Thought control endures
By Michael Marter

Though contemporary American society has not reached the drastic levels of mind control depicted in George Orwell's 1984, striking examples of subtle forms of mind control exist, said a city and regional planning professor yesterday in U.U. 220.

Professor Edward Ward, speaking on moral power and Orwellian prophecies, said mind control is much more subtle and benevolent but with the same potential negative consequences—although to a lesser degree.

Ward discussed five aspects of mind control present today. People may not consider some of these areas to be as powerful as the government, Ward said, but they can be deceptively "Mind control in Orwell's 1984 was about the mass mind. In our mind control is much more subtle and benevolent but with the same potential negative consequences—although to a lesser degree."

"People commonly believe they have more strength to resist attempts to modify their behavior than they really have. We have also underestimated the power of the social pressures to make us conform, comply and obey," Ward explained. "Each of Orwell's technologies of mind control is aimed at undermining or overwhelming an attribute control to the human spirit."

For instance, in 1984 freedom of action was controlled by obedience training, freedom of thought was filtered with Newspeak, memories were altered with Neweapeak, memory was filtered with Newspeak, memory was filtered with Newspeak, memory was filtered with Newspeak, memory was filtered with Newspeak, memory was filtered with Newspeak, memory was filtered with Newspeak, memory was filtered with Newspeak,

The Senate Student Council passed the following resolution calling for the university to publish the names of winners after the provost announced the winners earlier this week.

The resolution, authored by Bill Taylor, estimates that moving the reading room, which is open 24 hours, are being moved to the Reserve Room in the Library, which is open until 1 a.m.

The Senate Student Council recommends President Lance P. Carter approve the new administrative assistant to the provost, Ronald F. Busselton, Jr. said he couldn't give out the names of winners.

"I'm glad to see it failed; I hope some better ideas come up in the future that won't cost the students as much," acting dean of the School of Business said.

Alumni received as many as 1000 votes for Bus Boys Wednesday as voted Thursday with 13 percent voting the first day and 7 percent voting the second day. ASI cancels Bus Boys

Bylaws pass
Rec Center plans defeated

In an action which saw 28 percent voter turnout, the Recreation Center failed with 57.6 percent of the student's voting against it.

With 42.4 percent of the student body voting for the center, Recreational and Humanitarians Senator Lars Farn, who led the opposition said he was really pleased with the outcome.

"I'm glad to see it failed; I hope some better ideas come up in the future that won't cost the students as much," acting dean of the School of Business said.

The students who voted for the center received a check with the winner announcing the winners: Gary Deaton, Landscape Architecture; Steven French, City and Regional Planning; Brian Kenner, Architecture; and Paul Neel, Architecture.

The resolution was defeated with 74 percent of the students voting for them.

The Senate Student Council passed the following resolution calling for the university to publish the names of winners after the provost announced the winners earlier this week.

The resolution, authored by Bill Taylor, estimates that moving the reading room, which is open 24 hours, are being moved to the Reserve Room in the Library, which is open until 1 a.m.

"I'm glad to see it failed; I hope some better ideas come up in the future that won't cost the students as much," acting dean of the School of Business said.

Alumni received as many as 1000 votes for Bus Boys Wednesday as voted Thursday with 13 percent voting the first day and 7 percent voting the second day. ASI cancels Bus Boys

The Bus Boys scheduled to appear at Cal Poly have been cancelled due to an unexpected low turnout.

The concert that was to take place Saturday night at Poly's main gym was cancelled Thursday morning by Jerry Morales, ASI concert committee head.

"I made the decision in order to avoid losing a great amount of money," said Morales. He explained that the cancellation was not without a penalty.

"There is a penalty fee that has not been worked out yet," said Morales. He explained that the penalty fee would be substantial less that the amount that would have been lost had the concert been held.

Refunds for those who purchased tickets can be obtained in the University Union Business Office, Room 202, during the next two weeks, May 14-15, explained Judith Philbin, ASI Information Director.

The price of the concert tickets will be refunded in full, she added.
Fast driving comes to a stop

This is one case in which students will benefit from a lost freedom, and the Mustang Daily editorial board is thankful.

