Student Senate meets tonight for rec facility, reorganization by John Bachman Staff Writer

The Student Senate will be voting tonight on whether or not to place the proposal for a recreational facility on a special election ballot.

The facility would be built on the softball field next to the softball field cost approximately $12 million. Students would pay $10 a quarter in 1984, $20 a quarter in 1985 and $30 a quarter in 1986 for the facility. Students would have to pay $30 per quarter for 25 years to pay off the facility.

"I think we should let the students decide if they want the facility," said Business senator Kevin Greigheon. "The students have to decide if they want the facility. I have some serious questions in terms of cost." He added the Student Senate would push for it if the students want the facility.

The proposed building would not be complete for another five years, and would house indoor courts for racquetball, basketball and volleyball along with a weight training room and locker rooms. The facility would also seat approximately 1200 people.

"I don't think it should go onto the ballot," said Communicative Arts and Humanities Senator Lars Purner. "It should be made into an initiative. I don't think the Senate should put it onto the ballot as a referendum." Inititatives go onto the ballot through signatures rather than a vote by the senate.

The exact date of the special election has not been set and the election might not take place until as late as May. Several senators, including Purner, Communication Arts grantee Kevin O'elis, and Humanities Senator Sue Robbins, want on to say that one Task Force member argued that journalism actually in an unbiased study, and his opinion prompted the proposal to move the department to the new school.

Purner added that the move of the Journalism Department will have a negative effect. "It seems to me moving the Journalism Department would have adverse consequences. The Task Force wanted to stop the departments isolation, but this will make it worse." He went on to say that the Task Force wanted to make Communicative Arts and Humanities more oriented while providing support courses for Lemons of the university. "This seems like a constitutional problem when so many of journalism's support courses are in Communicative Arts and Humanities.

The meeting tonight is in UU 220 and starts at 7 p.m. Anyone can address the senate during Open Forum at the start of the meeting. The senators invite anyone interested in talking to the Senate to attend the meeting.

Student Senate meets tonight for rec facility, reorganization

Mix-up causes arch project to be destroyed

by Rosemary Costanzo Asst. Managing Editor

Miscommunication led to the destruction of a $20000 project that was in the Architecture Gallery over spring break.

The model was a 25-foot long replica of London Bridge built by a team of 18 architect students that was to be on display at the gallery beginning the first week of school and lasting through Poly Royal.

Three student workers from Plant Operations tried to get the model to school so they could retrieve the folding table it was on.

Associate Director of Plant Operations, Richard Tartaglia, said the workers called him and said they had lost the model in the Gallery with a model on top of them. "When they said models I thought they meant small models. I didn't know it was 25 feet long.

"I was walking down the stairs to the Gallery and I saw it. Our project was in a tangled heap on the floor. I couldn't believe it," he commented.

Simon said he believes the tearing down of the bridge was malicious. "The pieces were stepped on and kicked around there's no way it was anything but." They are going to say that it was an accident, but the only accident is that we have people of that mentality working for the university," he added.

"I'll never put anything in the Gallery again, that's for sure." A memo signed by the architecture students states: "Destruction of our work-in-progress by the campus support facilities has undermined our belief in Cal Poly's support of our design education. Needless to say, we now question the extent of our responsibility on this campus. Restitution of our financial investment could, at best, represent a token of responsibility of the University for its wards."

The question of reimbursement still remains unanswered and no action is planned against the student workers.

Simon pointed out that the money spent on the project is not the main point. "Working in a team is an incredible experience. A lot of sweat went into this project now all that's left is a few scraps. Simon's main concern was that after 10 weeks of work he doesn't even have photographs for his portfolio.

Just kidding

A story in Monday's April Fool's edition was too real for some students' tastes.

Summer quarter has not been cancelled. That was confirmed by the vice-provost's office, worried because of last summer's low enrollment, has been receiving calls from students about the story.

For more information, phone Malcolm Wilson at 442-2147.

Governor's veto a small victory for gays

by Dawn Yoshitake Staff Writer

DeKruizman's veto of a bill to eliminate job discrimination among gays is not a defeat but a small victory, the adviser for the Gay Student Union said Thursday.

