Yearbook still unpublished

By Mary Hennessy Staff Writer

The still-unprinted yearbook students ordered in 1982 are just another problem among many that have occurred in the last decade since the yearbook began being produced by volunteers to Cal Poly sources who have worked with the book.

The 1982 yearbook, scheduled to be mailed last June to the 450 students who ordered it, has yet to be printed. The last regular-yearbooks mailed last June to the 450 students worked with the book.

Officials lose brain and case

BOBON (AP) - Prosecution of a Boron man accused of killing his estranged wife will be dropped because the Los Angeles County coroner's office cannot find her brain.

"I can't believe it," said Kern County Sheriff's Sgt. Donny Youngblood. "It's just incomprehensible to me."

Dennis Gifford, 23, was accused of fatally beating his wife, Debbie, at her mobile home last Sept. 23. Teenage witness said the woman never got up after Gifford struck her with the back of his hand.

Mrs. Gifford was flown to Antelope Valley Hospital in Los Angeles County where she died a day later. Investigators theorized she died of either the alleged beating or a broken blood vessel in her brain.

Eugene Carpenter, a coroner's pathologist, removed the brain for further study but died before completing the death certificate.

The coroner's office told Youngblood last week that the brain could not be found.

The Kern County district attorney's office concluded it would be impossible to prosecute Gifford even if the brain could not be found.

The coroner was the wrong one.

The death certificate.

Brain is found because the defense could aim the prosecution of Gifford even if the brain could not be found.

A 21-gun salute greets Queen

SANTA BARBARA, Calif. (AP) - President Reagan greeted Queen Elizabeth II during a brief, roving ceremony under gray skies Tuesday as a 21-gun salute cracked to the brisk strains of a military band.

The queen arrived here shortly after 11 a.m. about a half-hour behind schedule, after flying with her husband, Prince Philip, on an Air Force DC-9 from the Long Beach Airport.

Earlier plans to yacht up the California coast were scuttled when a ferocious storm churned giant waves in the Pacific Ocean. The HMNY Britannia remained docked at Long Beach while the royal party toured this seaside resort city.

As the queen alighted from the plane and shook hands with Reagan and his wife, Nancy, an Air Force band blasted "God Save the Queen" and the "Star Spangled Banner" and a 21-gun salute echoed through the dank morning air.

Tornado blasts Los Angeles

LOS ANGELES (AP) - A rare tornado, spawned by the season's worst storm, blasted downtown, southern California's southern fringe into "a war zone" Tuesday, ripping part of the roof off the Convention Center, flipping vehicles like toys and damaging numerous buildings.

Hundreds of people were evacuated throughout Southern California as heavy rains and high winds flooded homes, caused a dam to overflow and triggered numerous mudslides.

"It's unbelievable," said Gerald Baker, a resident of the tornado-ripped area. "You know we worry about earthquakes, but this is wild."

In fact, two minor earthquakes did shake the Los Angeles area, one Monday night and the other Tuesday afternoon.

Eyewitnesses reported additional tornado-like winds in Pasadena, 10 miles north of Los Angeles, and in Santa Ana, 25 miles south. But the National Weather Service said it could confirm only the Los Angeles tornado until checking the other reports.

"I saw this black twisting cloud and said, 'Could this be?' when all of a sudden it started knocking me around," said 44-year-old John Baker of Arcadia, whose car was lifted at least 15 feet into the air in Pasadena, according to witnesses. "I think my car wanted to go to heaven and I didn't."

KCOY to Replay M*A*S*H Finale

by Steve Goodwin

Staff Writer

Oh how mad you were Monday night. You and your friends were bidding a fond farewell to the 4077th when it happened. Pffttazz—no picture! Well, cheer up. M*A*S*H fans. KCOY-TV, channel 12, will try it again tonight from 9 to 11:30 p.m. The hailed series' finale will be shown in its entirety.

