Students and faculty members who ride the SLO Transit buses to Cal Poly have been having problems since the beginning of fall quarter.

Riders are getting to class late or having to wait at City Hall as long as 40 minutes for a bus to the campus. All this confusion is a result of the new SLO Transit schedule changes.

"The schedules have been changed this year to provide better service to those people going to the Cal Poly Campus," said Dave Elliott, Administrative Assistant to the Public Works Director.

In the past week, Cal Coast Charter, after much deliberation in the past year, became responsible for the bus service. They have received a few calls from anxious students not making classes, said Maryann Tiger, Transportation manager.

Tiger relates the problem with the new changes in the transportation scheduling made by City Hall.

In the past, the Poly Shuttle rode in tandem, but now with the larger buses there isn’t a need for two, Elliott said. Now, not only does the Poly Shuttle come on campus. Routes One and Two both pass through the campus.

Another reason for the change in scheduling is the SLO Transit buses stop at Tropicana and at Valencia.

The private bus services for these two companies have been eliminated.

The new bus scheduling allows for direct service to the campus from City Hall via routes one, two, and the Poly Shuttle at four times during the hour, at six minutes past the hour, 39 minutes past, 56 minutes past, and on the hour. Each make their first stops on campus at 17 past the hour, 39 nart, 56 part, and on the hour.

Bus schedules are available in the University Union or call 641-BUSS for more information.

Various factors cause book shortages

It doesn't take a lot of paperwork to get into college.

Imperial's Tomorrow Student Loan is the best plan for today.
Now getting into college doesn't have to be a grind. Imperial Savings has done everything to cut the paperwork and the questions down to size. So you can spend your time preparing for school, not filling out endless forms. When your loan is approved, we'll offer you a free Tomorrow Checking Account. There's no minimum balance and you earn 5 1/4% interest. Plus you get the benefit of our network of ATM Tomorrow Tellers and 124 branches throughout California.

Call 1-800-CHEK-NOW (1-800-243-5669)

If you want to examine the Tomorrow Student Loan more closely, either give us a call, or contact your financial aid office. Our loan representatives are on the line Monday through Friday. Call now.

Statistics predict a rainy winter ahead
by Linda Reiff

Dust off the umbrellas and wrap up the books, the rainy season is on the way and it’s predicted to be comparable to last year’s tiny elusiiveness.

A Cal Poly professor, who’s been studying the weather for the past 15 years at Cal Poly says there has been a drastic increase in rainfall for the past 15 years in San Luis Obispo and this year should be no exception.

Joe Glass, professor of agricultural engineering, has been studying the weather as a hobby for years. Glass receives part of his data from a rain gauge kept outside the Cal Poly Public Safety office.

From other records and his studies, Glass has determined that the average rainfall for 114 years in this area has been 22.04 inches per year. However, since 1969, the average total yearly rainfall has increased six inches.

“And that includes the drastic contrast right in the middle of these past years, the drought of 1976-77,” Glass said.

Glass said last year’s rainfall was only the third highest amount in history for this area.

“In general, it was a very wet year, but what made it worse was that it was spread over a greater number of days,” Glass said.

“Last year we had the most days of rainfall on record for the last 50 years,” he explained.

Glass said the continuously wet grounds presented a variety of problems for the area, ranging from mud slides to poor access to farmlands.

Glass said the presently warm weather signifies the high possibility of more rain later.

“The higher the temperature the more moisture the air holds, therefore, the higher the potential for rainfall,” he explained.

Glass speculates that significant amounts of rain probably won’t begin to fall until the latter part of October.

“In October 1961, 1.69 inches were recorded and in October 1962, 1.74 inches were recorded, all during the last part of October,” he said.

Don’t get left behind because there is "too much to read."

Would you like to get out from under all those books?

EVELYN WOOD READING DYNAMICS
Morro Bay: a fishing bonanza

by Gail Pellerin
Staff Writer

It all seems just a little fishy. Barracuda, white sea bass, yellow fin tuna and other creatures usually found in the warm waters of South America are being pulled out of the ocean by fishermen in Morro Bay.

"It's like Mexico here," said Mike Fitzsimmons, owner of Virgie's Deep Sea Fish'n'Center in Morro Bay. "There's a bonanza of fish." And they're not only coming in variety, but also in size. Fitzsimmons reported that a 98-pound silverside was recently caught off the Central Coast.

"That's the biggest we know of caught anywhere," he said. "And it was brought in on rod and reel."

The unusual surge of fish off the Central Coast (reports indicate that it extends as far north as San Francisco) has been a boon for the Morro Bay fishermen and businessmen.

"It's stimulating for people in this area," Fitzsimmons said. "They aren't used to it."

Fitzsimmons' store wasn't used to it either. In order to accommodate fishing for the warm water fish, he has had to change his tackle supplies. He now carries fishing gear suited to catch marlin, and other warm-water games.

A possible cause of this influx of tropical fish could be what is referred to as El Nino, a warm current of equatorial water that normally appears around Christmas off the west coast of South America.

El Nino was first reported last June and has lingered around since. It has caused the increase in water temperatures as well as sea levels. Fitzsimmons reported water temperatures of 60 to 65 degrees off the Central Coast; the usual temperatures for this time of year are 61 to 62 degrees.

The current blocks the Humboldt Current from the Antarctic which causes the nutrient supply for marine life along Peruvian coastline to diminish. Thus, the usually flourishing anchovy business in Peru has dropped drastically.

In the Northern Hemisphere, El Nino has also had an effect. One by-product of the condition is the significant increase in tropical fish.