The vice president, who also requested anonymity, said, "The governor had two weeks to sign the bill and our members thought he would let it sit on his desk and let it pass. The group was surprised when he vetoed it."

Although the club is not politically active, the vice president said the LSU sent a letter to Gov. DeKruismian with 30 signatures of members in support of signing the bill.

Most of the members have part time jobs, so job discrimination problems have never really surfaced at the university.

McCaughan said he believes the tearing down of the bridge was malicious. "The pieces were stepped on and kicked around there's no way it was anything but."

They are going to say that it was an accident, but the only accident is that we have people of that mentality working for the university," he added. "I'll never put anything in the Gallery again, that's for sure."

Act overlooked—again

For a man who spews anti-crime rhetoric so forcefully, President Reagan certainly has a knack for deftly sidestepping the law himself, particularly the War Powers Act of 1973.

As U.S. Marines deployed in Lebanon increasingly became targets for hostile fire last year, congressional opponents of their ill-defined mission attempted to raise the Vietnam-era law as an impecunious for their troops' pullout. But, less than two weeks before 246 U.S. troops were killed by a truck bomb, Congress decided the soldiers weren't in an area where "imminent involvement is clearly indicated," as required by the War Powers Act, and succumbed to personal lobbying by Reagan himself, allowing the troops to remain at least 16 more months.

Now, with the Marines out of Lebanon and Reagan's Middie East policy a clear failure, the War Powers Act popped up again last week concerning military trainers in El Salvador and the Pentagon is bending over backwards to avoid its implementation.

House Speaker Thomas P. (Tip) O'Neil (D-Mass.) suggested the act might be being ignored after the Defense Department last Thursday reported that U.S. military trainers in San Miguel, El Salvador have come under hostile fire on two occasions and other Army and Navy trainers in the country have been shot at by snipers. No casualties were reported in any of these instances.

But Friday, the Pentagon flip-flopped, saying that a "careful examination of the facts reveals" no American lives have been endangered by hostile fire.

This sudden switch seems to be aimed at guaranteeing that nothing so incidental as the War Powers Act, passed following a decade of tragedy in Vietnam, will hinder active U.S. military involvement in El Salvador's civil war.

With the U.S. trainers fortunately escaping injury or death in the "non-attacks," there is no way to prove the Pentagon is simply lying. But once the flag-draped casket start being shipped home from El Salvador, the Pentagon and Reagan will have to find another way of evading the law.

Letters

Jackson editorial criticized

Editor:

Unfortunately you were way off base with your endorsement of Jesse Jackson for President.

First off, his full title is the Reverend Jackson; the fact that he is a "man of the cloth" often leads people to believe he is against the separation of church and state.

Secondly, and more importantly, Jackson is a bigot. When he first announced his bid for the White House I considered working on his campaign. But, less than two weeks before 246 U.S. troops were killed by a truck bomb, Congress decided the soldiers weren't in an area where "imminent involvement is clearly indicated," as required by the War Powers Act, and succumbed to personal lobbying by Reagan himself, allowing the troops to remain at least 16 more months.

Now, with the Marines out of Lebanon and Reagan's Middie East policy a clear failure, the War Powers Act popped up again last week concerning military trainers in El Salvador and the Pentagon is bending over backwards to avoid its implementation.

Sponsor-an-Athlete enables special Olympians to compete

Editor:

How would you like to be responsible for enabling a special athlete to experience a feeling of success and help him to develop a better self image? You now have that chance with Special Olympics. For $25.00 you or your group can sponsor a Special Olympian. As a sponsor, you will be sent the name of an athlete from your area of the county, the name of the school the Special Olympian attends, and a sponsor's badge. You will then be invited to follow your athlete's progress through the sports training program. This year's Area Meet will be held Friday, May 4, at Cuesta College. Your sponsored athlete could be selected to represent your county at the State Meet to be held at U.C. Berkeley at the end of June.

Position open

The position for Foundation Board Alternate is still open. The last day to apply for the position is April 15. Students interested in the position who will be a Cal Poly student for the next two years can submit a resume to their school dean's office. All majors are welcome to apply.