For those who have no television, or just feel the need to share their grief with a large group, the telecast will be shown on campus. The viewing will be held in Bishop Lounge on the second floor of the University Union, beginning at 9 p.m.

Concrete Expert Speaks

James R. Libby, a nationally known expert in prestressed concrete structures, will speak Monday, March 7, at 10 a.m. in Room 221 of the Dexter Building on campus.

He will touch on prestressed concrete design in general and problems associated with detail and design of bridges and buildings. Libby is a structural engineer and president of James R. Libby and Associates of San Diego.
Future of Cal Poly yearbook questionable

From page 1: Determining how many would sell, the ASI put no money aside, and the students simply paid in advance. Senior photos were also taken, but even these created problems. Timone said the students who worked with the Image Works photographers were never paid for their services. "It is such a bit and miss kind of thing," he said. "You can see how many students (460) want books out of the entire student body, a minority."

Both Rutty and Timone took the job of adviser after being approached by students who had thought up the idea to do a yearbook on their own.

Roy Gersten, ASI director of business affairs, added that the low interest in buying the book was simply not worth the continuous problems. "It isn't worth the time, effort, and expense," he said. "It's a special interest thing."

Evaluations progress

From page 1: He added that the goal of the committee is to have the first evaluations completed in spring and published for the fall quarter.

The steps involved in reaching that goal include putting a student representative on each of the committees, the evaluations team, Pugh said. "A consensus of needs, goals and aims, (between faculty and students), needs to be set up in order to have a successful program," Pugh explained.

Mustang Daily

Cordially invites you to their first annual OPEN HOUSE

Friday, March 4, 1983 11-2 pm

What would you like to know about the L...? This is your chance to have your questions answered and meet the Daily staff. Please come to help us in our efforts to improve communications between the Daily and the campus.

Mustang Daily office, Graphic Arts Bldg. #226

Don't miss it! Bring a friend!

It's not what you see.

It's how you see it.
Floral design workshop will be offered at Poly

Bob Thomas, internationally recognized floral designer and demonstrator, will present a unique floral design demonstration at the Cal Poly Theatre on Friday, March 4, at 8 p.m.

Thomas is the founder and director of the American Guild of Flower Arrangers and the author of three books on floral arranging.

His appearance at Cal Poly is sponsored by the Cal Poly members of the Gordon Student Chapter of the American Institute of Floral Designers.

Committee tries to decrease campus energy consumption

Women tracksters write another smash

Coach Harter comes up with some solid acts for a long run on the road

Last year was quite a season for Cal Poly's women track team. Scoring a record 258 points in N.C.A.A. scoring record for either men or women at the national championships, the women's team raced to its second consecutive Division II title, and were ranked 7th in the Division II standings. Overall, the 1982 team boasted 18 All-Americans.

What do you do for an encore?

Women's track coach Lance Harter apparently has something up his sleeve. According to Harter, this year's team has improved if you can believe it over last year's. With 10 of his 18 All-Americans returning, Harter's team is the overwhelming favorite to once again win the Division II title. "We have excellent depth and a super talented group of ladies," said Harter. "We're actually better than we were last year."

And so far, the team has lived up to Harter's expectations. In their first three meets of the year, the women's track team has already qualified 23 of its members for national competition. This feat is even more impressive due to the fact that none of the athletes were competing in their primary or strongest events.

"Basically in these early meets, we just want to see where everybody's at," said Harter. "We use these meets to primarily gear up for our big meets."

Harter also said the number of qualifying athletes will increase as the athletes are entered in their primary events. He said he feels the team could potentially qualify more than 30 members for national championships, by far the largest number of athletes which would compete.

With a team of such caliber, it is hard to single out individuals. Nevertheless, a few of these talented athletes deserve special attention.

Springs and hurdles will be led this year by All-Americans Janet Yarbrough (long jump, high jump), Karen Kramer (high jump) and Yarbrough.

