A bleak economic reality is hitting the California State University and Colleges system these days, as it prepares to pare over $60 million from its $1 billion budget for the next fiscal year.

The $69 million slash equals the amount necessary to support an entire medium-size university in the school system or to pay the salaries of about 2,000 faculty.

"It (the reduction) is a staggering blow by any standard," a CSUC report on the budget noted.

In order to deal with this 6 percent cut from the 1982-83 baseline budget, the CSUC board of trustees voted Nov. 18 to increase student fees and reduce enrollment by 6,000 students as well as to cut or minimize programs.

The effect on Cal Poly may be an extra $189 bite out of student wallets, elimination of 800 new students for summer quarter, an increasing workload for the financial aid office, and other reductions in areas such as EOP grants and summer quarter faculty.

In a letter last August, Gov. Edmund G. Brown Jr. ordered state agencies to submit plans to trim their budgets by 5 percent within a short period of time, and with the efforts of inflation and Proposition 13, system officials doubt that any more budget reductions can be handled by the CSUC system.

"Having been faced in the last four years with a series of heavy cutbacks to budget standards already pared to the survival level, the chancellor has agreed with the task force which concluded that significant further program cuts cannot be made," a CSUC budget report said.
Vitamin may prevent blindness

BOSTON (AP) — High doses of vitamin E soon after birth will prevent blindness that results from a disease common among very small babies who are born alive in incubators, a study says.

The disease, called retrolental fibroplasia, results from babies being given too much oxygen in their incubators. Its frequency has increased dramatically in the past decade as doctors rely more on incubators to save the lives of premature infants.

Each year in the United States, the disease causes some visual impairment in about 1,300 children and severely damages the sight of at least 200 of them. Severe cases can lead to blindness.

The researchers who conducted the latest study called retrolental fibroplasia “an important cause of childhood blindness.”

UCLA recipient of Hearst film

HOLLYWOOD (AP) — The Hearst Corp. gave more than a third of its vast Metravision News Library Wednesday to UCLA—some 27 million feet of film covering world news events dating back to 1906, a Hearst spokesman said.

The corporation bowed, calling the newsworthy footage the last such privately held collection in the world, said it intends to donate the remainder of its library—valued at $862 million—to the university over the next several years.

Engineering Students: Visit OCLI December 21 while you're home for the holidays.

See how OCLI engineers in your specialty are advancing technology—working in exciting fields of aerospace, laser fusion and scientific instrumentation to computer peripherals and instant photography. We are continually seeking qualified people in various engineering disciplines and we want you to know the kinds of opportunities which may await you at OCLI.

If you’re a college junior or senior, majoring in engineering—mechanical, chemical, electrical, metallurgical, industrial—OCLI wants you to participate in Engineering Students Day, Monday, December 21. Recent engineering graduates and graduate students also welcome.

Don't miss out. Call collect: (707) 545-6440.

or write: Engineering Students' Day, Optical Coating Laboratory, Inc., 2789 Northpoint Parkway, P.O. Box 1599, Santa Rosa, CA 95402-1599, for details and a reservation form.

Newsline

Actress Natalie Wood buried

HOLLYWOOD (AP) — The widow of movie legend Natalie Wood has been married to actor Robert Wagner since and kissed the flower-covered casket of her husband, Natalie Wood, who was buried Wednesday in the city she loved.

About 100 people gathered around the gravestone on a street of “Midnight in Moscow” floated into the warm audience members. The ceremony included Miss Wood’s two daughters, Courtney, 7, whom she had with Wagner, and Natasha, 11, a daughter by a previous marriage.

The 43-year-old actress’ body, contained in a white casket draped with white flowers, was interred at Westwood Memorial Park after a brief graveside ceremony with eulogies by actress Hope Lange, author Thomas Thompson and actor Rody McDowell.

Honorary pallbearers included Lauren Bacall, Fred Astaire, Gene Kelly, Gregory Peck and Frank Sinatra.

President Johnson signs minimum wage law

WASHINGTON (AP) — President Lyndon B. Johnson signed a minimum wage law Wednesday requiring employers to pay $1.60 an hour for full-time, full-year workers.