The freedom is being able to drive fast, as students are apt, along the narrowing stretch of Slack Street and Longview and Hathaway avenues, part of which borders campus to the south. San Luis Obispo Traffic Engineer Don Tilton called the driving "cram-style" because of the breakneck speeds with which drivers and bicyclists take the hills and turns of this residential stretch.

Now the city planning and public works departments have removed that freedom by installing three sets of stop signs along intersections of the road. A fourth set is scheduled for installation in two weeks, said Tilton.

The resulting benefit to students is a safer journey to and from campus. More than a few Mustang Daily reporters living near those streets have wondered how long it would be before they would have to cover an inevitable fatal collision there.

The editorial board thanks the Public Works, Community Development, Fire and Police departments, as well as nearby residents of the road for taking steps to lessen the chances for such a collision.

A petition by 13 residents from eight near-by households presented to the city council in July 1983 prompted the stop signs. The residents had originally asked for complete closure of the streets with a cul-de-sac at the intersection of Longview and Hathaway. But because the road is principal fire route, according to Tilton, the signs were installed as a compromise.

Stop signs have been installed at the intersections of Hathaway Avenue and Carpenter Street, Hathaway and Longview avenues and Longview Avenue and Slack Street. Two more signs will go in at Hathaway Avenue and Kentucky Street on May 22, said Tilton.

"I don't think that all the signs are necessary," said Tilton. "But the stretch of road is so narrow that you must have some kind of surveilance of the road 'for at least a month' to stop cyclists and drivers to run stop signs. The editorial board urges students to resist the temptation.

An apparent protestor of the signs has already taken one of the signs down, said Tilton, but those who grieve the loss of San Luis Obispo's own little Autobahn should consider the gain of a safe way to school, for the local children, for yourself.

Moped owner discovers a mysterious phenomenon

by Susan Denon

Every morning I strap my scratched, white motorcycle helmet onto my head and pull on my old ski gloves and start my moped. As I near the driveway, a scientific phenomenon occurs, something physics professors, researchers and fiction writers have only dreamed about: I become invisible.

I'm not the only one in the world who can do this. Thousands, even millions of other moped riders have experienced the same thing.

Car, trucks, campers, bikes and dog buggies seem to be drawn by some unknown force to turn in front of me, cutting me off before the drivers can't see me. As they turn, they are within eight feet of me, or they change lanes in front of me.

The muscles in my fingers are the strongest in my body because of the constant ride and a slight dizziness on my brakos to avoid death.

I'm not the only one who rides another moped, road one day and it was then when I learned the "Moped Right, Invisibility Syn­drome."

I was skeptical at first, thinking maybe it's just a bad day or I'm riding my moped and a dog looked straight at me then walked out in front of me, I became a believer. (I missed the bike, barely.)

As I thought about other near-fatal ex­periences I've had, my belief increased.

One day I was driving along the side of the road, at 30 mph, when I spied a car in my rearview mirror quickly gaining on me. Relying on past experience, I slowed down to 20 mph as an extra precaution. He passed by me, and then my right rear view mirror quickly gained on me.

Suddenly, he turned into a driveway on my left, and then I learned about the "speed of space to decide whether to hit him or swerve into the car." I don't do this, as I closed my eyes and slammed on my brakes, that if I am going to hit anybody it should be him, not the accident.

My left foot locked up, causing a piercing shriek to echo throughout the area. The scream, however, was drowned out by the screaming from my mouth.

I decided, as I closed my eyes and slammed on my brakes, that if I am going to hit anybody it should be him, not the accident. At least I could done do help me out. I yelled again as he stepped out of his car and walked into the store.

I guess when you're invisible people can't hear you either.

Friend remembers roommates

Editor

I am writing this letter in memory of two people that touched my life.

John Montague and Jim Krueger lost their lives in an automobile ac­cident on Thursday May 3, 1984. I met Jim and John last year while we were living in the Sierra Madro dorms. We became good friends last winter and I couldn't believe it when he helped me out by letting me become their third roommate. Through this school year we became close friends and frequently played poker with many of our other friends.

Then all of a sudden, it was their time. I'm praying that everyone who reads this letter take a good look at their friends and relatives -- because someday they may not be there.