Leaders in the throwing events will be Kathy Kahn (discus), and All-America performers Danielle Barnes (javelin) and Dana Hendersen (shot put).

In the shot put the Mustangs can boast the talents of All-America Chris Dubois and Kramer.

The distance events will feature many members of this year's championship Division II cross country team. The top runner will be Division II national cross country champion Amy Harper, who competed Feb. 18 at the Midwest Invitational in the mile and broke the existing indoor school record with a time of 4:38.3. Other outstanding distance runners include Irene Clay (5,000 to 10,000 meters) and Jennifer Dunn (second to Harper in cross country championships).

"Some things, if you work hard enough, stay the same."

...CORBIN

Some time back, when the people at Corbin were still only making trousers and an outstanding reputation doing it, they set out to produce a sport coat.

That took time. Because they decided, however long it might take, their coat would have to meet the same tough standards that had built their reputation in trousers. Or they wouldn't ship.

Five years later, it did. They shipped. And a lot of people, including us, have been very pleased ever since.

Some things, if you work hard enough, really do stay the same.

See our distinguished collection of Corbin sport coats, as well as natural-shoulder suits and trousers. We think you'll be very pleased, too — with the quality of fabric and tailoring, and with the value of Corbin's season-after-season classic styling.

A look at women tracksters

From page 6

Harter also feels she has an excellent group of freshman athletes, who “are going to have immediate national exposure.”

Besides the great amount of talent on the team, Harter said much of their success is due to their “tremendous team rapport.” Harter described this camaraderie by disclosing a comment made to him by a rival athlete.

“The one thing she hated about competing against Cal Poly was that she felt like she was not only running against the individual athlete, but also against the whole team.”

The rain has been too much even for a tough bunch like the rugby team. Last weekend's game was cancelled, but the team will face the UCLA Business School Saturday at 1 p.m., weather permitting. Last week eight rugby players got a taste of the way British plays its sport, Scrum-half Mike Janum, eighth man Steve Timidi, fly half Fess Codd, out center Phil Manukian, hooker Paul McAndrews, prop Stu Englehart and backaways Ken Nav and Steve Stommel were selected to the Tri-county select side team to face the team will face the U.C.L.A. business school Saturday at 1 p.m., weather permitting.

ASI confusion

From the beginning of the controversy surrounding ASI President Sandra Clary's academic eligibility, confusion has reigned. There has been a myriad of charges and countercharges, explanations and denials, as each side claimed it was right. What it now boils down to is a difference of opinion and the word of the bylaws versus the spirit and tradition of rules. It has all the makings of high drama. First, meet the cast:

Main Cast
Bylaws of the Associated Students, Inc. - govern the operations of ASI and the eligibility of its officers, requiring a cumulative grade point average of 2.0 G.P.A. and completion of a 2.0 G.P.A. during each quarter of office, and a course load of at least seven units a quarter.

Student Senate Operational Code 11b - provides policies and procedures to be used in the organizing of the Student Senate. The code has the same academic requirements as the bylaws, but with a section for special consideration if "senate members" fall below a 2.0 for a quarter. It involves consultation with an academic adviser to decide if ASI service is detrimental to the student's academics. If the decision reached is favorable to the student's service, the student must resign. This is the procedure Sandra Clary followed as a non-voting member of the ASI Senate. Her adviser allowed her to remain in office.

SA 72497 - is a CSU system-wide list of criteria developed by campus presidents as an official CSU policy. These criteria require the same academic performance as ASI bylaws and the senate operational code but have a section allowing for independent "involvement or student organization requirements." This clause is cited by ASI advisers and administration as the support for the operational codes' special provision.

Kevin Moses, ASI Vice President - says he is enforcing the bylaws. He sees the operational code as "subservient" to the bylaws, the "senate members" designation as not inclusive enough to cover ASI executive officers and as outside of spirit with the bylaws. ASI Student Senate - agrees with Clary that she is a senate member and is covered by the Operational Code. The consensus of the Senate is that Clary has done what she is supposed to and is free to continue in office.

