Students, faculty react to new add/drop policy

by Rebecca Prough

The new add/drop policy, which allows students one week to drop classes and two weeks to add classes is in effect as of this quarter.

Instead of having one week to add and three weeks to drop a class, students must decide which classes they want to keep sooner. Students are also required to take the responsibility of filling out their own change of program forms, which have to be completed and signed by the instructor of the class to be added or dropped and turned in by Tuesday, Jan. 17.

There are several reasons why the add/drop policy has been changed. Donald Coats, Associate Dean of Educational Services, said the new policy is a compromise between what the students wanted and what the faculty wanted. Students wanted a longer adding period and a shorter drop period consisting of two weeks each. Faculty members wanted a shorter add/drop period consisting of one week each. The new policy is the result of the demands for a better system.

Coats said, "We couldn't see any real problems with the old add/drop policy, the deadline just needed to be changed. And it was felt that the change of program should be student initiated, if students turn in their own materials, the system should be foolproof." The misunderstandings between teachers and students would be less likely to occur, he said, if students were responsible for the forms.

Another reason the new policy is in effect is that the schools will now be receiving more money from the state. The state gives the school so much money according to how many students are in a class at the time of the census date, which is the end of the third week of classes. With the old policy, students kept dropping up to the end of the third week, while they could only add for one week. Classes were left less than full, and the school wasn't receiving the full amount of money that it could get if the classes were full. The new policy will keep the classes full because adding students will replace the dropped places, and the school will receive more money.

Sue Turner, Academic Coordinator, doesn't think the new system is good for the students. "It's a pain to see how they will fare in a class. I think the new system is really inefficient. There isn't enough time to find out how well you're going to do in a class."

Dale Daniels, a senior engineering science major, said the drop date should be extended so that students could have a better chance to know the class, and that the drop date should even be after the first exam.

Dr. Sankey Sherer, chemistry instructor feels the new policy is a "cleaner and more efficient system." But, he would still like to see the drop date extended to the students. He said the administration should be taking care of the paperwork.

Dr. Sherer said if state funding were based on the initial enrollment in a class, the school would get the money and students could have a longer period of time to decide whether they could do well and if they would like to remain in their class.

Coats said even if the new policy doesn't work out, it can't be changed until next fall at the earliest. "Now, it's a matter of seeing how it works," he said.

Sherer said students can obtain add/drop forms in the administration building and in the library, and return them to the drop boxes in the same locations.

Poly student chosen from 500,000 for prize

by Lisa McKinnon

A Cal Poly ornamental horticulture student was one of 22 young people from across the nation honored for proficiency in production agriculture during the 1983 National Convention of the Future Farmers of America held in Kansas City, Missouri.

Melissa Sherman, a 19-year-old, freshman from Fallbrook, received the FFA Nursery Operations Proficiency Award for her wholesale nursery activities that began while she was a student at Fallbrook High School.

The Nursery Operations Proficiency Award is given annually to the FFA member having the most outstanding nursery enterprise among the almost 500,000 young people who belong to the national organization. The award is sponsored by Weyerhaeuser Company Foundation.

To become eligible for the award, FFA members must fill out an application which states the amount of money they have invested in their project, and also how much volume the 'business' deals in. These applications are then compared for the award, Sherman said.

Sherman started her nursery when she was searching for a way to make money while still in high school. She began with all the plants she could afford to buy herself, and gradually built the business up from there. Today, Sherman owns more than 4,000.
Opinion

Cal Poly's new add/drop policy was initiated to solve some problems caused by the longer deadline in the old system. The new policy provides the obvious benefits. It also has some drawbacks. And when the pluses and minuses are added up, the answer comes out zero.

We still have problems, but they are different than the old ones. Now they affect students to a greater degree than before.

The old policy resulted in a lot of misunderstandings between teachers and students over drop and added classes. The new policy puts the responsibility of adding and dropping on students.

While this should eliminate any questions in students minds as to their status on the roll sheet, it creates another problem that may loom larger than the original one. The problem is that students now have one week instead of three to decide whether they can make it through a class or not. Students who find themselves stuck in a class that has turned out to be harder than they had planned will just have to live with their hard luck—and their bad grades.

The new system is designed to enable Cal Poly to get more money from the state, since the University will be able to determine student attendance in classes in time for the State budget.

While the theory of this idea is sound, its practical application may prove to be a problem. It would put a student who added a class in its second week at a great disadvantage, as he would have already missed one-fifth of the class.

Another problem is the timing of this change. The most logical time for this change would be during fall quarter. Starting it during winter quarter only adds to the confusion.

