Physics prof to describe arms race

by Teresa Mariani
Staff Writer

The technical and philosophical aspects of the nuclear arms race will be the subject of a speech Thursday by a Cal Poly physics professor.

Dr. David Hafemeister, an aide to Sen. John Glenn (O-Ohio) from 1975 to 1977, said that his lecture will address what he calls "the technological imperative."

"If something can be done, there's a tremendous amount of pressure just to do it," said Hafemeister.

"History shows that."

The question of a technological imperative to use the nuclear weapons science creates is something scientists just do not focus on, he said. "Their attitude is usually, the contract's there, let's do it."

Hafemeister's work as science advisor to Glenn earned him a position as an adviser to an undersecretary of state during the Carter Administration. His work for both the Ohio senator and the undersecretary helped pass the Nuclear Non-Proliferation Act of 1978.

Hafemeister has presented his lecture for the American Physics Society and at Cal Poly Pomona. He will present the lecture again this spring in Washington, D.C., for the American Physics Society.

Hafemeister said he tried to be as unbiased as possible in his lecture presentation of the nuclear arms issue. "I'm basically trying to be 'academic,' " he said, but added, "I think we have more than enough hard-core arms." Hafemeister will use an Apple computer during half of the lecture to illustrate how the statistics about weapon stockpiles and first strike capabilities translate on maps and graphs.

New leader, new name, center changes goals

Bob Woolery, left, and Craig Chase look at their calendar enterprise project and discuss trademark negotiations.

Bridging the gap between first and 20th century religion is an important goal of the University Christian Center according to the Rev. David A. Smiley, campus minister.

The center has undergone several changes throughout this academic year, including the new leadership of Smiley, a new name, and what Smiley describes as "a change of emphasis."

The minister stated that the reason for the name change (from the Campus Christian Center to the University Christian Center) is to avoid confusion with the Campus Crusade for Christ.

Smiley said he tries to be as unbiased as possible in his lecture presentation of the nuclear arms issue. "I'm basically trying to be 'academic,' " he said, but added, "I think we have more than enough hard-core arms."

Hafemeister will use an Apple computer during half of the lecture to illustrate how the statistics about weapon stockpiles and first strike capabilities translate on maps and graphs.

"SLO Seduction" faced an injunction—or at least what's what "The Men of Cal Poly" calendar producers feared when they received a warning against infringing on the Foundation's right to the university trademark.

Bob Woolery and Craig Chase, who together with photographer Kevin O'Connor produced the 1983 calendar featuring Cal Poly men, were notified in November that the calendar was being reviewed by Administration officials.

On Dec. 33, Burke, Smith, Halesum & Hayes, the San Luis Obispo law firm representing Cal Poly Foundation, mailed a warning to the "SLO Seduc­tion" producers.

"When we first got wind of it, we weren't pleased at all," said Woolery, an industrial technology major who used the marketing portion of the calendar as his senior project. "After the calendar was published, (Administration officials) were concerned about the name being used, especially because he thought they were concerned whether the calendar would have a bad effect on Cal Poly's image."

"The word 'Cal Poly' is a trademark name. We've requested the publishers of both calendars ('SLO Seduction: The Men of Cal Poly, San Luis Obispo' and 'Women of Cal Poly 1983') to sit down and discuss a licensing agreement with us," said Foundation Executive Direc­tor Bob Griffin. He characterized the law firm's letter as "formal," rather than "disrespectful or accusatory."

The letter stated the Foundation could enjoy any further sale of the calendars, get an order for all the remaining unsold calendars to be destroyed and seek a permanent injunc­tion against the producers if they did not reach licensing agreement with the Foundation.

Poly student chosen as representative

by Mary Hennessy
Staff Writer

Cal Poly student Chris Hartley became the voice of students statewide when he was recently selected as a student representative to collective bargaining negotiations.

Hartley and three other state univer­sity students were selected by a group of thirteen applicants to fill openings in four of eight vacated positions.

Hartley will represent students from the state's eight public universities at the bargaining table after his trip to Los Angeles.

"It can be potentially very disrupting to school work," he said. "It would be great to sit on it on faculty, but I really hope to sit on one that best fits my schedule."

Hartley also emphasized that he hopes to be a system-wide representative.

"Even though Cal Poly, they may have dif­ferent needs than other universities. I must maintain an obligation to the en­tire system," he said.

Hartley is the second Cal Poly stu­dent to sit at the bargaining table with negotiators. Nancy Johnson, who graduated last June, was one of the five representatives who filled the position for the incoming students.

The Campus Ministry is supported by four denominations (First Presbyterian Church, Congressional United Church of Christ, Episcopal Church, St. Stephen's Episcopal Church, Congregational United Church of Christ), and by contributions from individuals. The minister describes it as being "unchurch" because everyone is encouraged to participate.

Come to the next S.A.M. (Society for the Advance­ment of Management) meeting and find out all about the upcoming Buckman Dally. Mustang Dally...
Black Canyon: cool river, hot creek, winter sunshine

For the thirteen members of ASI Outing's Colorado River Canoe Trip during the first week of Christmas break, it was a time of simple existence in the present. A time when thirteen people became thirteen friends paddling canoes down the Black Canyon of the Colorado River. Exploring side canyons, befriending cactus plants, standing under hot waterfalls, soaking in hot pools and swimming in the cool ones set in the rock of narrow canyons.

It was a time for paddling softly through the water as the sun set orange behind the mountains, the sliver of the new moon following in the glow when sipping a cup of hot chocolate around a campfire was the most satisfying thing one could be doing. Five nights under the stars and mornings of frost on the sleeping bags, and more hot chocolate and cider as the group huddled around the fire for warmth.

