Faculty unions face run-off election

BY SHARON REZAK

Though the election is over, two collective bargaining unions still face a battle for faculty representation as Thursday's count resounded in a tie, according to the Public Employee Relations Board in Sacramento.

The United Professors of California, which has been fighting for faculty representation before the California State University Board of Trustees for 11 years, faces a run-off election with its rival, the Congress of Faculty Associations, because UPC won the election by only 49 votes.

Out of the nearly 20,000 CSU faculty members, 15,424 voted—8,316 votes (40.9 percent) for UPC and 6,316 (40.6 percent) for CFA. About 2,400 votes (16.5 percent) were contested. About 2,400 votes (15.6 percent) were counted for "no agents" and a small amount—414—of the ballots were contested.

PERB, which is in charge of the bargaining election, was expected to meet Wednesday afternoon to decide when the run-off election will be held.

UPC contract developer Lloyd "But" Beoche said he expects a short campaign for both unions—"probably about three weeks, in my guess," with a run-off soon following.

Beoche said he was "surprised" at the close election. "I expected CFA to get anywhere from 38 to 40 percent of the vote," he said. "And I thought we'd (UPC) get our 49 percent. I didn't expect it to be this close."

CFA campus president Corwin Johnson said the results of the election were "not as good as we would have liked, but we're still happy." Johnson said that CFA plans to campaign hard for the large "no agent" vote, though there is no way to tell who voted "no agent" and who didn't.

"No agent" representative John Connely said he was not disappointed at the election loss for "no representation." "I certainly plan to vote in the run-off," he said. "It's fun to fight, isn't it?"

"The overall impact is that we will now have collective bargaining," he added. Connely said he thinks there will be a big turnout for the next election. The first election had an 80 percent turnout for the CFA family group.

"The 'no agent' supporters will most likely be the swing vote in the next election, so both unions are trying to hard to convince everyone to vote their way," Connely predicted.

Emergency center looks out for county residents

Cars and trucks head north on U.S. 101 near Madonna Road. In the event of an emergency at Diablo Canyon, county residents would evacuate by this route after being alerted by one of the warning sirens placed throughout Diablo Canyon evacuation zone (inset)

BY MAURA THURMAN

County supervisorial elections will take place in June under the redistricting plan created by a county commission, visiting Superior Court Judge Zel Cooney decided Wednesday.

The decision concluded a lawsuit brought against the supervisors and County Clerk Francis Cooney by county resident Michael T. Nolan.

The recent state Supreme Court order to hold statewide elections in June under the Democratic redistricting plan was the basis for Nolan's argument.

In a "tentative decision" Monday, Center stated "it would follow" that the county use the commission plan as the redistricting plan for the June ballot.

Nolan sued county officials to proceed with June election plans after he was refused a petition in lieu of a candidate filing.

When he sought the petition, no decision about when to schedule elections had been made because district lines were undecided.

Voters will elect candidates in the June election to fill seats held by Steve MacElvaine, District 2, and Howard Mankinis, District 4.

Love Carefully Week starts Feb. 8

BY TWILY THOMAS

"It's a Saturday night for a typical Cal Poly student spending time with a member of the opposite sex. The lights and music and sound are worn down low...

Love Carefully Week, which runs Feb. 8-12, will deal with situations such as this one by making students more aware of the responsibilities involved in relationships.

Sponsored by Cal Poly's Student Health Services, Love Carefully Week is a concentrated effort to educate students not only about birth control methods and campus relationships, but also about the many services the Health Center offers in these areas.

Denise Steele, the family planning programmer and a student peer counselor, said Love Carefully Week always coincides with Valentine's Day.
Winter storms batter the nation

BY THE ASSOCIATED PRESS

The tempestuous winter of '81 sent floodwaters into the second floors of homes in Atlanta's suburbs Wednesday and punished New England with ice storms that blacked out many communities.

Many Georgians fled to higher ground as up to 6 inches of rain fell in 24 hours.

Freezing rain for the second time in three days, and widespread flooding in places, crippled communities from Maryland to Maine.

A chemical tank truck wrecked on an icy highway near Sturbridge, Pa., One thousand people were evacuated. A school bus skidded into an overturned city bus in Lowell, Mass., slightly injuring 15 children.

Thousands of homes in the Northeast went dark as tree limbs crashed and power lines snapped under the weight of a glass of ice.

Rivers and streams boiled by heavy rains washed across highways and down city streets in several states along the Eastern Seaboard. Ice jams contributed to the flooding in some areas.

Center stands guard over SLO County

“Everything goes very fast,” he said. “In five minutes, the EBS broadcast is written, typed, approved and on the air.”

