Hearings determine fate of Diablo

Full power permit debated at Avila
BY JUDY LUTZ

The public hearing for Diablo Canyon's full power license begins today in Avila Beach in the face of opponents' protests over the issues to be considered.

The county's emergency plan and two technical issues will be considered by the Atomic Safety and Licensing Board of the Nuclear Regulatory Commission in the Avila Beach Civic Association Building, 191 San Miguel. The hearings will be moved Jan. 21 to the San Luis Bay Inn to accommodate a larger audience.

The plant was licensed for low power operation in September but fuel loading stopped when seismic design errors were discovered. The NRC suspended the license in November after confirming 14 seismic design flaws in October, according to Pacific Gas and Electric Company representative Sue Brown.

Lawyers for PG & E and the Mothers for Peace will discuss the issues on the three issues. The Mothers for Peace are legal intervenors to the licensing of the nuclear power plant.

Written statements will be accepted and made part of the record, according to Brown. No oral statements will be accepted by the board.

The NRC will consider the low power license application on Friday and Thursday in a closed door hearing in Washington D.C. The intervenors have raised objections to Robert L. Cloud of Berkeley, chosen by PG & E to review the design errors.

"It's easy to have hearings when you eliminate the issues ahead of time," said Nancy L. Miller, Mothers for Peace representative. The NRC has limited testimony to the subjects of the emergency plan, the adequacy of coolant loop valves and earthquake resistance of pressurizer heaters.

"At the very best, it's premature" to consider a full power license before an independent review of the errors has been made, Culver said.

"I'm sure they let us keep those just because they're so easy to resolve," Culver said of the two technical issues which will be considered first by the board.

Brown said the design issues will be discussed in the first two days of the hearing. They are based on contentions brought up by intervenors after the

Water discharge permit is denied
BY DAVE BRACKNEY

Pacific Gas and Electric Co. has decided it will appeal a decision made last Thursday denying it of a water discharge permit it needs from the state to begin full-power operation of the Diablo Canyon nuclear power plant.

The Regional Water Quality Control Board denied PG & E of a permit at a hearing last Thursday which would have allowed the utility to release ocean temperatures near the plant by 20 degrees Fahrenheit or more while discharging used cooling water to cool the plant's reactors.

"I don't know at this point if we will appeal," PG & E spokeswoman Sue Brown said Monday. Brown indicated that the utility has not ruled out the possibility of filing an appeal, but such an action, she said, would be "time-consuming and expensive." At present, the only alternative for discharging of cooling water discussed by PG & E officials has been construction of tall cooling towers such as those used at inland nuclear plants.

Brown called such towers "a terribly impractical solution" for cooling the plant's reactor water. Utility officials believe such towers would cost at least $100 million and would take four years to build.

To avoid the appeal process, Brown said PG & E hopes to convince the board at an appeal hearing this Thursday to allow them to discharge used water into the ocean. Brown said he has asked the board to reconsider its decision denying PG & E of the permit it sought.

Diablo Canyon is located at a majority victory

King eulogized during Cultural Center opening
BY SHARON REZAK

The opening of Cal Poly's Multi-Cultural Center coincided with Friday's celebration of Martin Luther King Jr.'s birthday -- a happening which led Baker called "fitting" because "this is exactly the kind of thing King worked so hard for.

Speeches and songs highlighted the celebration of King's birthday in the University Union Plaza as about 200 students and faculty of all races gathered and heard Baker and others praise King for his efforts at forming an integrated society.

Much of the event was to commemorate King. History professor Quintard Taylor presented a historical synopsis of King's life. He said King never wanted to be a civil rights leader per se, but was "forced into it" by race problems in the South.

Taylor urged everyone present to honor King by signing a petition to proclaim Martin Luther King Jr. Day a national holiday.

"Adiversity should not be existence," Taylor said. "We also went to teach people that King worked so hard for.

The petition drive

Alpha Phi Alpha, a black fraternity, sponsored the petition signing and came back as a national holiday. Christopher Santos, a junior at Cal Poly and Alpha Phi Alpha member, said the fraternity has been part of a nationwide movement to get Congress to approve the holiday.

"We also went to teach people that King worked so hard for the rights of all human, not just blacks," said Santos. "That's why we have a national holiday.

"We (King) was a world leader," Alpha Kappa Alpha, Omegas Psi Phi, and Delta Sigma Kappa also helped with the petition signing.

San Luis Obispo Mayor Melanie Bigg was also on hand to tell the crowd how welcome the center as a "meeting place for better understanding." No oral statements will be accepted by the board.

"We always good to learn from each other," said Bigg. "We always good to learn from each other.