Contact Lori DeMatta, Student Representative, in the ASI office, U.U. 217A.

Diablo Canyon propaganda manipulates public

Editor:

How can anyone say that they have all the facts? All of us have to depend on the experts. And yet, as we see all around us, even the experts have conflicting views. No wonder there exists confusion among us on such serious issues as nuclear power, military intervention, or even rent control. Unless we are willing to hand over completely all power to our leaders, we must be able to make some kind of sense out of all the information directed at us.

One way is to consider the source of our information. Whose interest is it serving? Are the facts used merely as a propaganda tool in the interests of a few? We must remember the importance placed on propaganda by politicians, advertising firms and public relations departments. In 1928, Edward Bernays, the father of the advertising industry in this country wrote in his book Propaganda:

"The conscious and intelligent manipulation of the organized habits and opinions of the masses is an important element in democratic society. Those who manipulate this unseen mechanism of society constitute an invisible government which is the true ruling power of our country...it is the intelligent minorities which need to make use of propaganda continuously and systematically."

No one really likes to think that they are being manipulated, but the fact remains that public relations departments exist to sway the public to one idea or project or another. For this reason you won't hear anything that undermines Diablo Canyon's reputation from PG&E public relations officers like Brown or Missie Hobson.

How does PG&E propaganda work? PG&E would like us to believe that users will have to pay dearly if they are forced by the NRC to shut Diablo down. First of all, the arrogance of threatening the public to bare the responsibility for its own criminal negligence and fiscal incompetence verges on the absurd. Also, by supposing their inevitable existence, they preclude any consideration of the alternative — that they be forced to bite the bullet and suffer the consequences.

We, the people at risk to our finances and our health need to consider the alternative of public ownership if PG&E were to go under. Consider that overall, in this country, publicly owned utilities operate at one-third cheaper than privately owned utilities. PG&E stockholders are guaranteed a sweet return (about 10 or 11 percent) on their investment by the Public Utilities Commission, even if PG&E operates at a loss.

In my opinion, PG&E, with $4.4 billion on the line with the nuclear power plant, will do anything necessary to sway public opinion, including misinformation, denial, lies, and even flag waving. In my opinion, all they have done in this community is to divide it between "upstanding" pro-nuke and "shiftless" anti-nuke. But we all end up playing the fool to their "good neighbor propaganda."

Randy Reynoso

The World Hunger Symposium will be held on campus from Tuesday April 10 to Friday April 13, rather than this week, as was reported in the Mustang Daily April 3.
Non-profit agencies need student help

By Cindy Blankenburg

Discrimination, sexual assault, eating disorders and alcohol abuse are just some of the concerns that students share with members of the community, the director of the Human Relations Commission told students at a seminar Thursday.

"There are 322 non-profit agencies in San Luis Obispo County that have a need for volunteers, staff and students," Director Steve Henderson said.

The agencies deal with these areas and others and are "begging for student help," Henderson said that students feel themselves by thinking they can get jobs without some volunteer work or field experience. The agencies give students an opportunity.

Students can get involved with Civil Rights issues, social services, tenant/landlord relations, mediation, program development and municipal government.

Henderson was the keynote speaker at the seminar titled "Cal Poly Students in the Community: Measuring Our Potential" sponsored by the Student Community Services.

Dr. David Borchers, of the Cal Poly Education Department, told students that they can receive academic credit for community work.

"What we require is that you let us know where you will be working and who you will be working for. We sit down and devise a plan of action, then you take it from there," he explained.

Education 322 was designed for those who were doing work before their student teaching, he said, but now anyone can enroll. The course will be offered in the fall.

Members of the Student Community Services also spoke on their roles. Some of the programs that are offered by the organization are Palo, Outreach, tutorial, social skills, short-term, and a volunteer income tax assistance.

For more information on volunteering in the community contact Henderson at 544-9900.

Award winning graphic designer to lecture

Graphic Designer Chris Hill, winner of several national awards, will discuss his work, his Houston studio and the influence of Texas designers on the national design scene this week.

