a lot.”

She shrugged and smiled, “I ain’t getting to know and love people what life’s all about!”

The Mustang Daily, a newspaper of California Polytechnic State University, is published weekly during the academic year by Mustang Daily, Inc. of San Luis Obispo, California. The Mustang Daily claims no responsibility for the views expressed in letters to the editor. Letters should be no longer than 250 words. Submissions will be edited for length and style, and to omit libelous statements. Letters should be kept as short as possible.

The Mustang Daily encourages readers’ opinions, criticisms and comments on news stories and editorials. To ensure that letters will be considered for the next edition, they should be submitted to the Daily office by 10 a.m.

Press releases should be submitted to the Daily at least a week before they should be run. All releases must include phone numbers and names of the source or organizations involved, in case further information is needed.

All unsigned editorials reflect the majority view of the Mustang Daily Editorial Board. The board consists of Editor Tom Johnson, Managing Editor Mike Carroll and Editorial Assistants Cynthia Barbarr and David Brachman.