The center, in University Union Room 103, will promote a First Love, a second love, and a third love.
Military attaché slain in Paris

PARIS (AP) — Assistant U.S. military attaché Lt. Col. Charles Robert Ray was assassinated Monday by a lurking gunman who police said fired a single shot into Ray's forehead and fled as the victim collapsed on a Paris sidewalk.

The U.S. ambassador to France, Evan Griffith Galbraith, said the gunman was "probably a professional and undoubtedly an experienced killer."

Police said Ray was shot about 9 a.m. (5 a.m. EST) as he walked alone to his parked car near his apartment in a fashionable district. He wore civilian clothes and carried a small attache case formed by his body;

ATTENTION SENIORS! ON CAMPUS INTERVIEWING JANUARY 26 & 27

APPLIED MAGNETICS representatives will be interviewing on campus this year.

APPLIED MAGNETICS is the world's leading supplier of magnetic recording heads to the computer industry. That's right. Applied Magnetics is "1". And we've grown from a single plant in Santa Barbara producing one product to a high technology research and manufacturing business with multiple products and facilities in several countries producing custom designed products.

We have Engineering assignments in Mechanical, Electrical and Quality Assurance assignments that lead to personal development in Technical and Management fields. For those qualified in Manufacturing and Business studies there are career paths in Manufacturing Supervision, Production Control, Purchasing, Quality Control and Sales.

If you prefer a work hard, learn to manage, share the profits environment and you won't be distracted by working in Santa Barbara, California, then sign up NOW at the Placement Office for an interview, or write to Mr. G. Brwae.

WANTED

Hard working students for the positions of Alternate on the University Union Board of Governors. At the end of Winter quarter, these Alternates will be replacing those voting members who are graduating.

The UUBG is necessary to effectively operate the University Union. If you are interested in, and concerned with, the operation of the Union, and would like to gain experience and personal satisfaction, pick up your application today.

WHERE: University Union Information Desk or ASI Officers' Office, UU 217A
When: NOW! — January 22nd

Avantek’s Next First... Will It Be Yours?

Avantek’s unprecedented 15 year record of growth and state-of-the-art technological achievements stand as a testimonial to our success. We have introduced many new products since our inception in 1965 including more than 20 industry firsts in the microwave and telecommunications markets. With an average growth of 30% per year, we are moving aggressively toward exceeding a $100 million company but there is a lot more to be accomplished.

If you are about to complete your BS, MS or PhD in Electrical Engineering major or MBA with a technical undergraduate degree, we would like you to share in our success by considering our opportunities in Product Design, Product Development and Marketing.

ON-CAMPUS INTERVIEWS

Tuesday, January 26

Make an appointment today with your Career Planning and Placement Center to talk with our campus recruiter. If you are unavailable to schedule the interview, please call J. Guidley COLLECT at (403) 727-0700 or send your resume to Career Placement, Avantek, 5141 Sowers Avenue, Suite 200, Santa Clara, CA 95054. An equal opportunity employer.

Avantek
Commission delays minor sports recommendation

BY SHAWN TURNER Staff Writer

The Athletic Advisory Commission continues discussion today on proposals to save money in the Intercollegiate Athletic Program, one proposal which would include dropping baseball from the 1982-83 schedule.

The meeting will begin at 3 p.m. in the Administration Building Conference Room.

Cal Poly President Warren J. Baker asked the commission to reconsider a proposal by Feb. 1, but any such move by the commission at its meeting last Thursday was delayed by a parade of supporters defending the baseball program and the absence of two voting members.

Donald Morgan, the industrial engineering department head, and Dennis Byrne, intramurals coordinator, did not attend the meeting.

Action also stopped because of a proposal by Joe Johnson, the ASI external affairs assistant, who said the Student Senate could allocate two-thirds of the estimated $30,000 needed to keep the athletic program going for the rest of the year.

Johnson, representing ASI President Dennis Hawk, said the money would give the commission time to find a permanent money-saving proposal that would not cut any sports.

The commission is now considering a proposal to cut five sports—baseball, water polo, men's volleyball and men's and women's swimming. The proposal replaces going for the rate of the year.

Johnson said the money—from ASI reserve funds—may not be enough to save baseball and other sports for the rest of the year until another money-saving alternative is found.

He said he would talk to members of the Student Senate about the funding "so as to make some progress." But he said the money—from ASI reserve funds—may not come for a month to six weeks.

Howard West, chairman of the Athletic Advisory Commission, called Johnson's proposal a positive step in helping the athletic program, but he said the commission would probably not want to spend a year on the issue.

Frat use permit review is rescheduled

BY MAURA THURMAN Staff Writer

Members of Alpha Upsilon fraternity received good news from the San Luis Obispo Planning Commission Jan. 13 when the board voted 5-0 to rescind review of the group's use permit for March 24.

