Corporate gift is Poly's last hope for a new track

by Karen Kraamer

ASI President Jeff Sanders announced to the Student Senate Wednesday night some of the details of an estimated $12 million dollar Intramural/Recreational Sports complex planned for the soccer field behind the Student Center.

The facility would seat 5,000 (twice floor seating for concerts seating 0,000) and would provide facilities for a slew of recreational sports, said Sanders.

The complex would not be complete for another four to five years, said Sanders, and because of the tight educational budgets, would have to be paid for by student fees. A student fee for the facility would be phased in over the next four years, and by 1989, students would pay $30 a quarter towards the facility.

"A year ago, with student fees going up so much, I was opposed to the idea," said Sanders. But recent Assembly bills which stabilized student fees and the governor's educational-oriented budget makes a student-funded facility feasible, he added.

Sanders said that he will be pushing the Student Senate to put a referendum on next election's ballot so students can decide if they want to pay for a recreational complex.

The complex is also contingent on getting the chancellor's office to put the money received from the sale of $3 million worth of Cal Poly's land toward the complex, Sanders said.

"The main drawback is the cost," said Sanders. "Unfortunately there is just no money from the state." The $12 million also includes two additional soccer/softball fields which would be located near the Health Center and in the area that is now a parking lot below the Yosemite dorms.

Sanders said the parking area would be reorganized so that only a few spaces would be lost.

Sanders also proposed a resolution which recommends that a competency test in the English language be given to all faculty members prior to hiring, and prior to being given tenure.

"Many faculty at Cal Poly and elsewhere in the CSU system are not proficient in the English language, said Sanders' resolution. "These faculty may not communicate their wealth of knowledge adequately to their students."

Poly dean co-authors book on business

A new book co-authored by Cal Poly's dean of the School of Business has received attention throughout the United States and Europe for its exploration of the changing face of capitalism.

Kenneth D. Walters and co-author R. Joseph Monsen, professor of business at the University of Washington, warn that American business may not be able to compete with the growth of state-owned companies of other countries in their book, "Nationalized Companies: A Threat to American Business."

The book states that nationalized companies, though less efficient than private companies, pose a competitive challenge to private firms because government subsidies them so heavily.

While Boeing and Lockheed are more efficient than Europe's Airbus Consortium, the book claims, the huge government subsidies to Airbus make it a tough competitor.

Walters said that after he and Monsen made extensive surveys of world markets and manufacturers he concluded that, "the United States needs a tougher trade policy, not an industrial policy that paroles out credit to various industries. We should not let products subsidized abroad compete in our markets without taking some strong steps."

The book points out that a major portion of European industry is nationalized. Few Americans are aware, said Walters, that Renault, Alfa Romeo, Rolls Royce, Volkswagen and Swedish Steel are companies in which governments are the sole or major shareholder.

Government-owned companies in Western Europe, make airplane engines, tractors, computer software, office equipment, computers and trucks, Walters said. Some even run local rail lines. The nationalisation sector is dominating more and more industries and is expanding to new products and markets each year.

"I believe the authors are right," Halffman wrote, "in calling attention to a striking change in the structure of economic life. This is the rise of state-owned companies, as perhaps the most rapidly expanding form of modern intergrees."

The book is published by McGraw-Hill.

Jump off chemical treadmill

Editor:
The Feb. 16 article, Ag forum,... did not truly represent the ideas many of the growers had.

Our present agricultural system is dependent on chemicals and petroleum based fertilizers. To immediately accept such a system without some real thought of what it could mean to America's Denise. However, if we continue to apply these poisons, we are only costing bandwagon our agricultural system will soon spoil. In the markets, the food is speckled with chemicals, it is tasteless and rubbery, and the color has been waxed to where it would look good on a mantle piece. Chemicals were the panacea in the post WW11 years and exist today due to the great media hype and mechanized studies. No farmer wants to poison his neighbor or himself. He is interested in a way to produce as need to take an objective stance and change the false panacea that is blinding us.