Mobiles and sculptures stolen

Editor

Two mobiles and two small individual plastic and glass hanging sculptures were stolen from my desk in F Lab, Engineering West. One mobile was of black and white wooden rods and beads, while the other had four five-headed rods, glass globes, crystals and a two and one half inch magnifying lens.

All of the above represent nearly two weeks of work on a project, part of which the instructor had not even seen yet. Some of the items in the mobiles were borrowed, or special gifts from friends and cannot be replaced. I would appreciate it if whoever took the objects would return them, or if anyone has any information about them would call 773-1787 evenings.

C. Trash
Another form of subtle mind control, said Ward, is the rapidly increasing forms of surveillance in both public and private sectors. Ultrasonic and infrared detectors sense motion, body heat or noise. "Bugging devices, voice stress analyzers, lie detectors and employee screening are becoming standard equipment in the business world," Ward explained.

Such devices foster suspicion and an erosion of interpersonal trust, in addition to reducing personal autonomy.

Ward said historical records contain failties to make them more desirable politically and socially, as described in Orwell's book.

Textbooks have up until recently portrayed the American Indian as "savage murderers of innocent white travelers," Ward said. The books failed to mention military massacres of Indians, broken treaties, or the diseases spread among Indian populations by white settlers, said Ward.

Many books have also done a poor job of depicting the internment of Japanese-Americans during World War II.

Ward also questioned the American bureaucratic society that is often dominated by professionals and "experts." "We should be concerned about excessive centralization and dominance of our institutions in our lives and the real and potential abuses of authority and power," Ward said.

"When control is cloaked as a cure, surveillance as a security device, and oppression as a rehabilitation program, civil liberties can be set aside and freedoms put on hold without arousing resistance or rebellion," Ward explained.

Ward believes people should assess their limits as individuals to withstand societal forces. Individuals need to be loved, respected, recognized and wanted, Ward said, all of which gives our lives meaning. But such identifications are usually gained through social interaction where forces can hinder reality.

Ward cited the People's Temple in Guyana where 910 people died as a result of coercion. The coercion made the unthinkable thinkable, said Ward, and provided an excellent example of Doublethink in that "people believed in things easily proven false by the simplest of empirical tests."

Obviously the forms of mind control employed in Jonestown are not a prevalent aspect of American society, but they serve as examples of what people will resort to when coerced, Ward said.

However, the forms of coercion present in contemporary society are nevertheless widespread and very subtle, making individuals susceptible to their influence, Ward explained.

To prevent Orwell's warnings or predictions from becoming complete reality in American society, Ward advocates more direct public involvement with the political and business institutions that control our lives.
Marriage, school work for some students

by Leanne Alberts

Marriage is something that most college students put aside until after graduation. But a few Cal Poly students have decided not to wait. They've chosen to marry while still in school. These students take on responsibilities and obligations that would seem immense to the average unmarried student, whose biggest concern is probably deciding which parties to attend every weekend.

Nancy Stringer, a Cal Poly journalism student, doesn't have time to worry about her social life. Besides going to school, Nancy divides her time between her 10-year-old daughter Kindra and her husband Boyce, who is also a student.

"I went to college a year and a half before I got married," Stringer said. "After I was married I stopped going to school and went to work. Looking back, I'm glad I took time off because I needed to decide on a major and exactly what I wanted to do with my life."

After four years of working Stringer decided to go back to school, but her educational plans were once again interrupted.

"After I went back to college I got pregnant and had to leave school again," Stringer went on. "When my daughter Kindra turned one I went back to school at a junior college in Washington."

"When my parents learned that Boyce and I were considering getting married they advised us to wait, but at that point it didn't really matter," Stringer said. "I knew that a lot of students are advised to wait, but I think the final decision should be based on the individual's maturity and ability to deal with responsibility."

Stringer believes that being married has enabled her to concentrate more on her studies and has helped her become a better student.

"Because I am so busy I have to budget my time," Stringer explained. "I designate certain times in the day for studying and when that time rolls around I study, because I might not get the chance to do it later on."

Stringer sometimes feels removed from the students at Cal Poly not because she is married, but because she is older.

"At the age of 34 I'm a lot older than most students on campus," Stringer said. "I find that younger students are usually parochial, protected and less tolerant. They tend to judge everyone and everything according to their own standards."