It was a time to enjoy the low winter sun as it shone through the quickly-rigged sails and masts to catch the wind sweeping across Lake Mojave, to glide across the lake's mirror stillness when the wind had subsided. There was time to lay on the warm beach in the sunshine, to read in the afternoon, and to forget that half your Christmas shopping had yet to be done. It was a time to touch the earth, to know that you felt it, that the land was always there even if you forgot. It was a time of reassurance, the image of which would keep you straight for the next quarter. The photos and words on this page are just some of them.

Clockwise from top left: a mass of cactus needles warns off intruders; two ASI Outings trip members glide through the reflection of the low winter sun, beaching their canoe for lunch; the Outings canoes lined up at camp, half-emptied of gear; another trip member and friend; and, lastly, the group heads up Boy Scout Canyon to a hot spring.

A golf club meeting will be held on the ASI Office on Thursday, Jan. 26 and 27. MATH/CSC, BUS/MIS, ME, ET/EL, IT, ET/AC & Rand IE on

Join the class of '82 at Hewlett-Packard

Take a look at why these Cal Poly grads chose HP

Ramona (Rey) Johnson
BSCC March '82
Development Engineer
Lake Stevens Division
Lake Stevens, WA

My first exposure to HP was in the summer of 1981 as a Co-Op. I worked for six months at the Computer Support Division in Cupertino CA as a board repair technician. It was there that I became quite impressed with the way that HP treats its employees. To me the greatest thing about working at HP is the people. The people at HP are very competent and priced competitively enough to sell itself on the open market. Lastly and most importantly, the people at HP are very competent and pleasant to work with.

John Wendler
BS EE/Appplied Math August '81
Development Engineer
Signal Analysis Division
Fort Collins, CO

My job includes designing algorithms to analyze electronic signals. This is a fast-growing field and it's fun to be involved in such a dynamic technology with a company that's a leader. Another thing I like about HP is that design constraints are 'real world.' It must be good enough that the company can effectively enough to sell itself on the open market.

Terry O'Connell
BSEE/ECE June '82
Commercial Customer Engineer
Nuna Sales Region
Sparta, N. CA

Robin Tilles
BSEE June '82
Facilities Engineer
Desktop Computer Division
Fort Collins, CO

I've wanted to work for HP ever since I first toured their Palo Alto plant in 1978. I was impressed with their attitude towards their employees and their management objectives. HP is more employee-oriented that most companies, and they are concerned with providing employees a stimulating, creative, challenging, and yet casual atmosphere to work in. Since I've started working at HP I've found that my expectations of the company have been more than fulfilled.

Humanities Council
There are two openings for finance committee representatives on the Human Development and Education Council. Applications are available in the ASI office, Room 317A.

Crops Club
There will be a general meeting at the Crops Unit at 7:30 p.m. on Thursday, Jan. 13. On Saturday, Jan. 15, the club will have a Crabbing Party at Avila Beach starting at 3 p.m. The party costs $3 per person.

NUTRITIONISTS/HOME ECONOMISTS...

You're Needed
All Over the World.

Ask Peace Corps home economists and nutritionists why they travel to Asia, Africa and Latin America. They'll tell you they are helping to diminish malnutrition by teaching gardens, food preparation and preservation, hygiene and budgeting. Ask them why Peace Corps is the toughest job you'll ever love.

PEACE CORPS
LAST CHANCE TO TALK WITH PEACE CORP REPRESENTATIVES, TODAY! 9AM-3PM, AT THE UNIVERSITY UNION PLAZA. WE HAVE AN ESPECIALLY LARGE NUMBER OF OPENINGS FOR MAY AND JUNE DEPARTURES.

If these sound like good reasons to you we'd like to talk to you while we're on campus.

We'll be interviewing March, June, and August Graduates in EL, CSC, MATH/CSC, BUS/MIS, ME, ET/EIL, ET/AC & R and EE on January 26, 27 and 28.

We'll also be interviewing juniors in EL, ME, CSC, MATH/CSC, and ET/EIL for Summer and Co-Op positions on January 27th.

Check with the Placement Center for more information on Hewlett-Packard and for interview sign-ups this week.

ASME
ASME's holding a Chevron-Pipelines Opportunities meeting on Thursday, Jan. 13 at 11 a.m. in the Mechanical Engineering Building, Room 202. Don Waddell from Chevron USA will discuss employment opportunities for mechanical engineers.
In the winter Sequoia National Park takes on a special appearance that the summer visitors do not see. Snow covers the ground and the crowds of tourists with their Winnebagos are replaced by small groups of wright campers and cross-country skiers. The excellent cross-country skiing potential of the park attracted 13 Cal Poly Students from ASI Outings to enjoy Sequoia’s winter beauty on a cross-country skiing trip.

Imagine buying a lift ticket and heading for the moguls on “skinny skis” with bindings that consist of no more than two pins on each ski into which you slip your foot. These “three pin bindings” are standard cross-country ski gear and were just part of the equipment we had in tow as we drove toward the western Sierras.

Unlike the steepness of the eastern Sierras, the western Sierras rise gradually out of the scrub oak-covered foothills. The first night we camped below the snow line among the oaks and sage brush. The signs cautioning about hungry bears reminded me of crossing the Sierra Nevada, since the conventional snow-plow and parallel turns are not to avoid hitting trees while on cross-country skiing.

The next morning we drove up to the snow level, and saw our first giant Sequoia Redwood. The Wolverton Ski area is located between Giant Forest Village and the Lodge Pole campground.

In the Wolverton parking lot I counted seven cars and saw what looked like a beginner’s slope. The ski area offers little that would attract the serious downhill skier but has good slopes for practicing a cross-country ski technique known as the Telemark turn.