Hill is best known for his design of annual reports, brochures, logotypes and corporate design programs.

"He is an internationally known designer and has received numerous awards — an impressive list," said Associate Professor of Art Chuck Jennings.

Hill's speech is at 7 p.m. on Thursday, April 6 in Room 108 of the Dexter Building. Tickets are $3.25 for members of Cal Poly's Graphic Design Club and $3.75 for the general public. For more information contact Elizabeth Ingebritsen at 544-3681.

Don't get left behind because there is "too much to read."
Seminar to discuss problems of women in work industry

by Jean Linsteadt Staff Writer

A seminar dealing with the problems of women in the graphic communications industry will be held on April 7 in the Cal Poly Faculty Dining Room. A buffet luncheon will also be served.

Cal Poly alumni and professionals in graphic and other fields will discuss problems of sexual harassment on the job, equal pay and laws concerning affirmative action.

The seminar, called "Executives of the Future: Issues Facing Women in Graphic Communications," will be held from 10 a.m. to 4 p.m.

"We hope to give solutions and alternatives to handling these situations in a positive manner," said Rachel Robinson, a senior graphic communications major and organizer of the event. She emphasized that these issues are important to all women and men, and not just those in graphic communications.

Men's attitudes towards women working above and below them in management will also be discussed during the seminar. Other problems and solutions, such as balancing family and work will be dealt with, including the topic of daycare programs offered by companies.

Tickets for the seminar and buffet luncheon must be purchased by Thursday, April 6, and are available at the U.U. ticket office. Cost is $5.75 per person. The event is open to students, faculty, and the general public.

Worth up to $17,000!

Tuesday, April 17, is the deadline for submitting applications for 3-year ROTC scholarships. Last year 8 Cal Poly students won ROTC Scholarships. If you are a superior student with a strong body, call Major Robinson, 546-2371, for details.

FORD BRONCO II
and the U.S. Volleyball Team...A Tough Team to Beat!

- Twin-Traction Beam suspension for controlled riding.
- Removable rear windows and sunroof options!
- AT FORD, QUALITY IS JOB #1!

"Get off to a great start with Ford"
Today, the clean-cut Cal Poly business major, 23 years old, works with Congressman William Thomas in his San Luis Obispo office - part of the 20th Congressional District. While sitting in his Market Street office, dressed in a suit and tie, Mullen talked about his initiation into politics in that trip east - starting with his eight-week internship in Washington, D.C. He explained how he "sold" himself into the internship program.

"I wrote a better cover letter than I thought," said Mullen, laughing. "I had about two pages of employers listed on my resume from Hawaii to Oklahoma."

This tactic worked for him. After completing the internship, Congressman Thomas hired him as a staff aide in Bakersfield. Last year the 20th Congressional District's boundaries were redrawn, creating the need for a San Luis Obispo office.

Mullen surveyed the area, found an office and Congressman Thomas gave him another staff position, this time in San Luis Obispo. Meanwhile, he received a space reservation notice from Cal Poly, and work and education came together for him at the same time.

Mullen has a schedule unlike other students. Though he said he doesn't work an 8 to 5 shift, he does have a certain amount of work to complete during the day. He is forced to take 7 a.m. classes, night classes and even one during his lunch hour. "But sometimes," Mullen said, "because my work is so interesting, the office comes before school."

"I hope that the maturity and experience I'm getting from the job will overcompensate for grades in school," he said.

Even though work comes first, Mullen said he has never been on academic probation. Part of the reason, said Mullen, is that Congressman Thomas empathizes with his student status. He tried to make other arrangements for duties if Mullan needed to tend to school.

"But usually try to work it out in the sense of getting some done to do it, he said.

Mullen knew the excitement of his work, like the time he got to fly to Camp Roberts in a helicopter to watch National Guard training exercises.

"We hovered overhead," said Mullen, "but saw nothing except trees and barren land. As soon as the helicopter landed, a platoon wearing combat gear appeared."

Mullen said he was quite impressed by the troop's ability to camouflage itself, which is what he reported to Congressman Thomas.