The type of emergencies which Richter said he personally fears the most are earthquakes, floods, and train and truck accidents involving toxic chemicals.

“Free people should not have to live in fear,” he said.

“Because of the threat of an accident at Diablo, however, Pacific Gas and Electric has been required to add sirens to the county’s emergency system, Richter said.

“The sirens, even though they are owned by PG&E, can be activated by the sheriff if the event warrants it,” he added.

Although Richter’s department is not involved in designing the county’s nuclear emergency evacuation plan, decisions made on the plan will affect his department, he said.

“From page 1

decisions in the hour it takes for the EOC to be set up.

In that hour, Richter said, phone lines are hook ed up, maintenance and emergency officials are called in, and the emergency communication system is organized, Richter said.

An Emergency Broadcast System tape is also made in that time by Richter, who is also the county public information officer. The EBS plays the message over public radio stations to alert the public of the emergency situation.

EBS plays the message over public radio stations to alert the public of the emergency situation.

POLICE CHIEFS BACK DEUKMEJAN

SANTA BARBARA (AP) - The statewide Association of California Police Chiefs endorsed Attorney General George Deukmejian on Wednesday in his bid for the Republican nomination for governor.

At the same time, the 200 police chiefs gave their nod to Republican Assemblyman Bill Tellegen in the attorney general’s race.

Both Deukmejian and Tellegen were on hand when the endorsements were announced. The police chiefs are holding their annual convention this week in suburban Montecito.

Deukmejian told the group he would emphasize crime prevention in his campaign, saying that was the No. 1 concern of Californians.

“Free people should not have to live in fear,” he said.

POLICE CHIEFS BACK DEUKMEJAN

SANTA BARBARA (AP) - The statewide Association of California Police Chiefs endorsed Attorney General George Deukmejian on Wednesday in his bid for the Republican nomination for governor.

At the same time, the 200 police chiefs gave their nod to Republican Assemblyman Bill Tellegen in the attorney general’s race.

Both Deukmejian and Tellegen were on hand when the endorsements were announced. The police chiefs are holding their annual convention this week in suburban Montecito.

Deukmejian told the group he would emphasize crime prevention in his campaign, saying that was the No. 1 concern of Californians.

“Free people should not have to live in fear,” he said.

“How we handle communications during an evacuation will be affected by their decisions on the matter,” he said.

The county is now organizing a five year plan to improve the communications system, Richter said.

Included are plans to add more transmitters sites to the county’s system, to replace old communications equipment with new, more reliable equipment, and to add an additional full-time position to Richter’s present staff of one part-time and two full-time employees.

Mubarak debuts in Washington

WASHINGTON (AP) - Egyptian President Hosni Mubarak declared his support Wednesday for Palestinian self-determination and urged President Reagan "to make it living reality."

In his debut here as Anwar Sadat's successor, Mubarak studiously avoided a direct reference to the 1979 Camp David agreements which Israel insists is the only basis for settling the Palestinian dispute.

But meeting privately in the Oval Office, the two leaders reaffirmed a commitment to the accords "as the appropriate and only vehicle for addressing the Palestinian problem," a senior U.S. official said.

The three Camp David partners, the United States, Egypt, and Israel, have pledged to try to accelerate the currently stated negotiations over the Palesti nian's future, said the official, who declined to be identified.

Mubarak also told reporters the Soviet technocrats that he invited back to Egypt last week will be gone again within a year.

The late President Anwar Sadat expelled 700 Soviet technicians from Egypt to work on Soviet-built equipment at the Aswan Dam and at some major industrial projects.

In his arrival statement, Mubarak lectured Israel that the 1.3 million Palestinian Arabs living on the West Bank of the Jordan River and in Gaza "have an inherent right to exist and function as a national entity free from domination and fear."

Student declares war on rape

BY LORI MARLETT

Rose hopes to take his energies one step further by organizing a student group with a possible title of "Citizens Against Crimes Against People." In this effort he hopes to unite both Cal Poly and Cuesta students to deal with rape prevention.

Gods set forth for this proposed organization include handling campus problems such as better lighting and security.

Rose is willing to speak to any interested clubs or organizations on campus about rape prevention.

Any students who are interested in volunteering their time to his proposed organization or who would be willing to fill out a questionnaire for a pamphlet he is writing on rape experiences and prevention can contact Craig Ross at 616 Broad St., San Luis Obispo.

He recently spoke on rape prevention to the Child Development Club at Cal Poly.

SAM prepares for business seminar

BY LORI MARLETT

Staff Writer

"Avenues of Advancement" is the theme for the annual Cal Poly SAM Business Seminar which will take place Feb. 8 and 9.