So, come on. Look up that old friend's address and sit down to write him a letter. Changed your major, got a mohawk or just miss the old days. What have you got to lose?

Mary Hassen—Misnaffiar

Modoc clone compensation

Editor:
Whereas four labs of fifth year architecture students reside in Tehema and Mariposa buildings.

Whereas these buildings are substantially similar to Modoc.

Whereas said fifth year architecture labs use the same restroom facilities that Modoc occupants use.

Whereas the School of Business faculty have pointed out said buildings' insufficient furnishings.

We stand resolved that the students and architecture faculty enduring these conditions should also be justly compensated for their suffering.

Four architecture faculty at 18 quarters of residence at $1,500...

Sixty students at two quarters of residence at $1,500 each...

Plus punitive damages, mental anguish and miscellaneous...

We are willing to negotiate for a reduced settlement. Thank you for your time and generosity.

William E. Zellmer
Too proud to gripe, but since the neighbors did...

Editor:
The architecture students would like to thank the business faculty members who filed their grievances. We like your method of complaining about inconveniences in order to get money, and ask ourselves why we never thought of it. All this time we thought nothing about the small problems because we were proud to be part of the university system.

The architecture faculty and students have been here for 10 years without insulation, walkways, or lights in the bathrooms. We were tired of providing for ourselves or going without. Thank goodness we finally have neighbors in nice suits who cannot endure some temporary hardships, who complain and make demands. Those of us who have been here since September or longer like to receive some of the cash the trustees are going to hand out to the residents of this part of the campus.

Most of us are students and are willing to endure these hardships free-of-charge because our predecessors have done so for 10 years without objection, but what the heck, our professors have had offices and a k$ room in these buildings for six years, therefore they should receive $27,000 each which is based on $1600 for three months of inconvenience as demanded by the business faculty and a nine month school year. With this money we should be able to prevent the floors from bouncing when people walk by, keep the rain water from running onto the front doors, and putting a ceiling over the exposed roof insulation.

Thanks again, our new neighbors, for showing us the way to get grip money. Maybe next fall when the new fifth-year students move in they will not have to install their own light fixtures and scavenge condemned buildings just to have desks to work on.

Voter registration drive geared for minimizing fees

by John Bachman

Staff Writer

Today is the last day of voter registration week, and students are being encouraged by student representatives to register and vote to keep fees down.

"Voting is one way to deal with the added fee increases," said Cam Bauer, chairman of ASI's voter registration drive. A booth is set up in the UU plaza so that students who aren't registered can come by, he added.

Bauer said of the 1,500 fliers sent out, he has received about 300 back, but added many students might be sending in the forms themselves.

Bauer has been involved with student government for four years and said he has tried to get legislators to listen to student needs in a number of ways, but none have worked.

One sure way for California's students to increase their political clout is for students to form a voting block which can't be ignored by the legislators, he said.

Having a large number of registered voters gives a psychological edge to the people who lobby the state government, Bauer said. Beyond just getting students registered, the voter registration drive is focused toward getting students to vote in the June 6 primary, he added.

"This is an opportunity that needs to be taken advantage of," he said.

Chevron says

to Computer Professionals

Chevron says "YES" to rewarding opportunities for Computer Professionals. "YES" to diversity and challenge... to gaining knowledge through association with some of the finest minds in our industry... to valuable training and guidance... advancement... and professional growth in this vital field. Consider what we've got to offer the Computer Professional: Chances are you'll say "YES."

APPLICATIONS involve diverse areas supporting major functional aspects of the company including finance, administration, logistics, marketing, engineering, exploration, production and chemicals. Tools our people use include PL/1, COBOL and FORTRAN Procedure Languages and IMS, CICS, NOMAD and MARK IV Database and File Management Systems.