Commissioners said they would restrict discussion at the March hearing to possible revision of permit conditions. The city planning staff had suggested possibly revoking the group's permit for their house at 1324 Sycamore.

The city is considering adoption of new guidelines for reviewing use permits. The city's Planning Director Geoffrey Grote said these guidelines might be incorporated in Alpha Upsilon's permit conditions at the March meeting.

The new guidelines were developed by an Interfraternity Council committee headed by IFC president Tim Leets. The Planning Commission may review the rules within two weeks, Grote said.

At a November Planning Commission meeting, city planning staff reported that several property owners in our region, college baseball is alive and well," he said, using the expansion of Fresno State's baseball stadium and the larger coaching staff at UCSB as examples.

"The other schools that are in our league, like Dominguez Hills and Chapman and Northridge and Riverside and L.A. State, most of those schools have dropped football somehow along the way, but they haven't dropped baseball," he added.

Harr said the baseball team here has fared well—averaging 30 wins a season—even though it doesn't get much money from the school. Some of what it does get Harr has to raise himself.

"That gets to be kind of a two-edged sword," he said.

"People say, 'Oh, look at the coach, he's out there raising all those funds for the program,' and other people say, 'Yeah, but we can't have a sport that has the coaches raising the funds; it could be embarrassing to the school, so let's not have that sport.'"

"The point I'm making is, the coaches wouldn't have to be out doing it if we had help from ASI or the athletics department staging Cal Poly baseball games."

The baseball team now receives an $8,000 subsidy from the ASI, and $18,000 in scholarships.

Johnson, the ASI representative, said the stop-gap funding from his organization would save baseball and other sports for the rest of the year until another money-saving alternative is found.

He said he would talk to members of the Student Senate about the funding "so as to make some progress." But he said the money—from ASI reserve funds—may not come for a month to six weeks.

American know-how is alive and well... and creating career opportunities every day at Rockwell International.

The Space Shuttle orbiter and main engine and the digital color weather radar. The latest in a long line of inventions designed to make our world a better place. The past and present technology that is Rockwell International.

We make it our policy to work at the leading edge of technology. In the four main business areas - Aerospace, Electronics (Commercial and Defense), Automotive, General Industries - we create technologies in everything from superionic aircraft and multimillion dollar recreational facilities to sophisticated offset printing presses and engines for the next generation of jettisons.

That's American know-how at its best. And as we grow - in size, need America's best engineers and scientists, capable of developing, applying and innovatively managing technology for many of the world's most unprecedented challenges. And that means unprecedented opportunities for you.

We provide everything you'd expect from a leading high-technology company: a package of benefits including in-house education as well as tuition reimbursement for advanced studies. We'll soon be on campuses all over America to recruit engineering graduates for hundreds of positions we have available. We're looking for Electrical, Mechanical, Industrial, Aerospace, Civil and Chemical Engineers, plus Computer Science, Physics and Chemistry graduates.

Check your Campus Placement Office for details on Rockwell International career opportunities and the location of your local meeting.

American know-how is alive and well at Rockwell International. And you can help keep it that way for the future.

Baker sees main goal to update Poly's facilities

BY TRACY JACKSON

Updating Cal Poly's facilities and implement to meet today's technological and increased enrollment needs are the goals of President Warren O. Baker, who spoke to the University Club on Thursday.

Addressing over 65 club members, Baker discussed key issues affecting Cal Poly—the dwindling budget, increasing enrollment, overcrowded facilities and state-funded sports.

Baker said there had been a slow erosion of the budget because of inflation and increased taxation, and we cannot continue to fund the kind of education and facilities that we think are necessary at Cal Poly, said Baker. "We have lost the flexibility that we had ten years ago when we were just starting to operate on the budget surplus.

Baker expressed his understanding of the effort overenrollment is having on campus facilities, and stated there would be no future growth for the next seven years. Steps are being taken to reduce enrollment by 800 to 1,000 by next fall, Baker said.

"We know that students can't get classes, parking spaces, library facilities and housing, and it is unjust to the students if we are overcrowded," said Baker.

Baker proposed to update the instructional facilities to concord with the present enrollment.

"We are a polytechnical university and we have to update the facilities and equipment to be with the times of the art," he said.

"We are not able to compete through competitive bidding that will enable us for future funding," said Baker. "There have been reservations by the provost (Bowers) that favor Cal Poly, especially in the areas of agriculture and engineering, two of our biggest programs.

"We are getting favorable response from the legislature, but the fact that 31,500 people are coming to get into Cal Poly, and that number gives up more space in the future," said Baker.

Athletics is another area which Baker discussed that has been affected by the budget cuts in the California state budget.