The law, which takes effect in January, also requires employers to pay $1.20 an hour for part-time, part-year workers.

Student Day, Monday, December 21. Recent engineering graduates and graduate students also welcome.

Don't miss out. Call collect: (707) 545-6440.

Or write: Engineering Students' Day, Optical Coating Laboratory, Inc., 2789 Northpoint Parkway, P.O. Box 1599, Santa Rosa, CA 95402-1599, for details and a reservation form.

San Francisco Chronicle
Budget cuts reduce system to the 'survival level'

Hawk points out that the same people who were hit with the 2 percent budget cuts were hit with a 4 percent one. In addition, only 19 percent of the state budget is being reduced, leaving 81 percent untouched. For example, none of the community colleges are being affected, said Hawk.

Long battle

"We're still going to fight it (budget cuts) in the legislature," said Hawk, who predicted a "long, drawn-out battle.

The bulk of the $50 million reduction will be offset by increasing student fees, a measure which generates $51 million, said Landrck. Of this amount, $10 million will be used to aid financially assist students who would otherwise be cut. Fees will increase a total of $216, student for the 1982-83 academic year, an amount calculated to include the $46 million to backboard's fee.

"It is hard enough to provide courses for people to graduate if impacted campuses as it is," Hawk pointed out.

Although $10 million is earmarked to help students meet the fee increase, the exact method of distribution has not been reined.

Hawk said the CSUC has 65,000 students for the 1982-83 academic year, an amount calculated to include the $46 million to backboard's fee.

"Students should be planning to bear more and more of the cost," said Ryan. "It may deny access to some students; we can't get around that.

As for the fee increase for this year, Ryan said the financial aid office will try to aid students to compensate for the increase and was successful in a some cases such as maximum eligibility and BEOC recipients. However, he said, more people will have to make up the money on their own.

Ryan doubts financial aid awards will be increased on a large scale to mitigate the effects of the fee increases.

Pessimistic future

As of now, there is no cut-out system for those who cannot afford the fee increase because the Emergency Fund was depleted during the last registration period. Ryan said these loans are due Jan. 8, so paybacks will hopefully again reimburse the fund.

If students need to pay the increased fees for this year and they won't be paid by their financial aid, students will be billed later for the difference. So far, the financial aid office knows nothing specific and isn't sure of their plan of attack.

Another $2.5 million will be whisked from the budget by reducing the funds that would have accommodated the ex- enrollment increase for next year, leading to a denial of access for 5,157 students system-wide, according to a CSUC report.

At Cal Poly, the effect of this has been a freeze on summer enrollment of new undergraduate students. Thus far, summer enrollment by 600 full-time equivalent students, said Cal Poly President Lon Baker.

Despite the freeze on new students, Snyder said the reduction will also influence enrollment figures for other quarters. In addition, there is usually a 5 to 10 percent increase in the number of applicants each year, and since there will be a 10 percent decrease in the number of spaces available, students applying for other quarters will be faced by increased competition for enrollments.

Impacted majors

Snyder said a definite effect of the freeze will be to make it difficult to be accepted into heavily impacted majors of engineering, computer science, and business. He said Cal Poly is a somewhat atypical as far as new enrollment goes, because much of the upward growth it experiences is from people going to school for the work force.

The other major areas targeted for systemwide budget reductions were programs that would require $91 million and program maintenance increase $84 million.

Program change proposals. said Han­ner. represent money allotted system­ wide to either new programs or im­ provements in programs, and are usually $200,000.

For instance, $7.7 million was cut from Instructional Faculty, a program that improved faculty staffing, because Han­ner doubts financial aid awards will be increased for those who cannot afford the fee increase. Han­ner said 50 percent of what we're likely to be.

Other reductions in the budget include $4.1 million cut from the Learning Assistance Program, $900,000 from personnel management and $100,000 from in-service teacher training.

Program maintenance increases are cuts that are taken away from restora­ tions or improvements in the maintenance of programs, said Han­ner. One such reduction is a $1 million cut from the Educational Opportunity Pro­ gram's grant increase request. Ac­ cording to the CSUC finance report, this will affect the size of the grant available to qualified EOP students, but not the size or scope of the EOP.