OPERATIONS supports two large data centers (soon to be all IBM 308X series mainframes), state-of-the-art systems software and a vast data communications network with MVS/SP, VM/SP, VP/SP Operating Systems and SNA Networks.

We offer qualified and motivated Computer Professionals immediate assignments that match their experience and skills. You'll receive on-the-job training and the support needed to advance to increasingly responsible assignments. Our horizons are continuing to expand so that, today, talented people can reach high technical or management levels faster than ever before.

Correction

In last Friday's Mustang Daily, ASI Senator Gina Nonini was quoted as saying she was against the senate dealing with social issues. These statements were made by Senator Gina Amente and not Senator Nonini.
Iran claims victory in Iraq

Iran claimed its biggest victory Thursday in three and one-half years of war with Iraq, saying its forces thrust 25 miles into Iraqi territory and cut the Baghdad-Baara highway in two places.

But Iran military spokesmen said the new Iranian offensive in the Baara region was "totally limited," and some 1,000 bodies, totaling up with thousands of Iranian bodies lost on the battlefront.

The Iraqi communiques said Tehran had claimed victory to divert public attention in Iran from the crushing of its offensives and its huge losses.

The communiques were monitored in Nicolas, Cyprus. Foreign correspondents were not allowed near the battlefront, and the conflicting claims could not be independently verified.

Iran said its forces captured two towns along the Iraqi highway—Al Qurah and Al Usayr. Both towns are 19 miles west of the Iran-Iraq border, with Al Qurah at the confluence of the Tigre and Euphrates rivers.

From the nation...

B-1 bomber ahead of schedule

WASHINGTON—I Air Force's $20.5 billion B-1 bomber program promises to remain ahead of schedule and below projected costs, Gen. Lawrence Skatze, the Air Force vice chief of staff, said Thursday.

Skatze predicted that the first B-1 bomber probably will fly before the end of 1984, three or four months ahead of schedule.

He said the projected cost of the program for 1980 and the middle of the six-year project, which was reaffirmed at $20.2 billion, including research and development, ground support equipment and spare parts.

"We have the potential for not only keeping the program ahead of schedule but under budget," he said a new briefing at the Pentagon. Skatze said "ab- solutely" when asked whether the B-1 contracts will be guarded against overcharging of spare parts for the 100 planes.

The B-1 is the first full-scale U.S. strategic bomber to be built since the B-52 was introduced in the 1950s.

by Linda Reiff

San Luis Obispo

A special blend of people, a friendly atmosphere and a warm climate are what make San Luis Obispo a great place to live. But along with these welcoming qualities, there are also disadvantages to SLO life, say several residents.

For many of the 36,000 residents, San Luis Obispo has just the right amount of people and a special community feeling that makes the town a nice place to call "home."

San Luis Obispo city councilman Robert Griffin and his wife decided to move to San Luis Obispo after honeymooning here. "San Luis Obispo struck us as a vibrant community, We wanted to come here," Griffin said. "We were really captured by the climate and the combination of being a college town and being progressive in that respect."

Griffin, who is also assistant to the executive director of the Cal Poly Foundation, said San Luis Obispo is a good place to raise a family. He feels that his 10-year-old son has greatly benefited from San Luis Obispo's environment.

Gail Franzone, a Cal Poly senior, has lived in San Luis Obispo all her life. She is currently working as an intern at the San Luis Obispo Chamber of Commerce. Franzone said San Luis Obispo was a nice place in which to grow up. "Everybody's really friendly here, she said. "If you go to a big city, you can't walk down the street and say 'hi' to everyone without getting the wrong impression."

She said San Luis Obispo is a perfect town in which to raise a family, with so much to do and a "good mix of people."

Griffin also said one of SLO county's nice features is its unique combination of people living close together.

"We live in a typical middle-class neighborhood, where retired people, students who rent and families with children all live on the same block and get along well," he said.

Although there have been some problems between the community and the students in the past, Griffin feels this relationship is improving.