His job requires a lot of traveling, most of the time to district offices in Bakersfield, where he was born, and Lancaster. When the congressman can't attend a meeting, Mullen takes his place.

Some of Mullen's other duties include listening to residents' problems and relaying the Congressman's feelings about issues to them - and vice versa. He said Diable Canyon, environmental issues and social service problems keep the office busy.

"One woman from Germany needed to get a passport to go back to her homeland," Mullen explained. "She was terminally ill so she needed it right away. She tried to get a passport, but since she lost her naturalization papers it was going to take four to six weeks to get one. So her daughter-in-law called Congressman Thomas' office."

Mullen called the passport agency and immigration office and within 24 hours he got a call back telling them they found her records. A passport was waiting for the woman in Los Angeles and she was off to Germany.

"It's really nice to know we can make a difference in people's lives," he said.

The position in Congressman Thomas' office made a difference in Mullen's life, too. He said he was never interested in politics, but being in the thick of it has broadened his horizons.

"We're the eyes and ears of the district and it looks easy when someone else is doing it but..." he explained.

After finishing at Cal Poly, Mullen said he would like to work for a corporation or own a company. But there was no time after his east coast trip, there is still a restless side in Mullen. He still wants to join the military and later on, politics.

"I would like to run for office some day," he said. He was setting aside an autographed picture of the president and first lady.

Soviets inspire presidential election poster

By Michael Marter
Staff Writer

An instructional poster that allows students to follow the 1984 presidential election process step-by-step has been developed and published by the head of the reference department at Kennedy Library.

More than 1,700 of the red, white and blue posters have been sold by Paul Adalian, professor of political science, who designed the poster.

Adalian said he first got the idea for the poster from the broadcast of a Soviet radio station his father was listening to. The station criticized American presidential elections for being too complex and difficult to follow.

Feeling that the criticism was at least somewhat valid, Adalian set out to find an easy to follow flow chart of the elections. The substantial resources of Kennedy Library revealed nothing like he had in mind. He had to work from scratch.

Adalian saw a ready market for such an instructional tool and first made a mockup using information from the 1960 presidential election. When the format was finalized, Adalian substituted the information for the 1984 election.

The most prominent feature of the poster is a U.S. map with blanks for the winning candidate's name and number of electoral votes received in each state.

On each side of the poster is a calendar for Democratic and Republican state primary elections and caucuses with blanks for the winning candidate and number of delegates sent to the respective national conventions.

Below the calendars are boxes for each national party convention with dates and locations and the number of delegates needed to win each party nomination.

Since the poster was printed in January, before all dates and information were finalized, some of the information presented is obsolete, Adalian said.

For instance, Adalian has voted to hold a caucus, rather than a primary election, as listed on the poster.

A curriculum guide is provided with each poster and allows educators to include additional information tailored to their students' class level.

Designed as a learning tool, Paul Adalian has sold the "scorecard of the elections," pictured above, internationally.

The posters have been sold to elementary, junior and senior high schools in all 50 states, Adalian said, with the greatest number of orders coming from rural school districts, which Adalian could not explain.

Four posters have been ordered by American universities abroad and 17 by the American Embassy in West Germany.

The posters are available for $6.75 through Creative Information Services, 7400 Cupertino, Alexandria, VA 22311.

Interaction sighted as problem in construction

by Leanne Alberta

More cooperation and interaction between architects and engineers is needed in the construction business, a principal in the engineering consulting firm of Foroll/Ellesaer Engineers said Monday.

In a lecture titled "Interaction Between Architects and Engineers in Creative Design," Eric Ellesaer explained how interaction between architects and engineers can prevent construction failure and ease the strained relationship that commonly exists between them.

Ellesaer's firm has designed and constructed buildings throughout the United States, including the Architecture and Environmental Design Building on campus.

Ellesaer said the main reason for the poor interaction is that the attitudes, methods and goals of architects and engineers are not the same. He said architects emphasize the building and creative process of construction. In contrast, engineers do more to mentally tear down and analyze building projects.