Each fall a countercurrent intertwined with the main California current system which flows from north to south, said Fred Clagston, a biological oceanographer. This year, instead of going

El Nino makes Central Coast fishing a reel whale of a catch

From page 4

Underneath the relatively cold California current, the Davidson countercurrent has gotten stronger off the top of Point Conception and has pushed the California current away from the coast. "Thus we have warm water at Avila Beach, as well as records of barracuda," Clegston said.

One reason for these conditions is the seasonal countercurrent has not diminished, but has lasted through winter and summer. Clegston said, its present appearance is at its regularly scheduled time, he noted.

Clegston said that no one is sure when El Nino will peter out, it may be February or it could continue until next season.

According to Assistant research meteorologist John Horal of the Scripps Institute of Oceanography's Climate Research, if the condition does continue, it can result in anything from a drought, as it did in 1976, to a severe winter, like it did in 1982.

"El Nino has several different types of affects," Horal said, "however it doesn't necessarily mean a major climate change."

Horal reported that ChG temperatures in the Pacific are presently returning to near normal levels, yet it's too early to tell what is going to happen. El Nino is one of the main causes of the peculiar weather, and even if it does diminish, there still may be some remnants of its activity noticed this winter, he said.

Escaping the warm water or just resting, this sea lion has chosen the rocky shores of Morro Bay to take five.

Western dance lessons

Here's a chance to have a good time, learn to dance and at the same time raise money for a Cal Poly cause. Mrs. Delta Phi, Cal Poly Pre Health Professions Club, is sponsoring western dance classes at Cal Poly and in the city of San Luis Obispo. The beginning and advanced dance classes, taught by Western Dance Unlimited, will emphasize the Western swing and Two-Step. Jim Becker and Mary Fitzgerald, both Cal Poly students, will lead the classes.

All classes will meet one night a week for four weeks and will cost $20 per person. Twenty percent of the proceeds will go to benefit Mrs. Delta Phi's scholarship fund. Participants are not necessary and all ages are encouraged to attend. The San Luis Obispo classes will be held on Thursday evenings, at the B.S.O.O. V.F.W.'s Hall on Grand Ave. Beginning and advanced classes will meet from 7:30 to 9 p.m. The Cal Poly classes will meet on Mondays starting Oct. 3 from 7:30 to 9 p.m. in Mustang Lounge. For more information phone 541-6043.

Poly has high hopes for San Diego meet

Amidst some of the strongest competition they have yet to face, the Cal Poly men's cross country team travels south this weekend to participate in the Aztec Invitational meet at Balboa Park in San Diego.

Second-year coach Tom Hamsan anticipates a good season. "This year's team is potentially as talented as any team I've coached," he said.

Considered the biggest cross country meet on the west coast, the Aztec Invitational will have over 20 schools competing.

The Cal Poly team will include returnees Kevin Broady, San Ellingson, Hector Pews, Jim McCarthy and Phil Bellan.

New additions to the team that have earned spots are: Nelson Bernal, a transfer from West Valley College in San Jose; Dave Livingston, a freshman from Willow Glen High School in San Jose; Hector Nieves, a transfer from Santa Barbara City College; and Bruce Storms, a freshman from Torrey Pines High School in San Diego.
After Pomona, Mr. Smith goes to San Luis Obispo

by David Kraft

When Jeff Smith changed his Cal Poly affiliation from Pomona to San Luis Obispo, the Mustangs knew they were gaining a solid receiver. After all, Smith was the third leading receiver in the Western Football Conference last season as a Bronco and was an honorable mention All-WFC selection.

Smith, however, has surpassed even the most lofty expectations to become an integral part in a potent Cal Poly offense. He has fit into the Mustang scheme as perfectly as the last piece in a jigsaw puzzle, and Cal Poly head coach Jim Sanderson has been more than happy to show him off.

A 21-year-old business management major, Smith is grateful to be in San Luis Obispo after Cal Poly Pomona disbanded its football program.

"This program has tremendous tradition," Smith said following a workout preparing for Division I-AA opponent Boise State this Saturday. "You feel confident and strong. When you go into a game, you know you're going to win it. Coach Sanderson has a great mind. He, it's a great asset to have him running the show."

Second-year Mustang mentor Sanderson considers Smith a great asset on the field. "I don't think he's dropped a pass thrown to him all year," Sanderson said. That's one of Smith's top assets—his great hands. He has pretty good speed and quickness and runs well-disciplined patterns. On top of that, he's a heady individual, both in the classroom and on the field. He was an academic All-American two years ago. What coach wouldn't love to inherit this kind of talent.

Smith is a vital cog in the Mustang machine which has rolled to an early 5-0 record and a high national ranking. He leads Cal Poly and the WFC in every receiving category with 19 catches for 307 yards and four touchdowns, but he is quick to credit his teammates for many of those numbers. "My success is attributed to our offensive line and quarterback Tim (Snodgrass)—he's our leader out there."

Snodgrass and Smith are roommates, and the arrangement has benefited both players. "It helps knowing how he thinks and him knowing how I think. That confidence shows on the practice field and in the game."

Sure enough, after most of the other Mustangs have headed for the showers when he learned that Pomona was dropping its football program. Since Pomona no longer fields a gridiron squad, Smith avoided sitting out three quarters as required for transfer by NCAA rules. The change won't relative smoothly."

"We've made some adjustments since I've been here," he said. "The adjustments came in getting to know my teammates. When I first came here, I didn't feel jelled like I do now."

"It (the new surroundings) hasn't changed the way I play—I'm always going to work hard. It feels a lot better when you put out and win. "Jeff Smith's hard work has been a major factor in that winning spirit."

The Mustangs are throwing the ball more—and senior split end Jeff Smith is on the receiving end of many of the tosses.