"The relationship between the students and community is the best it has been in a long time," he said. "There are still in some problems in neighborhoods, upset by unruly students...but I don't think there are very many of those instances or very many unruly students."

Jeff Sanders, ASI president, feels the same way about the students' rapport with other residents.

"We're being more accepted by the community," he said. "We're such a large portion of the community (we have to be accepted."

Both Sanders and Griffin noted several programs designed to build better bonds between the two groups.

"We're working much more closely with the community," Sanders said. An ASI business committee is working with the Chamber of Commerce, the Inter-Fraternity Council is working with the police depart-
BIRTH DEFECTS

Obispo is not really a tourist town. "Honestly, there is not that much business for tourism here," Griffin said. "It really amazes me to see young students and older people interacting.

Toby Ross, community development director, likes the college atmosphere of San Luis Obispo. He said the presence of Cal Poly and SLO has brought more entertainment to the town.

"There is a fair amount of activities, such as circuses and theatre because of the students," he said. "I appreciate the fact those things exist here."

However, the cultural selection of entertainment is one area Griffin thought the town was lacking. "There is not that consistent quality of cultural activities," he said. "Although for our site, it's not that bad.

San Luis Obispo may be lacking in steady cultural entertainment, Sanders noted the continuous recreational activities the city and climate provide.

"With the gorgeous weather, there's a lot to do, such as hiking and biking and running," Sanders said. "Other areas don't have the same opportunities San Luis Obispo has."

Most of the people interviewed also mentioned the mild climate as a warm aspect of San Luis Obispo.

In terms of drawing tourists, however, Shari Meyer of ERA-PT&C Realty said, "The houses are very nice, and the Sunset Boulevard area, she said the housing situation does look better.

Kelly Meyer of ERA-PT&C said the city of San Luis Obispo is not a tourist area. "Honestly, just aren't a lot of tourist dollars going here," she said. "When you stop and think about it, this town just had its normalities. There is only one novelty item - the Madonna Inn," she said.

Pickard said the area around San Luis Obispo does have a lot of tourists with Hearst Castle about one hour away and wineries blooming around the county. "I think Cal Poly and Diablo Canyon Nuclear Power Plant draw business to this area," he said.

"It's a long way from home," he said. Griffin also brought up one of the major problems in San Luis Obispo—housing. He said the relative prices of housing is a problem. "This town is going to attract tourists, with Hearst Castle and Madonna Inn," said.

"And to a certain extent I agree with her," he said. Griffin was recently in Washington D.C. and was amazed by the variety and lower prices there.

"I do hear a lot of complaints about not enough variety of merchandise here," he said. "But that is to be expected of a smaller town.

"We have to remember that being small is okay. It's not great, but on the whole, that's why people stay here," he said.

In this small town atmosphere, one might expect the crime rate to be lower. However, this is not the case in San Luis Obispo.

Steven Seybold, San Luis Obispo Police Department crime prevention coordinator, said compared to the amount of people, the crime rate is similar to large cities.

"On a per capita basis, the crime rate here is comparable to large cities," he said. "For example, in Los Angeles in 1981 there were 3,166 rapes committed. L.A. has a population of about 3.5 million. In 1981 in San Luis Obispo, there were 34 rapes and we had a population of about 35,500.

"Taking those figures, the percentage of rapes in Los Angeles compared to the population is .09 percent. The percentage of rapes in San Luis Obispo, compared to the population it's .97 percent. Please see page 8.

LOS HERMANOS
975 Osos St., SLO (across from the courthouse)
Despite crime, SLO still has appeal

From page 7

Seybold explained that the crime rate is high here compared to most small towns, "because a lot of people want to live here. We attract the unseaworthy element, as well as the upstanding, law-abiding citizens."

Seybold said San Luis Obispo is the major city halfway between San Francisco and Los Angeles. He said a lot of car thieves run out of gas around San Luis Obispo, then rip off another car to continue their journey.