Sponsored by the student chapter of the Society for the Advancement of Management, the two-day event will include panel discussions, classroom discussions and a luncheon.

The Cal Poly SAM chapter, largest in the section with over 350 members, conducts this event to give Cal Poly students the opportunity to learn from the experience and knowledge of business industry professionals on a personal basis.

Ireneannee Castillo, Region IX administrator for the U.S. Small Business Administration, will deliver the keynote address for the seminar during a luncheon beginning at noon Tuesday in Chumash Auditorium.

Tickets for the luncheon, priced at $6.50, will be on sale through Friday in the lobby of the Business Administration.

Business executives from throughout the United States will be in the University Union Room 218.

Topics will include "Employee Involvement in the Interviewing Process," "The Small Business Administration's Role in Government," and "Career Opportunities in Accounting."

Flutist Tim Weisberg entertains Sunday night crowd.

Flutist surrounded by energy, friends

BY SHARYN SEARS
Staff Writer

For those who appreciate an innovative flutist with a band just this side of rock ‘n’ roll, Tim Weisberg was the man to see Sunday night in Chumash Auditorium.

High energy and a warm casual air surrounded the flutist as he entertained the audience for over an hour.

Playing songs from older albums as well as his two most recent, “Travellin’ Light” and “Night Riders,” Weisberg shifted from enthusiastic foot-stomping during songs with a harder beat to a fluid introspective posture during more mellow pieces.

Commenting backstage that he enjoys playing at colleges, Weisberg expressed positive feelings about the audience.

“It’s like being with friends,” he said. One of his “friends” presented him with flowers during the first of the two performances he gave Sunday evening.

Last weekend marked Weisberg’s fourth performance at Cal Poly, and he kidded that he has been here so many times he ought to be given a degree.

As he played, Weisberg’s facial expressions often mirrored his flute melody, constantly communicating with the audience visually as well as musically.

As might have been expected, Weisberg’s flute solo made use of the Echoplex, a machine that records and then plays back after a brief delay to give the effect of two flutes playing simultaneously. Weisberg has used the Echoplex for 12 years. “I use it at least once every concert,” he said.

On stage with Weisberg Sunday night was a cast of seasoned musicians. The keyboardist formerly played with Melissa Manchester and the Manhattan Transfer, and the drummer has performed with Dave Mason. Also accompanying Weisberg were a bass and lead guitarist.

Pride in his band shone through when, several times throughout the concert, Weisberg would stand aside, gesture to a band player and allow the spotlight to fall on him.

Preceding the flutist was an excellent jazz trio comprised of Cal Poly students. Singer Robert DeVaughn, keyboardist Manuel Luz and bass guitarist Peter Goleta treated the audience to songs by Al Jarreau, Steely Dan and Christopher Cross.

Weisberg’s talent climbs to higher altitudes this month as he starts a concert tour that includes Sun Valley and Snow Bird.

Those of us at sea level Sunday night, however, enjoyed a concert that won’t soon be forgotten.

Movie bloopers come to campus

Ever felt guilty about laughing at other’s mistakes? When you watch Henry Graff’s “Out-takes and Bloopers” you can laugh and laugh at your own.

On Monday, Feb. 6, you can see some of Hollywood’s worst flubs on film, according to a producer on the day-to-day business for its crass combination of the worst of “King Kong,” “Star Trek,” and a censored “Batty Bop” cartoon. Also featured are censored scenes from well-known movies, and the dead-pans humor of U.S. Army training films.

A special segment contains a selection of early Ronald Reagan films.

The film is sponsored by the ASI Speakers Forum, a Program Board Agency.

Advance tickets for the presentation may be purchased by students at the University Union ticket office for $3. Cheap Thrills Records and Boo Boo Records have tickets for general admission at $4. Tickets may be purchased at the door but will cost one dollar more.

A Place To Achieve.

A semiconductor company measures much of its worth by the technology and training it gives to its people. At Sigetica, our Good People have an enviable record of advancement. It would take hundreds of pages to let all of them.

Many of these achievements, and you’d see why a career with our firm is a head and shoulders above other opportunities.

We offer challenging careers in all phases of engineering—product, design, test, process, reliability/quality assurance, yield analysis and data processing.

If you have a Bachelor’s or advanced degree in electrical, chemical or mechanical engineering; metallurgical science; computer science; physics; metallurgy; or electronics, we want to talk to you.

We’ll be on campus February 19.

Take a break at the Sigetica Recruitment Binder at your nearest Placement Center. We will tell you about opportunities.