Although Ellesaer blamed neither group for its lack of cooperation, he said, "Engineers need to put down their calculators and create building projects. Many times the engineers have started construction before the architects have finished their designs."

"Engineers have slightly different perspectives than architects," Ellesaer further explained. "For instance, an engineer's primary goal in construction might be safety, low cost and repeated business, while an architect might be primarily interested in good design and his own self image and public image."

According to Ellesaer, strained relations between the two professions occur because of inadequate budgets provided by financial backers, lack of performance on either group's part, lack of good building solutions and either not enough innovation or too much of it.

"Let's face it, if engineers were left alone, all of our buildings would look like pyramids, and if architects were left alone, all of our buildings would look like inverted pyramids," said Ellesaer, joking.

Ellesaer believes, however, that interaction between architects and engineers can be improved. His firm follows a system based on the collaborating efforts of architects and engineers in project information gathering, review and program development.

"If you follow a 'random process' in construction, as most firms do, it's like going down a river in a raft; some people fall out and they are either architects or engineers," Ellesaer explained.

Ellesaer explained that a good architect-engineer relationship is based on common goals, common attitudes, and an advanced technical knowledge and maturity of both groups.

The lecture was part of the 1983-84 series sponsored by the Architectural Engineering Department.

Aquaculture could solve deficit

Many of the problems and prospects of agriculture and integrated aquaculture in the United States and other nations were presented Monday in a seminar given at Cal Poly by a research associate from the University of Hawaii.

In a two-hour lecture and slide show Dr. Barry Costa-Pierce explained why he is helping to promote the use of aquaculture, the farming of fish and other fresh and salt water life.

Dr. Costa-Pierce is an instructor for the department of oceanography at the University of Hawaii and is the president of Integrated Aquaculture, located in Waimanalo, Hawaii.

Dr. Costa-Pierce said the importation of fish into the United States is a major reason for the national deficit. Fish is the second largest import behind oil, with some states importing up to 90% of their fish.

Dr. Costa-Pierce said the use of aquaculture is mainly an issue of economy of scale with the more developed countries being able to pay for the importation of this clean protein source—fish.

The total annual output of United States fisheries has remained around 70 million tons a year for the past ten years while the population has risen sharply.

Dr. Costa-Pierce said that aquaculture is more productive than its sister agriculture and that several countries, including China, have been integrating agriculture and aquaculture for thousands of years by using the waste products of farm animals to feed fish and provide nutrients for the growth of row crops.
Student tells of surviving struggle with cancer

Each year thousands of lives are being saved through cancer prevention and early detection.

Cal Poly student, David Jones, is one of those fortunate survivors.

He was twenty years old when it was discovered he had cancer. Life was now in 32.

Jones said, "How it came up was, I was landaneping at the time, and I was doing hard work. My neck would swell up on the right side. I let it go for about a month and finally decided to go to a doctor."

He went to the U.C. Davis Medical Center. Tumors were found.

Jones was put through bone marrow scans, radiation, and kidney testing. His spleen was removed and he had radiation treatments for six months.

"It changes you, it delays your life," Jones said.

He added, "One point that I think is really important is that my Hodgkins disease was detected at an early stage of development. That makes all the difference in the world."

He made it clear that if he were to have waited much longer he would have had to go through chemotherapy. Hodgkins is the disease of the lymph system which can be cured if detected in its early stages.

Through the two years of his fighting the treatments, Jones said the only way to get through the pain and suffering is: "A person must have a good mental attitude and support of family and friends."

He also said that the Cancer Society provided assistance to his family and himself. "They even paid drivers to transport me from Grassvalley to Sacramento daily for six months for radiation treatment. Getting cancer really made me look at what I was doing with my life. I was kind of wasting it. So I guess I could look at getting cancer in a positive way. I don't take things for granted like I did before," Jones said.

Goodyear loses suit

PROVIDENCE, R.I. (AP) — A Superior Court judge ruled Tuesday that the Goodyear Tire & Rubber Co. must pay more than $19.5 million in damages to the family of race car driver Mark Donohue because a defective tire the company made contributed to Donohue's death.