The student population also contributes to the higher crime rate, Seybold said. "The students are so tied up in their academic affairs, that they're real lackadaisical about security." He said a significant percentage of burglaries and rapes occur due to poor security—unlocked doors and open windows.

"I don't want to cause fear or paranoia," Seybold said. "San Luis Obispo is relatively safer than metro areas simply due to the fact that the police department can respond to every call." He explained that officers can usually get to any situation within three minutes.

Seybold also gave some reassuring news—the crime rate in San Luis Obispo in 1983 went down 17 percent, compared to 1982. If this trend continues, San Luis Obispo's crime rate may soon be able to be classified as an advantage, instead of a disadvantage to living here.

Many residents have studied both sides to issues such as the crime rate in San Luis Obispo and have come to the same conclusion as Sanders, "On the whole, the advantages to living in San Luis Obispo far outweigh the disadvantages."

GOOD PAY DURING YOUR SENIOR YEAR

The Air Force has a program that pays more than $1,200 per month to you during your senior year of engineering school. The College Senior Engineer Program is open to students in electrical, nuclear, aeronautical and astrophysical engineering.

Seniors may enter the program as late as 90 days before graduation. Juniors may apply after completion of the first academic term of their junior year and start receiving checks up to 12 months before graduation. Certain graduate students also are eligible. While you’re completing your engineering degree, you will receive full pay and allowances. Plus, you’ll be entitled to other Air Force advantages such as complete medical and dental care and discount shopping privileges.

Candidates for this program must qualify for a commission as an Air Force officer. You must be a U.S. citizen under the age of 35. For more information on the College Senior Engineering Program, call:

MSgt. Kampion (805) 543-0934
T Sgt. Washington (213) 831-8312
Skills are three-fold.

Students build own classrooms in snow

by Jerry Sheahan

For all but a few Cal Poly students, the classroom setting is confined to four walls on each side with a roof overhead. Students enrolled in Outdoor Recreation, Recreation 103 classes, however, experiment with a unique challenge of building their classroom—a classroom made of snow and ice in a wintry mountain environment. According to the course’s instructor, Dr. Michael Swiderski, the objectives of Outdoor Recreation 103 class are three-fold. The first is to introduce students to nordic skiing, the second is for students to experience functional living in a winter climate, and the third is to create snow shelters and live comfortably in them over a three-day weekend.

Swiderski serves as the chief architect of these snow shelters, yet insists students make the structures themselves as part of the course requirements. "If you have a good snow pack, then it is a "snow cave,"" noted Swiderski. ""If you have a bad snow pack, then it is an existing snow bank,"" he added.

Swiderski described this shelter with built-in refrigeration as having a floor that is higher than the ceiling at the entrance to keep the warm air from escaping.

The second type of snow shelter is the classic igloo design, made popular by the resourceful Eskimos, which involves cutting out blocks of ice with saws. The third nordic dwelling is the "trench" and is made by clearing-out a box shape 3.5 feet deep in the snow with an "A-frame" roof added over the blocks.

"Quinzees," or "snow huts" as they are commonly called, are the fourth form of snow shelters and demand only 12 inches of snow. They are created by the time-consuming method of gathering 34 inches of surface snow, which is then rounded into a dome strucure.

"We contour the snow into a dome. You don’t want any protrusions to cause dripping," said Swiderski.

"We had 15 people standing on top the next day," remarked Swiderski on the strength of one of his students’ snow huts.

In his experience as an instructor, Swiderski has only seen one facility structure: "I have had one collapse and it was the error of the student who didn’t let the snow settle prior to building the walls too narrow," he stated.

Students in Recreation 103 are given the option of choosing one of three weekend trips to go on during the quarter.

The class structure includes one hour of lecture, or "presentation" as Swiderski prefers to describe it, and two hours of lab on Fridays.