Lack of publicity of the change has also caused a great deal of chaos. Because the change is different from the proposal submitted by the Academic Senate, many teachers have contradictory information on the new policy. The administration should consider informing students outlining this change when they picked up their CAR. This could have gone a long way to make the new change a more pleasant addition.

Last Word

Pass the brownies, I give up.

"Diet is a four letter word. "I read this on a card once. The card was a huge chocolate bar with a bite out of it, rather appropriate if candy bars are your problem.

Miss is not candy, just "food" in general. Which is no simple matter, considering the many eaters, of which I'm not!!!

"Dieting" is a fad. If you're not on a "Diet" it's a real food—time or Baskin Robbins is never too far away!

A simple diet: don't eat real food—time or Baskin Robbins is never too far away!

Who has the time to "diet" anyway? A simple diet: don't eat real food—time or Baskin Robbins is never too far away!

What is the justification of battering your knees by jogging, stretching muscles you never knew you had, or ever wanted to know you had, and starv­ ing yourself? It shouldn't be, if you're a girl, just to impress a guy...never!!

"Dieting" should be just to feel good about yourself—in that case pass the brownies!!

Author Kathy Messinger is a senior Journalism major and a Mustang Daily staff writer.

Protesters: more than flakes

Editor:

In Jon Trato's letter (Nov. 22) he claimed, "People protesting the invasion of Grenada have no idea exactly what they are protesting." He seemed to view protesting as a fad, citing animal abuse protesters as the newest example, and discounting their inexperienced and emotional opinions on the basis of his many years working on a ranch.

As members of CASAS (Central American Study and Solidarity-Assoc.) we appreciate firsthand information, and we do know something about U.S. involvement with our southern neighbors—in fact we discussed the possibility of a Grenadan invasion the Sunday before it happened. One of the main purposes of our group is to educate others about the situation in Central and South America, and in order to do so (besides protesting) we have in the past presented at Cal Poly speakers and films with the sort of experienced information that these such as Jon Trato would seem to value. Last year speakers included Cynthia Morin, an American nurse who had worked in a Honduran refugee camp. She had been kidnapped and almost killed by Honduran soldiers.

There was also Father Chris Brickley, an American priest expelled by the government of El Salvador, and labeled a communist for his efforts to organize and help the poor improve their sanitary conditions.

Thus perhaps you, too, have not had the chance to view protesting as a fad, cited an animal abuse protesters as the newest example, and discounting their inexperienced and emotional opinions on the basis of his many years working on a ranch.

As members of CASAS (Central American Study and Solidarity Assc.) we appreciate firsthand information, and we do know something about U.S. involvement with our southern neighbors—in fact we discussed the possibility of a Grenadan invasion the Sunday before it happened. One of the main purposes of our group is to educate others about the situation in Central and South America, and in order to do so (besides protesting) we have in the past presented at Cal Poly speakers and films with the sort of experienced information that these such as Jon Trato would seem to value. Last year speakers included Cynthia Morin, an American nurse who had worked in a Honduran refugee camp. She had been kidnapped and almost killed by Honduran soldiers.

There was also Father Chris Brickley, an American priest expelled by the government of El Salvador, and labeled a communist for his efforts to organize and help the poor improve their sanitary conditions.

Though of course there are varying degrees of awareness, our actions, even if they appear spontaneously "trendy," are based more on the numerous firsthand accounts we have received through independent films, speakers, books and reports about the tragic im­ pact of American policy, than on a merely personal emotional response to the superficial appearance of the situation.

Brian Curran
Students urged not to work for federal government

I have a Bachelor of Arts degree from Columbia University and retired after having worked many years for this Federal Government's Social Security Administration and Health Care Financing Administration. I very strongly urge all college graduates not to work for the United States Government because:

1. Wages and salaries for Federal workers are 22% on the average (and in some cases as much as 50%) below the pay that workers in private enterprise receive for essentially the same jobs. The most pay that a federal employee can receive is $57,600 a year, which is very small compared to the yearly salaries of many private company executives which are in the hundreds of thousands of dollars and which in some cases exceed $1,000,000.

2. Federal employees have to pay a high percentage of the premiums for their health and life insurance, whereas, many employers in private enterprise pay all of such premiums for their employees.

3. Federal employees have to pay into Medicare's Hospital Trust Fund, and effective January 1, 1964 new Federal employees will also have to pay into Social Security's other trust funds. This is in addition to paying into the Civil Service Retirement System. It constitutes a way which the Reagan Administration and Congress have taken Federal employees' money to shore up Medicare and Social Security. Federal employees have their own health insurance and retirement systems and cannot bear these additional expenses.