Another $500,000 was saved by reducing summer quarter faculty staff­ ing at four campuses, including San Luis Obispo. Seven percent of the summer quarter will be eliminated overall.

Other reductions in this area include $500,000 for library development, $80,000 for work study matching, $700,000 for nonresident tuition waivers, $150,000 for public safety emergency fund, and $300,000 for academic program improvement.

Hanner said the task force went through every program to determine if it could be eliminated or reduced and then put these in priority order before reductions were determined. "Our first goal was to protect the essential core of the educational pro­ gram," said Hanner.

Hanner said the task force went through every program to determine if it could be eliminated or reduced and then put these in priority order before reductions were determined. "Our first goal was to protect the essential core of the educational pro­ gram," said Hanner.
Campus councils vote to accept Greek guidelines

BY MAURA THURMAN
Staff Writer

The Cal Poly Interfraternity and Panhellenic councils voted Thursday to accept a standard set of use permit guidelines that hope to ease complaints between Greek groups and the city Planning Commission.

A conditional use permit issued by the Planning Commission is required to establish a fraternity or sorority house in San Luis Obispo. The permit may specify, for example, maximum occupancy or parking facilities for the house.

Although all Greek houses must obtain use permits, each one has until next month to design and build their own. The process doesn’t provide much informal opportunities for fraternity and sorority meetings to work out solutions to problems with neighbors.

The next thing they know, they (Planning Commission members) have to decide whether or not to throw the fraternity off its property.”

The guidelines proposed by Lasts stipulate that any written complaints will be sent to the Interfraternity Council within 14 days after they are received by the Planning Commission.

The executive boards of the fraternity and sorority councils would review the complaint at a meeting including neighbors and fraternity members. Lasts said. If no solution is reached at this stage, the guidelines provide for review by a board comprised of representatives from the city, Cal Poly administration, ASI and the IFC.

Monetary fines or mandatory community service projects might be applied by the IFC as sanctions to Greek groups found to be at fault in disputes, Lasts said.

Neighbors who are still dissatisfied could then appeal to the Planning Commission for review.

Neighbors and fraternity members both “unjustly served” by the present process, Lasts said, because the Planning Commission often receives information from public meetings before the two sides have met.

“The Planning Commission assumes that every effort has been made to work things out,” Lasts said. “The public testimony they get at their meetings, sometimes comes from two sides who have never even seen each other before, much less talked about it.”

The issue is complicated because nearly all fraternity members and sorority house residents, while people who complain about them are often renters.

“The fraternities were there long before the people who are making a fuss about them,” Lasts said. “As property owners, they deserve some consideration.”

Neighbors and fraternity members were equally satisfied, Lasts said. The planning commission is tentatively scheduled for Dec. 11.

The guidelines, if implemented, would have little effect on sorority groups, said Panhel Council head, Terri Bailey. No alcohol is allowed in sorority houses, she said, and therefore sororities hold few parties and generate few complaints.

The main emphasis on the guidelines, which were drawn up by Lasts and IFC member Bill Corcoran, is revision of the use permit review process.

Complaints from neighbors are what commonly prompt the Planning Commission to review a group’s permit. In its present form, Lasts said the process doesn’t provide enough informal opportunities for fraternity and sorority members to work out solutions to problems with neighbors.

Although an Greek houses must obtain use permits, Panhellenic Council head, Barbie Mammone said, “We’re trying to do is smooth the problem out.”

FREED
a foundation opposed to slow growth and government interference

BY MICHAEL WINTERS
Staff Writer

A new political action coalition is forming in hopes of countering what its members see as excessive environmental concerns of local governments, and the threat they feel that concern poses to American values.

Made up of almost 100 business and professional individuals, the Foundation for Responsible Environmental and Economic Development is still in the formative stages, say its organizers.

Already, however, it has been the vehicle for raising funds to finance the suit against blockers of the Diablo Canyon Nuclear Power Plant, and it has come out against the county supervisors' decision to restrict redwood harvesting.