"We need comprehensive athletic programs at Cal Poly, but there just is not enough money to support the 19 intercollegiate teams at Cal Poly," said Baker.

"We are not going to cut sports to club sports because we just don't have the money due to rising costs. "To continue on the way we are, more money would have to come from the students' pockets," he said.

Baker related his optimism for the future of Cal Poly, although budgetary cuts are going to mean some shifting around and deletion of programs which are not financially effective. "You can't expect to cut taxes and provide the same services. But there is just not enough money in the economy of California, and I'm optimistic about California and the appropriate spending and low taxation," concluded Baker.

ASI delays Placement Center location decision

By DEBRA KAYE

Placement Center officials have asked the Student Senate for a two-year extension of the Center's lease at Mustang Lounge as a location for job interviews.

The center's present lease expires in May and they are considering the option to extend to May or June to accommodate the students who were heard from a few senators that this delay had gone on last year too. The Senate decided to discuss the issue again in three weeks, after more information has been gathered.

The Ad Hoc committee reported that $300 of the $8,000 assigned to the new escort service, which started Jan. 17, has been spent so far, all on equipment. Nine fraternalists have supplied volunteer escorts, and the rest of the money has been earmarked for future wages. Purchase of a paging device was also suggested.

Chinese specialists tour School of Ag

From page 1

All together, 26 representatives from 17 agricultural institutions of China visited Cal Poly's chemical laboratories and audio-visual production. Jiaidong said.

"We would like to incorporate more audio-visual techniques in our agricultural instruction," said Jiaidong.

Among the visitors were the representatives asked faculty opinion on the equipment being used, said Jiaidong, so that when they return to China they will be able to decide which kind of agricultural equipment to buy for their own institutions.

Chinese students tour School of Ag

From page 1

All together, 26 representatives from 17 agricultural institutions of China were visited by Chinese students to gather information on American agricultural technology.

While visiting with the Chinese, the representatives asked faculty opinion on the equipment being used, said Jiaidong, so that when they return to China they will be able to decide which kind of agricultural equipment to buy for their own institutions.

With the tour, the specialists were most impressed with Cal Poly's chemical laboratories and audio-visual production, Jiaidong said.

"We would like to incorporate more audio-visual techniques in our agricultural instruction," said Jiaidong.

Along with Bingchan Shnsheng, representing the Chinese government, members of delegations included Li Shakoo, an organic chemistry specialist; New Jiahu, a physical chemistry specialist; Wang Runchen, representing the Chinese Ministry of Agriculture; and Dang Shuhang, representing the State Administration of Resources, China, said they plan to further develop in their country.

"The fundamental difference in agriculture in China is that the people are responsible for the animals and the environment, while in the United States it is the reverse," Jiaidong said. "The cooperation between China and the United States is very important.

Three-week visit

The Chinese will be in the United States for three weeks while they visit other schools including Kansas State University, University of California at Davis and University of Indiana in University. After touring the other universities, the delegation will travel to the Bank of America headquarters in Washington, D.C. and then to New York for their flight home.

Nuke plan faces hearing

From page 1

The San Luis Obispo Island accident, she said.

The county's emergency plan will be considered by the licensing board from 9 a.m. to 3 p.m., according to Brown. The San Luis Bay Conference room of the County Office Building will be reserved until Jan. 30, she said. If the hearing turns longer than expected, the NRC will have to extend it to five times if necessary," she said.

The NRC will consider the county plan which fall within the 10 mile radius of the plant and emergency planning zone required by federal law.

The only thing that the NRC can do is whether the county plan meets the NRC regulations, said Baker. "We will try to do our best to conform to the regulations are extremely easy to meet." she said.

She said the county plan is a "table top plan" which is less than considered a simulation an environmental impact statement that take looks in consideration a simulation an environmental impact statement.

"We want that might be just fine for a plant in the middle of Kansas," Culver declared, adding it is unrealistic in planning for Diablo Canyon, which is located 2½ miles from the Diablo Fault.

"It is not an academic question at this particular site." Culver said. "The plant isn't finished. There are still whole 90s [Standard Operating Procedures] for things or areas that aren't complete.

REACH FOR TOMORROW WITH MARTIN MARIETTA AEROSPACE

MARTIN MARIETTA AT VANDENBERG
BY DON McCauley

When Stevie Nicks sings, people listen. As lead vocalist for Fleetwood Mac, Nicks' voice and songs were driving forces behind Rumours, the biggest selling album of the late '70s.

Thus was Fleetwood Mac's ill-fated attempt at a follow up to the critically acclaimed Rumours. The failure of Tusk was as complete as the success of Rumours. Its overproduced polyrhythmic babblings were dismissed by both fans and critics.