4. The Reagan Administration has raised Federal employees' and retirees' health insurance premiums to exorbitant levels and cut their health insurance coverage drastically.

5. According to the Congressional Budget Office federal employees receive less sick time than do many private enterprise employees.

6. The Congressional Budget Office also states that Federal employees receive less sick time than do many private enterprise employees.

7. Federal employees work a 40 hour week while many private enterprise workers have work weeks of less hours. For example, the electricians in New York City obtained a 25 hour work week many years ago.

8. Federal employees received $7% of their total pay into their retirement fund. They have had to pay into their fund for more than people covered by Social Security have been required to pay into the Social Security trust funds. The vast majority of private enterprise retirement plans are fully paid for by the employers with no employee contributions required, and private plans are protected by a Federal law, the Pension Benefit Guarantees statute.

9. Federal employees do not receive Christmas or any other bonuses, or have profit sharing plans, stock option plans, etc.

10. Federal employees are forbidden to engage in politics. This is a complete violation of their Constitutional rights of free expression and association.

11. Federal retirees who are under age 65 are only given to receive about one-half of the cost of living increases to which those 63 or older will receive. This constitutes age discrimination.

12. Federal retirees formerly received 1% of their pensions added to the pensions at the time of retirement and 5% of living increases each year in order to at least fractionally compensate them for the low pay they had been given while working. Now they do not get the 1% add-on, and they only receive 1 cost of living increases per year.

13. Federal retirees have to pay income tax on every cent of their pensions once they get back what they paid into their pension fund. The money that they paid into the pension fund is not taxable, because taxes were paid on it by the retirees, when he/she was working.

14. In the past college graduates sought employment with the Federal Government mainly because of job security and retirement at a comparatively young age on a good pension. Recent legislation has cut down Federal job security, job security has been increased in the private sector by law and recent court decisions, and many private company pension plans provide benefits (including early retirement) that are equal to or more generous than those given by the Federal Civil Service Retirement System.

Therefore, college graduates are much better off working in private enterprises with the chance of becoming one of the one million dollars a year corporation presidents or a quarter of a million dollars a year vice presidents, than working in the Federal Civil Service for low pay and second rate fringe benefits.

If a college graduate cannot find a good job in private enterprises upon graduation, he/she would do far better to work in a menial job in the private enterprise until such time as he can obtain a position in the private sector that is commensurate with his education than take a job with the United States Government.

Frederick C. Stark, Jr.
Local hospitals offer top medical care

No one wants to think about being in an accident or needing medical care, but students should be aware of the emergency and other medical facilities available in San Luis Obispo.

The three major providers in this area are the Cal Poly Student Health Center, Sierra Vista Hospital and French Hospital.

Cal Poly is one of the last state universities in the state with 24-hour emergency service open seven days a week.

Basic medical services are funded by student fees and are available 8 a.m. to 6 p.m. weekdays. Students with a health card can stay in the campus infirmary, plus other benefits.

About one third of Cal Poly students currently have health cards, according to Health Center cashier Crystal Burgstrun. They cost $49.00 per academic year or $27.00 per quarter. Having one could save a lot of money for a student with a history of allergies or who anticipates needing medical care.

For more serious injuries or health problems, one would be sent to Sierra Vista Hospital at 1010 Murray Ave. Sierra Vista is the trauma center for the county, says the hospital's public relations director Eleanor Sears. It is equipped to handle more serious problems outside the scope of the Health Center, such as surgeries.

"When a boat capsized in Morro Bay last year, about 15 children and an adult were sent to us and we treated them. We also successfully treated the children when the school bus overturned in Atascadero last month," said Sears.

French Hospital, 1911 Johnson, is a 138-bed facility with over 300 people on its payroll specializing in cardiac care.

"We don't get too many students in, because they are a pretty healthy group," says assistant administrator Tom Pace.

French Hospital offers various community health programs on topics such as stress management, weight control and "Brooke Stopper." Most are two to three weeks of intensive seminars designed to alter negative habits.

"What we're getting involved in is preventative medicine...I think it's the new wave of medical care," said Pace. "We want to catch the young and healthy out there and hopefully insure that they stay that way."

Keeping in mind the emergency policies of insurance programs, one should still seek medical attention if in question about the seriousness of a problem.

"If the patient is bad off enough that they think it's an emergency, we consider it an emergency and will do everything we can," says Grove.

Student honored for outstanding nursery

In addition to a $500 check and a plaque, the award includes a two and a half week European travel seminar in May, during which proficiency award winners will see how their respective facilities are operated in other countries. Sherman said that the best aspect of her upcoming tour of France, Germany, Belgium, Holland, the Netherlands and Luxemburg is that she'll be living and working with host families. "We'll get a real chance to see how the people in each country live," she said.