Essentially, said member James A. Ross, owner of Barketronics Inc., a San Luis Obispo electronics firm, the group is a voice for free enterprise.

Members were prompted to join forces, said Ross, largely in reaction to several features the county land use element that controls development; the state coastal plan; opposition to nuclear energy; and the slow-growth attitude of the new San Luis Obispo mayor and other city officials elected last March.

"It is not a group with pure environmentalists," said Ross. "The real problem is pseudo-environmentalists who work for their own self-interest."

Those "pseudo," as Ross called them, promote excessive government to further their ends. Speaking of his personal views, he cited Tom Hayden, Jane Fonda and the Sierra Club as among the chief agents of the pseudo.

"The Sierra Club is dominated by pseudo," he said, and the eco-alien-group, now "advances sandalistic causes."

John S. Ross—no relation to James Ross—is the temporary chairman of the group. A San Luis Obispo architect, he said he was moved to join the organization "in reaction to the difficulty of getting projects built through the government process."

The primary function of the group, said chairman Ross, is educational. He wants to reach public officials and voters with the message of free enterprise and the merits of growth that is responsible, he said.

County Supervisor Jaff Jomann, a supporter of limited growth, said "FREED will probably contribute heavily directly or indirectly to political campaigns."

Their lobbying and support of candidates for office would have a telling effect on county government policies, he said, but he claimed it was too early to make any conclusive statements about the group's impact.

Actual involvement in political campaigns, said chairman Ross, will be only a secondary concern of FREED, not a part of its main role of education.

City councilman and Cal Poly professor Allen K. Settle came into office last March along with Mayor Malana Billig and other candidates identified with slow-growth policies. He contended Wednesday that FREED members have to keep in mind the limitations and costs of services to any new developments.

Faulty fish screens may halt canal construction

SAN FRANCISCO (AP) — California's top water official told a skeptical state senator Wednesday that work on the Peripheral Canal would stop if measures to protect fish didn't work.

"Are you telling me if we have a canal nearly completed and millions of dollars are spent and someone says, 'Ah, the fish screens don't work,' state officials will halt construction?" asked State Sen. Barry Keene, D-Mendocino.

Keene, an opponent of the proposed, 43-mile canal, was questioning Ronald R. Robie, director of the Department of Water Resources. Robie was one of 21 witnesses invited to testify at a hearing by the Senate Select Committees on Coastal Fisheries and Aquaculture, which Keene chairs.

The Legislature has authorized construction of the canal, which would divert water from the Sacramento River to use by Southern California. The 409-foot-wide conduit would carry water from a point on the river south of Sacramento to the main state water project intake west of Stockton.

A referendum will be held in June so that voters can accept or reject the Legislature's authorization.

Robie insisted that "if the fish screen doesn't work, the canal won't be finished." The fish screen would prevent fish from being pumped from the river into the canal.

The water official said that a state constitutional provision mandating that such a water project "enhance" fish populations would force a halt to construction of the controversial aqueduct if it appeared that reproduction of fish was being harmed.

"What's more, Robie said. "There are people in this room who would bring lawsuits to make sure construction was suspended. Robie was referring to representatives of environmental groups who testified at the hearing that fish populations would be depleted if the canal is built regardless of what steps were taken to protect reproduction of fish.

Michael Harris, vice president of the Oceanic Society, was one of the environmentalists. The "abrupt reduction in fish and shellfish that have occurred elsewhere will occur" in California if water is diverted from the Sacramento River to Southern California, Harris said.

Harris cited the depletion of fish population in Chesapeake Bay, the Nile Delta in Egypt and the Volga River in the Soviet Union as examples of the devastating effects of water diversion projects.

Floyd Anders, deputy regional director of the National Marine Fisheries Service, said that if not too much water is exported from Northern to Southern California, the Peripheral Canal might actually increase fish populations, as proponents claim.

Freed...

From page 5

"This is a group who want to develop their own land...I would probably feel the same way if I were in their shoes," he said.

Many FREED members are property owners from the county airport region who have been frustrated before in their attempts to gain permission for dense residential and commercial development, he said.