The Telemark turn is the best means to avoid hitting trees while on cross-country ski, since the conventional snow-plow and parallel turns are not well-suited.

After an hour of skiing the temperature warmed up enough to make skiing in a T-shirt comfortable, and to change the snow from ice to slush. Everyone improved their Telemarking technique despite frequent falls and “head plants” banding face first in the snow. Marty, our trip leader, was on hand to give us personal instruction and to demonstrate a fine Telemark turn. By the end of the day most of us were a little bruised and stiff, but we were all better skiers than when we started.

The next morning we left from the General Sherman, a giant Sequoia Redwood over 300 feet tall, on a half-day ski tour that took us through the Giant Forest, out to Moro Rock and back to Giant Forest Village.

Before we went skiing, nine of us spent at least 13 hours waxing our cross-country skiefs. The waxing involved hard waxes, klisters (goopy wax) scrapers, rubbing corks and a waxing torch.

It was two weeks since snow had fallen, and the forest floor needed another three feet of snow to smooth over all the logs. In addition to using our Telemark skills, we learned how to jump logs and dodge low branches while on our skis.

The top of Moro Rock was our last obstacle before lunch. An intermittent railing and stairs lead to the top of this huge granite formation that stuck out of the ridge. The railing and steps were fine except that they were covered with ice. Special care and some awkward gymnastics on the railing brought us to the top, where we were treated to a spectacular view. To the west was the San Joaquin Valley, completely covered in fog below a cloudless blue sky. To the east, the snow-covered peaks of the Great Western Divide stood behind the Sequoia’s backcountry. The clouds resembled a static sea of cotton. The warmth of the sun on the rock added to the relaxed atmosphere of our lunch stop.

After a challenging descent of the icy staircase, we skied back into the forest along the road. The sun had melted enough of the snow to make us carry our skis the last mile. As we got closer to the end of the road, the conversation changed from skiing to talk of future trips.

So says the CA.
Co-Op Calendar

The Cooperative Education program is a work experience program through which students alternate periods of study with work related to their majors. The work is paid, and academic credit is given.

The following organizations are coming on campus to interview for co-op students and you may come to the co-op office to arrange to interview with them. There are also many other companies interested in co-ops, and information on these positions is available at the office in Chase Hall.

ASI Committees

The ASI is accepting applications for student representatives on the Campus Recreation/Intramural Advisory Board and the Liberal Studies Committee. The Elections Committee is seeking students interested in working on rules revision and overseeing and improving the election process. Contact the ASI office, UU, Room 217A for more details.

ASI Tutorial Program

Free tutorial services are available in the ASI Tutorial Center, Chase Hall, Room 104 from Jan. 10 to Finals week. Services are available in math, chemistry, computer science, economics, English, finite math, mathematics, mechanical engineering, philosophy, physics, statistics, and zoology.

"Indoor" Soccer

There will be a Managers' meeting on Monday, Jan. 31 at 6 p.m. This game is designed for a gym and is played on an enclosed tennis court area because of lack of indoor space. The dimensions are similar. Meetings are mandatory if participation as a team member or official is desired.

Free tutoring services are available in the ASI Tutorial Center, Chase Hall, Room 104 from Jan. 10 to Finals week. Services are available in math, science, economics, and building marketable skills from freshmen to senior year.

College Republicans

The college Republicans are hosting a potluck dinner for all old and new members on Thursday, Jan. 13 from 5 p.m. to 9 p.m. at 1317 Foothill, Apt. C. A brief meeting will follow dinner to discuss the college Republican's upcoming trip to Sacramento at the end of January. For more information, call Becky at 541-8167 or Karen at 544-9996.

People Generating Energy

A night of Poetry and Music to Stop Diablo Canyon Nuclear Power Plant will be held at 8 p.m. on Sunday, Jan. 16, at the Dark Room. Poets to read are Michael Churchman, Terre Haugete-Walt, Vickie Kelly, Stuart Presley, Patty Sullivan, and Ralph Vonna. Music will be performed by David Doue, Cindy Stanton, and Peter Yelda. Beer and wine will be sold. There is a $3 cover charge which will benefit People Generating Energy.

ASI Tutorial Program

Free tutoring services are available in the ASI Tutorial Center, Chase Hall, Hall, Room 104 from Jan. 10 to Finals week. Services are available in math, science, economics, English, finite math, mathematics, mechanical engineering, philosophy, physics, statistics, and zoology.

Welcome to Winter Quarter
From ASI President, Sandra Clary

Winter quarter promises to be a busy quarter for your student government, and for you as well.

This quarter the Student Relations Board will be conducting anywhere from 2 to 5 student polls. Many of you will be contacted regarding your participation in these polls. Your cooperation will ensure accurate and informative results that will benefit all students.

The Student Senate will be dealing with a whole range of issues that affect us all. Meetings are every Wednesday evening at 7:00 PM in UU 220. You are invited and may speak on any issue which concerns you. We need your input to ensure representativeness in our decisions on the variety of issues that face us in student government.

Final legwork on the published evaluations of faculty should be completed within this quarter. The committee in formulating the questionnaire will consist of students, faculty and one administrator. If you wish to give input on possible questions or format, please stop in at the ASI Office in UU 217A.

I am looking forward to meeting more of you and hope all goes well for you this quarter.

Welcome to Winter Quarter!

A Place of Cultural Exchange

The Multi-Cultural Center, founded last year on January 16th, which coincides with Martin Luther King’s birthday, is now approaching its one-year anniversary. Many students still are not taking advantage of this facility.

The Center is located on the first floor of the University Union across from the bookstores. In the Center students can find a variety of magazines and newspapers from Asia, the Middle East, Africa, Latin America, as well as periodicals for Native Americans and many other students who are interested in meeting and covering with people from different cultures, or who just want to pick up a new language, there is an bulletin board in the Center to find what you’re looking for.