"If the patient is bad off enough that they think it's an emergency, we consider it an emergency and will do everything we can," says Grove.

HEWLETT PACKARD
Government documents offer helpful information

by Karen Ellisman

Cal Poly's library has the largest government documents section of the 18 California State Universities, according to the department's head librarian. While many students are wary of the availability of information, Chi Su Kim said Tuesday, adding, "I don't know what students do without the government research." Over one-third of the Robert E. Kennedy Library's resources, he said, are housed in the government documents and maps department.

Searching for material amid the 30 bookshelves in the northwest corner of the library's third floor on Tuesday were several students who said they understand the value of government reports. Senior David Hill said he started using the department this quarter to research his aeronautical engineering assignment.

Freshmen Tanj Jensen and Kathleen Greenman, both home economic majors, were using the government documents for class projects. "Although they were "confused by what everything stands for," Jensen said the library staff provided the necessary help.

Kim said the government documents section is "the most difficult to work in" because some information is not indexed. Cuesta College student Gary Sage had no trouble finding the information he wanted—topographical maps for his backpacking trips. Sage said he discovered the maps while passing by the department, and now uses them extensively.

Kim said his department has an "enormous variety of information," which can serve the diverse interests of students, faculty and the San Luis Obispo community.

The government documents and maps department was not always so encompassing, however. Before 1969, unable to afford a variety a funds. Kim said, "especially with grad students."

Cal Poly has not been designated to receive United Nations material, Kim said, because the university has no graduate program in international relations. Only Nations material, Kim said, because the university has no graduate program in international relations. Only
campus that is printed by the government." Kim said he chooses documents to supplement the "and any extra materials we can request from other libraries."

Cal Poly has also received about 8,000 papers relating to the Diablo Canyon nuclear power plant. Kim said, pulling out a six-inch stack of material, one wouldn't even know it's in the library.

He explained that the Nuclear Regulatory Commi-
sion establishes Local Public Document Rooms (LPDRs) near proposed reactors because "the public has to know what's going on."

At first, Diablo's LPDR was at the San Luis Obispo county library, but filling the collection took too much of the county staff's time, said Kim. The collection was moved to Cal Poly's library several years ago, he said, "when we found out more faculty use the Diablo documents than anybody else."

The Diablo collection is part of the nuclear reactor's licensing proceedings. Safety evaluations, environmental impact reports, and political and public correspondence are included in the collection. Kim said.

Despite the wide variety of research available in the government documents department, however, many students overlook the benefits of using the information, said Kim.

"Some people ignore the section," he said, "which hurts the students because we choose everything need-
ed for the campus that is printed by the government."

Kim said he chooses documents to supplement the depository with recommendations from faculty and librarians. City and county government documents from California and agricultural experiment reports from all 50 states are standard materials in the depart-
ment.

Most materials in the future will be ordered on microforms, he added, because the department is running out of space for paper.

**MUSIC...**

**RATCLIFFE CONCERT**
Ronald V. Ratcliffe and visiting violinist Clayton Hasdell will perform at 8 p.m. Friday, Jan. 6, in the Cal Poly Theatre. Tickets are $4 for general admission and $3 for students. The program of baroque and viola music is sponsored by the Cal Poly Music Department.

**BOBBY BLUE**
Blues legend Bobby "Blue" Bland brings his 10-piece band to the San Luis Obispo Veterans Hall Sunday, Jan. 8, at 8 p.m. Tickets for the show, sponsored by the San Luis Obispo Blues Society, are $10 in advance and are available at Bootheel Records and Cheap Thrills. Unsold tickets will be sold at the door.

**THEATER...**

**GREAT AMERICAN MELODRAMA**
Discover what evil lurks in the minds of "Ben Gay," "Wilder Daily" and "Welland Strong" as the Great American Melodrama and VideoEye presents 'A Night on the Town.' This San Francisco-based comedy, spiced with mysterious mix-ups and desperate decisions, opens Friday, Jan. 6 and runs through Feb. 12. For showtimes and reservations, call the box office at 644-6299.

**RATHER PERFORM THAN WATCH?**
Open auditions for the Avila Theatre Guild's 1994 production of "When You Comin' Back, Red Ryder," and "Dreamgirl" will be held Friday, Jan. 6, from 7 to 10 p.m. at the Campus Community Center. All interested persons are invited to attend. For more information call 990-7219.