Extension of fire and police service, as well as utilities to such far-flung locations is hard to carry out in this era of government austerity, said Betts.

A more fundamentally laissez-faire philosophy would remove some of these obstacles to commercial growth, chairman Roos believes. Part of the problem can be traced to the loss of the work ethic that made America great, he said.

Professor authors book

A Cal Poly faculty member is author of a recently published book designed to help architectural draftsmen reduce the time needed to find usable data.

Titled "Architectural Draftsmen's Reference Handbook," the book by Dr. Jack R. Lewis of Cal Poly's School of Architecture and Environmental Design was released in September by Prentice-Hall Inc. of Englewood Cliffs, N.J.

Floyd Anders, a Cal Poly faculty member since 1969, said his experiences as a draftsmen, practicing architect and university teacher has revealed a lack of easily available up-to-date quick reference material. He said his book is a collection of information from manufacturers, trade associations and individuals. Parts of it are also from previously published material, often condensed or rearranged, and parts have never been previously published.

George Killian liked his new mugs so much he bought 5000 of them for Christmas presents.

And a grand Christmas gift it is. George is suggesting a special holiday offer of the mug and a six-pack of his glorious Killian's Red to anyone who buys the George gift box. George's label, from right off the bottle, is etched deep into the glass. So do your Christmas stocking early.

An imported pinch pint mug" said George, "now that's the proper way to enjoy my Killian's Red." Indeed.

Looking for that special Christmas gift? Then look at an HP-41CV, the most powerful personal calculator Hewlett-Packard has yet designed. It can easily handle masses of data to solve big problems quickly—from stock and bond evaluation to engineering design.
Police campaign against holiday drunken drivers

BY SANDRA GARY

Strong media and law enforcement campaigns against drunken drivers will be waged during the holiday season from Thanksgiving to New Year's, said Sgt. Gary Orbeck of the San Luis Obispo City Police Department.

The campaign, "Avoid The Nite," is an annual program involving local San Luis Obispo County law enforcement agencies.

"Basically the nine law enforcement agencies have a media and law enforcement campaign to arrest drunk drivers," Orbeck said. "Extra officers are assigned to go out and look for drunk drivers."

The penalty for misdemeanor drunk driving, according to the California Vehicle Code, is a sentence of 48 hours to six months in the county jail and/or a fine of $266 by completing one of those programs.

"In reality a person convicted for the first time for drunk driving does not get jail time," Orbeck said.

One alternative to jail time for a convicted drunk driver is the completion of an alcohol abuse or Driving While Under the Influence (DWI) program. A convicted drunk driver can reduce his fine to a minimum of $58 by completing one of these programs.

Under current law all jail time may be suspended, but a new law will go into effect Jan. 1, 1983, which mandates that all first-time convicted drunk drivers serve at least two days in jail or have their license suspended for 90 days. Convicted drunk drivers will also not be able to contest their state of drunkenness if their blood-alcohol level is .10 percent or more.

Drunk driving penalties are being toughened because of the grim traffic death toll statistics which reveal that half the traffic deaths nationwide are caused by people drinking and driving, said Wayne Hansen, alcohol health educator for the county.

"Of all those who are killed, 80 percent are under 25," Hansen said. "Injuries are usually at least 10 times as high as fatalities."

In San Luis Obispo County last year 19 people were killed as a result of mixing alcohol and driving. All were under the age of 25, Hansen said.

Arrests for drunk driving in the county numbered 88 last December, said Steven Seybold, San Luis Obispo City Police crime prevention coordinator. There were 40 arrests for public drunkenness during December 1980, and 558 people were arrested for drunk driving in 1980, he said.

"My guess is that a majority arrested are college age kids," Seybold said.

Since Cal Poly is a dry campus, alcohol-related problems are not paramount, said Wayne Carmack, public safety officer.

"We don't get much of that type of thing on campus," Carmack said. "If we arrest maybe one or two drunk drivers during each of the major holidays, and maybe a couple of people drunk in public," he said.

Alcohol related crimes are so minor on campus that no statistics are available. Yet Hansen approximated that 40 percent of the Cal Poly student population misuse alcohol.