Now, after a long absence from the record charts, Nicks is singing alone, and as you are listening. This time they're listening to Bella Donna, Nicks' first solo album. (It use that term loosely), which is currently number seven on Billboard's Hot 100.

Rock 'n' roll heaven may have a hell of a band, but it could hardly compare with the all-star cast Nicks has assembled on Bella Donna. The album's thank you includes Tom Petty and several of his Heartbreakers on guitar, drums, and vocals. Eagles—Don Henley and Don Felder on drums and guitar respectively, Roy Bittan of Bruce Springsteen's E Street Band on piano, former Elton John guitarist Davey Johnstone, drummer Russ Kunkel on loan from Jackson Browne, Blues Brother Duck Dunn on bass, and Waddy Wachtel, Linda Ronstadt's long time guitarist.

Switched to a new label, Gaffen, and has a new producer, Keith Olsen, who also handles the softer rock of Fleetwood Mac.

Without question, "I'll Fall in LoveAgain," released as a single of the album, is without a doubt, a Stevie Nicks album. Although the musicians do a fine job, their function is merely to provide a canvas for Nicks' voice to paint.

There are no extended guitar or piano solos on the album. Nicks' vocals are the lead instrument on Bella Donna. The album and its songs, all but one of which were written by Nicks, either fail or succeed on the talent and performance of Nicks.

Every rule has an exception, however, and the exception here is Stop Draggin' My Heart Around, a song which has Tom Petty written all over it. Petty co-wrote, co-produced, and sang the track, and The Heartbreakers, Petty's band, provide the music. The soaring guitar and organ along with Petty's shrilled, spot-out, vocals are reminiscent of his first hit, "Breakdown." The posting lyrical stance recalls You're Gonna Get It, from the second album.

"Leather and Lace" is a beautiful romantic dust featuring Henley and some sweet piano from Bittan. Of the nine songs Nicks penned for Bella Donna, it is the only one on which the lyrics are clear after one listen.

Nicks' lyrics tend to be cryptic, shouted in slurred sentence fragments, often open to several interpretations. The love songs which characterized Rumours are absent on Bella Donna, possibly due to Nicks' breakup with her live-in, Fleetwood Mac guitarist Lindsey Buckingham.

Arrangements which allowed Nicks' supporting cast more musical room would have been as plus as well. Interestingly, there are no Fleetwood Mac members lending a friendly hand on the album. Read into that what you will.

Bella Donna is a strong effort from a talented artist. It has flaws—estigmatic lyrical, slightly thick production, and restrictive arrangements—but as a whole, it is a rewarding album.

Hagar's 'Standing Hampton': a tone-down rocker

By SHARON REZAK

Staff Writer

"Now quickly check the hands on the clock. It's a good time to rock. There's One Only Way to Rock." This trick artist Sammy Hagar's latest album, "Standing Hampton," anytime is the right time to rock. This new record is a feast of plenty of fast-paced solid rock-and-roll, and lots of Sammy's well-known "scream-singing.

Throughout much of his album, Hagar uses new wave techniques—it's still rock of course, but with an 80's influence to provide a fun twist. The sounds make Sammy's hard work seem more upbeat, more palatable, instead of the constant and intense driving force usually found in his songs.

Unfortunately, the modern sounds become a bit too cosmic and spacey for a couple of the songs. "Inside Leather and Lace," for example, featuring Henley, flowing, slow, melodic, even haunting, with Hagar's raspy, harsh voice quite capable of taking on this ballad-type number. As with his previous albums, Sammy's fascination with the color red is peppered throughout his music. Hagar is like the Devil himself putting the influence of the color red is peppered throughout his music

And Hagar is certainly no great lyricist. On "Sweet Hitchhiker" he uses such cliches, mindless phrases as "Sweet Hitchhiker, he uses such cliches, mindless phrases as "Sweet Hitchhiker, I love you so/Sweet Hitchhiker, I love you so." Without question, his "Sweet Hitchhiker" is a serious attempt at a mathematical equation. Unfortunately, the modern sounds become a bit too cosmic and spacey for a couple of the songs. "Inside Leather and Lace," for example, featuring Henley, flowing, slow, melodic, even haunting, with Hagar's raspy, harsh voice quite capable of taking on this ballad-type number.

"Inside Leather and Lace," for example, featuring Henley, flowing, slow, melodic, even haunting, with Hagar's raspy, harsh voice quite capable of taking on this ballad-type number. As with his previous albums, Sammy's fascination with the color red is peppered throughout his music. Hagar is like the Devil himself putting the influence of the color red is peppered throughout his music. Hagar is like the Devil himself putting the influence of the color red is peppered throughout his music. Hagar is like the Devil himself putting the influence of the color red...
New John Klemmer:

**By Sharyn Beards**

John Klemmer and an intuitive mind with his recent release Solo Saxophone II-Life. The fifth album in his "Age of the Artist" series, Life is a collection of solo saxophone improvisations following in the tradition of Cry, Klemmer's 1978 album which inaugurated the series.