**MOVIES...**

**AUSTRALIAN FILM FEST**
Upcoming movies at the Rainbow Theatre include a 1962 drama "Tender Mercies," starring Robert Duvall and directed by Bruce Beresford. This film about a country music singer who has lost most of his life together runs through Monday, Jan. 9. Films at "Hanging Rock" and "Heatwave" will be shown Tuesday, Jan. 10, through Thursday, Jan. 12.

**CAMPUS FILM**
Five films present "Trading Places" starring Dan Aykroyd and Eddie Murphy on Friday, Jan. 6, at 6 and 9 p.m. Tickets are $1.26 and can be purchased before the show at the University Union Box Office. It will be shown in Chumash Auditorium.

Also, catch "My Dinner with Andre" Wednesday, Jan. 11, at 6 and 9:45 p.m.

Next year's football halftime shows will have a lot more pageantry if assistant band director Terri Sharpe gets her wish.

Sharpe, currently the feature baton twirler for the Cal Poly marching band, is directly responsible for the auxiliary parts of the band. So far this only includes tall flags, but Sharpe wants to add short flags and dancers for halftime shows.

The Cal Poly men's basketball is the first to benefit from these additions. Next week auditions will be held for a short flag squad, which will perform at basketball games.

So how does a baton twirler become an assistant band director? Well, according to Sharpe, one needs years of experience. She began twirling the baton at age five, and by age six she entered her first competition. Since then Sharpe has traveled to National Baton Twirling Association competitions all over the United States.

"I've been in about every state and all I saw were airports and gymnasiums," said Sharpe.

She was featured in "Who's Who of Baton Twirling," at age nine through the recommendation of coaches and judges. By age 12, Sharpe had appeared on one of the first episodes of "60 Minutes." With Walter Cronkite as commentator, the program examined the future role of baton twirling, following an individual through regionals to nationals. Sharpe still doesn't know why she was chosen to be that individual.

"There are often scouts at competitions, I guess that's where they saw me," she said.

A native of Florida, Sharpe served as an instructor for both high school and college majorette teams, flag teams and occasionally, drum majors.

The Cal Poly marching band, is directly responsible for the future role of baton twirling, following an individual through regionals to nationals. Sharpe still doesn't know why she was chosen to be that individual.

High academic standing backs hiring of Poly's first black physician

by Sherman Turntine
Staff Writer

In 1983 the Cal Poly Health Center hired its first black physician, Dr. Mark Isaac Sanders.

Cal Poly was one of the first schools in the California State College system to establish a health center with an on-campus hospital and a 24-hour emergency service. Since 1969 the health center has not employed a black doctor on the staff.

Dr. Sanders' educational achievements include a B.A. in Biological Sciences from the University of the South and a Medical Doctor Degree from Medical School. He attended Cal Poly in 1966 and 1967 and served four years active duty. While in the Air Force he stayed two years in Turkey as a family physician and worked the remaining two years in El Segundo, Calif.

"It's hard being up here away from my wife and son,"—Dr. Sanders.

After receiving an honorable discharge from the Air Force in 1962, he worked part time throughout Los Angeles County.

"I saw in the L.A. Times Classified section that the Health Center in San Luis Obispo needed a doctor for general medical practices. I inquired about the opening and filled out an application and had an interview. I was then hired," said Dr. Sanders.

Having only lived three years on the West Coast and having never been as far north as San Luis Obispo, Dr. Sanders feels like a kid who has left home for the first time. "I was surprised to find that there are so many towns up here, besides San Luis Obispo," he said.

Married for 10 years and the father of one son, Dr. Sanders recently found a house and plans to move his family from Southern California within a month. "It's hard being up here away from my wife and son, but soon they will be with me," commented Dr. Sanders.

Israeli jets leave 100 dead

BEIRUT, Lebanon—Israeli jets pounded Iranian guerrilla bases in the Bekaa Valley in Lebanon and Lebanese state radio reported nearly 100 people were killed and 400 wounded.

It was the second Israeli attack in two days on the guerrilla bases in the Syrian-controlled valley. Radio and police reports said 16 Kfir jets attacked in four formations at 8:10 a.m. local time, striking villages around Hassaka and a police station and a former vocational school at the southern entrance to the ancient city.

The Israeli military command in Tel Aviv said its pilot score accurate hits on two guerrilla bases it said were training camps and launching pads for anti-Israeli attacks. It did not elaborate.

Beirut radio claimed Israel was trying to sabotage a potential rapprochement between the United States and Syria following the release of American Navy Lt. Robert O. Goodman Jr. in Damascus on Tuesday.