For information, please write Sigetica College Relations, Opportunity Group, 811 East Airport Avenue, Sunnyvale, CA 94086

ASI CONCERTS PRESENTS

PRETENDERS
SPECIAL GUEST THE BOW WOW WORMS
THURSDAY FEB. 18, 1982 AT BOWLING. CAL.
Dorm activities overseen by 12-member committee

BY GAIL PELLERIN

Policy changes within the residents halls, communication lines throughout campus and intramural activities are some of the responsibilities of the Inter-Hall Council.

"We recommend, with quite a bit of clout, changes in the housing licensing," Eric Schallen said. "We also fill committees, such as Poly Royal Board, Food Service and Intramurals, which student representatives are asked to be on."

The 12-member council, supervised by Program Coordinator Stephan Lehm, is made up of the presidents from the residents halls plus the vice-presidents from Sierra Madre and Yosemite Halls. Every member holds a position on a special committee, serves as an officer of the group or both, Schallen said.

The IHC's communication lines begin with the group or both, Schallen said.

Carnation Sale
Residents of Sierra Madre Hall towers 1 and 4 will be selling carnations for 75 cents in the residence hall lobbies Feb. 8-10 from 4:30-7:30 p.m.

Prize money needed for annual Poly tractor pull

BY CINDY BLANKENBURG

Because of rising costs, the Agricultural Engineering Society which sponsors the annual Poly Royal tractor pull is having difficulty finding the prize money for the event.

Advisor Gary Weisenberger said that the club only has $200 of the $6,000 needed for the event. Recently he was asked the Poly Royal Board to help them with the other $4,000.

"If the board doesn't come through with the money, it will be difficult for everyone involved," he said.

The event takes a lot of manpower, Weisenberger said.

The tractor pull team is a division of the Agricultural Engineering Society. The Society, along with the Poly Gents, is without drive club, provides the manpower for the event.

"We'll find the money," Weisenberger said. "We have the manpower to do it."

The tractor pull was started in 1972 by students. This year the association for the equipment and prises came from industries, the Cal Poly Foundation and the students themselves. Weisenberger said the students formed a tractor pull as a division of the Agricultural Engineering Society and started contracting to fairs.

Cal Poly also provided the tractors with the equipment and the manpower to operate the machinery. The contract

Or 40 Y/$ Effort

enjoy is

by the members of the the tractor pull team on

sponsors the annual Poly Royal tractor pull promotion, including contracting the fairs. The Cal Poly tractor team still provides size for all the events. The Association charges the fairs to have a tractor pull and the team gets paid for the use of their equipment, and for their manpower.

Most of the money earned by the members of the tractor pull team only covers costs. What is left over is used for scholarships.

Because the equipment is getting more and more sophisticated, it is getting more and more expensive to maintain. To turn the tractor pull team charges the association more for the use of the equipment but, "we just can't keep up with the costs," Weisenberger said.

Weisenberger said Cal Poly is charged by the Association to put on a tractor pull just like any other organization.

"Some of the expenses are easily covered," he said, "because we supply the equipment and the manpower. We also use the tractors from the agriculture department, but we are still left without all of the prize money."

Weisenberger also said that the team doesn't have to put on the tractor pull but they enjoy it. "I also think that the people who attend Poly Royal enjoy it, too," he added.
Students, profs discover natural radiation in SLO

BY SANDRA GARY

Radiation is a glowing red word to most people, conjuring images of nuclear energy, cancer, leukemia and holocaust. But what some people fail to realize is that radiation occurs naturally in the environment.

Finding out what normal levels of background radiation are in San Luis Obispo is the subject of a project being conducted by three physics instructors and two physics students. They are monitoring naturally occurring radiation in samples of milk, vegetation, rocks, water, soil and marine life.

"Basically we are trying to establish norms in the levels of radioactive materials in the environment so we can evaluate increases in these levels," said Arthur Rosen, a physics professor.

Rosen is one of the instructors who has been involved with the project since its inception last April, when Pacific Gas and Electric Co. issued the radiation monitoring equipment to Cal Poly. The other two instructors are John Polking and Tony Buza of the Physics Department. The two students working on the project are sophomores Marc Himel and senior David Darrow.

The instruments, a sensitive gamma ray detector with associated electronics, and a computer, are on long-term loan from PG&E. The detector, called a gally detector, is worth about $100,000, said John Pickering, a physics safety officer.

Programs for the computer are run by Darrow while Himel gathers environmental samples and runs calibrations. They are trying to compare the environmental samples to known radiation samples, the experimenters have found.

"They are the same (radiation) levels people are exposed to every day," Buza said.