Life's six pieces are more cerebral than those on Cry, which was more like a flat thrusting outburst," Klemmer says. "I went even deeper this time—the album came out of a very emotional period of my life. Some of it was scatolic, some was frightening. Strangely, the music that came out of it is kind of peaceful, primal in an abstract way." Life makes extensive use of the Echoplex, a machine into which chords and notes can be played and it feeds them back after a brief delay. The result is often hear the lead twice; the second time it is simultaneous with the new lead melody and gives the music a circular thumping quality.

Klemmer breaks with the tradition of his preceding albums with the use of vocals in two songs. "All I Ever Wanted Was My Life" and "The Rats in the Tears of My God for Me" are sung by Clint Holmes but words and music are both by Klemmer. Life is named music. Warm, reflective, and earthy, it tends to evoke the same emotions in the receptive listener.

"I know that people respond to my music emotionally on several levels—that's human," says Klemmer. "I consider myself a humanist because I'm trying to reach as many of these emotional levels as I can."

The album starts and ends with the same song—Life. Side one begins with the prelude and side two, the final, mirrors the prelude but with sections of incongruous dissonance. Certain chords in the finale sound uneasy. Perhaps Klemmer is making his album analogous to life—a journey from birth to death.

**Bands offer traditional concert**

Concertgoers will be treated to an evening of music and style when the Cal Poly Symphonic Band performs its 2nd annual "Pops Concert—A Tribute to Arthur Fiedler."

The concert is to be presented in the tradition set by the late Arthur Fiedler and The Boston Pops Orchestra, with concertgoers seated at decorated tables while being served sparkling cider, coffee, tea and dessert.

Also featured at the concert will be The Cal Poly Studio Band, The Crescendo Geta Dixieland Band and the Paul Blass Sodermolin, percussionist. Highlights from the concert include stylistically diverse marches such as "Manhattan Beach" by John Philip Sousa, "Raidestuky" by Johann Strauss and "Sons of a Gambolier" by Charles Ivax. Also featured will be works by Malcolm Arnold and Joseph Taithe.

The Symphonic Band will also play a medley of big band music opening the years 1900-49, called "The Big Five" and arranged by John Higgins. Guest soloist Sodermolin will perform "Concerto for Percussion" by Darius Milhaud. She will be accompanied by the Symphonic Band as she performs with 19 different percussion instruments. She will also perform "Dizzy Fingers" by Zez Confrey on the marimba.

Sodermolin received an M.M. degree in percussion from the University of Illinois and has performed with ensembles such as The Aspen Festival and Chamber orchestras and Minneapolis Civic. The Studio Band's selections are "Close Shave," by Paul Clark and "Land of Make Believe," by Chuck Mangione.

The concert is set for 8 p.m. Saturday, Jan. 30 in Chumash Auditorium and will be conducted by William Johnson.

Tickets are $8.50 for general admission and $4.25 for students and are on sale at the ASI ticket office, Premier Music, Castle Music and from band members.

As Mustang basketball coach Ernie Wheeler predicted, it was a great weekend for basketball. Unfortunately for Poly fans, it was not quite as good as it could have been.

The Mustangs lost their first California Collegiate Athletic Association conference game Friday night to Cal State Northridge before the second largest crowd to see a basketball game at Cal Poly. Twenty-five hundred Cal Poly partisans packed the Main Gym to witness their fourth-ranked Division III Mustangs do battle with the No. 3-ranked Matadors. However, it wasn't until late in the game that the crowd had anything to cheer about as the Mustangs nearly turned a 14-point deficit into a come-from-behind win, losing 70-64.

The only lead Poly enjoyed during the game was at 2-0 and after that the first half was all downhill for the Mustangs.

Troubles started when Poly's leading scorer and rebounder Kevin Lucas collected his third fouls just 10 minutes into the game and joined the other 2,500 fans watching the remainder of the first half from the sidelines.

As Kevin Lucas go, so goes Poly's offense. The Mustangs shot a dismal 22 percent from the floor, but their biggest problem came at the free-throw line.

Poly went 6 for 12 from the line in the first half and 12 for 21 in the game, with 16. Van Horn, a 6-6 sophomore for Poly missed the free throw that came back to haunt the Mustangs as Dave Baker missed the front end of a one-and-one that could have possibly narrowed the gap to one point.

The ball, a three-point lead and the clock winding down within four minutes was all the Matadors needed to ensure their third straight CCAA win without a loss.