Also hit were the villages of Talib and Tallal south of Hassaka, Hwah al-Chamm east of the city, and the Wavell Palestinian refugee camp on Bealak's southeastern fringe. Police and radio reports said.

Except for the refugee camps, the targets were strongholds of Hussein Mursi's Islamic Amal Movement and the Hezbollah, or Party of God. Both are Lebanese extremist groups whose members are Shiites and Muslims. They are supported by Iranian Revolutionary Guards who preach Ayatollah Ruhollah Khomeini's brand of revolution to the predominantly Shiite population of the Bekaa Valley.

The two groups were widely reported to be involved in the truck bombings that killed 241 Americans servicemen and 58 French paratroopers in Beirut last Oct. 23, and 28 Israeli soldiers and Arab detainees in Tyre on Nov. 4. Both groups have denied reports they were involved in the bombings.

Nigeria settles down after coup

Nigeria's new military ruler Maj. Gen. Mokamadu Buhari on Wednesday summoned diplomats to discuss his takeover of the government. OPCD said the new leaders of the oil-producing nation had pledged not to slash prices, easing fears of a price war.

International and domestic flights to Nigeria resumed for the first time since Saturday's coup, some tales and telephone links were restored and a dusk-to-dawn curfew was lifted.

Buhari, 41, told the envoys in Lagos that if he had not overthrown the 4-year-old civilian administration, "the whole country would have suffered economic collapse and political chaos," the British Broadcasting Corp. reported.

In a BBC interview from Lagos, British Ambas­sador Hamilton Whyte said apart from the con­tinued closure of borders, "in terms of daily life everything is much as usual."

"The curfew was lifted last night, the airports have been opened, international and domestic flights to Nigeria resumed for the first time since Saturday's coup, some tales and telephone links were restored and a dusk-to-dawn curfew was lifted," Whyte said.

Buhari, 41, told the envoys in Lagos that if he had not overthrown the 4-year-old civilian administration, "the whole country would have suffered economic collapse and political chaos," the British Broadcasting Corp. reported.

In a BBC interview from Lagos, British Ambas­sador Hamilton Whyte said apart from the con­tinued closure of borders, "in terms of daily life everything is much as usual."

"The curfew was lifted last night, the airports have been opened, international and domestic flights to Nigeria resumed for the first time since Saturday's coup, some tales and telephone links were restored and a dusk-to-dawn curfew was lifted," Whyte said.

Buhari, 41, told the envoys in Lagos that if he had not overthrown the 4-year-old civilian administration, "the whole country would have suffered economic collapse and political chaos," the British Broadcasting Corp. reported.

In a BBC interview from Lagos, British Ambas­sador Hamilton Whyte said apart from the con­tinued closure of borders, "in terms of daily life everything is much as usual."

"The curfew was lifted last night, the airports have been opened, international and domestic flights to Nigeria resumed for the first time since Saturday's coup, some tales and telephone links were restored and a dusk-to-dawn curfew was lifted," Whyte said.

Need a body? Go to the Human Performance Lab

by Andy Frokjjer
Staff Writer

If you were building a human-powered aircraft and needed someone to fly it, how would you select the person most physically capable? If you were an aeronautical engineering instructor William Patterson, you would go to the Human Performance Lab and have potential pilots tested to find out who would do the most work.

Located on the second floor of the PE building, the lab houses equipment which is used by Cal Poly students and faculty for research and instruction. The lab serves several classes in the PE department, including tests and measurements, physiology of exercise and kinesiology. It is used by students for senior project and thesis work, and helps prepare people in the PE certificate program to become health fitness specialists, according to director James Webb.

Though most of the people tested are chosen by the researchers themselves, certain community groups, such as the police and fire departments, are also tested at the lab. Foundation employees are tested as part of the Foundation Fitness Program.

The lab does not do any clinical testing for private individuals unless they are under contract to the Foundation Fitness Program. Individuals without a contract can be tested, Webb said.

"We would like to eventually have a university-based program for the community where we could do testing on an fee-type basis during certain hours of the week," Webb said.

The lab occupies a room that was originally used as a boxing practice area and later converted into a weight room. Webb, a PE professor, began to develop the facility in 1970, adding electrical outlets and counter-tops, and a glass-enclosed office so that he could observe any testing that was taking place while he was working.

"A number of the courses in the department did not have lab classes connected with them initially," Webb said. "The development of the lab allowed them to be added to the program."

The room is divided into sections according to the function of the testing equipment. The main feature of the lab is an exercise machine known as a Cybex machine. It is used to determine muscle strength and range of motion at any joint and is a standard piece of equipment in physical therapy departments.