Buza said everything is radioactive and in one year of normal living people receive enough radiation to equal two chest X-rays.

The students and instructors do not fear any harmful effects from working with such low levels of radiation. Yet each is monitored for exposure to radiation with either a pocket dosimeter, which looks similar to a pen light, or a film badge, which darkens when exposed to radiation. Pickering is required by law to record every person exposed to radiation on campus. He takes readings from the dosimeters and records them in one of eight thick log books which date back to 1963.

Physics student Marc Himel runs a calibration on a material sample to check its radiation. Himel is one of two students and three professors studying natural radiation levels in San Luis Obispo County.

"All exposures (to student) since I have been here have been zero," Pickering said. "That means they have not received a measurable exposure."

Radiation is measured in roentgens. A dosage of radiation received by a person is measured in a unit called Roentgen Equivalent Man, or REMs. A lethal dose of radiation can range from 500 to 600 REMs, depending on the length of time it takes for a person to receive such an exposure and the concentration of the exposures, Rosen said.

Pickering explained what makes the nucleus of an atom radioactive. He said if there is too much energy in an atom or if an atom has too many neutrons compared to the number of protons, this can cause radioactivity. The two types of radiation monitored on campus are X-ray and gamma ray.

When radiation affects a body, it interacts with elements that compose compounds in the body. This can change the chemistry in the body by changing the structure of the atoms. But radiation doesn't always alter the chemistry of atoms. Pickering said. It depends on the energy of the radiation and whether it comes close enough to an atom, he said.

The information gathered by Himel and Darrow will be used as a yardstick to measure any changes in levels of environmental radiation in the future. PG&E will use any reports made by the three instructors to check for possible increases in environmental radiation when and if the Diablo Canyon nuclear power plant goes on line. The information gathered will help them find anything out of the ordinary.

A monitoring program is to establish a baseline before the plant goes into operation," said Bill O'Hara, radiation/chemical officer for PG&E.

Fire alarm systems improved

BY SANDRA GARY

Finishing touches were put on a new fire alarm system in the Administration Building last week as part of an ongoing project by the Public Safety Department to upgrade fire alarm systems at Cal Poly.

An enunciating alarm system was installed in the Administration Building along with smoke detectors placed in key positions and strobe lights to warn deaf people in the case of a fire, Carmen Johnson, Cal Poly fire chief, said. However, there are several degrees Fahrenheit Johnson said does not need a metal conduit to protect already received new and upgraded fire alarm systems or no systems at all.

The Crop Science Building is also receiving an upgraded alarm system. New smoke detectors, more alarms and an enunciating system will help firefights protect and prevent damage from fire. The enunciating map will be placed in the lobby of the new building, and the system should be completed within the next few weeks, Johnson said.

Next on the agenda to get improved fire alarm systems will be the Science Building. An enunciator panel has been bought but which will be placed in the lobby. Yosemite Residence Hall and Vista Grande Cafeteria and Restaurant have already received new and upgraded fire alarm systems, including enunciator panels. However, there are several buildings on campus with small fire alarm systems or no systems at all. Among these buildings are the University Union, English, Dining Hall, Music, Business Administration and Education, Math and Home Economics, Food Processing, Main Gym, and Mustang Stadium.

Johnson hopes to get rid of the "dial" alarms, or general alarms, which do not communicate the source using the building receiving the system. Johnson said, Cal Poly Fire Foundation would like to fully install the system. When a fire alarm goes off, it will ring in case of an emergency.

Funding for new alarm systems comes from the particular administration using the building receiving the system. For instance, Cal Poly Foundation would like to fully install alarm systems in the Dining Hall, and ASI would fund new alarm systems for the University Union.

A further step in improving campus alarm systems is the responsibility of the Public Safety Department purchasing a Simplex Life Alarm System. The department has proposed a study of the system which would cost the university about $300,000. Police Chief Richard C. Brug said the system would integrate intrusions and fire alarms from their original sources for a better computer to a computer in the Department of Public Safety Building.

Brug said the Simplex system would indicate to the dispatcher exactly where the alarm was ringing in case of an emergency system. The new system would also allow for one, 1,000 new alarm systems to be added to the dispatcher panel. Music, for instance, has 460 alarms and room for only 12 more on the dispatcher panel.

SEX: not something that 'just happens'

From page 1

“Never be sexually active just because the other person wants to be. Be sure what you’re getting is what you need.”

A guide to help mobility-impaired people get around the Cal Poly campus has been published by the university’s Disabled Student Services Office. Titled “A Guide to Campus Accessibility,” the booklet was designed and conceived by senior graphic communications major Erin Lee.