Jean Linstedt, a Cal Poly political science major, also feels removed from the students on campus at times.

"People are always surprised when they find out that I'm married," Linstedt explained. "It's always a negative surprise so I don't tell anyone anymore."

Linstedt's husband Ken is a fourth year Cal Poly architect student. The two were married after attending Cal Poly for one year.

"We weren't advised against getting married because our parents were good friends and Ken and I had known each other for a long time," Linstedt explained.

On the domestic front Linstedt and husband cooperate and split up the chores 50-50.

"I do the cooking because I want something good to eat and he does the dishes and nobody claims the house," Linstedt explained, trying not to laugh.

One of the benefits of marriage for the Linstedts is that they are able to provide support for each other's academic goals.

"He (Ken) wants me to finish college so I can make all of the money," Linstedt joked. "Serious though, we are committed to getting our work done and we help each other over the rough spots whenever we can."

Desiree Hubberly, a Cal Poly student currently working on her senior project and scholarship, is the newlywed of the journalism department.

"My husband and I were married during spring break despite the fact that my friends advised us not to," Hubberly said. "So far I'm still adjusting and it's hard because I'd like to spend more time with my husband, but I also have to study."

We're still getting used to each other because we've only been married two months and we know each other only eight months before our marriage."

Erie Fletcher, a Cal Poly journalism student, has had little difficulty adjusting to her marriage.

"My husband and I were married last July, but we had been living together for the past five years," Fletcher explained. "If we hadn't lived together first, and had gone straight into marriage without being used to each other, we would never have made it."

I wish I'd finished school before I got married," Fletcher regretted, "but so far everything seems to be turning out alright."

"We take turns cooking and cleaning because when we were living together we didn't get into male and female roles," Fletcher added. "It's another benefit of living together. Actually, my husband is more domestic around the house than I am."

Your place or mine?

Where to tie the knot is dilemma for college sweeties

by Lisa Shidler
Lifestyle Editor

Marriage—that all important decision that leads to a thousand other decisions. Planning and organizing a wedding, from the color of the bridesmaid’s dresses to how many people you invite, takes strong opinions and firm decisions for everything.

One of the biggest questions facing Cal Poly students who are getting married is where to hold the wedding. Should the wedding be in San Luis Obispo where they live and go to school, or should it be in one of the hometowns of the couple? If so, which one? Families and friends of both of the couple have to be taken into account for this decision.

Some couples go home for their wedding. Senior Political Science major Jean Linsteadt was married in her hometown of Ridgecrest. “We’ve only lived here for a year and most of our friends and family were still at home, so it seemed like the most natural thing to do,” she said. The decision was made easier for Linsteadt because her husband is also from Ridgecrest, where they went to high school. But many couples meet at Cal Poly and have hometowns at opposite ends of the state; and San Luis Obispo seems like a logical choice. The Old Mission, where about 75 percent of the marriages performed are to Cal Poly students, is one place that offers a middle ground.

“If the couple met here, this is where they grew together. All of their memories and togetherness are here in San Luis, their friends and their experiences,” said Theresa, a secretary at the Old Mission. Theresa believes another reason many Cal Poly students choose to be married in the Old Mission is because the church is very active and tries to do a lot with college students, so that the Mission comes to mean more to them than their church at home. And Theresa said many couples just like being married in a mission.

Senior journalism major Alan Kennedy agrees. “How can you pass up having a wedding in a mission and having a reception at the Monday Club? The architect for the Monday Club was also the same lady who did Hearst Castle,” said Kennedy. “It’s so traditional you can’t beat it.”

“We both have lived here for three or four years. It’s our town right now,” said Kennedy, who will marry Landscape Architecture senior Barbara Oliver next month, two days after they both graduate. With family members coming from Oregon, San Diego, Sacramento, Tucson and Los Angeles for graduation, they decided to make a clean sweep of the weekend and get married as well.

Joyce Howell, an Agriculture Business Management senior, also chose the Mission for her and her fiancé’s wedding in September. “It’s the church he goes to all the time. It’s a gorgeous church, really traditional,” said Howell. Howell also wanted to be married in San Luis Obispo because it made it easier for plans to be made. “I’m from Redding and he’s from San Diego and this is right in the middle. We couldn’t drive either place every weekend and we didn’t want our parents planning it,” she said.