Lucas led all scorers with 24 points (10 for 14) followed by Northridge's Cliff Higgins with 14 and Darryl Hawkins with 15. Van Horn, a 6-6 sophomores forward, was the only other Mustang in double figures with 10 points.

Poly beats Cal State LA
Cal Poly bounded back Saturday night with a come-from-behind, 44-43 win over Cal State Los Angeles.

The win gives the Mustangs a 3-1 conference record—good enough for a three-way tie for second place with Northridge and Cal State Domingue Hills.

The Roadrunners of Cal State Bakersfield, who beat Northridge Saturday night, are on top of the CCAA heap with a perfect 4-0 record. Bakersfield is currently ranked tenth in the NCAA Division II coaches' poll.

In the Mustangs' closest contest of the year, Poly trailed the Golden Eagles 24-17 at the half, but came back with a 27-point second half to edge Los Angeles with a pair of free throws by Alex Lambertson with 16 seconds remaining.

"Again the Mustangs started out slowly, shooting 26 percent from the floor in the first half," Wheeler said.

Pressure defense and poise when it counted were the key to victory, Wheeler said.

The Mustangs are now 14-2 on the season and will continue CCAA play on the road this weekend at Chapman and Domingue Hills.

Ski club offers 4 winter trips

By WARREN FOREST

If you have thought about skiing this quarter, the Cal Poly Ski Club may have something to offer. The club has four trips planned during the Winter Quarter, ranging from weekend outings to China Peak to week-long journeys to Sun Valley, Idaho.

China Peak, Jan. 22-24. Cost: $60-66. There is still time to sign-up for this weekend trip. China Peak is the closest ski area to Cal Poly, just north of Fresno.

South Shore—Tahoe, Feb. 12-15. Cost: $99. This trip will include chartered bus transportation from Cal Poly, and free shuttle service between our lodging, the ski areas, and the casinos.

Sun Valley, Idaho, March 20-27. Cost: $263. This week-long trip includes everything except food.

Representatives from the Ski Club will be in the University Union Plaza today, Wednesday, and Thursday, from 11 a.m. to 2 p.m., to answer any questions and to take sign-ups.

Women cagers open CCAA with two wins

Cal-Poly's women's basketball team opened California Collegiate Athletic Association conference play last week with a win on the road against Cal State Los Angeles and a win at home Saturday night against Cal State Northridge.

The NCAA Division II fifth-ranked Mustangs came up with 74 points on both occasions, beating the Golden Eagles of Los Angeles 74-69 and the Northerners 74-64.

Poly's three-time All-American Laura Bushning led the Mustangs in scoring against the Matadors with 22 points. Sophomore Kathy Ferguson grabbed five rebounds and poured in 15 points in the game.

The CCAA women's conference promises to be just as competitive and balanced as the men's, featuring these teams in the top 20—excluding No. 2 Cal Poly Pomona.

The Mustangs, who are trying to get back into the "groove," they were in when they won nine straight during Christmas break, are having consistency problems, assistant coach Darla Wilson said.

"We're slow starting," Wilson said. "Consistency is a problem. When we play better defense we tend to become deficient offensively."

However, the third-year Poly coach said the team, which has three sophomores in the starting line up, is coming of age right now. "It's the right time to make a move," she said.

Poly's three-time All-American Laura Bushning scored two of her 22 points in the Mustangs' 74-64 win against CCAA rival Cal State Northridge. Poly hosts Dominguez Hills Thursday night at 7:30 p.m.

It's winter, and surf's up

By DON McCaLEB

Tuesd a y, January 10, 1988

Morgantown Daily Page 11

Violence in surfing is not always restricted to humans. Local con noisseurs of the sport say that the spirit of the ancient religion whose followers hold that any unclean or unfriendly face on the water can become alarming~ly popular in the last few years. Burke said although he can sympa thize with those who have surfed the Central Coast for many years, their dissatisfaction with growing crowds at local surf spots is no excuse for violence and vandalism.

"Becoming angry to the point of har ming another individual is very childish," Burke said, adding, "These people must realize it is God's ocean; no one owns it."

Masten and Burks both agreed that the number of people riding waves on the Central Coast has grown substantially over the last few years, especially at South County surf spots.

The Shell Beach area contains several fine winter surf spots, but north is generally the direction to head to find the best waves during winter.

The winter upwelling of cold water near the shore may also bring another danger, sharks. A recent shark attack which killed the death of a surfer in the area has had little affect on the number of surfers out in local spots, said Burks.

Masten said the attack and news of several great white dom inated conversations at the shop, and that there were definitely fewer surfers in the water for days after the tragedy.

LENIVL ELLIOTT: Forty-Niner's 30-year-old phoenix emerges

SAN FRANCISCO (AP) — Lenivl Elliott was told off the field by his pro football career probably was over, and he says there were no hard feelings toward San Francisco 49ers Coach Bill Walsh.