Harriet Clendenen, acting coordinator of DSS, said the office saw a need to help people at Cal Poly with mobility impairments and that Lee, who is herself confined to a wheelchair, saw the guide as a way of fulfilling that need.

The guide is a series of maps, each showing a different section of the campus. Each uses symbols to indicate where LIFT CURTAIN elevators and stair lifts, handicapped parking, and ramps are located.

Copies of the guide can be obtained by telephoning the DSS Office, 546-1395, or by going to the office, Room 119A in the Julian Shuster Union. Michael A. McPhie University

Satisfying Relationships” was the title of a film feature presented March 3 in U.U. 216 from 12:15 to 1:30 p.m. Snyder notes that there are weekly birth control workshops in the conference room of the health center from 11:15-12:10 p.m. on each Thursday which are just a part of the center’s many family planning and sexuality services.

Warner hopes to let students know it’s “Health Center’s Family Planning Services Office run by and for students,” said Snyder.

Other services offered through family planning include premarital counseling, a prescription-filling for the PILL, fittings for a diaphragm and selling contraceptives like condoms (90 cents a dozen) and diaphragms ($2 each). A new workshop presented March 3 in U.U. 216 from 12:15-1:30 p.m. will aim at encouraging men to take a more active role in contraception.

Snyder said Love Carefully proved successful last year since a lot of people became more aware of the Health Center’s services. She stresses foremost the importance of having an active, satisfying relationship whether you are having sex or not, however.

Sex: not something that ‘just happens’

Women netters sponsor 1st Green and Gold tournament

The Cal Poly women's tennis team will hold its "First Annual Green and Gold Tournament" on Feb. 13, 14, 20 and 21 at the tennis courts behind the Main Gym. The tournament will be a fundraiser for the Mustangs, who open their 1982 season this Saturday at Cal State Dominguez Hills.

Those wishing to participate in the tournament may pick up an entry blank in Room 123 of the Main Gym. The entry fee for a singles player is $5, while the fee for a doubles team is $12. Each player or team must be equipped with one can of new Wilson or Penn tennis balls. Entries must be received by Feb. 9.

Competition is organized into 15 divisions: Men's Open, A and B singles; Women's Open, A and B singles; Men's Open, A and B doubles; Women's Open, A and B doubles; Mixed Open, A and B doubles. Participants may enter a maximum of two divisions.

If there are fewer than 16 singles entrants or eight doubles teams in any division, the tournament director reserves the right to change categories.

Matches will consist of the best two out of three sets with the no-ad system of scoring used. A 12-point tiebreaker will be used when games reach 6-6. Decisions of the tournament director are final.

If the tournament is rained out for both weekends, participant's entry fees will become a donation to the tennis program.

For more information contact tournament director and women's tennis team coach, Orion Yeast at 544-6412.

Athletic program benefit set

Cal Poly will be staging its annual fund-raising Poly-Romp on Saturday, Feb. 21 at the tennis courts behind the Main Gym. The purpose of the Romp is to benefit the Mustang athletic program in fund-raising efforts, which has become even more important in view of ever increasing inflation. The athletic program would suffer financially even more than other thousand or so individuals, legitimate groups and clubs may participate. Each group or club participating will receive 40 percent of the total revenue earned. Please see page 11

BY VERN AHRENDT

Just this time

Once upon a time there was a baseball field, and now it is a parking lot. Once there was a stadium with a backdrop for stands, and now it is a football outdoor theater. Once there was a clubhouse, and now it is a receiving house for the new library. Once there were uniforms, and they were donated a year ago to the semi-pro team in town for practice purposes. Once there was a large glut of baseballs, but the little league uses those now.

The old home plate, now bronzed, hangs in the library's Reserve Room. A little plaque hangs below it telling all about what life at Poly used to be like when baseball was a flourishing sport.

On a bulletin board next to the plaque are newspaper clippings of exploits of the former Poly cast. Berdy Harr, the former coach, just signed a three-year pact with the Baltimore Orioles, the article read, as the head coach of the organization's Double A club.

Another clipping told of Bob Busby's appearance in the 1978 All-Star Game. He came in as a pinch hitter in the ninth for none other than Ozzie Smith, who was making his seventh straight appearance in the midsummer classic.

Another clipping told of Tom Beyers and Craig Gerber both started in the World Series two years ago. Like most fairy tales this fabrication ended with a happy ending.

I failed to mention the thousand or so athletes that donated Harr's green and gold. They may not have made it to the major leagues, the All-Star Game or the World Series, but they still gave the Central Coast something special—college baseball. But, that was before the budget ax fell ten years ago. College baseball on the Central Coast was the greatest thing since sliced bread.