Engaged couples have over 30 churches to choose from in San Luis Obispo of every denomination, or non-denominational. But not every one of these churches hold many student marriages.

In over two years at the Church of Christ on Lawton, minister Mark McMurry has not married any Cal Poly students. “I don’t know if there is a large number of students getting married. The ones I’ve been in contact with say ‘Hey, no way. I’m waiting till I get out of school’,” said McMurry.

Cal Poly student Erik Johannesen turned this belief around. He married the former Donna Harper last July, and is finishing his degree in Construction this quarter. “One of the advantages to being married while going to school is all the time you would spend going out to bars to meet girls to go out with on the weekend is spent with your wife. You don’t spend the time and money and you’re a lot more emotionally stable. You don’t have to worry about trying to get someone to go out with you,” said Johannesen.

The Johannesens were married on the Tigers Folly II in Morro Bay, with a reception at the Achievement House afterwards. They decided to be married on the Central Coast because Donna’s parents had moved to Morro Bay, and because Erik’s hometown in Northern California was too far to travel.

“And because all of our friends from school are here, the people we deal with on a day to day basis. And it was during the summer so most of the families treated it like a vacation,” Johannesen said.

Students affect marriage license applications at the San Luis Obispo County Government Center. A marriage license issued from there is valid all over the state for ninety days, and most licenses issued in this county are taken elsewhere for the marriage, according to Bonnie Underwood, a legal process clerk at the San Luis Obispo County Clerk Recorder’s Office.

And most Cal Poly students must have traditional ideas about weddings. According to Julie Rodeward, a legal process clerk II, an average of four marriages a week are performed at the Government Center by the Clerk Recorder, but very few of these are to Cal Poly students. “It’s not usually Cal Poly students that come in and utilize this,” said Rodeward.

Store cuts book prices

The cost of going to Cal Poly will drop a little in June. El Corral Store cuts book prices

The cost of going to Cal Poly will drop a little in June. El Corral Bookstore’s textbook manager Cindy Giambalvo said the overall price of used books will go down starting summer quarter.

“We felt we were making too much money on used textbooks,” she said, explaining the reason for the lower prices.

The price of used books is based on the new book price. Giambalvo said the publisher sets a price for a new book and the bookstore adds to this using its own pricing policy. The bookstore then prices used books according to what they are charging for the new ones.

Used books will be sold at 72 percent of the new book price instead of 75 percent, she said.

For example, before the price cut a $20 book would be sold at a used price of $15. With the price cut a $20 book is going to be sold at $14.40.

“Anything the bookstore can do to cut prices is appreciated” said ASI President-Elect Kevin Craighton. He added, “I hope they continue to do things to cut the prices down.”

The scheduled cut in prices will save students $35,000 over the course of next year.

Ag leaders tour D.C.

by Frank Van Broeklin

The national tour of the Agricultural Leadership Program helps program members see how one piece of the world puzzle fits with the next to form an overall picture, a Cal Poly agricultural education professor said.

"The trip doesn't just broaden their agricultural background. It opens their minds to the world," Joe Sabol said.

Sabol said participants in the tour learned how such seemingly unrelated subjects as American art, politics and government, and agriculture "broaden the viewpoint of those who move in Washington," he said.

The tour, Sabol said, "made us all look at more than our little olive, our little cotton, or our little rice, because everything is related to everything else."

"And it really forced these young leaders to look at a bigger picture," he said.

This year's class four times visited New York City, Jersey City, areas in Connecticut, and Washington, D.C. on April 1 through April 13. The New York City portion included a special City Hall session for meeting New York City government officials, a Broadway show at $45 per ticket, and a bus tour with members of the International Ladies Garment Workers Union. Other activities included visiting with members of the Metropolitan Opera Association and the U.S. Ambassador to the United Nations.

Sabol said an emotional highlight of the tour was meeting with the U.S. Ambassador to the United Nations, Jeane Kirkpatrick. "It was one of the two times I cried. It was very moving. The trip was a very emotional trip. There were a lot of things that moved us, and Jeane Kirkpatrick was one of them," he said.