Hansen said misuse of alcohol is "using alcohol in a way that might be harmful to a person."

Alcohol is a depressant which taken in large doses can be lethal, said Vaughan Hitchcock, a first aid instructor.

The amount of alcohol a person can drink before he reaches a dangerous blood-alcohol level differs from person to person depending on the person's size, tolerance, whether or not he or she has eaten, and time elapsed between drinks.

Hitchcock told the story of a Morro Bay High School student who two years ago drank Tequila with his friends. His friends took him home and put him to bed. They returned the next morning to find him dead.

The boy died when the alcohol depressed his respiration and heart rate until they stopped, said Hitchcock.

There are certain things to do and not to do if you find yourself with a friend who is drunk, he said.

"First of all, you don't leave them in a back room to sleep if off," he said. "Try to arouse the person. Get him to exercise, and induce vomiting. The best thing to do would be to take him to the hospital."

Symptoms of intoxication to the point of alcohol poisoning include interrupted breathing, blue-gray skin, and loss of consciousness.
Newscope

Chesapeake Auditorium at 7 and 9:30 p.m. Admission is $1.

Christmas Parade
San Luis Obispo's Sixth Annual Christmas Parade will be held on Friday at 7 p.m. After the parade, stick around and enjoy the activities in the Mission Plaza including the opening of Santa's house and a Christmas carol sing-a-long. The parade is sponsored by the Downtown Merchants and R.I.A.

A.P.S. Groups
American Field Service returns at Cal Poly who are interested in getting together and being in a support group of the A.P.S. students in San Luis Obispo County are encouraged to contact Brenda Reissmeier, the district representative at 549-4700.

No Plans!
Overdue books returned to the Robert E. Kennedy Library between today and Dec. 8 will be EXEMPT from any fines due. Excluded from this are current periodicals, bound periodicals, and any materials on reserve. Take advantage of this one-time-only holiday offer!

WOW Board
Any past WOW counselors interested in being a part of WOW can come to the WOW Board meeting at 3:30 p.m. in the student union. The meeting will be held in the student union.

Mustangs fly, Hornets stung 70-45

BY VERN ARENDDES
Special to the Daily

Mention the acronym CCAA around Sacramento State basketball coach Jack Heron and you had better get ready to duck.

The Cal Poly Mustangs' handed Sacramento State (0-4), their fourth straight loss against a CCAA opponent this season, 70-45, in a Tuesday night match in San Luis Obispo. The Hornets lost to Cal State Los Angeles at the buzzer, to Bakersfield in overtime and to Cal State Dominguez Hills, 78-63.

To make matters worse Tuesday night, not only did the Hornets have a long six-hour trip home, but their leading scorer was wearing Cal Poly green and gold. Rich Jidimaon, the only Hornet in double figures with 16 points, was without a uniform and was forced to wear Keith Wheeler's green traveling uniform.

Ex-Viking speaks to mentors

BY SHARON BREAUX

Ex-NFL quarterback Joe Kapp spoke to Cal Poly coaches Tuesday afternoon about collective bargaining, prompting them to emulate him in his negotiations with other faculty members for representation in front of the CBU board of trustees.

Kapp, 43, a business agent for the NFL players' association, was asked by the United Professors of California (UPC) to visit coaches at campuses of the California State University and Colleges system to explain the benefits of collective bargaining.

Kapp said he is a strong believer in capitalism. "It works, but you have to stand up, fight, and demand what you're looking for," he said.

"You can sit back and expect Sacramento and Washington D.C. to get things from them, but it's not going to work. Like a football game, you're not going to win just going to play, you have to stand up and fight with the others," said Kapp.

The former Minnesota Viking quarterback said he supports collective bargaining because groups can usually get what they demand. As an individual, though, he said bargaining doesn't work.

Through his football contract, Kapp got into a legal battle with the NFL. After playing professionally in Canada for eight years, Kapp had one year to go before his contract was up.

From page 5

It was the winningest Poly defense that faced 22 Horset turnovers, that blocked five shots and that picked up 15 steals. It was the defense that spurred the Mustangs from an 11-14 deficit to a 25-14 and an eventual 25-20 halftime lead.