Topics covered include equipment essentials, condition, hypothermia and frostbite, winter driving tips, and a tire chain clinic.

"The most dangerous thing that we are driving to the activity," stressed Swiderski.

Swiderski believes students enrolled in the Outdoor Recreation Skills course benefit in a variety of ways from their experience.

"They learn the ability to enjoy and extend their outdoor activity throughout the winter, they learn about living in extreme conditions such as temperatures that dip below zero, and they gain confidence in their ability to live in extreme conditions," he said.

The course offers three different types of outdoor opportunities for students with a land-based activity in the fall, snow-based in the winter, and water-based in the spring.
Poly women swimmers make one last splash before March national meet

by Karen Kraemer
Staff Writer

The Cal Poly women's swimming team will wrap up its season with a last pre-national meet this weekend at San Francisco State.

Duane McCroy's national crew travels to the bay area looking for those last few qualifying times.

"I have nine, possibly ten, girls qualified for nationals," said McCroy. "If we swim our strongest at nationals we could place in the top 16."

Swimming strong means both Ann Stier and Anne Gatlin swimming in at least four events. Stier will swim the 600-meter freestyle, 1660 free, 400 individual medley and a team relay while Gatlin will compete in the 400 and 200 IM, 200 backstroke, and two team relays.

Other qualifiers are Donna McCroy (1 meter diving), Joan Mary Laubach (50 free, 400 medly relay, 800 free relay), Susan Waltz (50 free), Linda Tucker (200 fly, 400 medly relay), Nancy Stern (400 medly relay), Susan Williams (800 free relay) and Sandy Faren, who is a prospective relay swimmer.

This weekend's meet will be an important one for freshman Nancy Stern.

"Nancy is just a fingernail away from qualifying in both the 100 and 200 meter breaststroke events," said McCroy.

The team will leave on March fourth for the NCAA Division II Nationals to be held in New York. Competition will begin on the seventh at Hofstra University.
Mustang cagers facing uphill road to playoffs

by Sherman Turnine
Staff Writer

The Cal Poly men's wrestling team will begin competition today in the Western Regionals hosted by Indiana University at Terre Haute.

Coach Vaughn Hitchcok's matmen in the past have had just 46 champions in the NCAA Western Regionals. The Mustangs have had 46 champions, including 17 in the past four years, 19 runner up, 13 thirds and four fourths.

Despite a 6-10 regular season record this year, the Mustangs do have promise entering today's matches. Wrestlers who are making the trip to Terre Haute, Indiana include:

- Mike Provenzano (Jr), in the 118-pound class. Geronimo holds an impressive 16-9 record to date.
- Ernie Geronimo (Jr), will compete in the 126-pound class. Geronimo sports a 7-7-1 record to date this season.
- Cesar Escudero (Jr), will compete in the 134-pound class. Delong, who is 25-7-2, placed 6th at Regionals last year.
- Dennis Townsend (Sr), will compete in the heavyweight class. Townsend is 8-12 this season.
- Roger Sayles (Jr), gives the Mustang another solid weight class. Sayles will compete in the 197-pound class with an outstanding record of 20-4-1 this season.

The Cal Poly men's wrestling team will begin competition today in the Western Regionals hosted by Indiana University at Terre Haute. Hitchcock's matmen in the past have had just 46 champions in the NCAA Western Regionals. The Mustangs have had 46 champions, including 17 in the past four years, 19 runner-up, 13 thirds and four fourths.

Despite a 6-10 regular season record this year, the Mustangs do have promise entering today's matches. Wrestlers who are making the trip to Terre Haute, Indiana include:

- Mike Provenzano (Jr), in the 118-pound class. Geronimo holds an impressive 16-9 record to date.
- Ernie Geronimo (Jr), will compete in the 126-pound class. Geronimo sports a 7-7-1 record to date this season.
- Cesar Escudero (Jr), will compete in the 134-pound class. Delong, who is 25-7-2, placed 6th at Regionals last year.
- Dennis Townsend (Sr), will compete in the heavyweight class. Townsend is 8-12 this season.
- Roger Sayles (Jr), gives the Mustang another solid weight class. Sayles will compete in the 197-pound class with an outstanding record of 20-4-1 this season.