The Multi-Cultural Center is a fantastic place to learn about the many different cultures that are a part of the Cal Poly campus. The Center is a great place for people of all ethnic groups to learn more about each other.

Sharon Sagisig, Ed Sagisig, Mayra De La Torre, and Rosa Salazar model native costumes from the Philippines and Mexico.

Don’t Miss the Dances!

The upcoming Multi-Cultural Week will enhance many aspects of the different cultures of the ethnic groups here at Poly. Not only will there be booths with the traditional foods from various cultures, but there will also be the opportunity to watch dances that come from all parts of the world.

It will be performed by the Delta Chapter of Omega Psi Phi during the Multi-Cultural Week. The term “Tinikling” comes from Mexico’s Northern regional costumes of this dance include lace shirts for the men and butterfly sleeves on the dresses for the women.

The Indian dance “Bharat Natyam” will also be performed. This dance is a dance of coordination and concentration. From Mexico comes the “Bale Folklorico.” This dance originated from Mexico’s Northern regional costumes of this dance include lace skirts for the men and butterfly sleeves on the dresses for the women.

Please stop by the Center and enjoy the wide range of entertainment that will be available.

Welcome to Winter Quarter!

A Salute to the Cultures

When was the last time you tasted a wonton or seen anyone doing a Tinikling dance? The opportunity to experience these will be presented from January 17 to January 20 when the Cultural Advisory Committees will present a Multi-Cultural week.

This celebration is being held to enhance cultural awareness on this campus. The events will range from exhibits to folk dances and other types of entertainment. There will be plenty of traditional ethnic food available for sale. If you’ve never tried a Filipino rice cake—now is the time to do it. The purpose of the event is to let the students know that there are several ethnic groups on campus. “We all want to bring cultural awareness to Cal Poly,” said CAC Chair, Dae Hong.

An atmosphere that will help to make students more educated and perceptive to different cultures and to break stereotypes is the effect that the students involved in the Cultures of our fellow Poly students.

The Multi-Cultural Center is a fantastic place to learn about the many different cultures that are a part of the Cal Poly campus. The Center is a great place for people of all ethnic groups to learn more about each other.

Members of Omega Psi Phi demonstrate their march.
HOUSTON—An unemployed man who used stolen insurance papers to obtain surgery to cure his bleeding ulcers has been sentenced to five years in prison for stealing medical insurance documents he had stolen.

Rudolph's scheme was discovered, however, when a friend of Prater's, chaplain-intern Charles Moore, pleaded guilty to violating terms of his probation for a prior theft conviction, pleaded guilty to violating terms of his probation for a prior theft.

Moore said Rudolph had twice been jailed for stealing medical insurance documents he had stolen.

Rudolph, a native of Newark, N.J., who has worked as a cook, was being held at the Harris County Jail pending assignment to a state prison.

"I think it's terrible that he is going to prison for the reason he is," Ms. Moore said. "But it's not like he stole a loaf of bread and got sent to prison for it. We're not dealing with a first-time offender."

Moore said Rudolph received a prison sentence despite the nature of the theft because he already was on probation. Ms. Moore said Rudolph was questioned in his hospital bed by police and taken into custody when he was released from the hospital last Saturday.

"My feeling is that if Flanagan had not gone to the hospital to visit his friend, he (Rudolph) would have gotten away with it," Ms. Moore said.

Authorities said Prater's whereabouts were not known, nor was it known exactly under what circumstances Rudolph stole the papers.

Cost of the operation to the hospital was $3,203.60, hospital officials said.

Rudolph was questioned in his hospital bed by police and taken into custody when he was released from the hospital last Saturday.

Weinberger credited the prospective reallocation to Reagan's "effective... anti-inflationary campaign," meaning fewer dollars were necessary for programs once thought to require greater spending.

Despite that rationale, it appeared Weinberger had yielded to budget director David Stockman, other White House economic advisers, and senior congressmen who had been pressing for a significant trimming of the defense budget, Weinberger had come to reconsider his intransigence and modified his position in the wake of a controversial trip to the Middle East early this year.

The budget authority covers spending next year as well as some outlays spread out over future years.

Weinberger said actual spending in fiscal 1984, under his revised proposal, would be about $6 billion smaller than had been projected. That would place the fiscal 1984 spending figure at about $125 billion, or some $30.2 billion more than this year.

Stockman had been pushing for cuts in precisely the same ball park—$11 to $12 billion for fiscal 1984—as part of his quest to narrow what otherwise looks as a deficit of $200 billion.

But Weinberger denied he had given in to pressure and pictured the reductions as "long planned, ever since it was known how effective an anti-inflationary campaign has been."

Most of the rollback, he said, is attributable to lower fuel costs and prices for many other items as a result of "the lowest inflation rates," Weinberger said.

NOW Chief Arrested

LOS ANGELES (AP) The state's top women's group said Monday it had learned that Louisiana police had picked up women who had been reported missing.

Sperry Univac has openings for college graduates in many electrical engineering and computer programming areas including systems, design, and test. Entry level positions require BSEE/BSCS degrees and courses work related to RF and microwave theory, communications and/or controls, operating systems, microprocessor design, or operating systems.

More than 200 applications are being reviewed. Applicants will be notified of interview appointments.

In addition to a challenging work environment, Salt Lake City and the state of Utah offer a lifestyle that will open up a fresh new western way of life. Couples with this, and an excellent benefits package including complete reimbursement, comprehen- sive life, medical and dental, plus retirement, stock purchase, and you have a total life opportunity almost impossible to duplicate.