It was Kirkpatrick's commitment to the welfare of the United States and agriculture that moved Sabol.

The second time Sabol cried was when the tour group heard Florida Senator Paula Hawkins speak at a congressional office meeting.

"Again, it was very emotional. She really stood up for America. She said, 'You've got to believe in America and believe in agriculture.'"

THE MEMBERS' TOUR OF WASHINGTON, D.C. was arranged by Congressmen Jerry Lewis and Tony Coelho. The tour included a close monitor of the baggage, to get ready for the national tour, and to keep it running day to day leaders around take notes on the program members. "He gave us 24 minutes. He didn't come when we said for him to come. He came when he wanted to come," Sabol said.

Rapp assigned day leaders from the program members. "He gave very, very detailed information to prepare them for any eventuality," Sabol said.

Apart from his backup duties, Sabol also functioned as a notetaker and as a note collector for the group. Each day, the three day leaders would take notes on the days proceedings and give them to Sabol. From there he has prepared a 49-page journal of the trip to be delivered to the leadership program members, the national tour hosts, and the foundation sponsors of the tour.

Sabol said part of Rapp's intent was to prepare members for their international tour in 1986. "I think all behavior on the trip was to get ready for India next year," he said.

Rapp got team members to keep a close monitor of the baggage, form buddy systems, and watch their diets to make sure they ate correctly.

"The whole thing was play like we're in another country," he said.

For additional preparation, the group met with officials from the Indian Embassies in New York and Washington, D.C.

The key to the trip was to broaden the viewpoints of these potential California agricultural leaders. "They're already in leadership roles but they're relatively small. But through the program we think they're on their way to bigger roles," Sabol said.

"It was a chance of a lifetime to meet all these people," he said.

"They received so much respect from these people because they know who we are, the future leaders of agriculture in the number one agricultural state.
Agriculture program promotes awareness in leaders

By Frank Van Brocklin
Staff Writer

The Agricultural Leadership Program broadens the understanding of young agriculturalists to help them assume influential roles in the future California agriculture, the dean of the College of Agriculture and Natural Resources said.

Dean Lark Carter said every year students from throughout California are selected to participate in the leadership

program.

Four universities coordinate the program, which consists of seminars, a national tour, and an international tour. These universi-
ties are UC Davis, Cal State Fresno, Cal Poly Pomona, and Cal Poly San Luis Obispo.

The leadership program addresses three problem areas—the growing communication gap between urban and rural interests; the unfair lack of access to become acquainted with foreign markets which California agriculture is increasingly depending on; and the need for unity between all sectors of agriculture in California.

The program is not a course in agricultural production. It is a course for developing well-rounded agricultural leaders, in-
formed in social, economic, political, and cultural issues.

To this extent, each of the four universities specializes in a differ-
ent seminar function. UC Davis covers economics and interna-
tional trade. Cal State Fresno offers government and foreign policy instruction. Cal Poly Pomona deals with arts and social issues. And at Cal Poly San Luis Obispo, the seminar emphasis is on education and communica-
tions.

"One of the objectives of this program is to broaden these people as humanists as well as broadening them as agriculturalists," Carter said.

Carter added that though the members of the program and its related alumni group, Agricultural Leadership Association, take on leadership positions, both are non-political associations.

They don't take up partisan issues, but they do take up key issues affecting California agriculture, such as water usage, labor relations, and pesticide usage," Carter said.

"The seminars train not with an attempt to persuade the members to vote in a particular way but to be better informed on these issues," he explained.

Each year, the classes par-
ticipate in seven seminars. Seminar instructors include university professors, corporate executives, and government offi-
cials.

Carter said the Cal Poly com-

munications seminars give pro-
gram members experience in mak-
ing speeches, introducing speakers, being interviewed for television, and participating in debates. Throughout the

please see page 8
Awareness not for farmers only but also spouses

Carter said that the spouses of the applicants are also considered. Carter said it is essential to the program that each applicant's spouse supports his or her candidacy for the program.

Once applicants are selected at the regional level, they compete before a final selection committee to determine if they will be part of the leadership program. Carter said usually about 60 to 80 people apply for the 30 available positions.