For example, a therapist can test both a person's post-surgical knee and good knee, and compare the results to see how the person is getting in strength and range of motion. The therapist can then outline an exercise program to correct the weakness.

The physiological testing area uses a basic recording device to monitor breathing and heart rate, blood pressure and sweating responses. It also contains a stimulator to produce nerve conduction responses and a machine to measure the person's cardiovascular and cardiorespiratory condition.

Another area contains a treadmill, boot-stopping device and gymnastic bicycles which are used to assess people's cardiovascular and cardiorespiratory condition. One test performed in this area is respiratory gas analysis, which measures the body's ability to process oxygen. The test is a key to the person's overall fitness, because it limits a person's ability to do work.

"It tells us why people huff and puff when they do work," Webb said. "We can tell the individual if they are in poor, good, or excellent condition."

These work-producing machines can also help researchers find out certain characteristics of a person's metabolism.

No draft sign-up, no financial aid

by Catherine Aaron
Staff Writer

A recent amendment to the Military Selective Service Act requires that any student eligible to register for the draft who does not do so is ineligible to receive federal financial aid.

Recipients are required to sign a Statement of Educational Purpose/Registration Compliance form, according to Julia Waller, a Cal Poly financial aid counselor.

"We don't require that students bring in proof of registration, but there is talk of making that a prerequisite in the future," says Walder.

If a student falsely states that he is registered or gives untrue reasons for ineligibility, the student is subject to fine or imprisonment, or both.

The amendment was enacted as of July 1, 1983, the beginning of the 1983-84 award year. It applies to the Pell Grant, Supplemental Educational Opportunity Grant, College Work-Study, National Direct Student Loan, Guaranteed Student/PLUS Loan, and State Student Incentive Grant Programs.

Signing of the Registration Compliance form is not required to receive funds from the state, as with the new State University Grant program.

Those exempt from registration are females, males under 18 or born before 1960, permanent residents of the Trust Territory of the Pacific Islands or the Northern Mariana Islands, and those on active duty in the armed services.

New bus schedules set with Poly riders in mind

On Monday, January 9, the Poly Shuttle (Route PolyP) will begin a new schedule.

During the mornings, 7-4/2 a.m. - 10 a.m., the Poly Shuttle will operate solely on a clockwise route: City Hall - Tropicana Village - Cal Poly - City Hall. During the afternoon hours, 2:04 p.m. - 5:04 p.m., the Poly Shuttle will operate on a counter-clockwise route: City Hall - Cal Poly - Tropicana Village - City Hall. There will be two round trips each hour during the stated hours of operation, Monday - Friday, on regular Cal Poly class days.

The change will better serve Tropicana Village and Valencia Apartment students on Ramona Drive. Students traveling to class during the morning hours, and returning home during the afternoon hours will have direct routing with these Poly Shuttle changes.

Discounted tokens, monthly passes, and the new quarter pass are available to Cal Poly students, staff and faculty members at the Cal Poly University Information desk, for $2.50, $25.50 and $20 respectively. SLO TRANSIT schedule information telephone number is 454-BUSI.

The new SLO TRANSIT bus schedules are available on all City buses, and in City Hall. Bus schedules will also be included in the City water bills during January and February.

SLO TRANSIT will operate Routes 1 and 2 until 10:22 p.m., Monday through Thursday. The trial service will run until the end of Cal Poly's Winter Quarter.

As a result of testimony received during the 1982 Unmet Transit Needs Hearing, the San Luis Obispo Area Council directed the City of San Luis Obispo to operate a trial evening service for Cal Poly students. Research performed by City Hall staff determined that the majority of Cal Poly students live in areas served by Routes 1 and 2.

However, the service is open for general public use. The regular fare structure—50 cents cash fare, passes, tokens and five ride tickets—will be honored.

At the end of the trial period, evening service will be reviewed by the City of San Luis Obispo and the SLO Area Council to determine whether or not evening service becomes a permanent extension of SLO TRANSIT.
Health equipment offered to athletes and others seeking self-improvement

From page 10

Exercise. One researcher looked at how lack of sleep affects a person's physical performance. Other projects have studied the effects of deconditioning, diet modification, and temperature regulation by altering what people wear when they exercised.

The hydrostatic weighing area is used to measure the amount of body fat people have. Along with resting metabolic rate and nutritional information, the area has provided the service to athletic teams that have requested it. In the past, tests have been run on the wrestling team to tell them how much body fat they can lose or gain safely.

According to established standards, the average college age male should have no more than 15 percent body fat, while the average college female should have 20 to 24 percent body fat.