Supporting cast - Bob Walters, ASI Adviser and Dean of Students Russel Brown.

Brown and Walters see the Operational Code as an auxiliary to the bylaws and believes that as a non-voting student member of the senate, Clary is covered by the special consideration provision. This special consideration is applied to the officers of all ASI committees, clubs and other organizations. Brown says Clary is far from the first ASI executive officer to have academic problems during service and use the provision.

Walters says the reason for the ASI provision is to bring a little more "humanity" into the ASI, to allow for factors that would cause an officer to drop to a 2.0 for a quarter. He cites personal, instructional and ASI service-related factors as reasons for such a dip.

Moses sees the bylaws as black and white and the operational code and its provisions as subservient to bylaws. He points to the bylaw's lack of qualification requirements for senators and to the existence of specific requirements for executive officers. This, he feels, is evidence that the two categories are intended to be separate. The specific inclusion of executive officers in the bylaws binds them to it, not to the operational code, he says.

The Mustang Daily Editorial Board agrees with Moses' assessment of the authority vested in the bylaws and, despite past practices, those bylaws require Clary to resign. We strongly disagree, however, with the bylaws themselves. We support the special consideration clause like the one applied throughout the rest of the ASI Senate to submit the amendment to a student vote this spring and urge students to support the measure. There is no reason the same understanding given explicitly by professors, deans, parliamentarians and ASI senate committees cannot be extended to executive officers.

Dean Brown says he is forming a task force to wade through the mess and come up with a specific policy. We urge this task force to remove the clause in the language of the operational code to nail down what applies to whom and to recommend the change in the bylaws.

The confusion and assumptions that have brought this issue to such a high profile should be cleared away, so no obstruction like this requires energies of the ASI in the future.

Letters

Morro Bay stacks

Editor:

It strikes me as odd that when looking for pollution levels in San Luis Obispo County, the agency in charge is collecting samples from under the plume of pollutants emanating from Morro Bay Power Plant. (Re: "New Test Finds County Air Pollution Low," Feb. 18)

The primary reason that the unsightly stacks are as high as they are is to bring emissions from the plant in line with State and Federal standards, although we'll probably see these disappear under the current regulatory administration. Any shorter stack length would cause local emissions to exceed these standards, the theory being that the higher stacks allow for more wind distribution. Just ask PG and E how many cars they repaint per year in Morro Bay due to corrosive fog. They won't tell you, but I would bet it's not a small number.

Also, if Morro Bay Power Plant burned natural gas 97 percent of the time in 1982, why was it necessary for the Public Utilities Commission to order PG and E to stop burning fuel oil from their "sweetheart" contract with Chevron and start using lower cost and readily-available natural gas? Although the price of gas is now increasing, it seemed PG and E would rather pay more for specially-refined, low-sulfur fuel oil bought under contract from Chevron in Benicia, than give their rate-payers a break (and a breath of fresh air) by burning gas. Fortunately, the PUC could find the time between granting rate increases to behemoth monopoly utilities to do its job as public watchdog over these corporate gluttons.

I will agree that pollution in San Luis Obispo County is low, and I would like to see it remain that way. But I would question the statement that Morro Bay fog is the purse in the state. If measured at a more realistic site, say the Highway 1 interchange, I would also question the argument that we can have jobs or environmental quality, as tough environmental standards actually create jobs by forcing polluters to deal with the problem. The attitude of present State and Federal administrations is less than comforting in this area.

Timothy J. O'Neill

Redo mural

Editor:

I first disliked the faded mural in the U.U. plaza years ago. I was appalled when it was repainted with the same design. Recently, I noticed that it was originally done in 1973. While it was good in its day, (they had good drugs then) one of the many talented artists at Cal Poly could undoubtedly create a new design that will be much better liked. I will gladly do my share to help.

Dave Watson