"I understood. No one wants to be a running back with bad knees," says Elliott, a 30-year-old running back with bad knees who may be the 49ers' top rush ing leader when they face the Cincinnati Bengals in Super Bowl XVI.

Elliott, who came off the injured reserve list the day before the National Football League playoffs began, carried 10 times for a team-leading 48 yards and caught one pass for 24 yards Sunday in the 28-27 victory over Dallas which gave the 49ers their first conference title.

Elliott was with the Bengals six years including last season, when Walsh waived him late in training camp.

"I told me to try and stay in shape," said Elliott. "I would be out of football if it wasn't for Bill."

The 49ers did have injury problems in their backfield after cutting Elliott, and he was re signed after the opening game of the regular season. But another knee injury forced him onto the injured list and he went home, to Cincinnati, for 10 weeks.

Elliott carried a big part of the rushing load against Dallas because Ricky Pat ton, the 49ers' regular season rush ing leader, was out with a sore knee. On the game-winning, 89-yard touchdown drive in the closing minutes, Elliott carried four times for gains of 6, 11, 7 and 7 yards.

Lenivl is too old to take the constant pounding in the NFL for a whole season," said Walsh. "But for one or two games, he still has the ability to be outstanding, said's that's what he was for us in this game."

Elliott, who carried the ball only seven times in the regular season, said, "It just felt good to get the responsibility. The Dallas defense was loose because they didn't want to give up six quick points and they saw a field goal wouldn't hurt them.

"I was just thinking about holding onto the ball and trying to get out of bounds to stop the clock. They made us work slowly down the field, and we took what we gave us. We were patient."

Great Pizza Coupon Scam

Stuck with a lot of old pizza coupons?

Don't throw them away. Take them to Woodstock's. They're worth 1/2 the face value.
Imagine you are in a dealer showroom examining that sleek, red Ferrari you always dreamed you would own one day own. The large rim tires and the paint job look like new and the frame is impeccable. Best of all the asking price is a steal: $85,000. But before you sign your name to the buyer’s contract, you poke under the hood and discover—to your amazement—that the engine is missing.

As you gaze blankly under the hood, the sales representative puts a friendly arm around your shoulder and says reassuringly, “Don’t worry, the engine is just out for repairs. It will be back in the car and in perfect working order before you pick it up tomorrow. Trust me and sign the contract.”

While it may seem ludicrous to imagine that a sane individual would buy a car with no more than a verbal promise that an engine will be installed, that is essentially what PG & E is trying to do to the Nuclear Regulatory Commission. At the full-power testing license hearings which begin today, PG & E will try to sell the NRC an attractive looking nuclear emergency plan which is missing some essential parts and is far from operational.

The NRC is being asked to approve a plan which exists merely as a concept on a piece of paper, but is far from being able to be put into practice.

Only two of the six cities within a 20-mile radius of the plant—San Luis Obispo and Morro Bay—have completed standard operating procedures which specify what steps should be taken in case of a nuclear disaster.

The county must still train personnel, buy and install equipment and train workers to use it, which will take many months.

Finally, the nuclear emergency plan does not include an adequate analysis of how an earthquake would affect the emergency response to an accident at Diablo—a glaring omission considering the Hosgri fault lies less than three miles offshore from the plant.

When it is necessary to tinker and rewrite the entire plan have stated that under optimal conditions it would take five hours to evacuate San Luis Obispo. But it has been estimated that under average hourly wind speeds, a deadly radioactive cloud could begin to engulf the city in 2.6 hours. Thus, in this radioactive war, the casualty list would be high.

But again estimations on evacuation time have been based on optimistic conditions. It is assumed that in the face of a nuclear emergency, all will remain cool-headed and meticulously follow the emergency plan instructions. It also assumes that conditions will be ideal and that a nuclear disaster would not be triggered by rumbles from the Hosgri fault. Therefore, if Gale winds are blowing, people are panicking at the news of an accident at Diablo, or an earthquake registering more than 7.8 on the Richter Scale rips through San Luis, the number of people who could successfully evacuate the area would be reduced dramatically.

In short, it is asking the NRC to buy a product which is missing key components and will not work. It is the hope of the Mustang Daily Editorial Board that the NRC will prove a smart consumer and not buy a conceptual emergency plan which PG & E can only promise will operate smoothly.

The Mustang Daily encourages readers’ opinions, criticisms and comments on news stories and editorials. To ensure that letters will be considered for the next edition, they should be submitted to the Daily office by 10 a.m.

Press releases should be submitted to the Daily at least a week before they should be run. All releases must include phone numbers and names of the people or organisations involved, in case further information is needed.