Senior forward Kevin Lucas led the 11-point effort with two 12-foot jumpers and figured prominently in a Dave Van Horn steal. Lucas missed a hard-wood after a loose ball and batted it downtown. A hustling Dave Rabideau stripped after it and shoved a pass to Van Horn for an easy lay up before he went sprawling on his back.

Alex Lambertson pumped in eight first half points on route to his team-high 15. Lucas followed with 10 points and nine rebounds. Clark Guest and Mike Wills bounded off of the bench to add eight points each.

On the other hand, Ernie Wheeler's Mustangs are off to a flying 1-0 start as they prepare for this weekend's 11th annual Aggie Invitational basketball tournament. The four-team tourney will include Poly, UC San Diego, St. Judas State and Cal Lutheran. The two-day invitational opens Friday with San Diego and Cal Lutheran at 7 p.m., with the Poly tilt with St. Judas to follow at 9 p.m.

But against the Hornets, defense was the name of the game.

"To beat anybody by 25 points is impressive. I don't care who they are," said Wheeler. "We just shut them down, completely, in the second half.

From page 10

However, three NFL teams offered him a chance to play in the United States for $1,000 a year more than what he was making in Canada. When Kapp declined the offer, the Houston Oilers offered Kapp $1,000 per year.

"I got money hungry," said Kapp. "They (the Houston managers) told me to keep quiet about their offer and sign the contract. I asked if the contract was legal. They said it was. I told them I'd sign the contract, but I had one year to finish in Canada and then I'd be back."

Keeping the new contract a secret, Kapp returned to Canada to find himself suspended from the league—the cause being the Houston contract. Kapp went back to Houston thinking he could play a year earlier, but the NFL wouldn't allow him to play because the contract was illegal. He finally played for the Minnesota Vikings for four years, but had some contract problems concerning money and could not play football any longer.

Kapp and his lawyer asked if the football player was damaged by the NFL for having his career ended at age 22. The court said no, the NFL did not damage Kapp's career. Kapp did receive $450,000 the NFL owed him, however, but he still considered himself "a loser" because he could no longer play his sport.

"Power is corrupting," said Kapp. "An individual can win a lawsuit and still lose. You have to put together and fight, you can't do it alone because it doesn't work."

Kapp told the coaches they needed to organize into a union with other faculty members so the coach can get what they want from the government.

"The sanitation people (as a union) are better off than you," he said to the group during a bussines. "And look at what they deal with!"

"We are dealing with professionals, his mind," he continued. "It's time for you to stand up and fight."

Bargain education

Editor:
In regards to the editorial "Strange Meditations" of Nov. 18, I feel that the statement "education in the Golden State is no longer a bargain" is absolutely false. The editorial should take note of the fact that private institutions like Stanford University charge up to $26,283 per year in tuition and fees alone. Even a less prestigious institution like St. Mary’s College of California charges $23,992 per year for tuition and fees. These amounts are typical and up to 1100 percent greater than the "imposing total" of $235 facing Cal Poly students. Granted, the costs change with different institutions, but elsewhere across the country other state funded universities charge more than Cal Poly does in-state. As an example, the State University of New York charges $925 per year for the state residents to attend; this is almost double the $235 yearly fees at Cal Poly. Clearly, when compared to other universities in California and across the nation, Cal Poly and the entire CBUC system offers the students a true educational bargain.

John Wheatsone

Nuclear security

Editor:
When one writes to the editor it is always deplorably rewarding especially if you are pre-ruled to get a response such as Sharon’s in the News (Mustang Daily, Nov. 19, Blind Faith). You are certain to get a free analysis of your character, intelligence, ancestry, philosophy and whatever else may come to mind.

Sharon and her friends will probably be surprised and agast to learn that I (everts and all) am also concerned about the awesome power of nuclear weapons. The difference is in our approaches. I prefer a pragmatic, factual and realistic attitude whereas Sharon seems inclined toward emotion, hysteria, ridicule and negations.

I also think that our government is charged with our defense and protection. It has been with remarkable restraint in the use of nuclear weaponry during a time when, as so propitiously, it could have used these weapons to intimidate and dominate the world.