That was then. Now there is the possibility of spring training without any baseball. That is like Morro Bay without fog for us. But, there is the chance, a growing strong one with each passing day, that the university will open. No more doubleheaders at Poly Field which has often been called an airport, the rectangle, the matchbox basebaU, but the little league plays there.

Now, there is the possibility of spring training without any baseball. That is like Morro Bay without fog for us. But, there is the chance, a growing strong one with each passing day, that the university will open. No more doubleheaders at Poly Field which has often been called an airport, the rectangle, the matchbox, the short porch. Simply put, baseball is on the chopping block and unless something unexpected happens this fairy tale will come true.

The baseball team is not being singled out for crimes against the state, but it just happens to have the highest budget row. It would be an injustice to select any team for failure to keep the athletic program. It would be like picking Courtyard out of business or banning the consumption of alcohol during the All-Star Game.

Instead of targeting a single program or a group of programs as sacrificial lambs, why not draw straws?

Or what about a tug-of-war between coaches? Those are equitable proposals. One other possibility is the complete elimination of athletics at Poly, Hey, no more problems! That was easy enough. Just say from this day forward Poly will be an institution of higher learning and nothing else. Sounds fair.

But, the only idea that really makes sense would be to gather all of the athletes, coaches and next of kin to pick all of them into Mustang Stadium and lock the doors. Then that all the administrators and coaches would have to do is stuff the year's budget into a huge sack preferably in one day and fly over in a helicopter and dump it in a trash can and say "game over," the most money wins. Well, budget roulette isn't just a game anyway, isn't it? Some win, but an awful lot of innocent bystanders lose.

Tennis, baseball, baseball, where are you? I hope this fairy tale comes true. This week's picks. It never fails in Murphy's Law (I think) just when you think you know what a team will do it goes and does something stupid like start rebounding with authority again.

The baseball team might have upset its mind and if the rebounding continues, look for San Luis Obispo to make a run in the Central Coast Athletic Conference.

If you're taking tough courses, you'll need all the help you can get.

DELTA TAU RUSH

For Questions Phone 543-9656

SAN LUIS OBISPO I
Poly's 142-pounder Chris Cain (right) readies himself for a take down of a Bakersfield grappler in the Mustangs' loss at home last month. The matmen travel to the University of Oregon today for a 7:30 p.m. showdown with the Ducks.

Runners 'romp' for bucks, Poly sports

From page 10

There will be individual prizes for most laps run (male and female), largest pledge per lap, largest total raised, and most laps run in the Master's age-group (50 years or older).

Each runner who enters must obtain sponsor sheets from the Athletic Department office and then solicit pledges from family, friends or classmates for each lap he or she expects to complete. The event will be a timed one-hour run around Poly's 440-yard track. Participants may run, walk, jog, crawl or any combination of the four in the one-hour time allotment.

Further information about the Romp, sponsor sheets, club and team participation, or the athletic program in general may be obtained by calling the department office at 646-2923.

Students, faculty & staff duty rates are $3.75 for a 3 line ad and $1.00 for each additional line. Weekly rates are $5.00 for the 3 line minimum and $1.75 for each additional line. Classified ads are also available.

Payable by check only to Mustang Daily, GRC Box 789.

**Effective solution**

It's a difficult dilemma, and there are no easy solutions. In the wake of continued overenrollment, space limitations, and budget cutbacks at Cal Poly, administrators here must figure out how to curtail future enrollment in as fair and painless manner as possible. Already this task has required the making of some hard and decisive choices, such as the elimination of new admissions this summer.

There is also nothing to indicate that the administration's task will get any easier in the months ahead, but it is encouraging to note that President Warren Baker has already uncovered one fair and effective solution that could reduce enrollment from 900 to 150 students. Perhaps the best part of Baker's solution is that it will involve only the enforcement of laws already on the university books.

What Baker is proposing is that Cal Poly's schools begin to crack down on their underachievers, students who have attended Cal Poly for several quarters, but due to their low grade point averages will almost certainly never graduate.

Under this proposal, students with grade deficiencies will be weeded out among enrollment lists and counseled by their departments before they are allowed to register for another quarter. Underachieving students who stand no chance of ever graduating will subsequently be expelled from the university.

Removing underachieving students from the university will never be an easy or pleasant task, but when university funds and resources are already overtaxed, it is highly unfair to the remaining students and faculty to keep them on. It is a fair and effective way of reducing the student population.