If our unique challenge is what you're seeking, please check your placement office for the data Sperry Univac. Salt Lake City will be on your campus. If you are unable to attend the scheduled interviews, we would be happy to send you our resume to the address listed below. It could be your best career move, too.

We know how important it is to listen.

Mustang Daily Wednesday, January 12, 1983

Defense Spending Cuts

WASHINGTON AP—Defense Secretary Casper Weinberger surprisingly recommended on Tuesday an $11.3 billion cut in proposed military budget authority next year, a step that he and President Reagan had once resisted and called a "tooth and nail."

But Reagan declared, "I'm pleased ... Cap did it!"

Weinberger credited the prospective reallocation to Reagan's "effective... anti-inflationary campaign," meaning fewer dollars were necessary for programs once thought to require greater spending.

Despite that rationale, it appeared Weinberger had yielded to budget director David Stockman, other White House economic advisers, and senior congressmen who had been pressing for a significant trimming of the defense budget, Weinberger had come to reconsider his intransigence and modified his position in the wake of a controversial trip to the Middle East early this year.

The budget authority covers spending next year as well as some outlays spread out over future years.

Weinberger said actual spending in fiscal 1984, under his revised proposal, would be about $6 billion smaller than had been projected. That would place the fiscal 1984 spending figure at about $125 billion, or some $30.2 billion more than this year.

Stockman had been pushing for cuts in precisely the same ball park—$11 to $12 billion for fiscal 1984—as part of his quest to narrow what otherwise looks as a deficit of $200 billion.

But Weinberger denied he had given in to pressure and pictured the reductions as "long planned, ever since it was known how effective an anti-inflationary campaign has been."

Most of the rollback, he said, is attributable to lower fuel costs and prices for many other items as a result of "the lowest inflation rates," Weinberger said.

NOW Chief Arrested

LOS ANGELES (AP) The state's top women's group said Monday it had learned that Louisiana police had picked up women who had been reported missing.

Sperry Univac has openings for college graduates in many electrical engineering and computer programming areas including systems, design, and test. Entry level positions require BSEE/BSCS degrees and courses work related to RF and microwave theory, communications and/or controls, operating systems, microprocessor design, or operating systems.

More than 200 applications are being reviewed. Applicants will be notified of interview appointments.

In addition to a challenging work environment, Salt Lake City and the state of Utah offer a lifestyle that will open up a fresh new western way of life. Couples with this, and an excellent benefits package including complete reimbursement, comprehen- sive life, medical and dental, plus retirement, stock purchase, and you have a total life opportunity almost impossible to duplicate.

If our unique challenge is what you're seeking, please check your placement office for the data Sperry Univac. Salt Lake City will be on your campus. If you are unable to attend the scheduled interviews, we would be happy to send you our resume to the address listed below. It could be your best career move, too.

We know how important it is to listen.
Budding forecaster shines in the weather

Story and photos by Mary Hennessey

Move over Dan Rather. Step aside Barbara Walters. Cal Poly graduate Theresa Lukenas is already the weather woman and night reporter for KSBY television... and she's only been out of school for six months.

Theresa said she 'had submitted a resume to KSBY but wasn't actually applying for the job. The station called her and asked her to work.

"I had never done weather before," Theresa said. "I just kind of winged it."

Theresa took the job with the stipulation that she would eventually go into news.

"I didn't want to become a weather fixture," she explained.

Once hired she attempted to learn as much as possible about meteorology and weather.

"It was like a cram course," she said. 

Theresa's success, however, was hard earned. She worked full time for KVEC radio during her senior year while maintaining a 3.88 grade point average.

"It was rough," she said. "But I wouldn't trade it when I look where it has put me now."

KVEC hired Theresa while she was doing her internship at the station. She anchored the afternoon news and covered the city/county government beat. When she graduated last June she had completed nine months of full time professional work.

"Working at KVEC taught me how to work under pressure," she said. "I worked the November election for KVEC, got home at 5:30 in the morning and at 2:30 that afternoon started at KSBY."

Theresa described her first television appearance as "nerve wracking" but said she learned quickly and enjoyed conquering a new medium.

"There is so much to think about," she said. "You're looking at this funny little camera with a bunch of people running around and pointing in different directions."

Theresa describes herself as meticulous and claims that her willingness to do any task to achieve her long term goals is the primary reason for her success.

"People say I'm driven," she said. "I think to be in television you have to be."

Theresa presents the weather for the 6:30, 6 p.m. and 11 p.m. newscasts. She is also on call as the night reporter, covering any stories that occur between the early and late newscasts.

"Television is great because when you write your story the pictures have to match the words," she explained. "It also provides a very personal satisfaction, when I write the story and the anchors deliver it, the cast and I are really the only ones who know who wrote that story."

During the newscast Theresa runs the teleprompter, a machine that displays the copy the anchors are reading over the air. When it is time for the weather, the teleprompter is off since Theresa ad lib her entire forecast.

"It's easier for me to ad lib," she explained. "When I'm on the set it's still me, not someone else for people to watch."

Before work, Theresa reads a variety of weather reports and watches different news outlets.
Poly artists illustrate Arch and Design talents

A five exhibit featuring watercolors and pencil drawings by architecture and environmental design students will be held in the Gallery of the Architecture and Environmental Design Building this week.

Every piece in the exhibit "has something to do with buildings," Professor Ray Nordquist said. Whether the works depict details of buildings, townscapes, or interiors, they all have a direct link to architecture.

The display is a collection of work from two of Nordquist's classes: Architecture 218 and Environmental Design 210. The work illustrates the ability of the students to deal with graphics, Nordquist said, and "they love it."

The display will be open to the public Monday through Friday from 8 a.m. to 5 p.m.