Both Goodyear and the Penske Corp., the owner of the Formula One race car Donohue was driving when he crashed at the 1976 Austrian Grand Prix, were found by a six-member jury to have been negligent in the crash. The jury granted an award of $9.6 million against the two companies.

But Judge Anthony A. Giannini overruled the verdict with respect to Penske, saying there was no evidence given during the trial that Penske could have been responsible for the defect in the race car's left front tire that blew out as Donohoe was driving prac-

Electronic Technology and Electronics Graduates:

Add our innovative computer-controlled business communications training to your technical skills in this challenging position involving the repair, maintenance and preventative maintenance of ROLM's installed systems and products.

We're looking for customer-oriented graduates trained in a strong EE, ET or CS curriculum to be the prime interface with our customers after product installation. With your business sense and ability to make it work, you will be ROLM to our customers, ensuring customer satisfaction and identifying opportunities for improvement in a demanding customer environment.

This kind of customer service is the hallmark of ROLM. If you'd like to explore a career in operations management with us, please contact us.

Elements thwart men's track team
by Karen Kraemer

Although posting a number of lifetime bests, the Cal Poly men's track team lost to both Fresno State and Long Beach State in last weekend's triangular meet.

Senior Victor Perez secured the Mustangs' only victory by winning the 1000 meters. In his first meet of the season, Perez covered the distance in 3:55.9, less than a second ahead of Long Beach State's Dan Avanzo. Triple jumper Victor Torres came within a quarter of an inch of the 5-foot national qualifying standard, taking second place with a leap of 49-11 ½.

The new Cal Poly Golf Club is giving student golfers a chance to practice and compete through organized activities.

The group's first club meet was held at the San Luis Obispo Country Club for all players, "We're working on getting places on the main reason the club's 12-person team, Schallen said. By the Athletic Department, Schalien said. The golf club is also pursuing 'financial-backing from local golfers and businessmen for next year. The team members currently pay their own travel and competition expenses. Schallen said the team has matches scheduled with Fresno State University, the University of California at Santa Barbara and local colleges this quarter.

The Golf Club meets Tuesday evenings at 11 in Science North 213, and just had its first election of officers.

"We have the manpower we need to organize the club for all the players," Schallen said.

Two lifetime marks were handed in by weightman Jim Halter. Halter's tosses in the hammer (155-4) and the discuss (144-1) were both over a foot farther than any of his previous attempts.

Other lifetime bests were recorded by Todd Hogus in the discus (110-0) and Paul Verke in the 5000 meters (16:02.0).

Poor weather conditions clouded many of the performances for all three of the teams. "It was a very frustrating day," said freshman Andy Raugust. "We went there looking forward to good performances and instead got alot of rain and wind." Next week the team will return to Fresno for the Fresno Bee Games.

Golf Club provides organized activity

"We have the manpower we need to organize the club for all the players," Schallen said.
Run through rain, injuries

Track team wins-again

By Kim Foster

The Cal Poly women's track team won five events to defeat Fresno State and Cal State Los Angeles in a triangular meet at Fresno Saturday.

Despite the absence of five team members because of injuries or sickness and rainy weather during the meet, Cal Poly managed to outscore Fresno State 77-45 and Cal State LA 49-6.

"Persistence and poise kept us in the undefeated column," said Coach Lance Harter after the victory. "This meet helped us to look forward to our greatest challenge— from Cal and Arizona State in two weeks."

Sophomore Cee Chandler qualified for nationals in the long jump with a mark of 19-3/16, and took first place with a 37-11/4 mark in the triple jump.

Another sophomore, Jill Ellingson, won the 1500 with a 4:28.6 (second lifetime best), and took second in the hurdles in 16.24, and placed third in the 800 with a time of 2:14.61.

Junior Kathy Reiman won the high hurdles in a 18.34, and placed third in the long jump with a season best of 17-10.75. Fellow junior Karen Kramer turned in two lifetime bests in the javelin (110-3) and the 100 hurdles (13.86) and a season best high jump mark of 5-6.

Other outstanding performances came from freshman Kathy Manning and senior Sue NeNaal. Manning ran a lifetime best in the 3000 at 9:40.6 and took third place despite a downpour during the race. McNiel won the high jump with a 5-10 mark, tying her field record from last year.