He noted that the final committee will not necessarily select the same number of members from each region.

"Once the candidates are in the hopper at the state-wide selection, then it's go for the top candidates regardless of where they came from," Carter said.

Members' spouses attend the first and last seminars. "It is important that the spouse feels he or she is a part of the program, even though he or she is not participating in the whole program," Carter said.

In the final selection, 24 of the applicants are proposed. The spouses of the applicants are also considered. Carter said it is essential to the program that each applicant's spouse supports his or her candidacy for the program.
California farmers setting the trends in agriculture

Campus

The two-year program launches with a formal graduation ceremony, held during the summer at Cal Poly Pomona. On date 7, a total of 233 members of the Agricultural Leadership Association, which strengthens the bond between students and strengthens their commitment to California agriculture, Carter said. "They’ve contributed to their peers, others who have graduated before them, to go into areas where they can exercise their leadership abilities," he explained.

Graduates of the program have gone on to fill governmental, trade association, corporate, and political leadership positions.

Two outstanding examples of political leaders who graduated from the program are San Luis Obispo County supervisor Jerry Diezfelder and Stein Senate minority leader Jim Nielsen. These state assemblies and the chairman of the Council of California Growers are also graduates of the leadership program.

In June, the Agricultural Leadership Program will be reviewed in depth for the first time in its 14-year history. The dozens of the participating universities, the president of the Agricultural Education Foundation, and the campus coordinators will evaluate the curriculum to determine if it is meeting the program’s goals and if those goals need to be changed.

"I don’t anticipate a fruit basket effect in terms of program changes," Carter said. "Some changes will be made though to keep the program up to date with changes in...California agriculture.

The program was established in 1989 with original funding coming from the W.K. Kellogg Foundation. "They felt this was an important program for the state and wished of American agriculture and the nation as a whole," Carter said.

The Kellogg Foundation underwrote the program and kept it alive until private sources of funding could be solicited. "They entered in like a catalyst would," Carter said.

The leadership program is currently funded by earnings from an endowment set up by the James G. Bonwell Foundation and donations from various agricultural interests throughout the state.

These include agribusinesses, trade associations, and banks.

Carter said program members invested only time and the money needed to travel to the campus members. The program foundation covers room, meal, national tour, and international tour costs.

He said other states have started to adapt the California program to their own agricultural needs. "This is another example of California being a trendsetter, setting a model and example that spreads to other parts of the nation," he said.

Carter sees an expanding role in the future for the Agricultural Leadership Program graduates.

Professor explains foundations of world’s buildings

As part of a series of programs sponsored by the Cal Poly Architectural Engineering Department, a professor of architecture design discussed his extensive work in vernacular architecture Wednesday night.

James Warfield, a professor at the University of Illinois, presented his program titled, "Architectural Mistakes, Mongols and Alley Cats: Character in the American design. With slides, gallery exhibits, and lecture,

Warfield explained to the audience assembled in the Architecture Gallery, at the title of the program appropriately, the theme of his presentation.

"As architects we are sometimes strangled, because of political reasons and others, we must design buildings in urban, systematic and sometimes boring ways," Warfield explained. "The purpose of my program is to show that non-pedigree, or vernacular architecture, architecture native to a particular country, is just as beautiful and useful to certain cultures as our skyscrapers are in our society." Warfield worked with the Peace Corps in Bolivia during the 1960’s and has traveled extensively throughout the world. His program reflected the various architectural forms he witnessed in his travels.

"I try to help my students develop an appreciation for vernacular architecture. I stress that they should judge a structure in relationship to the site it’s built on," said Warfield.

"Frank Lloyd Wright, once said, ‘Never build on a mountain,’ but Cliffdown, located in Southern Spain, and monasteries in Greece prove that buildings can be erected in mountainous regions," Warfield added.

Form and light are the second characteristics an architect should look for when judging vernacular architecture. "These are two essential tools that many European architects were not aware of until they examined the mosque of Western Africa."

"There is one very impressive mosque in Western Africa that looks like a giant蜂, explained Warfield. "It’s such an amazing building in that it conceptualizes the mosque." It’s a perfect example of why European architects were not aware of what they could learn from another culture," Warfield stated.