Weather woman is new star

"Career goals are first and foremost in my life," she said. "Sometimes I get anxious at KSBY to get into straight news, but then that's why I'm in this profession."

If anchoring television doesn't agree with Theresa she might consider production, foreign correspondence or possibly magazine writing.

Theresa has two sisters at Cal Poly - Linda, a senior physical education major and Michelle, a sophomore computer science major. Michelle is not surprised by her sister's success.

"She's always been a very ambitious person," Michelle said. "It's weird seeing her on T.V. but then I always knew she'd go far."

From page 9

From parent stations to got ideas for improving her own show.

"Watching Dr. George drives me crazy," she said. "I don't think the weather person has to be the clown of the show. I try to give people the information they need so they can get something out of the forecast."

Even though Theresa works in a primarily visual medium, she calls writing her first love. At Cal Poly she was a journalism major with a news-editorial concentration before switching to broadcasting her senior year.

"I think the main reason I switched is because I began to get bothered by the time lapse between when you wrote your story and when it came out," she said. "In broadcasting it can come out in minutes but in newspaper it can be days."

The plan is to stay in television for at least another five years. The ratings she receives and the advancements she makes will determine how long she will stay after that.

"Career goals are first and foremost in my life," she said. "Sometimes I get anxious at KSBY to get into straight news, but then that's why I'm in this profession."

Tickets go on sale at the U.U. Ticket Office on Monday Jan. 10. Information on where and when the classes are held will also be at the ticket office. Class sizes are limited so buy your tickets soon!
Emotions range from tension to boredom as mechanical engineering students prepare to start their mousetrap racers.

ME's fire off mousetrap racers

by Brad Henderson and Robert Anderson
Special to the Daily

While fall quarter may not have been too eventful for some, one day in particular, Dec. 5, will be remembered by all Mechanical Engineering 134 students (and teachers) because the freshman design classes tested their final projects—mousetrap- powered vehicles.

ME 134 is an introductory course in mechanical engineering, required of all freshman ME's. The course is a survey of such topics as stress analysis, power sources, etc. An optional choice of topics as stress analysis, plastic I-beams, and miniature bearings. Also, many students disassembled toys for their gears and useful parts. Here, the old adage held true, "ingeniousness is the key to success." High throughout the project, and when everyone got together for the final test in the Main Gym, one look around showed that some enlightened minds had been hard at work. One student, Steve Sato, sandwiched a mousetrap-flopper mechanism between two LP records. Upon "flopping," the device began to roll. And roll it did, almost the entire length of the gym! Unfortu-nately, it rolled backwards, equally well, and finally came to rest at a shorter distance. Start (to Stop) was the official distance measured.

Another student, Bobbie Travis, had a novel approach. Her contraption, an intricate network of pulleys and spools, had an antique complexity that made one wonder whether she had consulted Leonardo Da Vinci on its design. Yet as she said, "it's all calculated," and indeed the car was, for it gave a sterling performance.

Dave Fandey out-classed all the rest with a sleek, direct drive innovation. Dave's mousetrap vehicle roared across the gym floor and beat the rest by going a record 120 feet, 2 inches.

Contest sponsors campus creativity

This is your chance to let the Henry Wadsworth Longfellow or Emily Bronte in you show itself to the public.

The 13th annual Cal Poly Creative Writing Contest, coordinated by English Professor Alan Landwehr and the English department, offers an opportunity for budding short story writers and poets to display their talents.

The contest, which was started by Landwehr in spring of 1971, is open to anyone officially enrolled at Cal Poly. There are two division, short story and poetry, and both award a first prize of $50; second $35; and third, $20.

All entries must be turned in by 6 p.m. Monday, Feb. 14 to the English department, Faculty Office Building, Sec­tion 25.

According to Landwehr, three faculty members will be chosen to judge the contest, and the selected winners should be notified the first week of March.

More than 100 contestants are expected to enter the contest. Landwehr said, including students from more than 20 majors.

Although the major winners are usually English and journalism students, students in architecture, crop science, biology, you name it, also do well in the contest, Landwehr reported.

Selected winning manuscripts will be printed in Cross Currents, a literary supplement to the Poly Royal edition of the Mustang Daily. Entering the contest constitutes agreement to publication.

Mustang Daily Managing Editor RoseAnn Wentz said, "We hope to put in the stories of all the people who place in the two categories. The number of stories which will go in depends on advertising sales, which determine how long the section will be. But we will put in as much as we can.

All fiction manuscripts must be typed and double spaced, poetry manuscripts must also be typed.

Contestants must use a pseudonym on their manuscripts. Entries should include a sealed envelope with the authors' names and their actual name, address and phone number on the inside.

Poetry contestants are limited to a total of no more than 300 lines of poetry. (Any number of poems but totaling no more than 30 lines)

Short story contestants are limited to no more than 35 pages of manuscript. (Any number of stories but totaling no more than 35 pages)

Winners and honorable mention recipients will be invited to a social gathering where they will have the opportunity to talk with the judges and other winners, Landwehr said.

This contest is a good chance for all students, not just the winners," Landwehr said. "It encourages creativity, which is needed on campus."

HURLEY PHARMACIA 6050 Monterey BLVD, SLO
Griffin, Woolery and Chase met Tuesday morn- ing to discuss the matter, and Woolery reported a restraining order is "not that likely, since they're dealing in good faith. Basically, we're in a negotiating stage." The calendar producer trademarked the whole tit- le, but the university claims trademark rights to the Cal Poly name, he ex- plained. The university is trying to preserve its trademark of the name Cal Poly and must be consistent in pro- tecting it, Griffin said. Cal Poly has a 1980 policy of getting licensing ar- rangements with anyone who plans to commercially market Cal Poly-labeled items, he added.