"We've had anorexics in here," Webb said. "We've also had athletes who had body fat levels so low they might have been metabolizing protein instead of fat, literally wasting away." Lab technicians work with people in the dietetics department and the health center to provide guidance for these individuals to put on more weight. Dietetics

"We've had anorexics in here. We've also had athletes who had body fat levels so low they might have been metabolizing protein instead of fat, literally wasting away,"—James Webb

majors often take classes using the lab to complement their curriculum, Webb said.

When testing groups of older people, Webb often finds the opposite problem: too much body fat. This condition may lead to health problems such as high blood pressure and adult-onset diabetes. The extra weight may also cause joint and heart problems.

The pulmonary area features two spirometers which are used to measure lung volumes and capacities, and measure respiratory gas analysis and a three-channel, multi-channel lead EKG machine. The pair would cost a minimum of $4,500.

The lab is funded primarily through the state, though the lab has received several federal grants and nonsmokers, or swimmers and people who don't swim. In a practical sense, they are used to determine if the lungs of local fire fighters have been damaged by smoke inhalation.

The anthropometric area is used to measure various sizes and weights, such as hip and shoulder widths, leg length, and body weight. Anthropometric norms are used by manufacturers when deciding the heights of sizes and weights, such as hip and shoulder widths, leg length, and body weight. Anthropometric norms are used by manufacturers when deciding the heights of

Visiting Pioneers find Mustangs unsettling again

Rebounding from its second loss of the season in the championship game of last week's Puget Sound Tournament, the Cal Poly men's basketball team Tuesday night dismantled Cal State Hayward, 76-35, in the Main Gym.

Paced by guard James Blevins' 20 points, the Mustangs, whose record improved to 10-2 with the win, opened up a 15-point first half advantage and then outscored the Pioneers 50-18 in the final period.

Blevins, who buried 10 of his 15 shots, was helped out in the scoring department by Nate Hatten, who came off the bench to drop in 19 points in 22 minutes.

It was the second lopsided win for the Mustangs over the Pioneers in less than two weeks. Poly defeated Hayward up north Dec. 23, 74-49, before traveling to the state of Washington for the Puget Sound Tourney.

The Mustangs, who had won their own Agile Invitational Dec. 3 and 4 with wins over Stanislaus State and Humboldt State, drew Central Washington in the first round of the holiday tourney and were extended into overtime before squeezing by with a 61-60 victory. But Poly was bumped by the host Loggers, 55-38, in the final.

The Mustangs have only two non-league tuneups remaining before opening their California Collegiate Athletic Association season Jan 13 and 14 when they visit UC Riverside and Cal Poly Pomona. Tomorrow night the Mustangs host Cal Lutheran from Thousand Oaks before entertaining Mount Marty College (South Dakota) the following evening. Both games are scheduled to start at 7:30.

Twelve games into the season, Blevins, a junior college transfer from West Los Angeles College, leads a balanced Mustang attack averaging almost 13 points a game—the only player averaging in double figures. Blevins has also passed off for 21 assists, a distant second on the squad behind senior guard Keith Wheeler, who has dished off 82, at a clip of seven per game.

Poly has received strong board play from forward Derrick Roberts and center Jim Van Winden, who have each grabbed 57 rebounds. Van Winden, however, didn't suit up against Hayward and is listed questionable for the weekend's contests.

Poly riders extend NIRA lead

The Cal Poly men's and women's rodeo teams turned in strong performances at the first of two Western Region-sponsored indoor rodeos held at Red Bluff.

Last weekend's win extended both teams' leads in the National Inter­ collegiate Rodeo Association's (NIRA) national rankings.

Junior Rocky Carpenter won the all­ around to lead the men's team to a 626 point first-place finish. Los Angeles Pierce College placed second with 316 points, followed by Hartnell College (third) and Merced College (fourth).

Carpenter, who was ranked third nationally in all-around standings going into the competition, captured the calf roping title. He later teamed up with Wade Banta to win the team roping.

Not to be outdone by their male counterparts, the women's team out­distanced second-place Merced with 246 points. Pierce and Hartnell finished third and fourth in the team standings.

Next weekend Cal Poly returns to Red Bluff for the third of five region­ sponsored rodeos at the indoor arena at the Tehama County Fairgrounds.

The Cal Poly rodeo teams have retained their first place NIRA national rank­ings since early December, in front of the University of Arizona. The Cal Poly women hold a 113 point lead over the Lady Wildcats, while the men's team enjoys a substantial 764 1/2 point lead over second-place Arizona.

In the individual national rankings, the Cal Poly men hold the top five places in team roping, four of the top five spots in calf roping, and two of the top four positions in the all-around riding.