Sports
Cal Poly runner in Olympic Marathon Trials

By David Kraft
Staff Writer

The task this weekend is simple for the Cal Poly baseball team; win three games from Cal State Northridge. Win, and then play the waiting game.

The tacos and Matadors in a battle with U.C. Davis for the second playoff berth in the western region. The Aggies have finished their season, winning the Northern California Baseball Association title with a 29-21 record.

The Mustangs, with a sweep, would finish the year in second place in the CCAA, generally regarded as the toughest Division II conference in the nation, with a 30-26 overall mark. A Matador win in any of the games would probably secure Northridge a playoff bid.

One statistic in the Mustangs' favor is that Cal Poly finished the year 10-14 against Division I teams, including games with Fullerton, Fresno State and Santa Barbara, all of whom have been ranked in the Division I top 10. Davis, on the other hand, finished just 2-6 against Division I.

Another possibility is that the selection committee could choose three teams from the West. Playoff spots are given in accordance to the number of schools in a region. The West has just 16 teams; hence, only two playoff berths while other regions have four. The committee could select three teams from the west if it so desired.

All the politics involved look like the Democratic Presidential race, but Cal Poly head coach Steve McFarland knows exactly what his team needs to do.

"I would think we have to sweep to even be considered for a playoff spot," he said. "I would think it was a sweep would get it."

"If we don't sweep, then Northridge should go to the regionals," McFarland said. "They (the selection committee) should take one or us, maybe both.

The Mustangs and Matadors split a doubleheader earlier this season at Northridge. Northridge beat an ailing Greg Gilbert in the opener, but the Mustangs rallied to win the nightcap.

The Mustangs will again start Gilbert Friday night against Northridge in the first game. Gilbert, who lost three straight starts after injuring his ankle, rebounded to beat Cal Poly on Saturday. Gilbert now sports a 7-6 record with a team leading 3.46 earned run average.

"If we have to use Snyder out of the pen to win the first game, we will," said McFarland, who lost three straight starts after injuring his ankle, rebounded to beat Cal Poly on Saturday. Gilbert now sports a 7-6 record with a team leading 3.46 earned run average.

McFarland said that either Steve Snyder or Mike Bright will start the nightcap, depending on what transpired in game one. Needing a sweep, the Mustangs will do whatever it takes to stop the Matadors.

"We can't hold anybody back," McFarland said. "If we have to use Snyder out of the pen to win the first game, we will.

Women's track team member Robyn Root is running a few quick quarter-miles around Cal Poly's windy track.

The light workout is a tune-up for this Saturday, when Root travels to Washington to compete in the Olympic marathon trials.

Root steps off the track looking like she could run quarter-miles all day. And she probably could; it seems the sprightly junior thrives on running for exceedingly long periods of time.

She certainly has enough experience. Root earned All-America honors as a freshman in cross country and duplicated that feat her sophomore year with a 10th place finish.

When Root isn't running in a Mustang uniform, she trains and races with husband Jon. The two were the first coach team to finish in the 1985 Levi's Ride and Tie race. Ride and Tie is a relay race including two runners and a horse.

The runners take turns riding and running over long distances through tough terrain.

The step up to marathon runner has been a relatively short one. After hearing there would be a Marathon for women at the Olympics a year-and-a-half ago, Root decided to give it a shot. She trained for a year—not by marathon standards, but before qualifying for the Trials at the California International Marathon in January.

Root surprised the competition—her first—by placing seventh in 2:44.15, lopping more than five minutes from her season-best. Her time was well under the qualifying time of 2:51.18.

"I was raised — that's what my number was. So I was happy when I finished higher," she explained.

"I hope to be able to pull off another surprise performance this weekend. Only the top three finishers in the Trials make the American Olympic team, the fourth finisher is alternates.

Out of the more than 200 competitors in the 1500-meter race, the American and world record holder Joan Benoit has already clinched a spot in the Olympics.Root will run this Saturday, when Root travels

"I want to do really well, and possibly make it."

Root isn't going to predict the outcome of the Smythe out of the pen to win the first game, we will.

"We can't hold anybody back," McFarland said. "If we have to use Snyder out of the pen to win the first game, we will.