"I think they realize the educational value of the project, and that it was more educational than commercial," said Woolery's partner, economics major Craig Chase. The junior received special projects class credit for his work on the calen- dar. Griffin said if the calen- dar is seen as both an enterprising project and part of the students' education, that might be considered a royalty discussion.

"It definitely isn't a part of the university try- ing to make any money off of it," he added. Typically in a commercial license arrange- ment...the negotiated amount...the royalty sum...might be considered something more than a "commercial" arrangement, "I think they realize the educational value of the project, and that it was more educational than commercial," said Woolery's partner, economics major Craig Chase. A little swordplay is a dangerous thing

Hamlet and Laertes will fight their famous battle in the Speech Communications Department's production of "Hamlet" this spring.

But those who can't wait to watch the swordplay can get a sneak preview during rehearsals as Laertes—fencing team member Mike Begulin—teaches his nemesis how to use his blades during the play.

Begulin and Hamlet—Aaron Elovas—practice nearly every morning at the Cal Poly Amphitheater. You may be able to catch a glimpse of them on your way to class, but the polished version will be presented at 8 p.m. Feb. 17, 18 and 19 in the Cal Poly Theatre.

It’s not such a great start to senior’s special season

by Mike Mathison

When Carolyn Crandall entered her senior year for the Cal Poly women’s basketball team, she envisioned wins. Lots of them. There even stood a chance of upsetting Cal Poly Pomona and winning the California Collegiate Athletic Association championship.

Fourteen games into the 1982-83 season, Carolyn Crandall’s senior year isn’t what she expected. It’s not even close.

After all, this is a special year for Crandall. It’s her final season in a Poly women’s uniform. And, to top it off, the 5-foot-10 performer out of Calabasas, CA, is the lone senior on the team. She wants to go out a winner.

"Yeah, I’m frustrated," Crandall admitted. "I want us to be a winning team. I haven’t had a great season since I’ve been here. I get bummed easily when we don’t do well, which we haven’t been. It’s hard when you keep losing. I get down on myself so easily. It would be a lot easier if we were winning.

How true. The winning season is still a good possibility. And making post-season action is also in the realm of things. Winning the CCAA championship, though, won’t happen. Pomona, ranked No. 1 in the action, is not going to get beat. In order for the Mustangs to make the playoffs they must finish second. And that means getting past UC-Riverside and Cal State Northridge. Poly faces UC-Riverside Friday down south in the CCAA opener for both teams.

“We need a big win to get our confidence back.” Crandall said about the 4-10 Mustangs. “Darla (assistant coach Darla Wilson) is really positive we can beat Riverside. It’s our first league game, and with the talk we had with the coaches last week, we should be ready for Riverside. Everyone knows we can beat them if we play well.”

The Mustangs gave a poor performance last week in a 63-52 loss at home to Fresno State. Poly hit an ice cold 24 percent (17-for-70) from the field.

“In pre-game against Fresno we were dead,” Crandall said. Then came the meeting. Friday before practice head coach Marilyn McNeil held an hour team meeting. Crandall, for one, welcomed the get-together.

“She (McNeil) told each player individually how she felt they played in the game,” Crandall said. “She got mad. She said they (the coaching staff) weren’t giving up on us. And if they did give up on us Marilyn said she and Darla just wouldn’t shoe up for a game. She said we’ve had the worst breaks possible a team could have. She

Fog and rocks mar rugby team’s start

It was a time of fog and rocks for the Cal Poly Rugby team as it began the regular season—foggy skies and rocky start.

The team won only once in three attempts at the San Diego Rugby Tournament last weekend, that one in the second game against Loyola, with Poly’s Brian Dwyer scoring one of two goals—along with Mike Juanena—for an 8-4 win.

Dwyer figured prominently in Poly’s first game against host San Diego State, but not big enough. Dwyer was the only Poly scorer at the half, keeping his team in the lead, 8-4. But under dense fog Cal Poly couldn’t hold on and lost 11-6.

Things might have gotten better for the team, but they didn’t. Playing its second string, Poly trailed by only three points at the half in its third game against Long Beach State. But the tight margin ballooned, and Poly was shut out 20-0.
It's no fun to put the last touches on the pages, the Daily's still going to let you work? You mean, you're not going to change majors or something?"

"That's not what they mean, I know, but it's what I think, maybe even deserve to think. If I had a spine, it would arch. Because in reviewing my work on the sports pages—just my work, designing the pages—passing out assignments, rewriting a few stories, writing this column—I did one thing right, at 2:43 p.m. October 16."

That was a Saturday. Actually my performance was a little better than that—notice I'm going out on a limb here—and if I had the dexterity I would put myself on the back for doing a few innovative things on the page. I mean, I did a little better in my first quarter than some professors have done in theirs."

"It's nothing to get an inflated head about, though. The object here is to do innovative things as often as possible, to leave the office at 6:30 after every afternoon knowing readers would get to see these pages that they turn to sports and leave the rest of the paper to be read by the serious University Union readers."

"Anything remotely matching that goal hasn't been realized yet. Right now, I think a story like one story will work, the rest won't. The rest of the time nothing will display. It would be easy to say, "Well, I have two display. It would be easy to say, "Well, I have two quarters to do a better job," which I do, often, but I only have a year. You know, you only go around once in life... wait, that's been used before."

"What we need is a line for a job as press agent for Gonzo the Great, or something as prestigious. I had better keep on my lock." A Checkwork Error: This is a silly notion, but if you were expecting I Don't Wanna to appear Monday, it's probably not a good idea to get your hopes up. Other, more pertinent copy will more likely kick this column off the page, to appear later at an undisclosed place and time. This way, it will be a surprise.

of the wins came against Hawaii Pacific, 90-41, in Hawaii. That's a team Cozza could probably play tough."