The Mustangs also host rival Cal State Bakersfield next Thursday.

Here are the facts:

- The Mustangs own a 6-5 CCAA record, good enough for fourth place at the moment.
- Bakersfield is a game ahead of them at 7-4 and Chapman, fresh off its upset of Riverside last week, is still another game up with an 8-3 mark.
- While the Roadrunners and Mustangs finish out the season versus common opponents, including each other, the Mustangs' final three contests are against the trio of squad's currently holding down the bottom of the CCAA standings.
- Finally, the three teams vying for second place all have similar overall marks. Chapman is 18-6, Bakersfield owns a 19-5 record, and Poly is 18-7.

A third-place wild-card berth seems to be the Mustangs' best chance for a playoff spot. Sweeping the rest of their schedule would leave the Mustangs with a 23-7 overall record and 9-6 in the CCAA, which should put them in the third spot.

But while the Mustangs should sweep over Cal Poly Pomona tonight, getting by the 10-1 Highlanders will be obviously more difficult. In their league opener last month, Riverside belted the Mustangs 63-51.

The Highlanders, despite their 82-72 loss to Chapman last week, are ranked fourth nationally in the NCAA Division II. Three players, James Blavins (11.0), Tim Bell (10.8), and Dennis Townsend (11.4), average more than 11 points each night, while CCAA Player-of-the-Year, Monday McSherry (Fr), will join the Mustangs in Indiana's 150-pound class. McSherry has a 6-7 record this season.

Eric Osborne (Fr), a two-time California prep champ will compete in the 158-pound class. Osborne holds a 4-8-1 record.

Dan Romero (Jr), a redshirt from last year's team, will make his bid in the 167-pound class. Romero has a 11-4 record.

Roger Sayles (Jr), gives the Mustang another solid weight class. Sayles will compete in the 197-pound class with an outstanding record of 20-4-1 this season.

Jeff Steward (Sr), who placed 5th in the Western Regionals last year as a heavyweight, will represent Poly in the 197-pound class. Steward holds a 17-13 record this year.

Tommy McSherry (Fr), will join the Mustangs in Indiana's 150-pound class. McSherry has a 6-7 record this season.

You've worked hard and made the grade at one of America's premier engineering schools for a good reason... the opportunity to see it all pay off in a highly visible, fulfilling and rewarding career.

We're Gate Array, the pioneer, innovator and leader in high-speed, high-performance gate array technology, one of the semiconductor industry's fastest growing and most dynamic fields. We're a new and rapidly growing Division, and the first major manufacturer in the industry to establish a design, prototyping and fabrication facility under one roof.

We offer outstanding graduating engineers some unique opportunities to contribute to the leading edge of advanced IC technologies... to help direct the course of one of the world's most rapidly growing industries... and to distinguish themselves in a small team engineering environment where initiative, ideas, and achievement are recognized and rewarded with professional advancement opportunities.

In gate array technology, we're the best there is. For top-notch graduating engineers, Gate Array is the logical path to greater career satisfaction.

We'll be on campus Friday, March 2nd. If unable to attend an interview, send us a transcript of your college records and letter outlining your areas of interest and professional goals to:

A. DICKEY, EMPLOYMENT MANAGER
FAIRCHILD GATE ARRAY DIVISION
380 MCCARTHY BLVD. (JUST OFF HIGHWAY 17)
MILLITAS, CA 95035

To arrange for an interview or receive additional information concerning career opportunities at Fairchild Gate Array Division, fill out the coupon below and mail it. Along with a transcript of your college records and letter outlining your professional goals to the address above.