The group on campus I would trust the most to prepare such emergency plans would be the Public Safety Department. Each member is trained in such matters. (Brug is the coordinator of the plan.) So perhaps some parts of the plan are inadequate, but it is only a draft. It is an early and important step in the right direction. Taxpayers will get a bit more for their education dollar by paying only to educate students who are motivated to succeed. Students and faculty at Cal Poly will also benefit from a less crowded, more productive academic environment.

We only wish the remaining enrollment problem had such an easy solution.

---

**The Last Word:**

**Lives at stake**

If there was an earthquake, I would probably crawl under a desk or closet and stand in a doorway. But if there was a sniper standing at the window, I would want someone to direct me to safety. To prepare for such emergency does occur.

The group on campus I would trust the most to prepare such emergency plans would be the Public Safety Department. Each member is trained in public safety— as their name suggests, and that is their responsibility.

The majority of the Academic Senate members don't think of this exists. On Jan. 19, the Senate passed a resolution urging President Warren Baker not to implement the draft campus Disaster Emergency Preparedness plan. They also passed a resolution urging the establishment of a task force representing the entire university community to review the drafted plan and present its findings to President Baker.

The Academic Senate presented their rationale for the scrapping of the plan: too little publicity on campus, the faculty wasn't involved in the drafting of the plan, parts of the plan were "prematurely inadequate," especially Diablo's Operational Plan, and the groundwork for any substantive aspects of the plan were deficient.

I guess they thought that faculty could draft a better plan than a group trained in the police and fire departments.

With the passing of the resolution, the senate essentially undermined Public Safety Director Richard Brug's credibility, along with the members of the Disaster Preparedness Committee. (Brug is the coordinator of the plan.) So perhaps some parts of the plan are inadequate, but it is only a draft. It is an early and important step in the right direction. Taxpayers will get a bit more for their education dollar by paying only to educate students who are motivated to succeed. Students and faculty at Cal Poly will also benefit from a less crowded, more productive academic environment.

We only wish the remaining enrollment problem had such an easy solution.

**Letters**

**Discouraging words**

If Mr. Pryga wants more data on the health hazards stemming from the nuclear process, I recommend him to the health records of the Navajos who have worked at the uranium mine in New Mexico. A study of Dr. Len Gottlieb of the U.S. Public Health Service indicates that for those Navajos who have worked at the mines the incidence of lung cancer has skyrocketed. Alan Reno, in the June 1, 1980 Los Angeles Times wrote that 25 Navajo uranium miners from the original Kerr-McGee Shiprock uranium facilities have died from lung cancer and that Mr. Gottlieb expects many more similar fatalities in the 1980's.

I must say that I am honored that Mr. Pryga thinks that our "cabal" could have such an impact on the growing anti-nuclear power sentiment in the county, state and nation. Never did I realize that "with their radical maneuvers (we are underminding the confidence of the people)... What a feeling of power!" I guess the truth is out in thinking on nuclear power over the past few years had nothing to do with the constant front-ups at nuclear power plants from Three-Mile Island to Diablo Canyon to that at Ginna Nuclear Power Plant in Rochester, New York a few days ago. I suspect, however, that Mr. Pryga's argument is not with me or Dr. Krejsa or the "cabal." It is with the American people for no longer accepting the nothing words of the Nuclear Regulatory Commission or Pacific Gas and Electric Company.

**Opinion**

"I think of what El Salvador could do with the $100 million military aid the U.S. is sending them. They could replace the stone walls, cinderblocks!"

**Editor:** With reference to Stanley Pryga's Jan. 28 missal in the Mustang Daily which excoriated Dr. Krejsa, myself, and "others in that cabal!" for our views on Diablo Canyon, the difficulty one faces is whether to reply to name-calling and invective and if so which one or two of the inaccuracies and aspersions must call out for response.

Because more people may be taken in by the oft-repeated claim that no fatalities have been committed by the nuclear power industry than by his other assertions I will limit my comments to this one issue. There is a whole host of literature which has developed since the Mancuso Report of 1977 which suggests that workers at nuclear power plants have a higher incidence of cancer than those in the general population.

Obviously, one cannot say that nuclear power causes cancer any more than one can say that cigarettes cause cancer, but there are highly positive correlations in both cases. In addition, given the latency period of several years to a decade for many cancers, it may be a very long time before we can calculate the human cost of this occupational exposure. The now routine radioactive emissions at several nuclear plants pose both environmental and health hazards. For a follow-up to the Mancuso Report I recommend that Mr. Pryga and others read Jack Anderson's column in the telegram-Tribune of April 4, 1979 on the dangers resulting from low levels of radiation at nuclear power plants and the government's attempt to suppress such news.