"When we were losing earlier in the year I thought, "Oh boy. I've thought about it and told my roommate I'm going to play hard in practice. People need individually to be told to get with it.""

"Crandall is averaging 13.5 points and 7.4 rebounds through the 14 contests. He has started each game. He is the team's leading scorer (11.1-14.7) from the floor on line. Her high game is 30. Crandall, though, is coming off the worst performance of the season—four points, two-for-three from the field and three rebouds.

"My concern about this is not so much for me as for the sports staff, whose work deserves eye-catching display. It would be easy to say, "Well, I have two quarters to do a better job," which I do, often, but I only have a year. You know, you only go around once in life... wait, that's been used before."

"What we need is a line for a job as press agent for Gonzo the Great, or something as prestigious. I had better keep on my lock."
Opinion

Help the march

Cal Poly State University revolves around one giant dollar sign. Money always seems to be the most essential element when any group on campus wants to do something.

As essential as money is, however, no student ever has enough. Associated Students, incorporated works with a small but underpaid budget and students always seem to be asking for more funds. The Associated Students Senate last week voted to add $7,200 to the Associated Students budget to help fund the Marching Band.

The Mustang Board urges students and faculty to pay attention to a worthy group on campus by contributing to Marching Band fund-raisers during the next two quarters. It is in everyone's best interest to earn our way and for the "Pride of the Pacific" to take Cal Poly's pride to others.

The Last Word:

Prioritize our goals

We've got a long way to go before we get there. We need to put our first move in getting out to is to get our collective head together and make a few decisions.

Firstly: we must determine our goals. Should we fund the band? Should we balance the budget? Should we provide jobs for all of our students?

Secondly: we must prioritize these goals. We can't have everyone aiming at a different set of goals. Once these goals are set our, everyone will fall into place, and we will have ourselves a lot of closure.

The Mustang Daily editors however, barange military spending and ignore the goals in which the military is responsible, which include protecting the entire free world. This is backwards—first we should set the goal, then make it a reality. Then the question would be: Should we defend the entire free world or not? If we as a nation can afford to hire Mustang Daily editors, they should be asking for money for military cuts. But if we remain committed to defending the free world, then we must decide, prioritizing our goals.

Once the goals are set, we have another task, prioritizing our goals. We must decide which is more important, "free world defense," "budget balancing," or "jobs for all students?" Without a resolution of priorities, politics would become simply "politics." With the resolution of priorities, politics would become something akin to economics, social, and economic factions would be pitted against each other. This way, the entire set of goals would be handled first. Simple enough for even the Mustang Daily editors to deal with.

Wouldn't it be nice? Instead of everyone aiming at a different set of goals, and thus disagreeing on every issue, we would have everyone aiming at the same goal, and thus more likely to achieve them.

The bottom line is this: before you argue about the execution of an idea, make sure that the idea itself is agreed upon first.

William Dooling is a 4th year architecture major and member of the debate team.

Letters

"Sensationalism" angers GSU

Editor:

The Gay Students Union would like to respond to the two articles regarding homosexuals in last week's Mustang Daily.

An error was made in the headline Wednesday which read "Men pled guilty to homosexual act." The men arrested did not plead guilty to committing a homosexual act, which is legal in California, but were arrested for "soliciting lewd or indecent conduct in a public place or in public view," as you state later in your article. Sexual acts, including homosexual acts, between consenting adults are legal in most states when conducted in private. Heterosexuals can be arrested on the same charge when they perform sexual acts in the backseat of a car, or in a secluded park.

While one article written about two men arrested the other day stated that the GSU would not take any action, we are left with the question of what the GSU would have done for homosexuals in this case. The information on the first arrest was repeated the information stated in the first, with additional statements which we find illogical. Graffiti on campus is not usually written by gays, as evidenced by anyone who has read the bathroom walls in the UU. Also, no one in the GSU knows of anyone escaping from campus bathrooms carrying "drills" which you claim are used to bore "hole." Also, the size of these "glory holes," which you so tactfully mentioned, and described for your article, is unbelievable, and can only be attributed to our campus maintenance workers. In the future, you could benefit the students of Cal Poly for more by printing informative articles about the lifestyle of mainstream gay men and women, instead of wasting space on bathroom stories.

Cal Poly Gay Students Union

Editor's note: We admit the headline you cite was erroneous and apologize for the misconception it created and the inconvenience it caused. Past that, the Mustang Daily has nothing for which to apologize. If a heterosexual couple had been arrested on campus for soliciting and charged with the same acts, we would have reported it as well.

While you understand the journalistic value of the first story, you find the second story written by the same reporter and mentioning the first incident, sensational. The article was reporting an activity that is illegal in the eyes of the maintenance workers of Cal Poly. That activity happens to be one of homosexuals. There was no mention of GSU members having anything to do with the bathroom problems. We made the point in the lead paragraph that the problem was with non-students. The information on the first arrest was repeated as background information in the second article, a very common practice in journalism and this was in no way intended to call more attention to the arrests. Two stories written by the same reporter would not constitute a conspiracy. Scott Swanston discovered the maintenance story while reporting the arrests. He took conscious care in writing the second article, making sure he was reporting facts which are often "touchy," and that he would not offend the gay community on campus. The editors also made sure that the problem was referred to as involving homosexuals and not "gays." Both articles were informative, neither was prejudiced or sensationalistic.

Fee increase correction

Spring quarter fees for part-time students (those with less than six units) were raised only $15, not $41 as the Daily reported Thursday. Total fees for part­time students will be $130 in the spring.

Confusion in taking the figures over the phone resulted in the wrong figure. We apologize for the error and any discomfort it caused.