That era has passed. Other nations, notably the U.S.S.R., have acquired their weapons in sufficient numbers to tilt the balance in the Soviet favor. I find that disturbing because, coincidently, there seems to have been an active and determined effort to utterly destroy, by political means or foul, every nuclear capability of our own country.

There is no substitute for being "futest with the mostest" either in war or in peace. I, for one, subscribe to the notion that our government should maintain at least a parity in nuclear weaponry and military capability. Thereby, discouraging the world-beat aggressor from throwing the first blow at us for fear of our own sure and certain destruction.

An uninformed dream

Editor:
Your Nov. 20 editorial entitled "Diablo’s lost rites" seemed to summarize much of the uninformed mind of many uninformed anti-nukes.

First of all, your statement about the NUC’s move to revoke Diablo’s license, "...have turned the anti-nuclear movement’s spotlight onto a single reality; Diablo Canyon may never go on line," is highly inaccurate. The fact is that the State of California is no longer a bargain.

Your statement implies that the nuclear power industry is morally indefensible and technologically obsolete. How can you apply these traits to a single plant and if nuclear power is obsolete you had better be ready to return your children’s’ babysitter to a tangle of taffeta.

You state that the nuclear power industry is morally indefensible and technologically obsolete. How can you apply these traits to a single plant and if nuclear power is obsolete you had better be ready to return your children’s’ babysitter to a tangle of taffeta.

Big freeze

While Cal Poly students and faculty are bundled up inside their homes during Christmas vacation or warming ourselves by the fireplaces, seven minor sports on campus might suddenly find themselves left out in the cold.

The Athletic Advisory Commission will probably decide during the quarter break whether to drop men’s and women’s swimming and tennis and men’s soccer, volleyball and water polo from the Cal Poly roster in order to comply with budget restrictions imposed on the intercollegiate athletic program.

Cutting these sports would be a tragic mistake.

In addition to the Athletic Advisory Commission to cut the seven sports, acting Director of Athletics Dick Heaton seems to have lost sight of the purpose of sports as a part of the educational experience of a university. College athletes do not exist simply to lend prestige to the university, but primarily to serve as an outlet for students to achieve social and emotional as well as physical growth. For some, college athletics is a pleasurable hobby; for others it is training and preparing for a professional career. In either case, athletics benefit the students who participate in them the most. Cutting minor sports cheats the players—and their fans—out of those benefits.

The simplest alternative to cutting sports is to reduce or eliminate scholarships except to the truly needy and to reduce staffing. The argument that scholarships are needed to lure quality athletes doesn’t hold water. The UC Davis football team, for one, does not give out scholarships and the Aggies do just fine.

Several sports on campus easily attract athletes even though they do not receive scholarships. These teams don’t need scholarships to attract athletes, as the university’s strong academic reputation and San Luis Obispo’s beautiful climate and locale are incentive enough for athletes to sign letters of intent to play at Poly.

Staffing can be reduced in the minor sports without lowering coaching standards by hiring graduate students. Some major sports, such as football, women’s basketball and volleyball, have already caught on and hired them.

But the Athletic Advisory Commission has also overlooked one major budget cut area: transportation costs. Because San Luis Obispo is isolated, transportation costs at Poly are high. It would be ludicrous to suggest that the Mustangs only play home games or restrict away games to opponents, say, within a 20-mile radius of Cal Poly. However, through careful scheduling transportation costs can be cut dramatically. Currently there is little or no coordination between teams in scheduling transportation costs to the next week. With a little planning between the two coaches, both teams could have played the same day, thus saving the cost of one bus ride.

Perhaps teams such as women’s and men’s basketball can schedule doubleheaders. This could increase interest in the weaker programs by bringing more fans to the gym.

Enough money could be saved by slashing transportation costs so that scholarships and staffing may not have to be eliminated.

The Athletic Advisory Commission and President Baker are seeking input from students to find out how they stand on the minor sports issue. Let your voice be heard. Don’t let it be one majored area: transportation costs. Because San Luis Obispo is isolated, transportation costs at Poly are high.