"Out of our traveling squad of 18, 15 have set season bests in their respective events, and our training scheme is designed for late season peak performance. The future looks very bright," Harter commented after the women's Fresno performance.

Next weekend the squad splits up, with seven athletes traveling to Tuscon, Arizona and the rest of the team competing at the Fresno Bee Games.

Gladies Prieur, Katy Manning and Carol Gleason (from left to right) compete in the 1500 meters during an intersquad meet. Prieur and Gleason will travel to Arizona this weekend for the Sun Angel Classic.

Softball 13th in Div. II

By Brian Bullock

Special to the Daily

The game or splitting double-headers isn't much fun for either team. It has been likened to kissing your sister, or maybe in the case of the Lady Mustang softball team, their brothers. It's nice but it really doesn't get you going.

Going into last weekend's double-header against Chapman College, Friday and LaVerne University on Saturday, the Lady Mustangs were 3-5 overall, with a 3-3 conference record. The team record may not sound impressive, but it was good enough to get the team a 13th ranking in Division II by the National Softball Coaches Association prior to the contests.

After the weekend contests were over however, the Mustangs record was still an even 5-5, 7-7 overall and 5-5 in conference play, splitting both double-headers.

Friday against Chapman, excellent defense by both teams left the score tied 1-1 at the end of seven innings. But the tie score didn't last long. In the top of the eighth, Chapman's Janet Loyd, one of the league's top hitters, stroked a solid double into right center to open the inning. A sacrifice fly followed by a sacrifice fly scoring the winning run for Chapman.

The Lady Mustangs got it together in the second game, putting together five runs on five hits in the bottom of the third. The fifth run came when Jill Hancock charged home and took out Chapman's catcher with a hit that would have made Lyle Alzado proud.

Some tough defense by Cal Poly snuffed out a Chapman rally in the top of the fourth, when catcher Kiri Goveiro properly blocked the plate and tagged out a Chapman runner trying to score from third on an infield ground ball.

Cal Poly added some insurance in the bottom of the fifth. After a walk to Angie Zoll, shortstop Donna Coviello doubled Zoll to third and then scored on a single by Hancock, but Coviello was thrown out at the plate trying to score from second. Hancock scored on an infield hit by Lisa Johnson, giving the Lady Mustangs a 7-0 win.

Saturday against LaVerne, the Lady Mustangs played without strong hitting left field Jill Hancock, who had turned an ankle against Chapman and was not in uniform.

Again, Cal Poly lost a tough first game 2-1, getting only four hits in the process. The loss was compounded by the loss of centerfielder Linda Elkins who also sprained an ankle. Before her injury Elkins got one of Polys four hits and the teams only run batted in with a solid double. Lisa Hook, Dana Hunter, and Angie Zoll added one hit each.

In the second game, LaVerne, who was ranked 13th in Division III by the NSCA, jumped out to a three-run lead by the end of the third inning. But in the bottom of the fourth, the Lady Mustangs got busy with the bats and scored two runs to get back into the game. See page 12.
Lady Mustangs split two games

contest. Cal Poly added another run in the sixth to tie the score at three and send the game into extras.

In the eighth, Gorman singled and moved to second when the ball was bobbled in the outfield. With Gorman on second, Johnson singled to left, scoring Gorman and giving Poly the win.

Poly's hitting stars for the second game were Gorman and Johnson, who combined for seven of the team's nine hits.

Although the teams hitting is coming around. coach Loren Yoshikura said she is still not pleased with how the Mustangs are playing.

We are playing good defense, but our hitting has been sporadic. We are not pleased, but we need to be more aggressive on offense.

Yoshikura added that the Mustangs need to be more aggressive in the box this weekend.

The Lady Mustangs will need much more concentration this weekend when they travel to take on first place Claremont on Friday and Dominguez Hills on Saturday.

Cal Poly basketball makes a successful slide into second base. After a week hiatus, the team resumes action this Saturday against the University of Nevada-Reno at Reno.
